## Travel first class. Pay economy.

Welcome aboard the Premier Diesel Deluxe. A car that is specially designed to make travelling a pleasure.

The Premier Diesel Deluxe is available with a range of luxurious features.

Ergonomically designed bucket seats with adjustable headrests. Plush carpet and velour upholstery. Tinted glass. 118NE Synchromesh gearbox. PU steering wheel. A back-lit instrument cluster with a quartz clock. A. C. version also available.

It's fitted with a quiet, eco-friendly engine designed by FNM, Italy. That accelerates from 0-60 kmph

in under 12 seconds\*. And stretches over 18 kms\* from every litre. Making it the most economical car to run.

Premier Diesel Deluxe. All the comfort without the expense.

To see the car on display, visit the dealer showroom today.

*High on performance. Low on maintenance.*

**The Premier Automobiles Ltd.**

Accessories shown in the picture may not be part of standard equipment

Premier Deluxe A.C. and non A.C. petrol versions with the luxurious features mentioned above are also available.

# mess? "

A smile. A teardrop. A raised eyebrow.  
A flare of the nostrils. A frown. These are  
just a few manifestations of a language  
that transcends the spoken word.

Spontaneously communicating  
feelings like ardour, agony, ecstasy,  
excitement, fervour, fright, passion and  
pain. All housed in the human body and  
triggered by amazing chemical reactions.

Devotion and dedication have enabled a  
handful to master the art of self-expression.  
Fostering it to perfection. In the visual arts,  
the performing arts, music and dance.

At Herdillia, we've also devoted  
over two decades perfecting  
chemical reactions, thereby elevating  
the quality of life. In homes, offices,  
industries and in agriculture.

It's our way of expressing underlying  
feelings. Like concern and care. Feelings that  
are an inherent part of Herdillia's chemistry.

Excitement, anxiety, agony  
and ecstasy -  
some amazing chemical  
reactions we all possess

**It's time we work for freedom again.**  
Economic freedom.

There is probably nothing more important than the freedom to communicate. The freedom to communicate with anyone, anywhere on the globe. As the exclusive provider of all-overseas communication to and from India, VSNL offers a comprehensive range of basic and value added services such as ISD to 236 territories, Telex, Facsimile, Television transmission/reception, Gateway Packet Switching, High Speed Digital Leased lines, Inmarsat mobile satellite telecommunications, Internet access, E-mail, Electronic Data Interchange and Video Conferencing. With the help of an extensive infrastructure of earth stations, state-of-the-art digital gateways, optical fibre multimedia cables and multimedia data switches. In a bid to effectively address the demand for high quality international service, VSNL continues to make extensive investments in new microwave and fibre optic links, digital circuit multiplication equipment, new earth stations, international superhighway gateway

nodes, global multimedia satellite systems, ICO-Global's hand-held satellite telephone system, British Telecom's Concert Packet service and several other important projects. VSNL, an international company with international ownership, is today ranked among the world's best telecom providers. The prestigious magazine Data Communications, USA said that research proved that VSNL enjoyed even better ratings than many of its European counterparts. A fact borne out by the overwhelming response to its maiden GDR issue - the largest listed on the London Stock Exchange. Acclaimed as one of the 'Navratnas' for building global skills and competence, VSNL closed this year with a total revenue of Rs. 5285.30 crore, net profit of Rs. 504.74 crore and an EPS of Rs. 63.09. Making it one of the country's biggest profit making companies. As India completes 50 years of independence, VSNL, India's gateway to the world, is taking telecommunications to the 21st century. Come join the celebrations.

GOOD TIMES COME IN  
SMALL MEASURES

PINT KING CANNED KING

**KINGFISHER**  
*The King of Good Times*

HTA 8909 97

This is 3 year old Shreya.  
Her parents abandoned her  
and vanished. If you turn the page,  
you'll do the same.

CAUSE  
CÉLEBRE Created by Contract for a cause.

With no one left in the world, little Shreya doesn't have the slightest hope of facing the future, unless she gets an education. And that's where you come in. To make a dream called *Nanhi Kali* come true. Through *Nanhi Kali*, you can become the foster parent of a little girl like Shreya. By giving Rs. 100 a month towards her education, your 'daughter' will be put into school and in fact, you will receive regular reports about her progress including a photograph. *Nanhi Kali* is a special project of the K.C. Mahindra Education Trust - a Trust set up by one of the most reputed industrial families in India. A Trust that's been working since 1953 to promote education and enlightenment across the country. Since *Nanhi Kali* literally means 'little flower', with people like you, we hope to repair the broken petals of thousands of such underprivileged little girls. So please don't turn the page yet.

**Nanhi Kali**

A project of K. C. Mahindra Education Trust  
Cecil Court, Mahakavi Bhushan Marg, Mumbai - 1.  
Phone : 2021031. Fax : 2852441.

Yes, I, \_\_\_\_\_ would like to adopt a 'Nanhi Kali' like Shreya. ☛ Enclosed is my cheque of Rs. 1200 (@ Rs. 100 p.m.) in favour of K.C. Mahindra Education Trust for one year's education. Please do send me progress reports and a photograph. ☛ Instead of one Nanhi Kali, I would like to adopt \_\_\_\_\_ Nanhi Kalis for \_\_\_\_\_ years. Thank you.

**STEEL AUTHORITY OF INDIA LIMITED**

**You call it a globe. We call it a market.**

Ranbaxy has always employed diverse strategies, including exports, alliances, partnerships and acquisitions to gain the flexibility needed for viable and profitable business operations in global markets. To this end, we established strong R&D and manufacturing divisions that set us well on our way to achieving our mission "to be a research-based international pharmaceutical company".

We have a presence in over 40 countries worldwide. The prominent ones being China, India, Russia, South Africa, Ukraine, U.K., U.S.A. and Vietnam.

Our production facilities in India conform to the standards laid down by the Food and Drug Administration, U.S.A, the Therapeutic Goods Administration, Australia, the Medicines Control Agency, U.K. and the Medicine Control Council, South Africa.

We believe that this is the beginning of a new tomorrow - a tomorrow without frontiers. It is in these environs that we look forward to building upon a vision that has stood us in good stead and which enables us to recognise business opportunities beyond frontiers.

Times have changed since ACC started business in 1936. But the company's values haven't.

Skim through the pages of ACC's 60-year-history. You'll find concrete evidence of leadership – roads, bridges, civil and commercial constructions – plus, that temple of modern India – the Bhakra Dam.

Today, ACC proudly salutes

another great achiever – India at 50.

A nation of 950 million people; with a host of its own achievements.

It takes a lot to build a successful business. But to build a nation takes something bigger. Which makes us doubly proud of contributing our mite.

In this epochal year of our

country's history, we want to reassure India and her people of our ongoing commitment, in the only way we know – for us, the nation's interest will always be "our way of life"

# Gulf Lubricants

## World wide Since 1901

*T*exas 1901: Gulf Oil drills the world's first oil well - Spindletop. 1913: Gulf Oil starts the world's first drive-in gas station. Thereafter Gulf Oil revolutionises the Lube Industry by pioneering the Catalytic Cracking Technique. India 1993: Gulf Oil becomes the world's first multi-national lubricant company to sweep into a newly liberalised market. The world today: Gulf Oil is a household name in Japan, Iran, Saudi Arabia, most of Europe, Argentina, Chile, Central America, USA and of course India. The world tomorrow: Gulf Oil is on the verge of flowing into China, Philippines, Indonesia, Korea and Taiwan.

And as Gulf Oil goes into overdrive we're consistently strengthening our base here in India. With a state-of-the-art, wholly computerised 75,000 TPA plant at Silvassa. A complete range of lubes (over 200) specially developed for Indian conditions. The fastest growth rate (28% as compared to 6% growth of the Lube Industry). And an all India distribution network (4 regional offices and 80 stock points) that has propelled our lubes to even the remotest corners of the country. Gulf Oil. We've been helping the world run smoothly. Since 1901.

# Annus horribilis

T N NINAN

WHO was happy in 1997? Start at one end and work through the various sectors of (and players in) the economy. Let's begin with the corporate sector. Ratan Tata had his hands full with yet another messy battle with a chief executive (in Indian Hotels), and a full-blown fracas with a state government (over Tata Tea). But leaving aside such diversions, there was another downcycle in Telco (lots of unsold trucks), no government clearance for his airline project, worries about ACC and Voltas, an indifferent year for Tisco, and a late-year decision to pull out of the Haldia petrochemical project. Not, one would think, a year to look back at with much satisfaction.

Take Kumarmangalam Birla. In his first full year at the head of the

group that Aditya Birla had bequeathed him, most of his companies had a tough time riding out the downcycle in commodity prices, a variety of projects were dropped, and the markets passed a harsh judgement on performance. In contrast, and almost uniquely, the Ambanis at Reliance had a great year. Eye-popping growth was topped by the promise of even more. The troubles of 1995-96 (remember the share controversy?) were forgotten, and indeed buried in another splash of business magazine eulogia.

If these three are the superleague of Indian companies, what about the senior league? The RPG group had its hands full of trouble. A power tariff dispute with the West Bengal government threatened to demolish CESC,

and in Mumbai Ceat Tyres continued to struggle. Thapar was caught in a seemingly endless family squabble over succession and control, even as the group companies continued to flounder. Asset sale continued in a cash-starved group. Bajaj struggled with loss of market share and declining sales. Customers were turning away for the first time since scooter manufacture began in 1960. The Singhanias found that none of their businesses was doing well – not tyres, not paper, not synthetics, not cement....

**B**ut nothing caught the unhappy state of India's vaunted business families as much as a report that Daewoo Motors had publicly warned against the sale of the house in which Bharat Ram (of the Shriram clan) has lived for half his life – because it was pledged to Daewoo as collateral for a Rs.15 crore loan. The loan has been mostly repaid and the house is safe with the family, but the group is riddled with business problems.

Some southern groups were all right – TVS, Murugappa, MRF. But groups like Chhabria, Modi and Mallya found the going tough, or were caught in messy disputes, or simply disintegrating. The established MNCs were all right in terms of profits, though both Lever and ITC had their run-in with the authorities. But the newer ones spilt greenbacks all over the Indian marketplace with little hope of getting them back soon (if ever): Electrolux, Whirlpool, Daewoo, Coca-Cola....

What did all this add up to? A comprehensive survey of the largest 1000 companies showed that all of them combined had taken a huge hit in the year – a 14 per cent drop in net profits, despite a 14 per cent growth in sales. No one can remember the last time this happened.

Industrial growth in the year to September was barely 4 per cent – the worst since the reforms began. The manufacturing sector was growing at only 0.7 per cent in September. Export growth was also at a low trajectory, at 4 per cent in dollar terms. At the half-way mark, excise and customs collections were running below the previous year. That was only to be expected, because the half-year results of over 1400 companies showed little growth in sales – but some profit recovery because of lower tax rates in the Budget, and lower interest costs.

Inevitably in a period of demand shortage, there was an investment famine – capital raised from the market declined, so did loans disbursed by the financial institutions. The capital goods sector suffered quietly. *Annus horribilis*, then, for the corporate sector.

**A**griculture had enjoyed record harvests the year before (6 per cent growth), and so little growth can be expected in 1997. More worrying was the decline in the long-term growth rate for farm output, with the decade of the '90s doing distinctly worse than the 1980s.

And in services, most sub sectors had a problem. In transport, there was a comprehensive mess in the railways, and a shake-out in aviation. Only two worthwhile companies survived in shipping, and the road transport sector was hit by poor, crowded roads on the one hand and lack of truck demand on the other.

Insurance remained unreformed, though the prospect of coming competition seemed to be perking up the existing public sector monopolies. And banking seemed headed for more trouble, with non-performing assets climbing across the board, and the growing suspicion that problems were being brushed under the carpet once

again. The situation seemed suspiciously like Japan's, in the limited sense that slow, halting reform was resulting in the problem getting steadily bigger.

**I**n the rest of the financial sector, NBFCs were going through a troublesome shake-out, and the financial institutions saw the lowest ever price-earnings ratios on their shares. The market was saying that no one believed the institutions' numbers on profits, non-performing assets and capital adequacy.

The stock market itself reflected angst. Though the index at year-end was substantially higher than at the start and some domestic buying had begun, the troubles in the corporate sector were reflected in low values all round – and the East Asian turmoil didn't help. There was a dangerous dependence on a few foreign institutional investors.

Telecommunications remained almost the lone sector which saw significant growth and investment, and the creation of the Telecom Regulatory Authority saw some real action in terms of sector governance. But power remained mired in policy *cul-de-sacs* with little corrective action at state level (which is where it matters). The Orissa experiment has come partially unstuck and only Haryana and Rajasthan so far have shown the stomach for some reform. A real surge in power investment is therefore unlikely till the second half of 1998, or even later.

What about the managers of the economy who oversaw this state of affairs? P. Chidambaram reacted to criticism about his cautious first Budget by packing everything into his second. But economic growth forecasts have had to be downgraded, the fiscal deficit is going to climb because tax collection has fallen short and give-

always have not been controlled. Much of the promised legislation (insurance regulatory authority, and revamped laws for companies, income tax, sick companies, etc.) never came through before the government fell, and the sharp drop in the inflation rate (less than 3.5 per cent) seemed only to point to the underlying problem of insufficient demand.

The RBI governor dropped interest rates and eased up on money supply in a belated effort to undo the damage that began with the liquidity squeeze in late 1995. He then bought fresh trouble by maintaining that the rupee was not over-valued. Encomiums were heaped on him at the end of what was seen as a good five-year innings. But industry was still in recession, the rupee was clearly out of line and had killed export momentum, and banking reform had been too slow. It looked suspiciously like a case of the operation being declared successful while leaving the patient half dead.

**T**he commerce minister did nothing to help exports recover, and unrealistic growth targets had to be junked. Trade negotiations were bungled on almost every occasion, so that he ended up eating crow. But he didn't seem to mind too much, because he did it again, and again.

The industry minister spent his time squabbling over a car company, and tried hard to steal the attention from the finance minister. That's a hopeless task in the post-licence raj era, and the announcing of public sector *navaratnas* made little difference because the real test of mindset lay elsewhere—in the disinvestment proposals that gathered dust.

The agriculture minister lived in the past (as did the deputy chairman of the planning commission), the railway minister was off the rails most of the time, and most of the other single-

industry ministries tried hard to stay relevant when logic suggested they should mostly be wound up.

**I**n short, the managers of the system were either unlucky, or incompetent, or irrelevant nuisances. True, two minority coalition governments managed to push the reform process forward (the biggest achievement was a start to de-regulating petroleum, followed by the decision to scrap the urban land ceiling), but in terms of immediate economic management, the collective wisdom brought to bear by the system's minders fell short. It is hard to see too many people getting upset if most of these individuals do not return to their last posts, but it is even more difficult to see who could come in and improve performance.

But the economy is growing at 5.5 or 6 per cent; how can that be such bad news? The answer might lie in the Pay Commission hand-out, which works out to well over 1 per cent of GDP, and which straightaway boosts the economy by as much. Take that away and the economy might grow at barely 4 per cent this year. Most of the crisis-ridden East Asian economies have done better than that. So much, then, for the self-serving argument by the outgoing prime minister that India must be cautious about reform after seeing what has happened in East Asia. Economic illiteracy is obviously no barrier to holding high office.

To get back to the original question, who was happy in 1997? Not the consumer—who kept his hands in his pockets except when he got price discounts, and even then only reluctantly. Not the investor—real estate prices stayed low, gold was at its lowest level in more than a decade (in inflation indexed rupees), and share prices reflected poor price-earning ratios. And not the producer, who saw shrinking margins in more competitive markets.

Is this a passing phase, or have the real solutions evaded discovery? It's possible to argue, for instance, that this is the great Indian shake-out. For industries have grown, while companies have run into trouble. The winners (like Reliance) aren't complaining, the losers are wailing and thrashing about. There is over capacity, as in cars: production capacity is being built to produce well over a million cars, while demand is less than half a million. And steel (two or three new plants have come on stream). And cement (again, a bunching of extra capacity). And most consumer durables, where companies simply overestimated the size of the market. If over-capacity is the problem, a shake-out is inevitable.

**A**nd because the process is far from complete, the pain will linger. Shouldn't there be a shake-out in commercial banking, for instance, just as there has been in merchant banking, share broking and other financial sub-sectors? Aren't there too many polyester manufacturers? Then think of the further shake-out as the protective walls that remain come tumbling down. Quantitative restrictions on imports (of consumer goods and agricultural products, mainly) will go in phases over six years. Tariff walls will come down still further. True competition has just begun.

The real danger in this scenario is that the losers will outnumber the winners. Manmohan Singh was always careful to ensure that this did not happen, so that the logic of reform found enough advocates. But if more and more people show no stomach for this economic medicine, it is because they see themselves as the losers.

But who are these losers? Most of them are gate-keepers to the Indian market. The bureaucrat, who wants discretionary control so that he can

extract rent from the system (a house in a nice part of town, a job for the son, perhaps some money when it matters, or expensive gifts at Diwali). In the commerce, industry and finance ministries; not to speak of RBI, SEBI and other bodies, the case-by-case approach lingers. The gate-keeper decides who is let in, and who is not.

**T**he politician, meanwhile, wants to be able to play with the exchequer so that he can buy votes – free power, bank loans that don't have to be repaid, and so on. If electricity distribution is privatised, or the banks go out of government control, how can you offer these goodies?

The third category of gate-keepers comprises businessmen who knew that an industrial licence was usually a licence to print money. If there are no licences and the gates are thrown open, how do you negotiate majority shareholding in joint ventures where you contribute nothing? So suddenly, India's great business families look like the emperor in his new clothes.

The role of the little girl, who blurted out the truth about the emperor's clothes, is being played by the stock market. The market capitalisation of many companies and groups has fallen to such low levels that almost any company in the system can be bought with a couple of hundred million dollars. Many companies are valued on the market at less than book value. Investors are saying what they think of family managements, rather than they don't think much of them; either their ability or their integrity. It cannot be a coincidence that the international players almost always command a higher price-earnings ratio.

Yet, the fact is that the Indian marketplace remains an area of huge opportunity. There is a fantastic latent demand that can be fed with products

and services. There is a famine in power, telecom growth will be explosive, and rapidly growing product markets always present opportunities for establishing new brands or occupying new niches. But the management challenge this represents, coupled with the financial challenge of raising money from investors, seems to be beyond the ability of most business families – who also seem unable to compete in the market for the best professional talent.

Inevitably, then, market consolidation is the current phase of the game, with the survivors entrenching themselves and the weak opting out. Look at pharmaceuticals (an acquisition a month), or cement. Or polyester and cigarettes. Tomorrow, it will be cars and steel. And at some stage, the banks. If the trend already evident in these areas spreads across more sectors, something like half the companies in the top 100 ranking today could cease to exist as significant players three or five years from now. And only a dozen or so will actually be strong enough to be global players.

**A**long among the companies, Reliance seems to have understood the new rules. It has gone global in its search for capital, bench-marks itself internationally in everything it does, is adopting international accounting standards, and has the drive and focus to build rapidly.

Watch the stock market already reading all the signals about the changed rules in the Indian corporate world, because there is a 'flight to quality'. Look at the portfolios of the two biggest foreign investors (Capital and Morgan Stanley), or the big domestic mutual funds. It is interesting that many of them have put more faith in public sector companies than in family-managed private enterprise. The real giants in the system are now

being recognised – BHEL, VSNL, IOC, MTNL. Some of these companies have gate-keeping privileges today, which will disappear with time. The obvious example is VSNL. But in an interesting twist, it is these companies which are seen as having professional managements and (in cases where the government has divested significant equity) no controlling shareholder who meddles around.

**A**s a corollary, notice the slow death of the diversified conglomerate, and the rise to prominence of the focused company. The old theory, developed in the American context by Harold Geneen of ITT, was that a company with management strengths could get into any business, apply sound business principles, and make the venture a success. India's own corporate history was shaped by the managing agency system – investors in England knew nothing about local conditions in India, and so hired local 'agencies' to manage the businesses for them. A typical agency would therefore be running a jute mill, some tea gardens, perhaps a textile mill or engineering unit or coal mine, and in some cases even banks and insurance companies. When the foreign-owned managing agencies began moving out, or sold out to Indian entrepreneurs, the Indian business conglomerate was born.

It is a business model that has parallels in other systems. The Japanese have the *keiretsu*, which more than anything else seeks market power – power over customers, suppliers, policy-makers, financiers. Profits and returns to shareholders are only a secondary objective, and flow from the over-all acquisition and wielding of power.

The Korean *chaebol* followed the same route. Cross-business financing was common, because once

again the key business objective was market share, not return on shareholder funds. The system now stands discredited in the wake of the collapse of the *won*; many chaebols are in trouble because they are hopelessly over-extended financially, and because the returns are not commensurate with the high gearing ratio. The IMF has stipulated enterprise-level reform in its bail-out package.

Italy has its multi-business enterprises too (IRI and ENI), which are state-owned to boot. But as in so many other things, the American system has now been found to be the best thought out. Market power is not really achievable across the board when a national economy opens out to the world (note that the Japanese and Korean systems are still intensely protectionist). At best, companies can hope to do well in a couple of chosen fields. At the end of the day, the business has to maximise shareholder return, and in today's environment, focused companies achieve that best.

**T**here is of course the Harvard professor of Indian origin who argues that in a developing economy, diversification by companies makes sense – so many opportunities are there to be exploited, and there is no merit in turning away from them. This would explain, for instance, the rush into telecom by companies with no prior experience in the field, not to speak of the new fascination for power generation (no imported competition possible here!).

For all that, it is clear that business houses simply cannot acquire sufficient expertise in a wide variety of businesses, and they have to specialise. Among other things, this is the route to capturing market share in your chosen category, developing powerful brands, and staying totally focused. Ranbaxy Laboratories does

well for precisely this reason, exporting close to half its turnover. Reliance has focused on integration backwards and forward. Other companies that have stuck to the knitting, and done well, include the Hero group, Gujarat Ambuja Cement, MRF and Eicher.

**I**f Tatas didn't have to worry about pharmaceuticals and steel, trucks and computer hardware, hotels and caustic soda, electricity and printing presses, refrigerators and economic forecasting, paints and computer software, airports and fertiliser, bearings and tea gardens, and a dozen other businesses, they could easily build a world class company or two, and ones that could compete on the world stage. But Ratan Tata's efforts to focus have made slow progress, though fresh impetus might now be there after the group's adoption of the McKinsey report. Kumarmangalam Birla may do the same on the basis of a report to him by Arthur D. Little. Clearly, business consulting will remain a boom business.

The short point is that Indian business now has to do business differently. The evolving situation also implicitly dilutes the family role in a company, simply because there is no room for all family members to get into management (as there would be in a diversified conglomerate). Even successfully diversified companies like Larsen and Toubro are getting round to accepting the theory on core competence. In future, therefore, you will not have India's top 20 groups, or a listing of the leading business families – because many of them have already faded away (the Mafatlals, Modis and Sarabhais being obvious examples) and more are on their way out.

What you will have, however, are a couple of strong companies in each field. Watch the slug fest between

Lever and P&G; or the Coke-Pepsi war. The petrochemical market could be sewn up in India by Reliance and IPCL.

Where does this leave Indian business? Two weaknesses that seem to run across the board will limit horizons. One is technology (most Indian companies don't have it – Asian Paints is one exception, and Ranbaxy perhaps another); the other is the ability to develop brands. This will confine most Indian companies to the engineering sector, labour-intensive fields like software and diamond cutting, raw material processing sectors like textiles, commodity sectors like steel, cement and petrochemicals, or non-tradeable sectors like power, or sectors which require strong trading skills. Survival is also easier at the small and medium enterprise level, where companies feed the larger ones and have a clear role as entrepreneur-driven entities. The good news is that this is a wide enough field to leave open a large slew of opportunities.

**T**he other challenge will be finance. Japan, Korea and other emerging economies provided cheap capital to their growing businesses as they established dominance. In India, the business families acquired capital through exploiting a protected market, or siphoning out project funds, or taking shareholders for granted, or organising a mesh of cross-holdings that gave management control. The first three options now have limited feasibility, so keeping faith with the retail and institutional investor is central to the business of raising capital for future growth. The alternative is to stay small, and many families seem to prefer this option. The ones that think big will have to face the challenge of professionalisation in a more comprehensive way than has been done so far.

But even if companies do their homework, they need a business environment in which they can function and grow. The current recessionary state therefore needs urgent redressal, if 1998 is not to be a repeat of annus horribilis. Remember that September (the latest month for which statistics are available) registered just 0.7 per cent manufacturing growth over September 1996.

**B**ut fresh investment is unlikely to come from the government because it does not have the money, and in any case incompetently run ministries do not have the ability to spend even the budgeted allocations. Fresh investment can also be spurred by private investment, but the key areas where there is no over-capacity as yet are all in infrastructure sectors, and in most of these policy changes continue to be needed. The reform process is therefore central to stimulating investment.

Finally, a revival of consumer demand would do the trick. This can be both domestic and overseas. For the latter, a drop in the rupee value is essential, so that exports can recover. And exports, don't forget, now account for 10 per cent of GDP. Domestic demand is a trickier business when there is political uncertainty and no feel-good factor. This is where the system's last crop of minders have failed to deliver. With another election coming up, the question marks therefore loom large.

But much the bigger question is posed by East Asia, where currencies have been tumbling, growth rates dropping and businesses frantically searching for new ways to survive. At one level, the East Asian virus should not spread to India – our current account deficit is less than 1.5 per cent of GDP (compared to 4 per cent for South Korea and 8 per cent for Thailand), the short-term foreign debt is

much less than the reserves (unlike Thailand, for example), there is no capital account convertibility (so there are limits on capital flight). And no asset bubble. Besides, the Indian banking system's exposure to real estate is no more than 2 per cent of total banking assets, compared to as much as 20 per cent elsewhere. Indian businesses have also not been financing long-term projects with short-term finance to the same degree as many South-East Asian companies, and corporate gearing ratios are more realistic than in South Korea.

It is also possible to argue that the East Asian crisis is not yet a crisis for the world economy, because the United States and Europe remain largely unaffected. The US has reported record job creation in November, and Europe is in fact into recovery mode. The IMF forecasts that global economic growth will drop from the 4.3 per cent expected earlier to 3.5 per cent. That's not catastrophic.

**B**ut to stop the argument at this stage would be foolhardy, because East Asia is next door and what happens there is going to impact in ways that many Indian businessmen may not yet have realised. Consider, for instance, the prospect of all the surplus capacities in areas like petrochemicals, cement, steel, aluminium, fibres, paper, tyres and a host of other commodities that will be seeking markets elsewhere because the East Asian economies cannot absorb them. And then think of the prices at which these commodities will be available in the wake of the devaluation of the won, baht, ringgit, rupiah and even yen.

At the very least, Indian exporters will be priced out. But much worse, competition from imports will give domestic manufacturers a torrid time within the country. And since most Indian companies are commodity pro-

cessors (and do not own strong brands or cutting edge technology), this price competition can have devastating consequences.

**T**he obvious defensive manoeuvre should be to let the rupee drop instead of the Reserve Bank continually trying to prop it up and expending dollar reserves (which are already down by a couple of billion). A cheaper rupee will make imports more costly, and encourage more exports – exactly what the system requires. But the system also has a fascination for a strong currency (as though it is a sign of national machismo), and the danger is that the rupee will be kept too high and tariff walls raised all over again as an alternative to devaluation. This then risks slipping back into the old mindset of a high rupee and high tariff walls combining to protect the domestic market while discouraging exports – and thereby creating a siege mentality all over again.

It should also be expected that funds earmarked for the emerging markets by the global investment companies will be sharply reduced. So while India may seem like a calm pond, secluded from the stormy ocean next door, it is entirely likely that the inflow of portfolio investments will drop; indeed, there could well be a net outflow. This will put its own pressure on the rupee, and on the stock market – which has understandably been showing nervousness.

The past couple of years have seen the economy become a victim of macro-economic mismanagement, principally through over-valuation of the rupee and a liquidity squeeze, combined with under-investment in the infrastructure. If the policy responses are wrong again, then 1997 will be a picnic for Indian business, compared to what lies in store in 1998.

# The South in ascendant

MAHESH RANGARAJAN

THE reservoir at Poondi to the north of Chennai dates back to the days when the Congress stalwart, Satyamurthi was chairman of the city municipal committee and pushed through the project to help meet the demand for water among its residents. In a small ceremony in early 1997, the chief ministers of the two states, Tamil Nadu and Andhra Pradesh came together at Poondi to celebrate the completion of a scheme to augment the supply of water. While thanking Chandra-babu Naidu for sharing Andhra's waters, the Tamil Nadu chief minister M. Karunanidhi praised the former as a *dalapati* of Indian politics. The word itself means a general or a commander. Of course, the younger man repaid the compliment in full measure and hailed his counterpart as his own *thalaivar* or leader. The terms were apposite.

The shift in the terms of power towards the regions and away from the Union has been one of the most significant developments in Indian politics in recent years. The times have changed and decisively. When at the death of Jawaharlal Nehru in 1964, Congress party president Kamaraj Nadar's name was suggested as successor, he preferred to play king

maker. It did not seem realistic to expect someone outside Uttar Pradesh to become prime minister. But with the Hindi-speaking belt experiencing deep social cleavages between the Mandal classes, upper castes and Dalits, the South has gained considerable political clout. Not only that. Kamaraj was still part of the Congress system, which was able to incorporate and accommodate the aspirations of upwardly mobile groups. It is a measure of how deep the changes have been that in his own lifetime his home state passed out of Congress hands in 1967, never to return.

The Congress has continued to be a major player in the peninsular region even as it now faces terminal decline in the Gangetic basin. It leads a formidable alliance with smaller parties in Kerala and is the chief opposition in the Telugu and Kannada speaking regions. But the late 1990s have seen Congress fortunes slip in a manner that may have significant long term consequences at an all India level. In the past, the South always remained its last bastion in times of electoral adversity. This was the case in 1977 and again in 1989. The minority government of P.V. Narasimha Rao in turn would never

have been possible had his party not won 95 of the 130 seats in the southern states in the general elections of 1991. Yet, five years later the pendulum swung sharply the other way and it is the United Front that has that many seats in the South.

Such figures and the deeper shifts that they represent would have carried little import had the Congress held its ground elsewhere in the country. But its decline in the North has been precipitous and sharp. Further, the only other party with all India aspirations or pretensions, the Bharatiya Janata Party, has as yet been unable to establish and sustain a position of dominance in Uttar Pradesh or attain power in Bihar. The situation then is that while Congress dominance is over, no single force has yet emerged to fill the vacuum. Since 1991, the forces of Hindutva have held most of the Lok Sabha seats from U.P. In the same period, however, they only held power in Delhi for less than a fortnight. This means that the demographic weight of the Hindi region in general and of Uttar Pradesh in particular counts for a lot less now than ever before. In any case, the BJP hardly exists in the South, except for Karnataka where it is a strong third force.

**A**s long as it aspires to lead a coalition regime in Delhi, the Hindutva party has to win over regional allies outside northern and western India. On the face of it this is not so difficult. After all, it joined hands with the Dravida Munnetra Kazhagam against Indira Gandhi in 1977 and was also part of the conclave politics initiated by N.T. Rama Rao in the 1980s. But the hurdle that it now faces is a serious one. At a time when diverse regional groups with a handful of seats in the Lok Sabha are able to shape the coalition government of the day at the Centre, they have little incentive to

join hands with a party that looks to them quite like a Congress clone in respect to centralising ambitions.

Its tacticians argue that at least it will not be a threat to regional forces in their own backyard. Unlike the Congress, it has little hope of coming to power in the states ruled by members of the Federal Front. Yet, it is precisely this factor that will make it easier for these parties to withstand pressures. At a time when regional identities are increasingly important, it is easier to resist pressures from a party that is largely external to local politics. If the BJP can do little to hurt the Telugu Desam in Andhra Pradesh, it is that much easier for the latter to resist it. The regional satrap is sustained in part by the image of a larger entity that he or she has to combat and contain.

**Y**et, there is a deeper pattern to this hiatus between the regional parties and the Hindutva forces which was not always evident in the Indira or Rajiv eras. The priority then was to defeat the Congress by pooling together opposition votes. After 1990, the picture changed, and decisively. Even more than the *mandir* issue, what forged a new set of relations was Mandal. V.P. Singh's implementation of reservations for the Other Backward Classes in Union government jobs sealed a compact with those who championed such demands from early in this century. So strong was the DMK's appreciation of his step that in mid-1996 it backed him as prime minister even after his party, the Janata Dal, made overtures to its arch rival the AIADMK on the eve of elections.

Mandal meant that the politics of OBC assertion had come of age in north India. It also meant that even as the BJP displaced the Congress as the premier vehicle of *savarna* Hindu aspirations in the North, its chief

contenders for power, the Mandalite leaders in that very region would have a common syntax and grammar with the regionalists in the South.

In turn, there are important differences in perception and priorities between the tactical and strategic calculations of a Mulayam Singh Yadav and his southern allies. In October 1997, when he strongly supported the use of Article 356 in Uttar Pradesh to dismiss the BJP ministry of Kalyan Singh, he was unable to have his way. One key factor was the united stand of the regional parties who have in the past felt the whiplash of Article 356, used by successive Congress governments to serve their own partisan ends. But there was more to the conflict than mere political self-interest. In much of Hindi-speaking India the country is seen as being constituted around the core of the Gangetic basin. The use of the term 'heartland' embodies and reinforces this view. In this version of the past, it is the North that is the kernel of the Indian nation. Even the lower caste led formations that challenge the upper caste led social order do not attempt to problematise the relationship between region and nation. But for N.T. Rama Rao or Annadurai, it was the re-negotiation of this equation that was the question of questions.

**T**he idea of *Aryavarta* being the core of India warms the cockles of the hearts of the Hindutva groups. In an ideal world they would hope to overcome and supplant regionalism, which is as divisive of India that is Bharat as are minority religious identities. Or so it would seem to them. As early as 1967, C.N. Annadurai, on his tour of the opposition ruled states of northern India, pointed out that the very notion of Hindi as a unifying link had its limitations even in the North. This was not to disparage the lan-

guage, much less to denigrate it, but to emphasise that there was a welter of cultures and identities at a sub-regional level within the Hindi speaking states that was also submerged in a bid to homogenise the language over the last century or so. More ominously, these attempts have often equated a particular variant of Hindi that is highly Sanskritic with not only the region but the Indian nation at large.

This overlap of Hindi-Hindu-Hindustan dates back beyond the Sangh Parivar. But all-over southern India it raises deep anxieties—not only in Tamil Nadu, long a citadel of sub-nationalism. One reason for this is that Muslim communities in the South—the plural is both deliberate and accurate—are strongly integrated into regional cultures. Regional party formations not only depend on them in terms of votes but have often incorporated them in their leaderships.

Muslims make up 11 per cent of Karnataka's population, nine in Andhra Pradesh, seven in Tamil Nadu and over 21 per cent in Kerala. Except in Hyderabad, Partition hardly left any scars (which makes one wonder why more historians do not investigate this other hidden history, along with writing about the scars of 1947). Such syncretism as exists in Tamil Saivite shrines where Allah is said to come riding on a tiger, does have its counterparts in the North. But the populist and anti-saffron formations are still in the early stages of appropriating and taking over such symbols from the Congress. In the South, even a leader like Jayalalitha with soft saffron inclinations, has taken care to be seen at Muslim dargahs and shrines.

**32** **A**ndhra Pradesh and Tamil Nadu are the two states in the South with bona fide regional parties. Of course, the Left-led Front in Kerala as well as

the Karnataka Janata Dal are both regional formations in a de facto sense. But for reasons that can only briefly be touched upon here, neither state has managed to intervene as decisively in shaping the contours of the ruling coalition as the other two states. In Kerala's case, the incredible success of the so-called Kerala model in creating a social welfare system, the likes of which does not exist anywhere else in continental South Asia, has over-shadowed the failure to expand the productive base in industry or to upgrade agriculture. Given its small size and population (20 seats in the Lok Sabha), the state is further handicapped by the fact that in a time of liberalisation, high labour costs inhibit fresh investment. Nor is the left-wing alliance as securely in power as its counterpart in West Bengal.

**K**arnataka was in many ways a contender to play a leading role, signified by the rise and eclipse in the eighties of R.K. Hegde and the eventual ascendancy to the prime ministership of India of H.D. Deve Gowda (1996-97). The latter was a first in many ways—the first of the Mandal classes, the first non-Congress premier from the South and perhaps the only head of government other than Charan Singh to have an agenda for agriculture. Despite ostensibly being from a national party, he also symbolised the impact of federalism within such formations as was evident in his views on centre-state relations. But Karnataka was unable to pull its weight after his exit from power.

There are two significant factors at work here. One is that the industrialisation of the state is in serious trouble due to problems of infrastructure, especially in the power sector. Further, much of its land area is highly prone to seasonal fluctuations in rainfall and the gestation period of its

ambitious irrigation projects may be longer than its leaders would care to admit. The other factor is socio-political. The Janata Dal in the state is governed mainly by a coalition of the dominant landed castes and Muslims, and it is the Congress that commands sympathy of most of the OBCs. This has made it easier for the Janata Dal to knit together winning coalitions at election time in the state but also led to sharp internal cleavages once it was firmly ensconced in power. Given the size of the state (six per cent of the Indian Union lies in its borders) and its numbers (only 26 seats in the Lok Sabha), the latter political factor has proved to be a limiting one. One has to turn to the other two states.

**B**ut there are important contrasts between the Tamils and Telugus. Tamil Nadu is the only province which had a full-fledged secessionist movement until the DMK gave up this demand and opted for federalism. The deep animosity over the bid to impose Hindi as a link language also contributed in no small measure to the growth of a distinctive Tamil identity. In Andhra Pradesh, the Telugu Desam was from the outset a regional party working within the constitutional framework. In the Tamil case, the movements for cultural assertion have strongly emphasised the non-Brahmanical and non-Sanskritic roots of their culture. In Andhra country, these voices have been more muted and Rama Rao at least was often ambivalent in his deft use of religious symbols and emblems. Even in these times of saffron tides, Karunanidhi is perhaps the only chief minister in India who can fob off demands for more power connections to temples by asking why deities with halos should need light bulbs!

But what this also means is that the TDP is unlikely to withdraw into a

regional fortress and make peace with whoever rules Delhi the way that the DMK did with Indira Gandhi from 1969 to 1976. From the very beginning the Telugu Desam has seen itself as a spearhead of regional forces that will displace the Congress from power at the Centre. The term *Bharat Desam*, used by N.T. Rama Rao in the eighties, was in fact prophetic. This is what the United Front, or at least the Federal Front, aspires to become.

What makes such an enterprise look achievable is the new economic context of liberalisation. Given their better infrastructure and relative political stability, the southern states are clearly better placed to attract investors, both Indian and foreign, than the North.

**N**o state is now as abuzz with news of new projects as Andhra Pradesh. Ironically, Chandrababu Naidu has the advantage of being a regional strongman as well as possessing the consensus-building ability of a Congressman of yore. But the major planks on which the Telugu Desam came to power in 1994—cheap rice for the poor (critical in a state with the largest number of landless labour in India) and prohibition (in response to a powerful grassroots women's upsurge), have both been modified, though not jettisoned. There have been significant initiatives in other respects: local bodies have been revived, the proposal to give wider powers to tribal gram sabhas is under serious consideration and the laws regarding cooperatives have limited the arbitrary powers of officials. The chief minister is probably alone among Indian politicians to openly champion small families as part of his Janmabhumi programme.

Andhra Pradesh has the advantage of both size and numbers. It is the largest of the southern states in both

land area and population. Its 1000 kilometer-long coastline is the site for new harbours and dockyards that will tie it to South East Asian trade routes. The deltas of the Krishna and the Godavari were sites of the Green Revolution around the same time as Punjab and Haryana, and could become one of the few areas in India with both agricultural prosperity and capital-intensive industry.

But much depends on the ability to deliver on promises of better governance. Andhra Pradesh is also a sharply polarised state. Its forested districts are the sites of intense social conflict over the control of timber wealth and land between tribal and dominant groups, the former often led by radical groups and the latter backed by police power. The lessening of disparities, or at the very least better provisioning of credit, food and land rights will test the Telugu Desam. Its record in office will determine whether or not it can keep the Congress at bay at home, a pre-requisite for the wider dreams and hopes of the TDP leadership.

**I**n fact the state that is poised to do better than any of the others is Tamil Nadu. Governments can hope to complete their term as there is a stable two-party system in place. Along with Pondicherry, the Tamil-speaking region accounts for 40 Lok Sabha seats, but even in the days of a Congress-AIADMK sweep it never had as many as nine Union ministers.

The economic underpinnings of a drive for power are significant. Given the absence of perennial rivers in the peninsula, the percentage of crop area under irrigation is a critical indicator of the viability of a state's agriculture. Tamil Nadu's is the highest in the region at more than 47 per cent. What is more, the Kaveri delta produces as many as three crops a

year, and in the Cumbum valley, rice yields touch six tons a hectare. The state has a social welfare system second only to Kerala's with none of the disadvantages that accrue from a large unionised labour force in an age of the dominance of capital. The entry of three auto majors is an indicator of its growing industrial muscle. In a range of products from auto components to electric pumps and hosiery, industry is going through a phase of expansion. It has been helped in no small way by the willingness to allow captive power plants, which has staved off the sort of power crisis that exists in some neighbouring states.

**R**ecent figures on state level expenditure during the Eighth Plan show Tamil Nadu ranked just behind Maharashtra in terms of its ability to utilise central grants and allocations. In fact, in terms of mobilising its own resources the former actually raised 50 per cent more than what was planned. In the same period, Bihar's level of use of 'state's own resources' was of the order of 5 per cent. West Bengal's was at 39 per cent. Further, in terms of social indices, Tamil Nadu is now just behind Kerala. Not only has literacy increased markedly to near the two-thirds mark, the birth rate has fallen sharply. The mid-day meal scheme expanded massively in the early years of AIADMK rule, has made a major contribution to better levels of nutrition among children.

The flipside is equally important. In political terms the DMK remains vulnerable to the kind of orchestrated howl that national parties as well as the media are capable of on matters of 'national security'. This was the case when its ministry was removed from office in 1991. Another bout of panic over the Rajiv assassination case was built up in late 1997. The ability of the regional forces to withstand such

pressures is presently under test. But the interesting part of the Tamil political spectrum is the AIADMK, whose response to the issue was in a language that was barely different from that of Advani or Arjun Singh. This is the real question for Tamil Nadu – whether it should be ruled by a bona fide regional party or one that will increasingly be a surrogate national party with a regional flavour. The Jayalalitha squad is the real Trojan horse for a future in which a strong pro-Centre, saffron alliance may find a fellow traveller. In that sense, the citadel of federalism also has its *bete noire* on its own soil.

More seriously, the rise of autonomous Dalit forces in Tamil Nadu calls into question even the most basic claims to legitimacy of the existing social order. While it may not have developed significant electoral clout, its very presence signals deeper dissonance in the ‘Tamil Nadu model’ of politics in which identity and culture score over economics.

All this may not have been on the minds of Messrs Naidu and Karunanidhi as they met at Poondi. But there is no doubt that we are at the threshold of a new era. The Congress system, in crisis since 1967, is wilting and the BJP is unable to fill its shoes. Irrespective of who rules in Delhi, increasingly the little queens and kings in the regions will shape our future. The South is better placed than the West on the one hand and the North on the other, both for reasons of relative social cohesion and communal peace, superior infrastructure and services. How its leaders use these opportunities will play a large role in reshaping a new idea of India. Much depends on how they resolve rather than exacerbate their own differences, as over water sharing. Much will hinge on their ability to go beyond tactics to articulate a vision that engages with allies and supplants the centralising project with a federal one.

## No breakdown

HARISH KHARE

FOR all the apparent chaos and for the sordidness inflicted on the nation by a shop-worn political class in this year of the Golden Jubilee of our Independence, we must be grateful that it did not come to as ugly a pass as it did in neighboring Pakistan, where unruly supporters of a prime minister felt compelled to invade the Supreme Court. And though the country was a seemingly helpless witness to the downfall of two prime ministers, the Centre did hold; the polity tried strenuously and with reasonable success to deal with the demands of maintaining a semblance of functioning order. Despite the fact that India finds itself having to undergo the unpredictable agony of a general election in less than 20 months, it can be asserted that by the end of 1997 the polity was in a healthier shape than it has been in for a long time.

The unsettled relationship between the Indian state and the citizen continued to be mediated without much violence and within the framework of a discernible political legitimacy. Till the horrible massacre in Bihar in December 1997, the polity played host to new experiments in political conflict and conciliation among groups and personalities without the outbreak of any large-scale violence. Undoubtedly violence and guns continued to dominate the

idiom of political discourse on the periphery (more in the north-eastern region than in Kashmir, or in Punjab), there was no occasion for any wholesale re-examination of the state-citizen relationship. Indeed, a general sense of tiredness could be detected among those external actors who in the last decade thought they had a justifiable role in pressurizing the Indian state to concede autonomous space to ethnic minorities or discontented individuals.<sup>1</sup>

**N**onetheless in 1997 the Indian governing elites found themselves constrained to learn – some to their cost, some to their advantage – the fundamental requirement of a constitutional democracy. A political democracy necessarily and inherently puts constraints on the power and authority enjoyed by each constitutional functionary; and, that the key to the success of parliamentary democracy, in a coalition era, hinges on the political elites' capacity to understand the need for mutual restraint, respect and reconciliation.<sup>2</sup>

1. For a thoughtful discussion of the nagging problem of legitimacy and its implications, see Subrata K. Mitra, *Legitimacy, Governance and Political Institutions in India after Independence*, in Subrata K. Mitra and Dietmar Rothermund (eds.), *Legitimacy and Conflict in South Asia* (New Delhi: Manohar, 1997). It needs to be noted that the political leadership remains alive to the need to co-opt and propitiate those who choose to challenge the authority of the state. For instance, a Government of Manipur memorandum on law and order, submitted to the prime minister on 22 May 1997, notes: 'It is our irreversible commitment to protect and preserve the integrity of Manipur as a state and take up all positive steps to fight any divisive force and element working against the state and the country as a whole for ushering in peace and prosperity in this remote corner of India. We, in this context, appeal to you to invite misguided elements in Manipur to have talks with the government in order to solve the problem of insurgency in the state permanently.'

2. For an understanding of the requirements of restrained behaviour in a constitutional

Consequently the Indian polity was able to attend to the never-finished (and probably a never-finishable) basic task of democratic consolidation: making the Indian state forego its roguish impulses and instead to learn to respect the relentless logic of democratic urges and aspirations in an unequal and hierarchical society. And notwithstanding the middle classes' fashionable rubbishing of the political class and despite the corporate sector's inelegant impatience with the inherent uncertainties of parliamentary give-and-take, the democratic consolidation proceeded apace.

**T**his consolidation is neither easy nor can it be achieved overnight. The reason is simple. The elite consensus that underwrote the Indian development experiment in the first four decades visibly broke down in the early 1990s and has not yet been rebuilt. At the same time the old political majority that sustained the elite consensus has broken down, and is still in the process of being put together again. The next general election should provide us some clue as to whether the task of cobbling together such a new majority would be undertaken by the advocates of Hindutva or would it be left to the 'secular front' to put together a new coalition of the poor, the underclasses and forward-looking segments of the middle classes.

For the first time since the Constitution was inaugurated in 1950, the political system came to appreciate the delicate balance among various functionaries that has been worked into the constitutional scheme of things. Since the polity no longer acquires its institutional efficacy from

democracy, see Barry R. Weingast, 'The Political Foundations of Democracy and the Rule of Law', *American Political Science Review*, June 1997.

the effective presence of the prime minister as the chief political executive in the country, the process of governance came to be shaped by a dynamic interaction among various functionaries. That this interaction was not allowed to overload the political system points to an hitherto unsuspected maturity among the governing elites.

**N**othing symbolized this new maturity more pointedly than the gentle but firm manner in which U.N. Biswas, the Joint Director of the Central Bureau of Investigation, was finally dealt with. The saga of Biswas' celebrated crusade against the then chief minister of Bihar, Laloo Prasad Yadav, constitutes a chapter in the story of how the limits of liberal democracy can be easily trampled upon by its presumed defenders. Both Biswas and his boss Joginder Singh proceeded on an assumption that the protection from the Supreme Court in pursuing their investigation in the fodder scam, also gave them a license to pursue personal agendas.

The most frightening denouement of this politics of hate and prejudice – which hinged on an instant trial and instant judgment by a middle class dominated print media and an upper class oriented electronic media – came when a bench of the Patna High Court encouraged U.N. Biswas to call in the army to arrest Laloo Prasad Yadav, rather than let the chief minister have the satisfaction of surrendering before the magistrate the next day. It is gratifying that this singular act of misplaced and misguided vigilance alerted the sober souls to the dangers of partisanship and eventually prompted the Supreme Court to step in to ensure that everybody stayed within limits of their authority and jurisdiction.<sup>3</sup>

3. See Harish Khare, 'The Joginder Singh

The judiciary itself became aware of the real danger of becoming both prosecutor and judge, of transgressing its own institutional jurisdiction and encroaching upon the institutional autonomy of the executive and the legislature. Though Justice J.S. Verma disappointed many admirers who were looking forward to his stewardship of the Supreme Court as the golden phase when the politicians' Aegean stables would be cleansed once for all, it must be said to his credit that through thoughtful and sagacious leadership he was able to dissuade the higher judiciary from an overtly interventionist agenda. And it was about time. The very real possibility of the judiciary deciding the fate of the high and mighty in the political world probably prompted a section of the judicial fraternity to play politics with the line of succession in the Supreme Court.<sup>4</sup>

If the judiciary resisted the temptation of overturning the intricate institutional balance between the courts and the executive, it was left to Rashtrapati Bhavan to take the initiative within the executive to define the ground rules for the constitutional head (president and governors) to exercise his/her discretion. In the first week of June 1997 President Shankar Dayal Sharma brought together the governors and the leaders of political parties to share views about evolving guidelines for the constitutional head in these times of coalitions. And though there was little enthusiasm for

the DMK's suggestion that Instruments of Instruction (for governors) be incorporated in the Constitution, there was appreciation for President Sharma's formulation that the constitutional head must function 'with due impartiality, independence, constitutional propriety and transparency, and uphold national interest paramount.'<sup>5</sup>

That Rashtrapati Bhavan could be a source of a much desired judicious restraint and thoughtful corrective action against a wayward council of ministers became evident in October 1997 when President K.R. Narayanan forced the Gujral government to review its decision to dismiss the Kalyan Singh ministry and to dissolve the Legislative Assembly in Uttar Pradesh. That Narayanan's exercise in presidential activism itself was not exactly in harmony with the metaphysics of the cabinet system of government was widely overlooked. Instead, the president was applauded for enabling the constitutionalists to carry the day in the Gujral cabinet against the rogues who were insisting on naked political retribution and calculation.<sup>6</sup>

The entirely welcome outcome of this unprecedented and unexpected presidential intervention ensured that during the next round of governmental crisis in November, no political leader was prepared to take Rashtrapati Bhavan for granted. A small but enormously significant gain against possible abuse of authority by a poli-

tically-inclined union council of ministers.

And as if the self-restraint hinted at by a watchful judiciary and a constitutionally-correct president were not enough, the speaker of the Lok Sabha emerged as a tough task master, demanding that Parliament not be taken for granted by the political leadership. When in March 1997 the coalition at the Centre came under strain on the question of law and order in Uttar Pradesh, the speaker ruled that 'lack of this unanimity of voice in the treasury benches in this regard is a matter of very serious concern which is inconsistent with the principle of collective responsibility of the council of ministers to the House as spelt out in Article 75 (3) of the Constitution. This responsibility is joint and indivisible. The matter is especially grave considering that U.P. is the most populous state in the country and law and order situation therein has implications for the country as a whole.'<sup>7</sup>

The point is not of a momentary embarrassment to the treasury benches but of yet another constitutional functionary feeling emboldened enough to strike a balancing note in a situation of indecisiveness at the heart of the ruling arrangement in New Delhi. Again when in the last week of November the Congress and the DMK members engaged each other in shouting slogans and disruptive activities in the Lok Sabha, P.A. Sangma invoked the magisterial authority of his office: 'Slogan shouting, demonstration and continued disruption of the business of the House, is a sad breach of the Resolution of the Golden Jubilee session of the House held from 26.8.1997 to 1.9.1997, as far as it concerns commitment in respect of orderly conduct-

of business. It is also a mindless mockery of the people who have returned this House and appalling denigration of the very institution of Parliament which I shall not permit.<sup>8</sup> It is, of course, a different matter that Sangma too fell to the temptation of putting his oar in the troubled political waters and tried his best to get the president's nod for a prime ministerial role in a national government.

**A**ll said and done, this orderly search of institutional space by various constitutional functionaries – without feeling totally smothered by the heavy hand of a dominant political personality or centre of power, and without trying to overstep limits – has contributed towards democratic consolidation. What is more, this process of democratic consolidation was sustained by the political elites' hitherto unsuspected willingness to learn the rites of accommodation and the protocol of sharing power.

Notwithstanding all the criticism that came the Congress party's way for withdrawing support from the Deve Gowda government, that episode reminded one and all of the need for learning the code of conduct and rites of accommodation. The United Front was an extraordinary conglomeration of political personalities who had nothing in common – no shared memories, no shared collective association, no sense of joint struggles – except a burning desire to share power. It was not easy for these leaders to work, leave alone produce a synergy or even a convergence of political perspectives.

After Deve Gowda was given the boot by Sitaram Kesri, it was left to his Home Minister, Indrajit Gupta to point out that his former boss's

'basic weakness was his inability to devise norms and procedures for handling the functioning of a coalition.' More than this failure to measure up to the demands of a coalition era, there was a marked absence of comradeship among the Gowda cabinet ministers. As Gupta noted: 'These were mostly problems of communication. Very often when we should have met we were not able to meet either because of there being lack of time, mine or his, or may be because of styles of functioning. Styles of functioning are very important. And then my background, my political background, my social background and everything, is very different to Mr. Deve Gowda's. You know from where he came and naturally you cannot expect that he and I will be on the same wavelength.'<sup>9</sup>

**W**ith or without prompting from Sitaram Kesri, the United Front crowd had a difficult time appreciating one another. For instance, in July 1997 the DMK threatened to pull out of the Gujral government because K. Karunanidhi suspected some of the UF leaders of working on a 'personal Common Minimum Programme'. A couple of months later, the Agriculture Minister, Chaturanan Mishra publicly engaged the finance minister in a dispute that had less to do with differences over policy and more to do with the CPI leader's lack of familiarity with the by-lanes of decision making in a cabinet system.

Beyond personalities, this problem of evolving a *esprit de corps* does not lend itself easily to a solution. There was a time in the early years after Independence when there was a certain socio-economic commonality to the entire political class, a condition

that ensured that disputes and differences, either along ideological or party lines, did not result in an erosion of civilities and niceties. After the bitterness of the Indira and Rajiv years, and after the total churning of recent years in the composition of political elites in the post-Mandal era, the UF experiment forced the political leaders to learn through the hard way the necessity of bargaining, sharing and conceding power.<sup>10</sup>

**N**othing underlined this imperative more acutely than the inability of the United Front bosses to get on with the supporting Congress and its boss, Sitaram Kesri. It was obvious that as prime minister, Deve Gowda was not sufficiently clued into the complexities of internal equations within the Congress and had unfortunately allowed himself to be influenced by the negative perceptions of his friends such as Chandra Shekhar and P.V. Narasimha Rao towards Kesri. This resulted in a calculation that the Congress need not be treated with the requisite civility and that the UF government could get away with isolating and targeting individual Congress leaders in various legal cases, some suspected to be contrived and some reported to be genuine.

The political class watched with dismay as the Gowda regime tried to use the minatory reach of the CBI or Enforcement Directorate and other coercive agencies to make political rivals fall in line. The end result was that Gowda lost his prime ministerial chair and the political elites learnt a vital lesson that 'in this age of coali-

8. Statement read out by the speaker in the Lok Sabha (text courtesy Lok Sabha Secretariat).

9. See Indrajit Gupta's interview with Home TV, telecast on 21 April 1997 (text, Home TV). Also see Javed M. Ansari, 'United Front: widening schisms', *India Today*, 28 July 1997.

10. The churning in the composition of the nominal political elites can be gauged from the fact that the just dissolved 11th Lok Sabha had as many as 287 members who were elected to Parliament for the first time; of these, 117 had no experience whatsoever of ever having served in a state legislature or having played any other legislative innings.

tion politics, no political party or leader can hope to get away by exercising the power and authority disproportionate to his real strength and acceptability. Leaders who refuse to understand this would end up only frustrating the country's need for a stable and coherent governance.<sup>11</sup>

The dire necessity to sup with your presumed enemy was starkly illustrated by the BSP-BJP's elaborate pact to share power in Uttar Pradesh. Again, after the bitterness over the departure of Deve Gowda from the prime minister's office, both the Congress and the UF found themselves having to do business with one another. What is more, both felt constrained to give a written undertaking to the president of the Republic that the two groups would put in place mechanisms of coordination between the Congress and the Gujral government. That the two sides could not honour this undertaking – as well as the breakdown of the BSP-BJP arrangement – only underlines the fact that the political elites are still having difficulty cultivating the habit of accommodation and reconciliation.

**T**hat the political class appeared willing to learn a thing or two about restrained behaviour and otherwise gave evidence of trying to grow up ought to be juxtaposed with the wider context of unrelenting and unfair intellectual hostility. Management of the economy appeared to have been largely insulated from the inadequacies and insecurities of the political leadership. That ensured at the minimum that the emerging consensus on 'economic reforms' remained essen-

tially unchallenged, notwithstanding the left parties' delusion that their presence in the ruling arrangement in New Delhi had helped reverse the one-sided allocation of economic resources.<sup>12</sup>

**S**imultaneously the 'cultural market' could not be liberated from the stranglehold of essentially elitist and not entirely wholesome forces and individuals.<sup>13</sup> The unequal battle between the cultural and economic elites, and the political/constitutional and other representative voices appears to have entered a decisive phase. The party system is trying to adjust itself to the changed nature of political conflict in the aftermath of the retreat of the Indian state from the commanding heights of the economy.<sup>14</sup> Viewed in this larger background the orderly upheavals in the political world must be seen as part of a continuing struggle over the soul of India.

12. 'Political opportunism, loot and plunder of state coffers, criminalisation, five-star culture have hardly left any difference between these forces and the earlier rulers. In the name of leftism, CPI and CPI(M) have also wasted their time in political manoeuvrings.' See *Liberation*, central organ of the CPI(ML), September 1997. It needs to be noted that despite the ideological, intellectual, and policy concessions made to the votaries of economic reforms, the Indian state is still having a difficult time making the rich and the powerful pay taxes. The finance ministry has been constrained to rope in the likes of cricketer Kapil Dev and sarod maestro Amjad Ali Khan to impress upon the rich the advantage of '30 per cent tax, 100 peace of mind.'

13. For a coherent perspective on the emergence of a cultural mafia, see Khare, 'The Bent and the Beautiful Age' (16 January 1997), 'Manufacturing Political Correctness' (27 August 1997), and 'Beyond Mr. Murdoch's Temptations' (10 September 1997), in *The Hindu*.

14. See Christopher Candland, 'Congress Decline and Party Pluralism in India', *Journal of International Affairs*, (New York: Summer 1997). Also see, Sheri Berman, 'The Life of the Party', *Comparative Politics* (October, 1997).

11 See Harish Khare, 'Beyond Kesri and Gowda', *The Hindu*, 13 April 1997. Also, Khare, 'Lessons from the Current Crisis', *The Hindu*, 9 April 1997. Also see Rajiv Shukla, 'Beyond Endurance', *Sunday*, 7 December 1997 for a glimpse into the difficulties in evolving a protocol of accommodation.

# The beginning of the end

VIR SANGHVI

IN party political terms, 1997 was the year of the Congress party. It was the Congress that brought two governments crashing down; the Congress that was portrayed as having forced an election on an unhappy country; and the Congress that went for the largest internal party election in recent memory to elect a 'truly representative leadership'.

It is, of course, entirely in keeping with the current state of the Congress that all of these achievements are essentially negative. When he withdrew support to the United Front government headed by H.D. Deve Gowda, Sitaram Kesri was pilloried by the country and called an 'old man in a hurry' by the outgoing prime minister. When he withdrew support a second time, the entire political establishment united against him and he ended up with an election he didn't want. And as for the party election, what should have been a great democratic experiment was as widely mocked as a Marcos-style poll whose chief objective was to legitimise Kesri's position.

Now, as India heads for an election that the Congress has prompted, the party seems unable to benefit from its actions. Nobody—not even Sitaram Kesri—believes that the Congress will

win this election. The best that the party can hope for is to be part of some new rag-tag coalition that will take office in the centre if the BJP doesn't make it.

Victory is unthinkable for a party that is bereft of charismatic leaders, empty of ideology, devoid of policies that appeal to its once loyal vote-banks, and uncertain about who calls the shots. Most of all, however, it is a party in the grip of dynasty that is nevertheless unsure whether a revival of the Nehru-Gandhi leadership will be the holy grail or a poisoned chalice.

Deep within its heart, the Congress still can't understand why it didn't get a majority in the 1991 election. Until the campaign began, everything was proceeding according to the script. Rajiv Gandhi refused to accept office in 1990 when the V.P. Singh government fell, even though it was clear that the Congress had the numbers, thanks to defections from the Janata Dal. Instead, Rajiv told interviewers that the Congress would not form a ministry without a mandate. It would rather support Chandra Shekhar.

Nobody within the Congress seriously doubted that Rajiv wanted to become prime minister again. But they knew the script. Like his mother

before him, Rajiv intended to give the new ministry a few months in office before forcing an election. And just as Indira Gandhi had been triumphantly swept back to power in 1979-80, they expected Rajiv to return to South Block.

**I**n 1979-80, the campaign had been predicated on a single theme: you gave this lot a chance and they let you down; put us back in and we'll give you stable government. It was an argument that worked best in the North (in any case, the Congress did reasonably in the South in both 1977 and 1989) where there was a two-horse race. If one lot failed, then the other lot was the obvious alternative.

Rajiv had been stunned by the Congress's reverses in the cow-belt in 1989. But he was certain that just as the voters had changed their mind between 1977 and 1980, they would do so again between 1989 and 1991. It was a certainty based on several miscalculations, one of which was fundamental. In 1977 and 1979-80, Indian politics may have been a two-horse race but now there was a new horse in the running. If voters were fed up of the Congress and Janata, they now had the option of the BJP.

There were other miscalculations. During Rajiv's term in office, the Congress lost its Muslim support-base. But when it was in opposition, it did nothing to win back this crucial vote-bank. On the other hand, the Janata Dal appeared to have sacrificed its government so that it could save the Babri Masjid. And despite V.P. Singh's unpopularity among the middle class, he had endeared himself to a powerful backward caste constituency by focusing on Mandal. More significant, he had unleashed social forces that continue to dominate cow-belt politics to this day.

Moreover, the Harijans, long and integral part of the Congress's

support base had begun to find their own leaders. The Congress ignored DS4 in U.P. when Rajiv was prime minister but was forced to come to terms with the organisation once it called itself the Bahujan Samaj Party. In 1991, Rajiv tried to buy over Kanshi Ram but the Congress made no significant attempt to try and halt the exodus of Dalits from its ranks.

And yet, everybody in the Congress believed that the party was headed for certain victory in 1991. In fact, as we now know, the Congress would not have improved on its 1989 performance had Rajiv not been assassinated. Even then, it failed to get an overall majority.

**T**he crisis of the Congress today stems from the same factors that led to failure in 1991. To those factors, the assassination added a new one. The Congress had no charismatic leadership: it was always the Nehrus and their followers. So, who was to succeed Rajiv?

When Sonia Gandhi turned down the job, the party chose Narasimha Rao, an old man in poor health (he had not contested the 1991 election because he wanted to retire to Andhra) on the assumption that he would be a transitional leader.

Narasimha Rao proved to be much smarter than the Congress had recognised and not only lasted the full five years but also purchased a majority for the party. But because he had no understanding of grassroot politics, he never addressed the issues that had led to the Congress's electoral decline. Such was his insecurity that he refused to let anyone else become Congress president while neglecting the organisation himself. Despite his undoubted shrewdness, he had certain angularities which further damaged the party's image with its votebanks. For one, he was very much the Brah-

min and liked to surround himself with other Brahmins, which did not go unnoticed by Harijans. For another, he was never very keen on Muslims, an image that stuck after the demolition of the Babri Masjid.

In late 1995, with elections only a few months away, Rao recognised that the Congress was heading for electoral defeat. The decline had not been stemmed – it had increased. His solution was as innovative as it was cynical. He was aware that there was a public uproar against corruption, much of it directed against his own government. He believed that if he could transform himself into a crusader against this corruption, he could engineer a wave of electoral popularity.

Accordingly, he used the Jain-hawala diary (which had been around for four years) against politicians from all parties. The innovativeness of the move lay in the fact that he acted against his own ministers including those, like V.C. Shukla, who were personally close to him. No prime minister had ever done that before and he was certain that the electorate would applaud his daring.

The irony is that the hawala failed in all respects – a few months later, the courts threw out the cases citing insufficient evidence. And far from helping Rao, the issue actually hurt the Congress electorally – it unleashed a wave of judicial and police activism whose greatest victim ended up being Narasimha Rao himself.

**B**ut Rao had one last gift for the Congress. In 1996, after the BJP failed to win the motion of confidence, the Congress should have led the coalition that formed the next government – after all, the coalition could not have survived without the Congress and the party was its single largest constituent.

But all the constituents of the United Front made it clear that they would not serve under Narasimha Rao as prime minister – after all, nobody ‘may’ have won the general election but Rao had clearly ‘lost’ it. Considering that the objection was to Rao as an individual and not to the Congress as an entity, the logical consequence would have been for Rao to resign and let a more acceptable leader take over. But not only did Rao refuse to quit as Congress president and CPP leader, the party did not have the guts to throw him out. Instead, it re-elected him unanimously.

That added yet another factor to the decline of the Congress: it came to occupy a strange nowhere land with regard to the government. It was not in opposition so it couldn’t attack its decisions beyond a point. And yet, it was not in government either, so it had no power or clout. Effectively, the Congress was in a situation where it shared the blame for whatever the government did. And yet, it got none of the credit for its more popular actions.

**C**ontrary to the general view, the Congress can handle being in opposition. It has managed to offer a credible challenge to non-Congress governments in such states as Madhya Pradesh and Kerala. And it did all right at the centre in 1978 (after Indira Gandhi split the party) and in 1990 (when it went for V.P. Singh).

The problem was not simply – as the same observers have said – that the Congress wanted power. It was that having placed it in a situation where it was neither in government or in opposition, the United Front went about seeking to destroy it.

Prime Minister H.D. Deve Gowda and some of his colleagues recognised that much of India was moving to a BJP vs The Rest situation.

There was less and less room for centrist parties in this scenario. The Congress was already in decline. So why not hasten the process and leave the field clear for the Janata Dal and its friends.

Narasimha Rao had provided Deve Gowda with the ideal weapon to finish off the Congress. The CBI and the judiciary were eager to target politicians. The public enjoyed the spectacle of former prime ministers being led away in handcuffs. And though the credit for the action went to judges and politicians, no blame seemed to attach itself to the United Front government even when the victims screamed ‘vendetta’.

**T**he many cases filed against Narasimha Rao were the first step. But then, Deve Gowda began targeting the rest of the Congress. An investigation was ordered into party funds. The Mescos group whose chairperson had been a Congress candidate in the 1996 election, was raided and prosecuted for technical violations in the manner in which it made contributions (by cheque) to the Congress.

Next, criminal prosecutions were planned against Congress leaders. The CBI raked up an old case relating to a murder of a Delhi doctor and attempted to implicate Kesri himself in the death. The civil aviation ministry referred Air India’s wet-lease aircraft to the CBI which promptly prepared to prosecute former civil aviation minister, Ghulam Nabi Azad. And so on.

As the pressure mounted, Congressmen turned on an increasingly worried Kesri. What was the point supporting a government that was determined to send them to jail, they asked. Kesri sent emissaries to Deve Gowda who argued, rather as Narasimha Rao had done in the hawala, that the CBI was autonomous.

This was a laughable response as the new CBI director, Joginder Singh was previously an obscure Karnataka policeman who Deve Gowda and the CPM’s Harkishan Singh Surjeet had foisted on the CBI. Nor could it be said that Deve Gowda was moved by piousness. Nothing in his record suggests that he is particularly intolerant of corruption.

Finally, just as the CBI prepared to tell the court that it was investigating Kesri in the murder of the Delhi doctor, the Congress acted. It unilaterally withdrew support to Deve Gowda and staked its own claim to form the government. In the process, it gave the impression that what had been a decision provoked by desperation was in fact part of a carefully worked out plan to seize power. This was a huge mistake because Deve Gowda was now able to claim that he was being pushed out only because Kesri wanted to be prime minister.

The following week must have been the most humiliating in Kesri’s life. He was pilloried by the media, told to get lost by every constituent of the United Front when he asked for support, and finally, abused in Parliament. Even when he eventually got what he had wanted all along – a new prime minister of his own choosing – it seemed like a defeat. The Congress had emerged as the new irresponsible untouchable of Indian politics.

**M**ore than the first crisis caused by the withdrawal of support, it is the second crisis, in December 1997, that showed up the weakness of the Congress. The first time around Kesri may have acted out of desperation, but he had at least acted of his own volition. The second crisis demonstrated that despite the massive support he received in the organisational elections. Kesri does not control the party. He did not want to withdraw support to

the Gujral government, yet such is the structure of the Congress that he was left with no choice.

Kesri believes that Arjun Singh leaked the Jain Commission report to the media. The report suggested that the DMK was involved with Rajiv Gandhi's assassins. In the circumstances, could the Congress continue to support a government that included the DMK? Singh's interest in all this was obvious. He had lost the last Lok Sabha election and had no interest in letting the 11th Lok Sabha continue. He had also been sidelined by Kesri and believed that Kesri and Prime Minister Inder Gujral were running the government for their own benefit to the detriment of the Congress. All he needed was an issue on which to break-up the UF-Congress relationship.

**T**he Jain Commission report was the perfect issue because no compromise was possible until the DMK left the government. Moreover, by recalling the Rajiv Gandhi assassination, Singh would open the door for the dynasty. As a self-confessed Sonia Gandhi loyalist, Singh hoped to score brownie points with I Janpath. The Sonia Gandhi factor would also scare Kesri. While he might disregard any other issue, he had no room for manoeuvre when it came to the dynasty; he would have to threaten to withdraw support if the DMK did not leave the government.

There was yet another bonus. If the Congress did withdraw support and an election resulted, then Sonia would feel duty-bound to campaign. After all, the election was caused because of the party's strong feelings about her husband's assassination. If she campaigned, then the Congress would benefit and so would Arjun Singh, as her chief lieutenant. This argument also appealed to Jitendra

Prasada, another leader who had been sidelined by Kesri. He threw his weight behind Singh's demand.

Sonia Gandhi's role in all this is not clear. The press believes that she prompted Arjun Singh. Her friends say that he acted on his own and that she resented being manipulated. In any case, they say, it is not certain that she will campaign now that an election has resulted.

**B**ut regardless of whether Sonia and Singh were acting in concert, what the episode proved is this: when it comes to the dynasty, the Congress has no choice. Kesri didn't want an election. Much of the working committee did not want an election. Virtually no Lok Sabha MP wanted an election. And if Sonia's friends are right, then she didn't want one either.

And yet, an election has resulted simply because interested parties were able to manipulate the Nehru-Gandhi factor in such a manner that the entire leadership of the Congress felt obliged to bring down the government and put its future on the line.

What does this say about the Congress? It is one thing to be led by a dynastic leader; quite another to be manipulated by the perceived sentiments of the dynasty, especially when no such sentiments have ever been publicly expressed.

Worse still, the episode suggests that there is nobody in the Congress with the guts to ask Sonia Gandhi a direct question. If Kesri believed that Arjun Singh was acting against the party's interests, then the obvious thing would have been for him to go and see Sonia and ask if she wanted him to withdraw support. It is bad enough that support would have been withdrawn merely because Sonia wanted it. But in this case it was withdrawn because people thought that Sonia 'might' want it. Nobody asked

her a direct question and she remained enigmatic till the end.

As it rushes into an election that it never wanted, the Congress is pinning its hopes on Sonia Gandhi. Because it has no policies with which to attract support and no charismatic leader to lead its campaign, it hopes that Sonia will plead for revenge for her husband's assassination.

Congressmen say that even if she doesn't take over the party and even if she doesn't expressly ask people to vote for the Congress, it will be enough as long as she plays the grieving widow and reminds people that her husband laid down his life for the country.

Obviously, such an approach to politics is cynical beyond belief and demonstrates the depths to which the Congress has sunk. But in purely political terms, it suffers from another drawback: it might not work.

**D**oes the dynasty still count for much? If all that the Congress needs is a Nehru-Gandhi at its head, then why did Rajiv Gandhi lose the 1989 election? Why would he have lost the 1991 election? And do people still care that Rajiv was assassinated and that the DMK may have offered shelter to some of his killers?

If the answer to that is 'it might work; it might not', then consider the flip side. The Jain Commission issue targets the United Front because it suggests that it is shielding the DMK. But it has nothing to do with the Congress's real opposition in the North: the BJP. On the other hand, a Sonia-led campaign might actually work to the BJP's benefit. It would once again portray itself as the party of national pride while the Congress would be accused of selling out to foreigners: Ram Rajya vs Rome Rajya.

Even from Sonia Gandhi's perspective, it is hard to see how it is

in her interest to stand. At present she enjoys a special status in the Congress because people believe that she counts for something. But when that belief is put to the test, she is certain to lose.

Even if Sonia campaigns nobody believes that the Congress can get an overall majority. Her greatest supporters say that she may help push the total from 140 seats to 180. That's the best case scenario and even if that comes to pass, all she'll have proved is that the famous Gandhi dynasty is now worth no more than 40 seats. How could this possibly be in her interest?

But what if it doesn't work? What if Rome Rajya becomes an embarrassment? If that comes to pass then she will, at a single stroke, have destroyed the image built up by three generations of her family. Is that a risk worth taking?

No doubt Sonia is aware of these calculations. That could be one reason why she is said to be unhappy about the election. And in all fairness to her, it must be said that she has repeatedly told friends that she is not in politics and that even if her intervention gets the Congress an overall majority, she doesn't want to be prime minister. She doesn't see what she would gain by taking the job. And she does see what she could lose.

**K**esri has now tried to put a happy face on events. He believes that the failures of two successive governments have finished off the United Front. He reckons that the election will throw up a hung parliament. The BJP will find it difficult, once again to find the allies required for a majority. It will be left to the centrist parties to form the government. And this time around the Congress will not support the ministry from outside. It will form a Congress-led coalition.

Indian politics is notoriously difficult to predict, so this scenario could come to pass. But there are other scenarios that are as plausible. After the Congress broke up in U.P. nobody believes that the BJP is untouchable any longer. It is possible that various United Front constituents will refuse to align with it. But it is as likely that a third of the Congress will break away to support a BJP government. In December 1997, when the BJP tried to break the Congress it managed 25 MPs, short of the one-third required for a split. But in a post-election scenario, that could change.

**M**ore worrying for the Congress is that even as the BJP was enticing its members, a sizeable chunk of the Congress led by Sharad Pawar was negotiating with the United Front. If Pawar could have brought 70 MPs with him, the United Front was ready to make him prime minister. In the event, Pawar failed to get the numbers required for a parliamentary majority.

Kesri, who was aware of all this, is now threatening to deny party tickets to Pawar's supporters and to others who are likely to cross the floor. Should he go ahead and do so, then it is almost certain that Pawar will start a regional party. The same is true in Bihar where Jagannath Mishra has threatened to start his own party. The result may be that the Congress ends up looking like a mirror image of the United Front: a loose confederacy of regional leaders who have nothing in common except for a desire to take office.

Should that come to pass, it will mean the end of the Congress as we have known it. And yet, would that surprise anyone? How long can a party get by without any ideology, without any support base, without any charismatic leadership and indeed, without any direction?

# Dark side of the moon

RUDRANGSHU MUKHERJEE

THERE is a joke doing the rounds in Calcutta. Jyoti Basu was given a special mobile phone by Bill Clinton. On this phone Basu could talk to anyone anywhere in the universe. Basu, to try out the instrument from the White House, rang his old comrade Promode Das Gupta in heaven. There was no comrade Promode Das Gupta registered in heaven. So Basu tried hell and spoke to his old comrade for a couple of minutes. He was aghast when the bill came to a million dollars. But Clinton saved him and picked up the tab.

Back home in Calcutta Basu was showing off his new phone in the party headquarters in Alimuddin Street and told Dasgupta's hand-picked boys – Biman Bose, Anil Biswas and Buddhadev Bhattacharya – about his conversation with their old mentor. The trio was very excited and wanted to speak to their guru immediately. Basu warned them about the cost.

They called hell nonetheless and spoke for about an hour. Much to Basu's surprise the cost came to less than 50 cents. On checking back, Basu discovered that this was the charge for a local call. The trio had merely called hell from hell.

The speed at which the story is circulating is an indication of how the Left Front's performance is perceived after 20 years. The response to the jibe from advocates of the Left Front is also a give away. They say things in West Bengal are much better than the state of things in Bihar or Uttar Pradesh. This cannot even be described as a back-handed compliment. The very fact that West Bengal has to be compared to India's lawless states is bad enough.

One reason why a story like the one above circulates among the Bengali literati is the performance of the Left Front in the sphere of industrial development. This has a long his-

tory. The left first tasted political power in West Bengal in 1967. There was an enormous amount of popular support and enthusiasm for the first non-Congress government. Nobody doubted the fact that the decisive presence in the United Front in West Bengal in the 1960s was that of the Communist Party of India (Marxist). Heady with power, they were in no mood to brook any compromises with business and industry. Trade unions became militant and this resulted in the notorious *gherao* movement which closed down many industries and business houses.

**T**here was also an escalation of violence in the state. This was a fall-out of the Naxalite movement which preached and practised the doctrine of armed revolution and terrorism. The cult of the bomb and the pipe gun affected the entire climate and atmosphere in West Bengal. The inevitable consequence of *gherao* and the instability which accompanies violence was a flight of capital from the state. From that flight the state has still to recover.

The next round of left electoral victories came in 1977 when the CPI(M) led Left Front reaped the harvest of its consistent opposition to Indira Gandhi and the Emergency. This victory, unlike the ones in the late sixties, has proved to be more permanent. After 1977, the CPI(M) has forgotten what it means to lose in elections. But its 20 year long tenure in power did not bring about any major changes in the investment climate of the state. The Left Front, at least upto 1994, made no attempt to woo capital and persisted in its anti-capitalist rhetoric.

On the labour front, there were no major strikes and actions but the trade unions continued to erode whatever little work ethic was left in the

state. To maximize material gains for its members without inculcating in them the responsibility of work became the hallmark of the trade union movement. Workers remembered that they had wages to collect but forgot they have a duty to perform. The absence of strikes was part of a deliberate strategy to project the image of a docile labour force and a stable and peaceful state.

The reality was even harsher. Any attempt to set up a production unit of any size meant encountering the muscle power of the local party cadres who demanded jobs for the boys. There was also the mindless obstructionism of bureaucracy, the party and officials. This transformed West Bengal into an industrial wasteland. The Marxists were not unaware of the steady decline as a convenient stick to wield against the central government. West Bengal's economic decline was a direct product, the left argued, of the centre's discrimination.

**W**hile the West Bengal communists fought their mock battle against New Delhi, the currents of world history turned against the established communist regimes. Like ninepins, the totalitarian regimes of Eastern Europe collapsed. Millions of people, weary of starvation and a diet of lies, reacted against inhuman oppression and threw the so called dictatorship of the proletariat into the dustbin of history. Mikhail Gorbachev's *glasnost* transformed the political face of a large part of Europe. The tremors of this collapse were inevitably felt in all communist parties across the globe. Some changed their names and many changed their agenda.

But the tides of history did not succeed in shaking the complacency of the CPI(M). It stuck steadfast to its true Stalinist colours. Its programme and its rhetoric remained undisturbed

by any distant cannonade from the streets of Moscow. Within India, the party launched itself into a crusade against the policies of liberalization and globalization which had been initiated by the then prime minister P.V. Narasimha Rao and his finance minister Manmohan Singh.

**F**rom the middle of 1994 there was one voice which was heard over the cacophony which the CPI(M) raised against the new economic policies. This was the voice of the chief minister of West Bengal, Jyoti Basu. A veteran communist, his discomfort about his party's opposition to liberalization and the dismantling of the socialist structure had no ideological moorings. His unhappiness grew out of his concern about the verdict of history on his chief ministership. His ambition had always been to go down in history as West Bengal's most successful chief minister. Instead, by faithfully toeing the party line, he was running the risk of going down in the history books as the chief minister who left behind an industrial desert in the state over which he ruled.

Basu's ego dictated that a change was required. In his speeches and public pronouncements from the second half of 1994, he made it clear that he wanted to bring back capital to the state. He invited foreign companies to invest in West Bengal and promised them co-operation. He sounded a warning to trade unions by announcing that unnecessary strikes and cease-works would not be tolerated. If necessary such agitations would be broken with the help of the police. To make his intentions clear Basu refurbished the West Bengal Industrial Development Corporation and appointed Somnath Chatterjee as its chairman.

This appointment was by itself significant. Chatterjee is well known as a communist parliamentarian but he

is not known, to enjoy any special importance in the party hierarchy. By choosing him, Basu was obviously indicating that he wanted somebody from outside the party apparatus, somebody who would be more flexible and amenable to change. He wanted to be rid of the party mindset, to be free of the official straitjacket.

Under the changed circumstances and because of some heroic wooing of international capital by Chatterjee, by the end of 1994 a staggering sum of Rs100 billion was promised for industrial development in West Bengal. Subsequently, even more sums were promised. But the euphoria seems to be dying down. Promises are not materializing into actual investments.

**T**he reasons for this are not far to seek. Economic development, by definition, cannot be a one man enterprise. Basu discovered that his path was not as smooth as he had thought it would be. The CPI(M) which had been nurtured on anti-capitalism found it impossible to forfeit its old vocabulary. Looking at industrialists as friends rather than as class enemies proved to be impossible. Basu failed in as simple a thing as privatizing the Great Eastern Hotel, a state-run loss making enterprise which a French conglomerate wanted to buy, because he could not get the unions to agree. Work culture, once killed by communist trade unions, refused to be resurrected.

In a very real and tangible way, in his attempts to inaugurate an industrial renaissance in West Bengal, Jyoti Basu was fighting his own past. His failure can only bring to mind the following lines of a German radical, long forgotten and much abused by his friends and foes alike: Men make their own history, but they do not make it just as they please; they do not make

it under circumstances chosen by themselves, but under circumstances directly encountered, given and transmitted from the past. The tradition of all the dead generations weighs like a nightmare on the minds of the living.

**I**f CPI(M)'s past refuses to unshackle West Bengal's economic future, in another vital arena the CPI(M) has killed West Bengal's past to ensure its own presence. This is the arena of culture.

From the forties, the predominant cultural idiom of the Bengali intelligentsia has been left and radical. The intelligentsia, as one commentator noted, saw itself as an active agent of transformation, standing outside the systems of privilege and exploitation through which rich businessmen extracted huge profits while workers were left without subsistence, or landlords and rich peasants hoarded large stocks of grain while small peasants and sharecroppers sank deeper into debt.

Cultural creation increasingly became an activity of self-questioning; the more the intelligentsia asked itself what its role was to be, the more political the answers became. Dissent, self-questioning and a heightened social and political consciousness informed the world of education and culture. This was noticeable in universities, in creative writing, in the plays put up by theatre groups outside the commercial stage, and in films produced by directors who did not conform to the Tollywood formula. It was evident even in street graffiti. More often than not, the influence of the then undivided Communist Party of India was crucial in the making of this tradition.

The first muffling of this tradition of dissent came in the early seventies, first under Siddhartha Shankar Ray and then under the Emergency.

Formal affiliation or sympathy with either the CPI(M) or the CPI(ML) posed a danger to life. Under severe state repression thousands of political activists were shot by the police and by hired hoodlums. When the left came to power in 1977, there was the natural expectation that this tradition would be carried forward. But this did not happen. The principle reason for this was the Left Front's quest – and in this respect as in all other spheres, the CPI(M) was the driving force – to acquire complete control on all matters relating to education and culture.

**A**s an organized and cadre-based party, the CPI(M) went about the matter with great method and discipline. Using the strength of its organization and the power of governance, it reached a position where nobody could be appointed to any post unless he was a party loyalist. On one memorable occasion when a non-CPI(M) candidate got himself appointed vice-chancellor of Calcutta University, through a quirk of the complicated electoral system and with some help from the chancellor, the party used its muscle power to bring the university to a standstill for five years.

Another victim of the left's short-sighted policy was Calcutta's premier undergraduate institution, Presidency College. Under the guise of greater democratization, the left decided to ignore the special status Presidency College had enjoyed among the government colleges. It decided that Presidency should be treated at par with the other government colleges. The immediate consequence was an indiscriminate transfer of teachers from Presidency to the mofussil colleges and from the mofussil to Presidency.

Many of the best teachers of the college left government service and sought employment elsewhere. Oth-

ers who had never taught a small honours class or had never known the tutorial system came to teach in Presidency. The fallout was an immediate decline in standards. Another long term result of this policy was the decline of the college library, which at one time was one of the best in the city. Because the CPI(M) refused to recognize the special status of Presidency, it refused to take seriously the demand and the recommendations of the University Grants Commission that the college be made autonomous and be given deemed university status.

Once this control was in place, the CPI(M) suddenly had no dearth of supporters. Teachers who had served for years in the mofussil and were eager to come to Calcutta or keen to get university appointments, overnight became party sympathizers. Loyalty prevailed over merit in transfers and appointments. There were some remarkable cases where persons with no left affiliations were appointed to high posts because they cultivated the right persons and made the right ideological noises.

Another example of the same trend is seen in the theatre movement which was once vibrant and an important part of Calcutta's cultural life. Through a judicious disbursement of state patronage in which loyalty counted for everything, the theatre movement has been reduced to a position of dependence. This is reflected in the choice of themes and the complete absence of experimentation.

Under twenty years of left rule, dissent in culture has not been at a premium. In fact, the culture of dissent has been stilled. In human beings, twenty is the age of youth and rebellion. In politics, it represents a comfortable and cosy middle age. In the words of the poet Samar Sen, the love of young men has become the lust of old age.

## Ambedkar and the Dalits

NALINI PANDIT

IN the movement for emancipation from the shackles of the caste system in the first half of the 20th century the Dalits chose B.R. Ambedkar as their leader. Ambedkar is iconised today, his statues erected in Dalit settlements, his name associated with many institutions and any perceived dishonour to him is likely to lead to violence. However, 40 years after his death it would be worthwhile to trace the path Ambedkar set out on, the progress which the Dalits have made and the obstacles, internal and external, they face.

After graduating from the University of Bombay in 1913, Ambedkar, with the help of a scholarship from the ruler of Baroda State, went to Colum-

bia University in the USA for higher education. He stayed there for four years and obtained an M.A. and Ph.D. in Economics. John Dewey was a professor at the university and is remembered, after Jefferson, as a philosopher who contributed to the development of democratic thought. Jefferson believed that God gave certain natural rights to all human beings and political democracy was necessary for enjoying these rights. If man were free of the fetters put on him by tradition, freedom in various fields would naturally follow – science, culture, art and industry. Man is ultimately responsible to God for his actions. Believing that restrictions imposed by society diminish the fundamental freedom of the individual, Jefferson sought to minimise government interference.

**D**ewey did not agree with the proposition that there is a basic contradiction between the individual and society. If man is to enjoy real freedom, it is necessary to consider the social conditions conducive to the perpetuation of such freedom. Democracy is not merely a form of political system, it is a way of life. It is expressed through the feelings which people have for each other and its success is measured by the effect it has on their lives. Naturally, those who believe in freedom and democracy must reflect on the nature of the social system.

Dewey believed that man is a moral animal. The relationship of men to each other has both a social and moral side.<sup>1</sup> During his stay in the US, Ambedkar was deeply impressed by Dewey's philosophy. He accepted the liberal values of liberty, equality, fraternity, rationality and democracy and

spent his life in giving a social democratic basis to the political democracy which was slowly taking shape in India in the 30 years after the First World War.

**O**n returning to India in 1923 after finally completing his education in the US and then in UK, Ambedkar established the Bahishkrit Hitakarini Sabha, a society for the welfare of the untouchables. Satyagrahas for the right to use water at a public tank in Mahad in Colaba district and over the right to enter temples at different places in Maharashtra were organised but these were not successful. So after the Round Table Conference held in the UK by the British government he withdrew these agitations and concentrated his efforts on securing certain political and economic rights for the Dalits.

In the political sphere, Ambedkar worked at two levels. In 1917, Montagu, the Secretary of State for India in the British Cabinet, had made a statement in Parliament that the goal of the British government was the establishment of a responsible government in India in a gradual and peaceful manner. Ambedkar used this statement to press for certain special rights for the Dalits in a future constitution for India. He did not participate in the national movement under Gandhi's leadership, but tried with the help of the British to pressurise the Congress to achieve his objectives. For this reason Arun Shourie has, in a recent book, accused him being a stooge of British imperialists.

Shourie's judgement shows an ignorance of the condition of the Dalits. The untouchables, though Hindu by religion, were not allowed to enter temples or listen to the scriptures. They had no right to education. It was not only their touch but even their shadow which was considered

polluting. They were forced to reside outside village boundaries and follow the meanest of occupations. Untouchability through sanction of religious scriptures left no outlet available to them to improve their position in society.

The Mahars to whom Ambedkar belonged were in a desperate position as they had no occupation of their own. The Mahar was the lowest grade government servant in the village in medieval times. He assisted the headman in collecting government revenue and acted as a watchman for the village. Other men of the caste worked as agricultural labourers in certain seasons for extremely low wages. The East India Company provided them an opportunity by recruiting them in their army. Some rose to become lower grade officers. Education was made compulsory for children in military colonies and Ambedkar's father was a school teacher in one such colony. While the British opened their schools to students of all communities, they did not legally abolish untouchability as it was sanctioned by religion. However, they established a system which was based on freedom of occupation, of exchange and contract.

**U**nder British rule a new English educated middle class emerged in the country which imbibed the ideas of individual freedom, nationalism and democracy. Yet, as most of them were from the higher castes, they were unwilling to accept the idea of equality and welcome untouchables in their midst. Even Tilak, the most respected leader of the Indian National Congress before Gandhi, was opposed to social reform on grounds that it would divide the people and disrupt the national movement. Gandhi accepted the removal of untouchability as part of his constructive programme, but Congress workers were not enthusiastic

about it. Therefore, we cannot blame Dalit leaders if they feared that a transfer of power from British to Indian hands would lead to a revival of the hated *chaturvarna* system.

Ambedkar's strategy was to force the Congress to agree to a communal settlement before the transfer of power. 'A question is asked,' says Ambedkar, 'as to why a communal settlement is necessary for a political settlement. The answer to the question is to be found in the wrong social system, which is undemocratic, far overweighted in favour of the classes and against the masses, too class conscious and too communal minded. Political democracy will become a complete travesty if it were built upon this foundation.'<sup>2</sup> So he endeavoured to find a solution to the communal deadlock which had arisen due to differences over the nature of the future constitution of India between representatives of the Congress on the one hand and Muslims, Dalits and other minorities on the other.

**A**s the process of political reform gained momentum, Ambedkar felt the need for a party which would be an alternative to the Congress. The Constitutional Law of 1935 had given reserved seats to the Dalits both in the provincial and central assemblies. Ambedkar knew that it would not be possible for the candidate of a Dalit party to get elected on a reserved seat with only Dalit votes. So with the help of his friends in the Social Service League, he established the Independent Labour Party (ILP).

Eighteen candidates of this party, including Ambedkar, were elected to the Bombay Legislative Assembly in 1937, 13 of whom were on reserved seats and 5 on general

seats. Ambedkar put forward two new bills in the Assembly, one for the abolition of the Mahar Watan which bound the Mahar to the village on meagre wages and the other, for the abolition of the Khoti system (zamindari) in the Kokan region. His party being in a minority in the Assembly, both the bills had to be withdrawn.

The ILP was also interested in the problems of industrial labour. When the Congress government in Bombay brought forward a bill placing restrictions on trade unions and making arbitration compulsory in industrial disputes, Ambedkar criticised the bill in the Assembly and asked his followers to join the general strike organised by the communists to oppose it.

**A**mbedkar looked upon the Second World War as one between democratic and fascist forces and willingly accepted the offer of a seat in the Viceroy's executive council. As negotiations for the transfer of power started, he felt the need for a party of the Dalits to protect their interests in these negotiations. So in July 1942 when Stafford Cripps came to India for discussions with Indian leaders, he disbanded the ILP and established the Scheduled Caste Federation (SCF). The SCF contested elections to the provincial assemblies held in 1946 but no candidate was elected. The results of the elections held in 1952 for selecting members to the first Parliament under the Constitution of independent India were no different. Defeat in these elections convinced Ambedkar of the necessity of forming a broad-based political party. However, before such a party could come into existence, death overpowered him in 1956.

In September 1943, Ambedkar, then a member of the Viceroy's Executive Council, was invited by the Indian Federation of Labour to deliver

a lecture at the all India workers study camp held at Delhi. He pointed to the weaknesses of parliamentary democracy and urged the labourers to form a party of their own and capture political power. According to Ambedkar the two main defects in the ideology of democracy were the sanctity of contract, which gave the strong an opportunity to defraud the weak and a failure to realise that political democracy cannot succeed without social and economic democracy. As a result society is divided into two classes – the rulers and the ruled and the government is in reality a government of a hereditary subject class by a hereditary ruling class.

Ambedkar held the labouring classes responsible for this. The labouring classes, he said, have failed to acquaint themselves with literature dealing with the government of mankind such as Rousseau's Social Contract, Marx's Communist Manifesto, Pope Leo XIII's Encyclicals on the conditions of labour and J.S. Mill's On Liberty.

**A**nother fault of the labouring classes, he argued, was that they lacked ambition to capture government as a necessary means of safeguarding their interests. They formed only trade unions. The control of government must be a target for labour to strive for. An objective of the trade union movement should be to abolish the present system in which they are made to work as slaves on meagre wages and to establish a new social system which in a real sense will be organised on the basis of liberty, equality and fraternity. This would require a basic social transformation.

Political power, he said, was a powerful tool to bring about such a basic transformation of society. He advised the workers, therefore, to form a political party of their own and

2. B.R. Ambedkar, *Ranade, Gandhi and Jinnah: Writings and Speeches*, Vol 1, p. 224 Government of Maharashtra.

work for this transformation.<sup>3</sup> The type of transformation Ambedkar had in mind is clear from a memorandum which he submitted to the Constituent Assembly on behalf of the SCF. In this memorandum he recommended that the nationalisation of basic industries, nationalisation of agricultural land and leasing it to cooperatives of farmers, irrespective of caste and religion, and compulsory insurance of all adult citizens should be made a part of the Constitution of India.<sup>4</sup>

The party which he had in mind was to be formed on the basis of the unity of labourers and Dalits. The Dalits, he said, had now come to understand the injustice which the Hindu social system had imposed on them for hundreds of years. So they were expected to move politics in the right direction. Since they had reserved seats in the legislative assembly, a labour party could benefit from them as the ILP did in the past.<sup>5</sup>

**A**fter Ambedkar's death his followers established the Republican Party of India. But it did not become a party to be reckoned with. The Dalits in Hindu society had to fight not only class oppression but also caste oppression. In 1936, Ambedkar had reached the conclusion that a struggle against caste would not succeed within the Hindu fold. So he decided on conversions as a strategy. After considering different faiths he concluded that Buddhism was more consistent with modern science, humanist moral values and the cultural ethos of this country. Naturally, after his resignation from the Nehru cabinet, he devoted time to studying Buddhism and became a

convert in October 1956 along with a large number of his followers.

As Ambedkar died within two months of conversion, he had no time to think in any detail about the ideology or the organisational structure of the new party. His leftist friends in the ILP had no place in the SCF. So they joined other left parties. The post Independence generation of educated Dalits had not yet reached an intellectual level where they could formulate an ideology of their own. Naturally, an ideological vacuum was created in the new RPI.

**M**oreover, within a few days of his conversion, Ambedkar delivered a speech on Buddha and Karl Marx at the World Buddhist Conference held in Nepal. Both Buddha and Marx, he said, opposed exploitation and recommended public ownership. The only difference between the two was that Marx advised violence for achieving the ends while Buddha preached non-violence.<sup>6</sup> This speech, which cannot be defended on scholastic grounds, created ideological confusion in the movement with certain groups espousing Marxism and others Buddhism. It also led to splits within the RPI.

Ambedkar was essentially an intellectual, not an organiser. He was unable to establish a strong organisation in his own lifetime to fight for the rights of the Dalits. Though organisations such as the SCF were formally created, they primarily worked as instruments for mobilising people for mass demonstrations. But after demonstrating people dispersed and nothing remained. One cause of this organisational weakness was the suspension of satyagrahas for obtaining civil rights. In a satyagraha, those who participated risked a cane charge, flogging, imprisonment and confiscation of property by the government. It tested

the devotion, endurance and courage of the participants and helped the formation of an organisational corps. The suspension of satyagraha meant that such a spirit could not be inculcated in the movement.

**A**mbedkar fought for the rights of all scheduled castes in India. However, the base of his movement remained confined to Maharashtra, spreading to only a few other SCs in India such as the Chamars in U.P. This was because in most provinces of the North the SCs were more or less treated as serfs. In Maharashtra, the Dalits belonged mainly to three castes — Mahars, Chormakars and the Mangs. The Mahars were the first to migrate from the village and entered the army. They were also the first proletarians and hence became conscious of their political and economic rights. The Chormakars and Mangs on the other hand, even after migration to the towns, continued with their traditional occupations or worked in the unorganised sector.

After the principle of reservation in government jobs was accepted, the Mahars being more educated managed government jobs easily while the others could not compete with them. This created a rift between Mahars and the others. In 1935, when Ambedkar publicly declared his intention to convert, the Chamars feared that if they changed their religion, caste Hindus might boycott them. At this time Ambedkar organised a separate conference of Mahars to elicit their support for conversion. However, no similar effort was made to convince the Chamars and the Mangs about the desirability of conversion. So the movement for conversion remained confined to the Mahars.

Today, the Dalit community is divided into a small, educated middle class which has risen as a result of res-

ervations, and a large class of poor agricultural labourers, small farmers and workers in the unorganised sector. The movement is dominated by the middle class and rarely goes beyond reservations. The redistribution of land and security to agricultural labour is not part of their agenda. After Ambedkar, Dadasaheb Gaikwad – his trusted lieutenant and an experienced worker – organised satyagrahas on the demand that fallow lands with the government be distributed to the landless. He succeeded only to a limited extent. But the 'Reformed RPI', i.e. the middle class group, did not support him. After his death the Dalits and some small leftist groups in Marathwada attempted to persuade the state to legalise the occupation of village grazing lands which were brought under cultivation by poor Dalits of the locality. The demand was partially accepted by the state, but this occupation of grazing lands created tension in the villages and led to atrocities on the Dalits.

**T**he basic cause of the weakness of the RPI can be traced to the left parties. Being a minority, the Dalits needed the support of some non-Dalit groups to get their candidates elected to the legislative assemblies or Parliament. With whom to form an alliance, has always been a cause of splits within the party. Second, when a relatively powerful leader does emerge, the ruling party such as the Congress tries to co-opt him into its power structure and neutralise the movement. Today, the different groups in the RPI do come together over questions related to Ambedkar, such as the renaming of the Marathwada University, the Riddles of Hinduism or the desecration of Ambedkar statues. But this cooperation does not last long: once the problem is over, they revert to their separate existence.

The failure of the RPI is in a way the failure of all progressive forces. The Dalits who live in villages and in urban slums are the real proletariat in the Marxian sense, i.e. those who have nothing to lose but their chains and a world to win. They suffer from both caste and class exploitation. The left assumed that caste was a part of the superstructure and would disappear with the growth of capitalism. This did not happen. Caste as a social system has broken down and the Indian Constitution has given every citizen freedom of education, freedom of occupation and the right to vote. But untouchability still continues in our villages. The food, clothing, language and behaviour of each individual depends on his caste, and most people marry within their community even today.

**N**aturally, it has also influenced our political system. Each party is based on a particular caste cluster: Even the left, though indifferent to the problems created by the caste system, has not completely absolved itself from this system. It has failed to provide a praxis that the socially depressed population needs. It continues to be dominated by upper caste leaders who, though sincere and selfless, cannot consciously overcome their caste in both style and intellectual orientation. Ambedkar envisaged a party of the Dalits and the labourers to fight against their two enemies, Brahmanism and capitalism. In the present circumstances such a party would have not only to shape the new consciousness among the hitherto oppressed groups such as the Dalits and the lower OBCs for social equality and political power, but simultaneously struggle against imperialist designs and fascist forces. In the current political situation that prevails in India today such a party remains a distant dream.

# Kashmir: getting real

BHARAT KARNAD

WITH the Cold War research gravy-train reaching a terminus, American think-tanks and the academia are frantically searching around for another long-haul vehicle. Until such time as something else is found Kashmir, apparently, will do. For starters, the militancy there had — note the past tense — shades of Bosnia and of the Palestinian *intifada* on the West Bank. Then there is the assiduously nursed myth about Kashmir as a 'flash point' for nuclearised conflict in the subcontinent.

And, to top it all is the western hostages issue which makes it perennially topical. What with the hostages' family members making periodic, futile, rounds in the Valley and the possibility of the next body suddenly turning up somewhere, prompting the CNN to rush in with camera crews, the Kashmir issue is always an incident away from getting back into the glare of international publicity.

*1947-1997, The Kashmir Dispute at Fifty: Charting Paths to Peace, Report on the Visit of an Independent Study Team to India and Pakistan.* Kashmir Study Group, Larchmont, New York, 1997.

*The Crisis in Kashmir: Portents of War, Hopes of Peace* by Sumit Ganguly. Woodrow Wilson Center Press and Cambridge University Press (Foundation Books, New Delhi), 1997.

*Wars and No Peace Over Kashmir* by Maroof Raza. Lancer Publishers, New Delhi, 1996.

*The Peacekeepers of Kashmir: The UN Military Observer Group in India and Pakistan* by Pauline Dawson. Popular Prakashan, Bombay, 1995.

That Kashmir is at all rivetting to an American audience on the other side of the globe is because it encompasses some of the more intellectually fashionable concerns presently agitating the attentive public in the United States — N-war, Islam, terrorism, cultural and civilizational clashes, human rights (HR), ethnic nationalism, and Third World strife. They may not understand the issues very well, but damned if they don't want their government to have a say in the matter!

The American public's anxieties translate directly into governmental interest which leads to oodles of private and taxpayer's money pouring into related research. These funds keep the innumerable think-tanks and professional analysts busy, and in business. Combine this with Washington's long standing desire for an activist role in South Asia, and one can see why many policy wonks and wannabees in American universities and elsewhere are spewing forth, when not novel then banal and politically impractical, solutions for the Kashmir problem.

The Report by the US-based Kashmir Study Group, financed by M. Farooq Kathwari, a Kashmiri (whether originally from the Indian or the Pakistan side of the Line of Control is nowhere indicated), is the latest such work produced by a team of American South Asia experts, most of them well-known and well-regarded.

Kathwari is Chairman of the Board of Ethan Allen Inc., a New York financial consulting firm of repute. (The other prestigious report, *A New Policy Toward India and Pakistan: Report of an Independent Task Force*, was released in early 1997 by the Council on Foreign Relations. An Asia Society Report on The United States, Japan and South Asia: Cooperation on Nuclear Challenges will soon be out. It reworks the by now stale scenario of a nuclear war between India and Pakistan triggered by hostilities in Kashmir, but this time with the Japanese anti-nuclear weapons sentiments and joint US-Japanese nonproliferation pressure as sub-text.)

Each of these studies is touted as being written by 'independent' groups, presumably to preempt raising the hackles of its intended readership, particularly in India and Pakistan. This word is a code for the absence of US Government funding for the project and, therefore, for the supposedly dispassionate and 'balanced' nature of the research carried out and of the remedies suggested.

**T**he Council on Foreign Relations (CFR) Report written by a collection of experts chaired by a former assistant to President George Bush, Richard N. Haass, relies on *no* field research as such but rather on the cumulative experience, expertise and wisdom of people who have dealt with this region for years. The Report of the Kashmir Study Group (KSG) authored by a smaller but equally impressive array of American analysts, on the other hand, is the result of two study teams headed by Ambassador Howard Schaffer (who retired as the Principal Deputy Assistant Secretary of State for South Asia) and Ainslee Embree of Columbia University travelling respectively to India and Pakistan. The aim being to sample informed

Indian and Pakistani opinions and viewpoints on a comprehensive set of issues relating to Kashmir and to use these to configure a viable design for peace.

American solution-mongering on Kashmir may be more subdued now, but it is not any less intrusive. This is reflected both in the CFR and the KSG Reports. Indeed, the only difference in the recommendations of the two studies seems to be that the Kashmir Study Group, while hewing to the same basic line, has fleshed out its solutions a little more fully. This indicates that the dispute is of such long standing, there's little new that can be offered by way of a panacea. The upside is that it precludes the airing of too fanciful solutions. If it isn't new or fanciful, then banality inevitably reigns.

**C**onsider the relevant CFR recommendations (short enough to be quoted here *in toto*) to get an idea of what the Americans believe is a workable solution to achieve 'limited objectives'. 'The United States, in concert with other governments, should seek to lower tension and violence, reduce military forces, and restore political normalcy in Kashmir. Specifically, India and Pakistan should be urged to undertake regular and sustained bilateral negotiations directed toward a ceasefire and a halt to military actions (other than patrols for strictly defensive purposes) along the line of control in Kashmir; the reconstitution and increased monitoring of peacekeeping machinery along the boundary, supplementing UN-sponsored with bilateral mechanisms if possible; and renewed negotiations for a separate, rapid agreement over the withdrawal of both Pakistani and Indian military forces from their present positions on the Siachen glacier.

'Pakistan should be urged to end direct and indirect military support to

Kashmiri insurgent organizations. And India should be urged to continue and accelerate moves to resurrect the political process in Kashmir, including grants of amnesty for those insurgents willing to abjure violence, punishment for those members of the security forces involved in human rights violations, and conduct of discussions with the newly elected Kashmiri government about the degree of autonomy for the state within the Indian constitution.' The KSG Report hoes much the same ground.

The trouble is that all this 'should' stuff – India and Pakistan *should* do this and *should* do that, is like most free advice doled out by parties unrelated to a dispute – high-minded, well-intentioned and useless. Besides, the two countries are doing many of these very things to the extent that they are, from time to time, deemed politically feasible by Delhi and Islamabad. The controversial features, such as they are, in the CFR and KSG reports, are not new but go to the heart of the matter. They are concerned separately with the instrumentalities for keeping the peace on the *de facto* border and for ensuring that human rights are respected by all concerned.

**B**y way of reconstituting the monitoring machinery as per CFR guidelines, the KSG is of the view, for instance, that the United Nations Military Observer Group for India and Pakistan (UNMOGIP) be revitalised and the peace-keeping be augmented by establishing what it calls a bilateral Joint Border Security Group (JBSG). The JBSG-idea and the revival of UNMOGIP, alas, run up against an insurmountable barrier – the Indian government's basic if belated recognition that involving the UN in Kashmir by Prime Minister Jawaharlal

Nehru in 1949 was a horrendous mistake. The country has paid and is continuing to pay heavily for this and its resolve, therefore, not to entertain hereafter international nose-pokery in any guise.

In fact, Nehru also quickly realised his mistake by which time the Big Powers had sunk their teeth into it. However, what the Indian government did succeed in doing was to hamstring the UNMOGIP by circumscribing its operational ambit and capabilities with attenuated reporting procedures and bureaucratic norms. UNMOGIP, formed in the wake of the 1949 Karachi agreement, was, as a result, unable effectively to carry out its allotted task. This much is evident from Pauline Dawson's study of its working record.

**T**he history and current uncertainty attending on the status of UNMOGIP, detailed by Dawson, indicate just why the prospects of a monitoring agency, like JBSG, are bound to be bleak. The widespread and regular infractions of numerous bilateral and international accords and agreements by India and Pakistan since 1949 – scrupulously recorded by UNMOGIP – show what the two countries believe their respective politico-military stakes to be on the disputed border in particular and in Kashmir in general. It also shows the sort of niggling armed actions they are prepared to undertake on and across the Cease Fire Line (CFL) or LOC, to preserve them, even at the risk of triggering a full-blown war.

Indira Gandhi, conceding that a quintessentially internal matter relating to accession was allowed wilfully to be transformed into a full-blown international issue, attempted to undo the damage her father had done. But instead of compelling President Zulfikar Ali Bhutto to convert the Line of Control (LOC) into the international

boundary, which he was in no state to resist, she settled for his agreeing to treat Kashmir as a purely bilateral matter vide the 1972 Simla Accord. An opportunity for a final solution, which is unlikely ever to fetch up again, was thereby passed up. Nevertheless, as a result of this accord, New Delhi formally deactivated UNMOGIP on its side of the LOC.

**P**redictably, the Pakistan government soon rediscovered the value of the UNMOGIP as a lever to keep the UN hand in the dispute and of the benefits accruing from its twin policy of aiding and abetting the Kashmir insurgency and of 'internationalising' the dispute. They publicized it as an unresolved matter pregnant with the possibilities of devastating (in recent years, nuclear) war and concerned variously with self-determination, religious persecution and human rights abuses. Multilateral, including UN, Islamic and human rights fora couldn't, in the event, but get engaged. But if the UNMOGIP is dead as far as India is concerned, there's little likelihood of something like the JBSG getting New Delhi's nod.

To monitor 'compliance with human rights covenants', the KSG ask for 'official encouragement' of local civil liberties organizations, which is fine. They then plead for the 'removal of barriers' against 'international humanitarian agencies', like Amnesty International, the International Committee of the Red Cross and Asia Watch, and go on to suggest that agencies be set up, preferably under the aegis of the South Asian Association for Regional Cooperation (SAARC), to police the human rights situation region-wide. Transparently, the last is nothing more than an after-thought to cover up for the prospective shenanigans of Amnesty International and outfits of that ilk. And, in any case,

such concessions will beget more problems, even if they 'better assure India's credibility' as the KSG claim.

The CFR and KSG reports are, where Kashmir is concerned, at best Pollyannaish exercises and it is just as well that they have passed without creating much of a ripple here. But that said, for purely academic reasons, there are some striking consensus views elicited by the KSG team visiting Pakistan. These views, perhaps, are born as much of frustration and exasperation as a gradual adjustment to the reality of India's preponderant political, economic and military power in the region and growing presence in the world. They are notable only because they point to an eventual, mutually acceptable, solution revolving around the status quo, i.e., the LOC as the international boundary.

**T**here is a second, less credible but more complicating, sub-genre of 'American' research in this area – the writings by Indians in the US 'doing' South Asia for a living. In trying to establish their bonafides or sucking up to the Establishment – take your pick – they end up not just dancing around the official US line, but extending it; i.e., they end up pushing a more American line than the Americans these days are prepared to.

In the event, such people and their 'research findings' could persuade a few of the generally uninformed American influentials in and out of government, who might mistakenly assume that these expat Indians (i) have an intuitive and substantive grasp of the subject (which is arguable) and, (ii) represent a strong or popular viewpoint in India (which they clearly don't).

Moreover, if it is a well-known institution 'sponsoring' the said 'research', like the Woodrow Wilson Center in Washington, DC, as in Ganguly's

case – there is the danger of a flawed assessment of the situation laced by faulty analysis based on questionable premises being inputted as a possibly winning idea into US policy considerations. Official American thinking about South Asia is sufficiently skewed as it is to need no such help.

But in this latter category there is the occasional report of some substance. Like the 'Documented Briefing' by Ashley Tellis for the RAND Corporation and the US Army's Arroyo Center's Stability in South Asia released a few months back. Specialists working in think-tanks in the thick of US military policy-making tend to be far more realistic in their analyses than individuals and institutions intent on realizing private, idealistic agendas or pursuing mainly academic schemes of marginal to questionable utility.

**T**his is not the place to review the RAND Report, but Tellis (a Goan presumably, from Mumbai) in arguing the various policy options open to Washington, does so in measured terms, coming down ultimately on the side of prudent caution, of reconciling to the current and future military imbalance in the subcontinent favouring India. Considering that he is an NRI endeavouring to make good in America, it is no surprise that he ends up with advice to exploit the evolving situation in the region in a way such as to advance US national interests. Still, up to that point his albeit linear and somewhat simplistic analysis is, from the Indian perspective, at least not egregiously wrong.

(The only political scientist of note of Indian origin in North America that I can think of who, over the years, has consistently and unabashedly argued India's case and India's national interests from India's point of view, whatever the subject – security, Indo-US relations, geostrategy, poli-

tics or the mixed economy, is Baldev Raj Nayar, professor emeritus at McGill University, Toronto.)

**T**o revert, Ganguly makes it exceedingly difficult to take The Crisis in Kashmir seriously. For one, his solution is a dressed up version of the offer to Pakistan made in 1963 by the Indian Foreign Minister Swaran Singh to draw the dividing line in Kashmir on the Chenab. Fortunately for India, Singh's opposite number at those talks, who else but Zulfikar Ali Bhutto, over-reached himself and rejected a solution that many Pakistani strategic analysts have ever since rued as the great lost opportunity (much as many of us here do the Simla Accord which Ganguly, incidentally, believes was a 'diplomatic triumph' for India) – an opportunity in terms of a larger slice of Kashmir territory being brought under direct Pakistani control.

The Swaran Singh-Bhutto talks, it may be recalled, were held when Delhi was under intense US-UK pressure prompted by the British Commonwealth Secretary, Duncan Sandys (who is misidentified by the author as the British Minister of Defence – p. 45) to make big concessions to Pakistan over Kashmir in return for President Ayub's undertaking not to attack India in case the Chinese resumed hostilities in the North and the East.

It is not clear, however, why Ganguly thinks this offer plainly made under duress long ago by a China-spooked Indian government would be found acceptable by a now much more powerful and self-confident India. It is as if nothing had changed since then, as if the 1965 and the 1971 wars had never occurred and had not, in any case, radically transformed the distribution of power in the subcontinent and the region at-large. It is like asking Washington to assume that the

Cold War was still on and to treat Russia as if it were the USSR of yore as a means of improving US-Russian relations.

Further, Ganguly recommends that India make concessions on Sir Creek, Wullar Barrage and the Siachen Glacier along with additional 'limited territorial concessions' on the LoC and urges that the militants be favoured with full amnesty followed by an election under international supervision. And by way of completing his peace edifice, Ganguly not only seeks reversion of the state to the pre-1952 status, but its empowerment to draft a new constitution for itself!

**B**ut, assuming for arguments' sake that the territorial concessions were made by India but without the plebiscite – because an internationally-supervised election is just that – what's there to prevent Pakistan from continuing with its low cost strategy of encouraging the insurgency in the part of J&K still remaining with India. And if it did that, wouldn't India's situation be worse off and the options open to it more truncated?

With modesty unbecoming a would-be architect eager to realize a grand design for peace in South Asia even if it wrecks India in the process, Ganguly describes his grand design as constituting not 'a complete panacea' but 'a politically realistic approach'. And he tries to endow his solution with a certain reasonableness by, first, juxtaposing it against a policy, he claims, was communicated to him by 'a small coterie of individuals' in India who, of course, are not identified. This policy advocates cutting the losses by pronouncing victory in J&K, ceding the Valley to Pakistan, and getting the hell out of there! And second, by worrying about the 'long term morale effect' of waging a anti-guerilla war on the Indian Army. This last is

not particularly convincing because, earlier he hails the success of counter-insurgency operations in the Indian North East as a stellar achievement.

**R**ank escapism and daft proposals are one thing. Inadequate knowledge of history on which some of these are based is something else altogether. For instance, Ganguly declares rather blithely that Maharaja Hari Singh 'temporized' on accession after August 1947. The Maharaja may indeed have contemplated (as Sheikh Abdullah did) presiding over an independent 'Switzerland of Asia', but by now there are sufficient records (not least the writings of Justice Mahajan deputed by the monarch to liaise with Nehru) to indicate that much before 15 August 1947, and the lapse of British paramountcy, Nehru time and again deferred a decision on accepting Kashmir's accession to India until such time as, in his view, it also had popular support as symbolized by the backing of Sheikh Abdullah. This delay is what caused the original problem in the first place.

Having thus misread history, it is not surprising that Ganguly finds Delhi's tolerance of Abdullah's malfeasance and misrule 'a paradox'. It is hardly so considering that the Indian government's mollicoddling had a larger motive. For Nehru the Sheikh represented the democratic impulse of the people and, once the dispute was internationalised with its referral to the UN, he became the lynchpin for the Indian case. Given the opportunist Abdullah's mercurial shifts in thinking, Delhi could not possibly risk alienating him by pulling him up on relatively unimportant issues, like corruption and improprieties in governance.

But such debilities are compounded by the other weaknesses in Ganguly's study. Some have to do

with historical detail. For instance, the first Indian troops to land in Srinagar were not the Paras (p. 11), as Ganguly states, but a battalion of the line infantry regiment, 1 Sikh.

Another set has to do with his sociological framework. In attempting to work out Samuel Huntington's thesis about political order in developing societies, he sources the insurgency to the fact of the spread of literacy but the incapacity of the state to provide adequate jobs to the now educated youth. Kashmir, he concludes, represents 'both the mobilizational success and simultaneously, the institutional failure of Indian society.' This begs the question: How is this situation any different from that found in any other region of India? And, if it isn't different, would he then also condone the educated unemployed getting involved in secessionist movements in their provinces? Or, contrarily, would he have rather that Kashmir had been deliberately kept a backwater and literacy not been facilitated via generous subsidising of mass education?

**O**ne of the primary causes of popular disaffection in Kashmir was the religious nationalism propounded by the Jamaat-i-Islami in Jammu and Kashmir since 1942. This was given a boost in the 1970s and the 1980s by the mainly Saudi financed organization, Ahl-e-Hadis, whose programme for indoctrination of the young and the susceptible provided the feedstock for the Pakistan supported insurgency. This significant facet of the problem mentioned in passing by Ganguly has been more fully developed by Major Maroof Raza, who analyzes the ensuing lethal 'combination of Kashmiriyat and Islam'.

Raza, a former Indian Army Grenadiers officer, has done what Ganguly did not – track the slow and

inexorable slide of J&K into insurgency and the depths of despond on the basis of talking to scores of well-placed individuals within the state government and the law and order apparatus and those in the Kashmiri society at large. He helps us to better understand just why the Kashmiri rebellion took the form and the route it did. With the Sheikh Abdullah government unwilling to reign in the activist mullahs cooking up discontent in the madrasas from the 1970s onwards, the question is why did the central government too turn a Nelson's eye to this development?

**T**he immanent danger for a multi-religious country such as India lies, first, in the central and state authorities being unable to distinguish between religious freedom and religious licence. Second, and more alarmingly, in the political leaders and parties' reflexive habit to exploit religion and religious symbols for petty political and electoral gains.

A third set of infirmities deals with Ganguly's methodology. He has relied on sources, or rather, and this is disconcerting, on one source for some very critical information about life and society in Kashmir and specifically the Srinagar Valley in the time of insurgency. Whether he did in fact do 'field research' by actually travelling to Kashmir is not clear. But if he did – because his footnotes suggest he met with some Kashmiri leaders – then his reliance on just one person, Amitabh Matoo, for singular bits of information is problematic.

Matoo, a Kashmiri, is a good enough scholar at JNU alright. But to base subsequent statements and conclusions on just this one person's opinions is to take the easy, but questionable, way out. It is to do the academic equivalent of what journalists-in-a-hurry are often accused of doing.

Whatever the CFR, KSG and RAND reports may say or Ganguly may claim, the core issue with Kashmir insofar as foreign interests are concerned, however, is not so much the possibility of Indo-Pak war (which is manifestly remote) as human rights. But human rights watchdogs running wild skirt the fundamental issue involved: Kashmir is not a run of the mill law and order problem, but a war of secession. If as that 'great liberator', Abraham Lincoln, declared that he'd gladly countenance slavery and agree to keep the United States 'half free and half slave' if that kept the Union intact, the arguably less 'enlightened' Indian leadership can hardly be faulted for acting on their conviction, which reflects the will of the people, that the future of Kashmir as an integral part of India is no more negotiable than, say, a separate Confederate South was in terms of Lincoln's America.

**W**ould good ole Abe have tolerated an Amnesty International making a nuisance of itself about human rights as General George Sherman advanced with his army in that extraordinarily destructive 'march' which razed the Confederate Capital, Atlanta, to the ground and otherwise reduced, with extreme prejudice, the southern states into servility? Lincoln obviously acted on the not unreasonable belief that in a life and death struggle, a state cannot be expected to be bothered with the Marquess of Queensberry rules or to permit any outside interference under any guise or pretence.

The fact is that the settled countries of the West, having in a sense completed the messy transformation involving the ruthless coercion of minorities of various kinds to merge into the national mainstream, surely, have no ethical or moral standing to lec-

ture countries currently in the throes of configuring modern societies.

**B**ut in the matter of blame for putting the country on the defensive with regard to human rights, surely it rests in large measure with the official Indian stand. From Nehru's days, New Delhi has always acted as if its self-professed moral superiority inoculated the country against the inherent pains of crafting a nation state from its disaggregated parts. The fact that nation building is invariably a bloody and messy process has simply not been understood or admitted by the Indian government and the political leadership. Which is one reason why it sounds apologetic on human rights, when the more forthright attitude of turning a deaf ear to the human rights-wallahs would have been more honest and self-respecting.

It is hypocritical in the extreme for anybody to insist that on the cusp of the 21st century human rights matter more than they have at any other time in history. Different countries are at different stages in their national development. India is still not at that stage where a strong national identity automatically restrains the momentarily marginalised peoples from seeking recourse to violence and 'betterment' outside the whole. In the circumstances, New Delhi's policy from the start should have been one of a forceful execution of policy of nation-building, coupled with a no-nonsense warning to outside forces to keep their concerns to themselves.

New Delhi's efforts in Kashmir and the North East all these years have, alas, been akin to pricking a boil, involving less bloodletting than pusletting. It has allowed self-serving extra-territorial entities (be it countries or do-gooder organisations or, worse, do-gooding HR transnationals prompted by motivated countries) to

interpose themselves in the issue. The constraining of the armed forces' prosecution of counter-insurgency operations is a fallout of the Indian government buckling under pressure to the western human rights lobby.

It is time that New Delhi had a declaratory policy which asserted that the overarching public good being the maintainance of the Union, this will be realized at any cost, and it will always and every time take precedence over the rights and freedoms of individuals and groups within the country. It follows that the use of the sometimes brutal means to subdue those seeking to sunder the Union is almost an imperative, as the experiences of many western countries have proved. Flinging the violent domestic histories and records of the western countries back at them is an excellent tactic to stem unwanted, and largely undeserving, criticism.

**T**he ceaseless production of studies, reports and recommendations by 'independent groups' and 'task-forces' rooted in present day American/western value system has reached that point of diminishing returns when the targeted audience has simply had too many of these papers looking at the situation in the same sort of way and of preaching the same sort of things. Actually, other than exciting a few NGOs and academics here, these studies are so much waste of paper. Lacking anything new to say, what effect they have, if any, is actually a negative one of firming up an ultra nationalistic backlash.

Foreign analysts would be well advised to give 'peace in Kashmir' as research theme a rest. It sure could benefit from some benign neglect. Because, whatever *they* might advise us to do, India and Indians will solve the Kashmir problem exactly as it suits our narrow national interests.

# The idea of democracy

YOGENDRA YADAV

THE story of Indian democracy at fifty is fairly predictable. There was a golden period when a charming prince ruled. This was followed by a steady decline during the reign of his progenies, real and otherwise. Finally, local chieftains and thugs took over, leading to chaos and continuous crises. The storyline is simple but powerful. Like all such stories, it has the power to give meaning to any event, big or small, and to provide a yardstick for distinguishing the normal from the deviant. Like all stories, it looks at things from a particular vantage point and provide us a moral. It is a comment on the simple charm of this story and the social origins of ideas about Indian democracy that it continues to dominate the imagination of all political analysts.

The challenge of understanding Indian democracy at fifty requires that we tell this story differently. For this palace-eye-view of politics has hidden from view things which lie in front of us. And its moral is deeply, if subtly, anti-political. It is important to contest this story. After all, *homo sapiens* are story-telling animals. Retelling the tale of one's life is only reinventing a new future for oneself.

The establishment of democracy was an invitation by the Indian elite to the ordinary citizen to join them in the new game. It was a bold invitation, for the modalities of the game were

not clear to the hosts. Besides, they did not know their guests particularly well. The history of Indian politics since Independence is a story of how our people responded to this invitation and discovered a new game, at first with hesitation and amusement and then with obsession and fierceness. It is a story of what this encounter did to them and to the game itself.

What happened was not difficult to anticipate. After the initial unease, many guests felt at home in the new setting and changed the rules to suit their taste. They soon turned their back to the hosts and enjoyed themselves. It was a different game now, which shared little, except the name, with the original design. It took on a new avatar and was played for purposes substantially at variance with the textbook version or the original intentions of the hosts. No wonder, its consequences proved to be radically different from what was intended or anticipated. It threw up a new set of opportunities and constraints for which there were no precedents.

The story unfolded itself in various stages. The first phase, the famous 'Congress system' of the 1950s and 1960s, was characterised by a wide gulf which separated the all-powerful westernised elite from popular beliefs. It was no doubt a democracy, for the game was decided by numbers. But

only the brave called it a democracy of ideas. This democracy was firmly guided. The democratic invitation was accepted by a significant number, large enough for the hosts to be soon outnumbered and defeated in the game they had initiated. But the structure of the game basically followed the rules set by the hosts. There were deviations and distortions, but on balance the game was manageable, or at least recognisable. The idea of democracy was placed inside an incubator. The surroundings were artificial but it saved the infant at a crucial period.

**N**ehru's school teacher like mannerism symbolised the didactic relationship in which the political elite stood vis-à-vis the ordinary people. In terms of ideas it clearly was a one-way traffic. Even political protest was cognitively loyal, notwithstanding a Lohia. The citizens were autonomous in this realm only to the extent to which they managed to misunderstand the ideas they received from above, a privilege lower orders of society have enjoyed throughout history. From a certain vantage point, it was a fairly satisfactory state of affairs. If you were born in the right kind of family, took care to keep away from the heat and dust and took a telescopic view of things, Indian democracy appeared much like an authentic or at least a 'developing' liberal democracy. It was like viewing photographs inside cardboard motorcars in rural fests: the visual effect largely depended on the indulgence of the viewer.

The insulation of democracy from popular beliefs had a real life effect as well. It provided democracy a breathing space and an initial settling in period for a new set of institutions. A relatively low level of participation and competitiveness helped early institutionalisation. The electoral system, party organisations, legisla-

tures, judiciary and the bureaucracy managed a grace period where their capacities were not subjected to the strenuous test of popular democracy.

At the same time, the legacy of nationalism meant that the new regime enjoyed a high level of legitimacy, even if the people did not quite understand what they were supporting. Occasionally the game threatened to break down, for popular beliefs refused to be tamed on questions such as the one of linguistic states. But a skilful political handling routinised, and thus rendered harmless, the legitimate political expression of regional diversity. Popular self-identities were granted a back-door entry by all parties through a process of politicisation of castes. A combination of good design, skilful execution and good fortune thus ensured that the new democracy did not create alienation among, or face deep-seated hostility from, those whose beliefs had little room for play in that setting.

**T**he Nehruvian phase of Indian democracy is widely seen, and rightly so, as a period of consolidation. The intention behind emphasising the discursive chasm that characterised this period is not to undervalue its achievements but to remind ourselves of the artificial conditions which made them possible. The much too loudly proclaimed nostalgia for this period often implies a longing for an infinite extension of those conditions. It barely conceals a deep, suppressed desire to save democracy from the people.

The second phase of Indian democracy is recalled in all the stories as signalling a failure of the system, as the beginning of its regrettable decline. It is equally plausible to read this phase as the natural outcome of the earlier one of successful installation and consolidation. It marked the coming of age of Indian democracy. The infant was now taken out of the

incubator and placed in the more natural, if also more risky, environment. Far from being a result of a failure of the system, it was a direct consequence of the extraordinary success of democratic politics in drawing out some new strata of the people into the political arena.

**A**s more and more participants adopted this game, they brought to bear on it their expectations, demands and beliefs. At least some of them – the large and landed OBCs and a small section of Dalits – thought it was about time they too had a say in framing the rules of the game. This phase was also marked by the beginning of an interaction between elite ideologies and popular belief systems. As competition grew more intense, political actors were forced to pay attention to the tastes and preferences of the ordinary voters. The first casualty of the new compulsions of the political market was the edifice of borrowed high ideologies, both of the government and the opposition. These had to be quietly and quickly replaced by home-spun, or rather home-made, patchwork ideologies. The result was admittedly shabby. Stitched in haste by tailors of varying skills, the new clothes did not quite fit the customer. Yet a paradigmatic change had taken place. Everyone now conceded that the clothes must fit the body, and not the other way around.

The immediate result of this paradigmatic shift was the rise of populism as the dominant political ideology. Populist ideology did not reflect popular beliefs, let alone rework high ideology in the light of popular aspirations and needs. At this stage there was little room for ideas to travel bottom upwards. The Indian version of populism involved a selective appropriation of the language of socialism, which had been popularised in

the previous decade. Socialist symbols and rhetoric served to package substantive policies which had little to do with an egalitarian agenda. In fact mainstream politics grew less sensitive to the real needs of the people, at least those which did not lend themselves to easy aggregation. Yet, insofar as rhetoric tends to bind down the actors, the language of socialism also set limits to what could be defended and legitimately debated in the political arena.

**F**irst deployed to reap electoral harvest in 1971, populism continued as the reigning ideology of Indian politics till the end of the 1980s. Different political brands were worked out by recombining familiar elements under the socialist label. Elections were about whose claim to offer the same menu was seen as more credible by a national electorate which now cut across the old regions. The conditions were thus ripe for a series of plebiscitary elections where a more or less uniform swing across various states created electoral waves. In this Congress Opposition system, one party dominance gave way to one party salience.

This first encounter of Indian democracy with popular beliefs left it at once deeper and weaker. It helped Indian democracy take roots. Greater participation and more intense politicisation showed that the process of democratisation continued. The system of representative democracy had greater acceptance among the people than was imagined at the beginning of India's democratic career. Repeated, almost ritual, alteration of governments gave the people a sense of control and contributed to their sense of political efficacy. Leaders like Charan Singh and Karpoori Thakur articulated new and hitherto excluded voices in the political mainstream as did movements like Navnirman,

Bihar and Naxalbari which incorporated issues from outside the party political framework.

At the same time, the failure of socialist rhetoric to deliver the goods contributed to a deep-felt popular frustration. This period showed up the weakness of political institutions as exemplified by the Emergency. The cultural presuppositions embedded in the imported liberal democratic institutions clashed with the everyday practice of Indian public life. The process of an erosion of political institutions, especially those which required functional autonomy, had begun. The catch-all character of the populist ideology squeezed out some of the claims to power based on regional and ethnic identities leading to political crises in Assam and Punjab.

**T**he third and the current phase of democratic politics was inaugurated by the simultaneous arrival of the three M's—Mandal, Mandir and Market—on the domestic horizon and the collapse of the USSR, which effectively signalled the demise of the hegemony of the language of socialism in Indian politics. The fundamental change in the terms of political discourse which followed was sudden and unanticipated, but it did carry forward the story of the encounter of the language of democracy with popular imagination. The third phase took the encounter a step further.

The removal of the token necessity of the idea of socialism had both a liberating and a debilitating effect on the democratic contestation of meanings. Some of the new set of beliefs which came into play in this phase were from the lower orders of society and articulated interests which were not possible under the previous ideological hegemony. This development liberated a Kanshi Ram or a Laloo Yadav from packaging their sectional

demands in the language of high ideology. It made possible a reconfiguration of the 'third space' to allow for a coalition of regional parties with the left. It could also lead to a further reconfiguration of what appears today as the Congress-UF space.

**I**f the second phase had turned the ordinary voter into a customer whose tastes had to be taken into account by political entrepreneurs, the third phase turned them into demanding and often discerning customers. In this sense there is, for the first time, a flow of ideas from below. It is not surprising that this also happens to be the period when a democratic upsurge is taking place among the hitherto disempowered sections. Among Dalits this upsurge is reflected in a jump in political participation, from voting to membership of political parties.

There is a beginning of a change among Adivasis too, for their turnout recorded a sudden jump in the 1996 election, although other signifiers have not recorded a similar change. For women, an increase in participation has affected all the signifiers except voting turnout. These are not meaningless statistics. Nor is the fact that India is perhaps the only major democracy in the world where the turnout and political activity of a certain kind is higher among the very poor than among the upper middle class. These are nothing if not instances of a participatory upsurge associated with the journey of the idea of democracy.

This radicalisation of the discursive encounter does not by itself produce a radical agenda of politics. The loss of the received language of high ideology and an inability to replace it with a home-spun alternative has deprived political formations of the lower order of any aggregating or screening device. The beliefs brought

to the centre of politics by the rise of the lower orders (especially Dalits and the OBCs) are fragmentary in character, concerned only with one section and with a single issue (BSP's slogan '*Vote hamara raj tumhara nahin chalega*' captures the evocative power and the narrow vision of these ideologies) and are incapable of mediating competing sectional claims.

**T**his constraint, coupled with the sudden collapse of the earlier consensus, which had in any case worn thin, created conditions for the discursive coup in the form of Manmohanomics. Almost overnight it succeeded in overthrowing the established economic consensus and installing a new common-sense of liberalisation and globalisation, without any evidence of popular demand or support for such a drastic turnabout. The happy acceptance of the agenda of liberalisation by the UF partners only underlines the flip side of the current discursive flux. The successful deployment of the cultural symbols of the subalterns by the Sangh Parivar in the Ramjanmabhoomi agitation also serves as a reminder of the consequences of an absence of broader ideological filters.

A meek surrender to forces of economic globalisation and a sharpening of ethnic cleavages may have left a deeper wound on the polity than is now visible. It may already have eroded something of the extraordinary autonomy that politics has enjoyed in post-independence India. Some of the signs are visible in the middle class driven politics of anti-politics, be it in the name of electoral reform or clean politics. The BJP's political ascendance can only further strengthen these trends.

Fifty years ago, the decision to create a democratic polity in a poor, unequal, post-colonial society did not look as courageous as it does in retro-

spect. Perhaps the mood of the time enabled everyone to forget that no other society had successfully traversed this path before. Nor has it been done since. India failed to remove poverty or inequality or even remove the cultural traces of post-coloniality; yet it has succeeded in remaining a democracy. Ironically, it is precisely when Indian democracy is evolving a specific language of its own that politics may lose its historical specificity and India may begin to reflect the routine logic of democratic politics in a poor, post-colonial society. Developments of the last few years thus crystallise a paradox inherent in this story of the encounter of India with the idea of democracy.

**L**et me round off this story by raising a general question: what does it mean to install a democracy? Implicit in much of what is wrong with the dominant story of Indian democracy or for that matter in contemporary democratic theory, is what may be called a 'hardware' approach to democracy. According to this approach democracy is above all an institutional mechanism which can be made to work properly in any setting, given the right conditions of installation. The approach implicit in my story, on the other hand, treats democracy more like a language, a 'software'. The software called democracy must be continuously re-written in the language of its end-user, the ordinary citizen. The point of using a software is its value-addition – it cannot even begin to work without establishing a firm protocol of shared symbols. If it has to have a life, democracy must exist in and through the minds of ordinary people; it must learn to work its way through their beliefs and values.

Or, to change the metaphor: what happens when the idea of democracy travels downwards? Perhaps

some founding fathers of our democracy, the original hosts to this game, entertained the illusion that the democratic idea would remain intact as it travelled downwards. Gradually larger and yet larger number of persons would come to embrace the package of liberal democracy in the same form in which the elite had believed. Alternatively, some romantics believed that the idea of democracy is automatically transformed by the people when it reaches them. They make democracy speak their language and devise the system best suited for their needs.

The experience of the last five decades confirms neither of these versions. The journey of the idea of democracy in India not only changed the lives of millions it touched, it also changed the idea of democracy itself in more ways than one. Call it creolisation or vernacularisation of democracy, this transformation is at the heart of whatever success democracy has achieved in India. Serious attempts to marry the democratic idea to popular beliefs, to develop shared protocols with the pre-existing language of the people, is what has distinguished India from other countries where the democratic enterprise never took off. It can continue to maintain this distinction in the future.

**C**reolisation by itself is no magic remedy. Indigenisation of democracy is a necessary condition, but not a sufficient one for the working out of this idea. A large historical process follows no pre-ordained script. It does not produce neat outcomes. It leaves gaps, it produces contradictions. And there is no hidden hand here which might straighten every wrinkle. There is, in other words, no short-cut to creating and sustaining the language of radical democracy except weaving every strand and tying every thread.

# From victory to defeat

OMKAR GOSWAMI

IF it weren't for its awful consequences, the manner in which Sitaram Kesri was hijacked by non-performing, born again hawks of the Congress party would have been cause of much mirth. After Kesri's first aborted attempt at the prime minister's berth in March 1997, the old codger was reconciled to living in a state of limbo — where his party was neither on the treasury benches nor on the opposition's. To give him the little credit that is due, Kesri had built a good rapport with the affable United Front (UF) Prime Minister Inder Kumar Gujral, who, on his part, kept the Congress leader informed of governmental matters.

Unlike previous coalition governments in the Centre under Morarji

Desai, Charan Singh and V.P. Singh, this UF administration did not collapse under the weight of its own internal contradictions. While it might be all very well for Bharatiya Janata Party's Jaswant Singh to describe the government as 'a fifteen legged centipede', the fact of the matter was that the partners were getting their act together and Indian citizens were getting used to a coalition that was beginning to deliver the goods. To be sure, the government had its weak links, with C.M. Ibrahim, the Union minister for civil aviation, and Ram Vilas Paswan, his colleague in the railways, taking the top slots. However, countering their abysmal performance were P. Chidambaram, Murasoli Maran, supported by a cast

as diverse as Chaturanan Mishra, Jayanti Natarajan, B.B. Ramiah, and some other straight-thinking politicians, backed by Gujral himself.

As in most governments, the reform rhetoric of the UF's ministers sometimes outpaced actual action. Nevertheless, there can be little doubt that reforms were once again moving on track – the more so after the somnambulism that characterised the last two years of P.V. Narasimha Rao's tenure as prime minister. Chidambaram's audaciously bold budget of February 1997 rekindled the spirit of reforms that had petered out in 1995 and 1996.

**W**hile it is doubtless true that the government failed to meet the fiscal deficit target of 4.5 per cent for 1997-98, I would argue that Chidambaram's second budget should not be viewed in a short term perspective. Unlike Mani Shankar Aiyar, who lampoons Chidambaram as 'Superman in a veshti', I believe that the 1997-98 budget radically altered our approach to tax policy. Poor countries with vast bureaucracies perforce treat tax revenue as a milch cow, and the logic that, up to a point, collections may rise with a fall in tax rate does not often cut much ice.

Going by the signals given in his first budget in July 1996, one expected the thin-skinned lawyer-finance minister to be a risk-averse fiscal marginalist. On 28 February 1997, he proved us wrong. Slashing personal income tax rates to 30 per cent, corporate taxes for Indian companies to 35 per cent, and eliminating double taxation of dividend income were not the marginal changes of a cautious man. These were powerful signals to investors and individual savers that the government was determined to cut loose from its fiscal past. And I would not blame the finance minister for fail-

ing to meet the fiscal deficit targets. To ask a counter question to Mani Aiyer and his friends: Do they seriously think that Chidambaram would have met a 4.5 per cent target had he kept the old tax rates? Almost certainly not.

As a key signalling device, therefore, the budget clearly underscored the UF government's commitment to hasten the pace of reforms. But that was not all. By late 1996, it had become apparent even to the Reserve Bank of India and the North Block mandarins that the tight money policy which was adopted to curb inflation in 1994-95 – when the wholesale price index shot up by 12.5 per cent – was devastating swathes of the industrial sector. Reacting to the heady days of reform in 1992-93 and 1993-94, almost every corporate house had embarked on major projects.

Suddenly, in 1995-96, the bottom fell out of the primary equity market. As if this was not enough, interest rates began to harden, and companies found themselves not only investing in the future on the rump of high cost debt but also operating in the present on the basis of very expensive working capital. By late 1996, profits had taken a beating and the ugly red blotches that dotted the corporate landscape in 1996-97 were testimony to doing business in a competitive milieu with uncompetitive cost of credit.

**T**o his credit, Chidambaram realised this very quickly, and the last two credit policies of the previous RBI governor, C. Rangarajan, ushered in a more realistic monetary environment. There were reforms directed to the supply side as well as the organisational aspects of banking. Making RBI's Bank Rate a reference rate and progressively reducing it to 10 per cent, cutting down the cash reserve ratio that banks had to deposit with the RBI from a 12 per cent to a

target of 8 per cent in March 1998, and freeing deposit and lending rates were some of the reforms that eased the borrowing cost of corporates.

In addition, there were major reforms on the anvil in commercial law. A brand new Companies Bill was drafted in record time. I was a member of the committee that did this task. Members would fly in to Delhi from various parts of India, spend an average of three days a week – often working late into the night – to redo the bill from scratch. With enthusiasm, a group of dedicated professionals introduced concepts like buy-back, employee stock options, derivatives, efficient winding up procedures, and some of the best international norms for corporate disclosure.

**T**o be sure, some galling provisions were inserted without the knowledge of the committee. Nevertheless, the bill was a clear statement of corporate reform and ought to have become law during the 1997 winter session of Parliament. So, too, would have been the new Sick Industrial Companies Act and the Foreign Exchange Management Act. And, unexpected by all, there was a major breakthrough in the Urban Land Ceiling Act, with the cabinet deciding to recommend its repeal rather than piece-meal amendment.

Chidambaram was not the only reformer. Murasoli Maran's unfortunate public duel with Osamu Suzuki over the Maruti affair cannot detract from the zeal with which foreign investment proposals were cleared in the industry ministry. Indeed, Maran has notched up a record of sorts by clearing the largest number of FIPB approvals in the shortest period of time.

Of course, there were failures, the most important of which was a rapid capitulation to the wage demands of government employees – where the

state doled out an extra Rs 15,000 crore without demanding greater efficiency in return. No less significant was the failure of the so-called 'disinvestment' programme of the government. I have always argued that when privatisation is called 'disinvestment' it is doomed to failure. The reason is simple enough. By its very meaning, disinvestment suggests a revenue raising exercise to be implemented via marginal reduction of shareholding, while privatisation means that what was once the government's now belongs to the private sector. In a country seeped in the tradition of public sector – where much of the intelligentsia still believe that the government should produce steel, cement, fertilisers and offer hotel rooms – disinvestment is a sure-shot recipe for failure. It is like asking Bishen Singh Bedi to open the innings and then expecting him to score a century. Not surprisingly, despite earnest efforts by G.V. Ramakrishna, whose Disinvestment Commission produced master plans for several public sector enterprises, nothing worth the while has happened. The only exception was MTNL's GDR offering which, despite turmoil in world capital markets, managed to garner \$358 million.

**D**espite these failures, the general consensus was that we were once again moving along the path of economic reform. But, more significantly, people of the country were seeing that it is possible for a coalition to politically govern a country as complex as India. Cynics who had written off the UF as a bunch of dead-beats saw Chidambaram and Maran develop working relationships with Chaturanan Mishra, Indrajit Gupta and even Ram Vilas Paswan.

64

The most heartening feature of the government was its commitment to federal polity. On the one hand, states were realising the importance of

growth and the need to attract investments on a competitive basis. On the other, the Centre was increasingly loosening its 40-year hold on state-level decision-making. The litmus test of this was the manner in which the Centre was encouraging states to directly access programme assistance for restructuring from The World Bank and the Asian Development Bank – instead of interfering in each and every process, as it had done in the past.

**A**s we were gingerly making our way forward, tragedy struck from the most unexpected quarters. There was a superannuated judge who had got one extension after the other to investigate matters relating to the assassination of Rajiv Gandhi. He resided in relative obscurity in one of the many subsidised bungalows that dot Lutyen's Delhi; he was full of self-importance, hungry for fame and his office leaked like a sieve; and he wrote unbelievably atrocious English. One fine day, he met with the executive editor of a leading weekly, and the rest is history.

The absurd drama that followed would have made Eugene Ionesco rush for cover. However horrific his death, the fact is that Rajiv was killed more than six years ago. And one would have thought that lapses in his personal security and infiltration in Tamil Nadu by Sri Lanka's Liberation Tigers of the Tamil Eelam would have been matters for the history book. Can one imagine Lyndon Johnson's government falling had there been Milap Chand Jain type revelations about 22 November 1963? But, as we know too well, *Mera Bharat Mahan*. So, we were spectators to vignettes that could only be produced in the sub-continent. Consider a few choice examples.

An ideologically crippled party led by a rudderless old non-leader suddenly decides that it is the honour of

the slain leader at stake. It therefore looks for signs of action from the Sphinx-like Italian widow – who is expected to give up her housewife's tasks, utter the magic words, 'Ido' and don the mantle of a vengeful Durga. She doesn't. So, the great leaders of the Congress party camp outside 10 Janpath to catch the slightest twitch of the fair lady's left eyebrow. She twitches, she twitches not, they mutter amongst themselves. Finally, the born again hawks of the party decide to raise the clarion cry of national honour.

And who are these hardliners? Jitendra Prasada, who has never fought a real election in his life, who clawed his way to the top by fawning and back-stabbing, and under whose illustrious leadership Congress won only 5 seats in U.P. out of 85 in the last Lok Sabha elections. A close second is the inscrutable Arjun Singh, who is smart enough to give the world the impression that he kow-tows to 10 Janpath while placing two of his proteges in the UF government. Then there is the masterful ex-minister for petroleum, Satish Sharma, whose legendary bequests of petrol pumps and gas distribution centres is matched only by the Italian tiles of his swimming pool. The list goes on.

**T**hese great leaders of the Congress decide that the country is not worth bothering about, that governance is inconsequential, and, hence, that their solemn duty is to get rid of a government and force another crisis in the name of Rajiv Gandhi. And they do so. Neither the powerless Kesri, nor the desperate first-time MPs can stop the 'Honour Rajiv' cabal. History will underscore how bizarre it all was – how a dozen has-beens could force their writ on a party and, thence, on the country.

From the day President Narayanan dissolved the 11th Lok

Sabha, all policy decisions of any import have been put on the backburner. Already, the hallowed politicians of the land are fishing around for strategic alliances. Mulayam Singh Yadav, whose motto is 'U.P. is India, and India U.P.', is finding out ways of creating alliances to regain his status in the home state. Kanshi Ram is playing god. The BJP are willing to welcome anyone in their fold. The Congress MPs from Orissa are sussing out the BJP, as is a faction of the Maharashtra Congress. The rat race has well and truly begun.

**A**t this stage, it would be certainly foolhardy and probably impossible to predict the outcome of India's unwanted 12th Lok Sabha elections. However, a couple of things can be said with near certainty. First, with the current flock of leaders, the Congress will be decimated at the hustings. I would be very surprised if it wins even 90 seats. That will be a fitting reply to the Congress. Second, unless G.K. Moopanar purges his Sonia bug and decides to ally with the DMK according to Karunanidhi's terms, the Tamil Maanila Congress is all set to be wiped out. Thanks to Justice Jain and the Congress, it is no longer possible for Moopanar and Chidambaram to simultaneously play the Tamil and the Congress game. For TMC, fence-sitting time is over.

I am of the view – more accurately, of the faith – that the elections will further strengthen regional parties and give a larger numerical support base for the constituents of the UF. However, that will really depend upon the nature of pre- and post-electoral alliances and, more significantly, on how many Congress seats are snatched by the BJP. In fact, the stupidity of Congress has made matters easy for Advani and his ilk. Now they no longer need to talk of Ram, Ayodhya,

Kashi and Mathura. They can speak of the unity of the nation, usurp the slogan *ekta aur akhandata* and present themselves as the stable national alternative. Thanks to the Congress, people may believe them sufficiently enough to give BJP 230 plus seats.

All this is crystal ball gazing. Far more certain are the consequences of this dissolution and election on the economy. The East Asian crisis had unwittingly presented India with one last opportunity to catch up with the ASEAN nations. Most experts believe that it will take Korea, Japan, Indonesia, Thailand and Malaysia another year – perhaps 18 months – to restructure their economy and financial systems. Equally, everyone who understands the region knows that these countries will come back with a vengeance, this time with an efficient financial sector and more competitive exchange rates. For Korea, Japan and Malaysia it goes beyond economic restructuring. It is a matter of national honour. To understand that one has to see a photograph that was recently published in a newspaper. It showed Korean mothers donating gold rings to the national cause – like we did during the Chinese aggression in 1961.

**T**his was a godsent opportunity for us to speed up the pace of reforms. We needed to pass all the economic bills that were waiting to be legislated; to open up the insurance sector; to rapidly privatise and use the proceeds to focus on social sector spending; to take advantage of the depreciation of the rupee and reduce import tariff rates to ASEAN levels; to accelerate the pace of financial sector and capital market reforms; to put in transparent investment guidelines and eliminate FIPB; to encourage a ten-fold increase in foreign direct investment; to sanction as many power projects as possible and encourage the states to privatise trans-

mission and distribution; and much, much more.

Even before the dissolution of the Lok Sabha, our leaders were being smug about the East Asian turmoil. The chant that we heard the most was: 'They were overambitious and therefore collapsed. It is a sure sign that we, the slow and steady, are doing the right thing.' We've heard this from Gujral (who hasn't the foggiest idea of what reforms are all about) and from Chidambaram – who lectured the delegates at the World Economic Forum about the need to 'calibrate' reforms.

**W**hat bosh! In an integrated world, reforms are not about levels. They are about rates of growth, of speed. The fact that India is better-off in 1997 compared to 1991 is of no consequence. Malaysia is incomparably better off in 1997 vis-à-vis 1991, as are Thailand, Indonesia, Taiwan, China, let alone Korea and Japan. In the last six years we have grown at an average of 5 per cent. Notwithstanding the East Asian crisis, our competitors have grown at 7 per cent. Therefore we have slipped at the rate of 2 per cent per year for six years.

Even the best of our political leaders are prone to forgetting this. So, in the best of times, we were sliding away. This was the opportunity to claw back, and we blew it. Three months of 1998 would have passed before a new government is formed and a budget passed. Another three months will pass before the new government finds its feet. By the time we wind up our old gramophone record player, ASEAN will have raced ahead to regain its supremacy and further widen the gap. And if China devalues its renminbi to ASEAN levels, it would be curtains for India. Ladies and gentlemen, let's all join together and thank Chacha Kesri for giving us such a great present.

# Economic diplomacy

SANJAYA BARU

CONSIDER this true story. When Iraq invaded Kuwait in 1990 a group of Koreans stuck in Kuwait quickly moved into their country's embassy from where they hoped to fly out and return to Seoul. Was it safe to drive from the embassy to the airport without getting into trouble with Saddam's soldiers was the question uppermost in their mind. A Korean company executive had a bright idea. 'My company's name and logo is very popular in Iraq,' he explained. 'I suggest we fly my company flag on our vehicles rather than the national flag and drive out.' The suggestion was accepted and the entire group drove safely to the airport, with Saddam's soldiers waving along the way, shouting out the name of the company! While trade still follows the flag in some parts of the world, increasingly it is the flag which follows trade in contemporary times.

Receiving this writer in his office in Brussels in 1993, a senior European Commission official pointed to the computer screen on his table which showed EU's trade and investment links with the world and said: 'In the past

India did not appear on this screen, so for me it did not exist. Today, it figures prominently, so it matters.' In defining India's relations with the world in the post-Cold War era, economics and business have come to the fore.

The end of the Cold War, the collapse of the so-called 'centrally planned economies', the emergence of East and South East Asia, including China, as the new engine of growth in the world economy, the globalisation of economic activity and regional integration encompassing major industrial economies as well as newly industrialising countries, the emergence of new communications and information technologies accompanied, paradoxically, by protectionist tendencies in the OECD economies and so on, have altered the external environment in which the Indian economy, like any other, operates.

Economics has been at the heart of diplomacy in the nineties. Strategic analysts who viewed the relationship between nations largely through the prism of geo-politics and military might, have come to recognise that

in the post-Cold War world, geo-economics has acquired primacy. It could be argued, however, that economics has always been central to international relations even when politics was in command. As early as in December 1947, Jawaharlal Nehru told the Constituent Assembly:

'Talking about foreign policies, the House must remember that these are not just empty struggles on a chess-board. Behind them lie all manner of things. Ultimately, foreign policy is the outcome of economic policy, and until India has properly evolved her economic policy, her foreign policy will be rather vague, rather inchoate, and will be groping. It is well for us to say that we stand for peace and freedom and yet that does not convey much to anybody, except a pious hope... (and) every country is prepared to say the same thing, whether it means it or not.

'What then do we stand for? Well, you have to develop this argument in the economic field.... To come to grips with foreign policy in economic, political and various other aspects, to try to understand it, is what ultimately matters. Whatever policy we may lay down, the art of conducting the foreign affairs of a country lies in finding out what is most advantageous to the country. ...I regret that we have not produced any constructive economic scheme or economic policy so far... when we do so, that will govern our foreign policy more than all the speeches in this house.'<sup>1</sup>

**W**hile the foreign policy of a country may from time to time be influenced by specific non-economic, purely strategic or political priorities,

1. Jawaharlal Nehru quoted in Dewan C. Vohra, *Economic Relevance of Non-Alignment*, ABC Publishing House, Delhi, 1983.

Nehru's emphasis on the underlying importance of economic policy influencing the long term foreign policy framework of a country, well appreciated in the context of the post colonial, 'bipolar' world he was functioning in at the time, is even more relevant in the contemporary post-Cold War world of pragmatism and business-orientation in foreign policy. What is 'advantageous' to a country can no longer be defined purely or even primarily in political or strategic terms, but must fundamentally be defined in economic terms.

One of the lessons of the post-War era and indeed, the lesson of the history of the Cold War, is that sooner or later the success of a country's foreign policy is circumscribed by the efficacy of its economic policy. Successful economies have a greater degree of freedom in shaping an independent foreign policy than failed or weak economies. More importantly, economic policy can itself be an instrument of foreign policy if it enables a country to win friends and influence people.

**A**dmittedly, in the era of decolonisation and at the height of the East-West confrontation, some countries in the South, especially India, could afford to pursue a foreign policy which had a higher profile than was warranted by the strength of their economy. In the post-Cold War world this is no longer possible. Equally, pragmatic rather than ideological considerations have come to the fore in relations between nations. This was evident even in the 1970s after the oil shock of 1973 when strategic policy analysts recognised the importance of geo-economics over geo-politics.

Control over high technology is clearly even more critical to political power today than control over economic and natural resources whose

importance the oil crisis underscored. Since such control is increasingly exercised by non-sovereign, extra-national corporate entities, the ability of nation states to deal with such multinational corporations is central to the success of a country's foreign policy. Equally, with the spread of regional economic groups and regional integration of economies, India's external economic relations with her neighbours are critical to the success of her wider foreign policy goals.

**T**he emerging structure of power in the post-Cold War world has been described by many analysts as being 'multipolar'. US strategic policy analyst, Henry Kissinger, the most prominent exponent of this view, aptly summed it up in the following words:

'The international system of the 21st century will be marked by a seeming contradiction: on the one hand, fragmentation; on the other, growing globalisation. On the level of the relations among states, the new order will be more like the European state system of the 18th and 19th centuries than the rigid patterns of the Cold War. It will contain at least six major powers—the United States, Europe, China, Japan, Russia, and probably India—as well as a multiplicity of medium sized and smaller countries.

'At the same time, international relations have become truly global for the first time. Communications are instantaneous; the world economy operates on all continents simultaneously. A whole set of issues has surfaced that can only be dealt with on a worldwide basis, such as nuclear proliferation, the environment, the population explosion, and economic interdependence.'<sup>2</sup>

2. Henry Kissinger, *Diplomacy*. Simon and Schuster, New York, 1994

While it is premature to regard India as a major power today, it is necessary to recognise that it is capable of becoming one within the first half of the next century. Indian policy-makers, especially politicians, have not yet adequately appreciated the wider policy implications of such a status for India. The Chinese leadership seems to have a better appreciation both of the opportunities and the responsibilities that a 'major power' status brings with it.<sup>3</sup>

What are the implications of this worldview for India's foreign policy and her economic policy? The most important implication for us is that the non-aligned nations no longer have the bargaining power that the Cold War gave them. The smaller, less developed, more outward oriented economies with the non-aligned movement discovered this fairly quickly and adjusted themselves to the new environment.

**T**he course of the Uruguay Round of GATT talks showed that the postures adopted in the 1986-89 period were quickly abandoned after 1990 and most developing economies chose to fall in line with developed industrial economies, especially the US, by the time the Marrakesh agreement was signed in December 1994. Despite the more reassuring assessment of the global power balance by Kissinger, most Third World leaders believed that the bipolar world had been rep-

3. See for example I.K. Gujral, 'The Post-Cold War Era - An Indian Perspective', and Wu Xueqian (former Chinese foreign minister) 'The Post-Cold War Era - A Chinese Perspective', in *World Affairs*, Vol. 1, No. 1, January-March 1997). Compared to Gujral's more cautious and traditional view of Indian foreign policy in the post-Cold War world, Xueqian is more forthright in stating that a bipolar world is being replaced by a multipolar world in which the United States will continue to be the strongest economic and military power. He sees Japan, the European Union, Russia and 'a number of developing countries including China and India' as other major powers:

laced by a unipolar one. The quick and resolute conclusion of the Uruguay Round after the Dunkel Draft was circulated in 1992 reflected this assessment.

**E**ven a small country, if a sizeable economy, like South Korea started reflecting on these issues almost immediately after the end of the Cold War. Commenting on Korea's 'New Internationalisation Strategy', the President of the Korea Institute for International Economic Policy, Jang-Hee Yoo, said in early 1993:

'At the end of the Cold War, a new international order was created when a militaristic balance of power was replaced with an economic balance of interests. The world economy in the 1990s should eventually see a multipolar system in which the US economy shares the economic leadership with the EC and Japan. Asia's newly industrialised economies have also put themselves in a strong international position.... Recent changes in the international economic environment and Korea's increasingly significant position in the international community suggest that drastic reform should immediately be made in Korea's foreign economic policy.'<sup>4</sup>

Offering a 'positive' agenda of what Korea should 'do' to meet this

Wu Xueqian goes on to add: 'The multipolar evolution—even though in a transitional stage—has become so irreversible that even the existing superpower has to take into account the possible reaction of other countries when taking important decisions on foreign affairs.... The emergence of the developing countries is also a major event in contemporary international relations.'

4. Jang-Hee Yoo, 'A New Internationalisation Strategy of the Korean Economy: Suggestions and Recommendations', in Jang-Won Suh (ed.), *Korea's New International Economic Diplomacy and Globalisation Policy*, Korea Institute for International Economic Policy, Seoul, 1993.

emerging situation, rather than what it should 'oppose' (a usually Indian approach!), Jang-Hee concludes:

'A unified Korea could eventually be listed as one of the top ten economies in the world. It might, along with other major industrial powers, lead the world economic order. If this is to happen, Korea will not only have to participate in all major international organisations, but it must also take partial responsibility for world economic growth and stability.... Coping with the globalisation trends of the world economy is the most important task on Korea's economic agenda for the next several years.'

'From Korea's perspective, while the forward growth model is still the basis of economic growth, the new forms of protectionism in the international economy (offensive market production, technology protection, environment protection) may threaten rather than provide opportunities. Therefore, instead of continuing the existing passive or defensive policy actions, Korea's foreign economic policy should be reformed affirmatively towards market openings. Without this dramatic change, the Korean economy may lag behind other dynamic, open economies in a rapidly changing world economic environment.'

**W**ith the passage of time and a fuller appreciation of the Asian economic miracle, notwithstanding the recent crisis in the East Asian markets, it is now clear that the Kissinger view has greater credibility and the world is indeed likely to see competing centres of power emerge. The next decade or two will witness constant competition circumscribed by structured cooperation between major and minor powers. The multipolar power struc-

ture is going to influence the manner in which the forces of competition and the mechanisms of cooperation operate.

Whether it is the functioning of institutions like the WTO or the outcome of discussions on a multilateral agreement on investment (MAI), whether it is transfer of technology or the movement of people, nothing will be shaped by the power structures of the Cold War era, in which super-power rivalry and ideological conflict defined the outcome of any given competition or attempt at cooperation. Nor will the United States always be able to unilaterally dictate the terms of resolution. It will have to look to other major powers for support on an increasing number of global issues.

**I**n the coming years multilateral negotiations can have wholly unpredictable outcomes since the forces of competition and cooperation will be in a state of flux, until the six major powers are able to define a new equilibrium. China's increasingly high profile presence in multilateral forums can only add to the flux. India still cannot take its position within the multipolar structure defined by Kissinger for granted and will have to work hard at it – both on the foreign and strategic policy front as well as on the domestic and external economic policy front. This is by no means an easy task.

What does this mean in operational terms for Indian diplomacy? Foremost, India must accept the privilege and challenge of being a major power. It must not only seek the political power that such a status confers on it, as when it did in not signing the NPT and the CTBT and in (hopefully) continuing to seek a Security Council membership. This is the easier part of the challenge. The more difficult part is to pursue an economic policy

agenda, both internally and externally, which such a status entails.

India must be a major trading nation in the world, its share of world trade and investment flows must increase. Its trade and investment regime must encourage freer flow of goods, services and capital. In order to ensure this without suffering the pain of destruction of the sub-optimal structures built during the decades of protected, inward-looking development, India must quickly invest in improving the economic and social infrastructure and the skills of its people. Investment in health and education – basic, technical, professional and higher – is as imperative as is new investment in power, irrigation, communications and transportation, both in the public and private sectors. The public sector, especially in defence related industries, must be rejuvenated as an instrument of advanced research and development of new technologies.

**A**ll the other major powers, especially USA, Russia and China, invest heavily in defence-related industries and seek to exploit technological externalities. Indian industry has rarely viewed public investment in defence, space and nuclear programmes in these terms. Public procurement and major business deals must be linked with explicit foreign policy objectives, as China has done systematically. Compare the manner in which the Chinese have used foreign investment as a means of leveraging foreign policy, best exemplified by the use of the Boeing deal to ensure continuation of MFN status by the US, and the inability of the Indian political system to view foreign investment policy within a wider foreign and strategic policy perspective.

Equally, India must improve its bargaining skills in global forums and give a sharper edge to economic diplo-

macy, both in its relations with the developed industrial economies of the North as well as in its relations with the countries of the South, particularly her neighbours. The focus of policy formulation as well as public debate in the area of foreign policy has for long remained obsessed with political and security issues so much so that economic diplomacy has till recently not acquired the primacy it should.

**E**ven the policy and the public debate on India's relations with her neighbours has not fully integrated political and economic diplomacy on this front. India's shabby response to the Sri Lankan proposal for a bilateral free trade agreement, reflecting the power of domestic lobbies, and the slow pace of development of the idea of a South Asian Free Trade Agreement (SAFTA), where India can even now easily make unilateral trade concessions provided the government is willing to face up to domestic lobbies, is a telling example.

While some in government have been alive to the beneficial potential of such initiatives, there has been knee-jerk resistance from domestic lobbies and local politicians in some parts of India to proposals like, for example, the BBNI (Bangladesh, Bhutan, Nepal, India) trade grouping, where local vested interests in Bengal have been lobbying against freer trade with Nepal and Bangladesh. Despite official Indian enthusiasm for ideas like BIST-EC (Bangladesh, India, Sri Lanka and Thailand Economic Cooperation) and IOR-ARC (Indian Ocean Rim Agreement for Regional Cooperation), domestic business response has so far been lukewarm. The lack of genuine enthusiasm within the Indian business community for a more liberal trade and investment regime underscores the limits to effective foreign economic diplomacy. Since the MEA

and the finance ministry seem to have a better appreciation of its potential, they must communicate their policies more effectively to political leaders, businessmen and the academia.

Unless India is willing to pursue a 'liberal' outward-oriented foreign economic policy, which enables it to improve bilateral relations with other major powers and other developed and developing countries, it will find it difficult to pursue a nationalist defence and security policy. Moreover, it should also be understood by those who advocate a more inward-oriented trade and investment policy that an India which is insular with respect to the developed industrial economies, cannot be open and expansive towards the economies of the South Asian region.

Acquiring economic and political leadership within the South Asian, Southern Asian or even the Indian Ocean region carries with it the obligation of being more open to global investment and trade flows. Indeed, a more liberal trade and investment regime with respect to her neighbours, through SAFTA, should be the first step in reaching out to the world, first to other developing economies, especially in Asia (through closer links with ASEAN and membership of APEC), and then to the developed industrial economies.

It should also be recognised by our policy makers that sustained high growth is as much a politically and strategically necessary objective as it is an economically desirable one. Indeed, a pro-growth and liberal economic policy is a necessary element of a strategic policy commensurate with India's status as an emerging power. Economic growth has improved the profile of Chinese diplomacy just as the lack of growth and economic crisis has reduced Russia's. It is time Indian political leadership drew the appropriate lessons.

## Satyameva Jayate

MANI SHANKAR AIYAR

THERE is little space for reasoned argument in our politics. Everyone has an opinion about the Jain Commission Report, but almost no one has read it. Not that one can blame them: the report runs to over five thousand pages spread across 17 thick volumes, all in incredible detail and is very densely written. But what does the report say?

### Treason and Sedition

Following the ambushing of a Sri Lankan army patrol by Sri Lankan Tamil militants in July 1983, there were widespread anti-Tamil communal riots in Colombo and elsewhere accompanied by the unleashing of genocidal attacks on the unarmed Sri Lankan Tamil civilian population of

North and East Sri Lanka, particularly in the Jaffna Peninsula. As in 1971, when Pakistani military action against the civilian Bengali population of East Pakistan led to a massive influx of refugees and Bangladeshi militants into India, so also from 1983 onwards a large number of Sri Lankan Tamil civilians, political personalities and militants took refuge in India, almost entirely in Tamil Nadu, a state and a people with whom the refugees shared a common ethnic identity.

The Sri Lankan Tamil militants who took refuge in India represented a number of rival factions. The shoot-out in Pondy Bazaar, Chennai in 1982 between two groups then relatively little known, one of which was the LTTE, underlined the necessity of keeping the rival militants as segregated from each other as possible. This was achieved by organizing separate camps for separate groups of militants. Each militant camp was run by the faction concerned. They were permitted to impart training to their cadres. The Indian authorities also organized training for the militants.

**T**he Jain Commission has examined all the evidence led before it with respect to this training. Justice Jain has come to the considered conclusion that: 'Evidence available before the Commission indicates that the training was essentially for self-defence and not for launching military operations.' (VII, 916)<sup>1</sup>

The key pieces of evidence adduced by Justice Jain for coming to this conclusion include the following:

- \* The deposition of P. Chidambaram, who, as Justice Jain says, 'was intimately connected with the issue of

Sri Lankan Tamils,' that 'he was not aware of any training imparted to the Sri Lankan Tamil militants by the Indian Army.' (VII, 915)

- \* The deposition of Chief Minister M. Karunanidhi on 21.2.97 that 'The training was for self defence.' (V, 63)

- \* The deposition of the pro-LTTE Tamil Nadu leader, P. Nedumaran that the LTTE had refused 'to join the training programmes along with other groups' and LTTE supremo, V. Prabhakaran who said, 'even if the heaven comes, we will not take it.' (V, 56)

**I**n any case, from July 1983 onwards, the Sri Lankan government had launched a propaganda broadside against India in the United Nations and forums such as the UN Human Rights Commission and its Sub Commission on Human Rights claiming that the Government of India was assisting terrorism against the Sri Lankan state. The international community refused to give any credence to these charges. Indeed, it is precisely because India had established its credibility in the United Nations family that, when IAF planes accompanied Indian transport aircraft for the dropping of humanitarian relief supplies, including food items, to the besieged civilian Sri Lankan Tamil population of Jaffna in June 1987, no government in the world and no organ of the United Nations was willing to entertain the complaints of the Sri Lankan government that India had violated the sovereignty of its air space.

Such assistance as was provided, whether as alleged in Uttar Pradesh or in Tamil Nadu, was for 'self defence' only and for the reason given by Justice Jain: enabling the Sri Lankan Tamils to protect themselves from the genocidal assault of the Sri Lankan authorities.

There is no evidence before

Justice Jain to indicate that the LTTE was a Frankenstein's monster created by India. On the contrary, Justice Jain has found (VII, 917) that:

- \* 'Several Sri Lankan Tamil militant groups, notably the LTTE, began seriously training themselves in the hands of organizations such as the PLO and MOSSAD during the seventies as well as early eighties (i.e., long before the LTTE came to India)... it was this highly specialized guerrilla training which LTTE cadres had undergone in foreign terrorists outfits which made the LTTE a formidable enemy of the IPKF.'

- \* 'The LTTE started stockpiling arms from the international market from the early eighties onwards.... There is evidence of huge mobilization by the LTTE for purchase of arms from the international underground bazaars.'

- \* 'For smuggling of arms the LTTE purchased their first ship "M V Cholan" in 1984 and subsequently augmented their fleet of smuggling vessels.'

- \* 'LTTE cadres also underwent regular courses in wireless communications from foreign countries.'

**W**hile Sri Lankan Tamils were provided refuge and other assistance in India, the Government of India, first under Indira Gandhi and then under Rajiv Gandhi, engaged the Sri Lankan government in a dialogue to find a political solution to the ethnic question in Sri Lanka. The bottom line of the Indian stand was that India would not endorse or support the demand for *Eelam*, that is the partition of the island republic into a Tamil nation and a Sinhala nation. We pledged ourselves to preserving the unity and integrity of Sri Lanka. This has remained the policy of six successive governments since Rajiv Gandhi: those of V.P. Singh, Chandra Shekhar, P.V. Narasimha Rao, Atal Behari

1. In all references to the Jain Commission Report, the number of the volume is given in Roman numerals and the page number in Arabic numerals. Thus, VII, 916 means Volume VII, page 916.

Vajpayee, H.D. Deve Gowda and I.K. Gujral. Since these prime ministers were drawn from several different parties, it can be asserted with confidence that there is a mainstream national consensus in India that the sovereignty of Sri Lanka will be respected but that the Sri Lankan authorities must find a political solution acceptable to the Sri Lankan Tamils.

President Jayawardene was the first foreign dignitary to visit Prime Minister Rajiv Gandhi after he won the election of December 1984. Within six months, the Sri Lankan president again visited New Delhi and even accompanied Rajiv Gandhi on a joint visit to Bangladesh to meet the Bangladesh president and visit the cyclone-devastated island of Uri Char in the Bay of Bengal.

In consequence of the success of India's efforts to engage Sri Lanka in a dialogue and promote a political settlement between the Sri Lankan Tamil militants and Colombo, two rounds of negotiations between the Sri Lankan authorities and the Tamil militants were arranged in Thimpu, Bhutan during 1985. While Colombo indicated some willingness to move forward on greater political and administrative autonomy for the North and East, short of partitioning the island to bring into existence a sovereign Eelam, the Sri Lankan Tamil militants, including the LTTE, insisted on Eelam as their minimum demand. At the same time, all Tamil militant groups made it clear to New Delhi as much as to Colombo that no political settlement would be acceptable to them unless it was guaranteed by the Government of India.

Contacts continued through 1986 and considerable hopes of a breakthrough were raised when Rajiv Gandhi and Jayawardene met at the Bangalore SAARC Summit in Nov-

ember 1986. Notwithstanding the disarming of all Sri Lankan Tamil militants within a week through 'Operation Tiger' mounted by the Tamil Nadu state police—an operation which Justice Jain commends and describes as proof that under MGR 'the state law enforcement machinery was capable of tackling and disarming all Sri Lankan Tamil militants in the state' (VII, 930)—the political talks did not make much progress. Meanwhile, Sri Lankan military action in Jaffna started rising alarmingly during the spring months of 1987.

While the Sri Lankan authorities were intensifying their military operations against the innocent civilian Sri Lankan Tamil population of Jaffna, the simmering revolt of unemployed Sinhala youth in southern Sri Lanka, under the leadership of a Sinhala naxalite party, the JVP, started seriously threatening Colombo's control of the southern half of its territory. Back in 1971, a similar naxalite revolt led by the same party had resulted in an urgent request by Sirimavo Bandaranaike to Indira Gandhi for assistance from the Indian armed forces. This assistance had been readily given. The precedent was much in the minds of the Sri Lankan government when the JVP revolt was intensified in the summer of 1987.

Caught between the inability of his armed forces to impose a military solution on the North and the East and the imperative need to redeploy his armed forces away from the North and East towards the South to deal with the JVP insurgency, Jayawardene began to see reason. Contacts were established with the Indian government and Rajiv Gandhi was invited to Colombo to sign the India-Sri Lanka Accord of 29 July 1987 which halted hostilities while paving the way to democratic elections for choosing a Provincial

Council for the North and the East under the chief ministership of a Sri Lankan Tamil and with political control of the Council firmly vested in Sri Lankan Tamil hands.

The Accord provided for Sri Lanka to turn to India for assistance in implementing the agreement. In accordance with this clause, President Jayawardene immediately asked India to send in a peace keeping force that would keep the peace in the North and the East while the Sri Lankan army was deployed to the South to deal with the JVP insurgency. That is how the IPKF went into Sri Lanka, not as an army of invasion but as a peace keeping force at the invitation of the Sri Lankan government.

With the conclusion of the Accord, all Sri Lankan militant groups, bar the LTTE, quickly returned to Jaffna, surrendered their arms to the IPKF and earnestly set about availing of the political opportunity presented by the forthcoming elections to the Provincial Council to secure the democratic support of the Sri Lankan Tamil people. Prabhakaran held out in New Delhi for a while, but in return for some financial assistance, agreed to go back to Jaffna, surrender arms and participate in the political process. There was even a token surrender of arms by the LTTE; in Prabhakaran's presence, to the IPKF in Jaffna.

However, when the Sri Lankan navy seized a LTTE vessel attempting to cross the Palk Straits with contraband in violation of the Accord, a problem arose about the authority—IPKF or Sri Lanka—which was to hold the captured militants in custody. The LTTE managed to smuggle cyanide capsules to the captured militants in the guise of food supplies. Every one of the militants swallowed the capsules at the Palaly airbase while the Sri Lankan authorities were arranging

for their transport out of Jaffna. This incident signalled the outbreak of armed hostilities between the LTTE and the IPKF. Eventually, some five thousand Indian jawans and armed forces officers were killed or maimed by the LTTE.

Till October 1987, the LTTE were turning to India for succour. After October 1987, the LTTE became the enemy. Once the LTTE became the enemy, any material assistance from India or by Indians to the LTTE to kill and injure Indian armed forces personnel became an act of treason and sedition. The DMK failed then, and seems even now to not understand this distinction.

**J**ustice Jain has found that whereas LTTE operations in Tamil Nadu wound down to virtual disappearance between the departure of Prabhakaran in September 1987 and the end of President's rule in January 1989, immediately after the DMK government took office in January 1989, the LTTE received protection, patronage and support to convert Tamil Nadu into 'a rear base or launching pad for fighting IPKF.' (VII, 923)

The evidence for this uncovered by the Jain Commission includes the following:

\* Memorandum prepared by the Director, Intelligence Bureau (DIB) dated 26.6.89 which says: 'Tamil Nadu has, in a sense, become a clandestine rear base for the LTTE.... DMK ministers, other party functionaries and state government officers have been extending covert and not so covert support and patronage to the LTTE'. (XIII, 77-83)

\* The same memorandum goes on to say: 'LTTE elements have also been in contact with the chief minister.... It is Murasoli Maran who is mainly orchestrating various moves on behalf of the DMK administration.'

\* DIB also reports 'a considerable degree of laxity in the responses of state administration and the police.... the LTTE has fully utilised the situation to step up its activities and specially its arms smuggling operations.'

\* DIB went on to say: 'Almost the entire eastern coastline has now become a haven for smuggling operations.... Items smuggled include gelatine sticks, detonators, explosives, different kinds of ammunition and firearms.' These were arms to be used against the IPKF.

\* The memorandum reported: 'LTTE cadres injured in encounters with the IPKF in Sri Lanka are brought to Tamil Nadu.... At least 27 persons are now undergoing treatment.' On recovery, these injured cadres were returned to Sri Lanka to resume their killing and maiming of Indian armed forces personnel.

\* 'Madras is the main communication centre of the LTTE for establishing contact with the outside world,' said the memorandum.

\* Most damagingly, DIB said: 'Madras and Coimbatore have emerged as major centres for the manufacture of arms and ammunition for the LTTE.'

**J**ustice Jain pointedly asked Prime Minister V.P. Singh whether he had any reason to doubt the veracity of IB reports. Singh replied in the negative. (VI, 671) No evidence was led to indicate anything to the contrary. Justice Jain has confirmed the active collaboration of the DMK and its leaders in protecting and promoting the endeavours of the enemy to kill and injure Indian soldiers. This amounts to treason and sedition.

Justice Jain has unearthed much other evidence of the blind eye which the DMK government deliberately turned to anti-national LTTE activities during this period of active armed conflict between the LTTE and the IPKF in Sri Lanka. This includes:

\* The manufacture and smuggling out from Coimbatore of various kinds of arms and arms components, rocket propelled grenades and Arul 89 rifle grenades for use against the IPKF. (IV, 336-346)

\* Justice Jain has also detailed the evidence that 'the LTTE was getting its supplies including arms, ammunition, explosives, fuel and other essential items from Tamil Nadu to continue its fight against IPKF and that too with the support of the DMK government.' (VII, 937)

\* Communications from the central collector of excise and customs, Trichy to the state government and DIG CID Q branch's report to the state government relating to the abduction of customs officials by the LTTE and intimidation of government officers by LTTE militants. (XIII, 122-125 and 130-133) Justice Jain concludes: 'There is no evidence to show whether any LTTE cadres were apprehended, and weapon seized, or any preventive measures taken to curb the inflow of wounded LTTE cadres.' (VI, 362-363)

\* With regard to the follow up on the abduction cases, Justice Jain finds that there was 'not only apathy but extreme reluctance. Even after the facts were clear to the investigators, the appropriate sections of law were not applied. No investigation appears to have been conducted and the case apparently was brushed under the carpet.' (VI, 372)

\* Justice Jain has further examined no less than 24 cases involving LTTE activists and a series of incidents in Salem.

**O**n the basis of a careful examination of this overwhelming body of evidence, Justice Jain finds that whereas 'prior to 1989, the militancy, particularly LTTE activity, was not anti-national in character' (VII, 924), 'soon after the DMK government took over the reins of power in Tamil Nadu

(in January 1989), the LTTE slowly began to consolidate itself in the state.' (VII, 937) He has also reproduced the Intelligence Bureau's summing up of developments during 1989. (XIII, 142-145) He concludes: '1989 signified the perpetuation of the general political trend of indulging the Tamil militants on Indian soil and tolerance of their wide-ranging criminal activities.' (VI, 415)

The DMK government was in office through all of 1989. During all 12 months of 1989, the LTTE, with the active connivance of the DMK, killed and maimed thousands of Indian jawans and officers. That is what is called giving aid and comfort to the enemy. That is what amounts to treason and sedition.

DMK spokesmen and their supporters have sought to portray these acts of treason and sedition as being excused by the political contacts maintained through this period by the government of India with the LTTE, sometimes through the DMK.

**I**t is normal and regular in times of war to maintain political contacts with the enemy with a view to ending hostilities and finding peaceful solutions. After all, when the Americans and North Vietnamese were engaged in war, there were regular political contacts in Paris and elsewhere between the two sides, some overt and some covert, some direct and some through intermediaries. Indeed, Henry Kissinger and Vietnam's Le Duc Tho jointly won the Nobel Prize for Peace for the negotiations they conducted aimed at the conclusion of an agreement to end hostilities even during the period that their armed forces were at war with each other.

It is one thing to talk peace with the enemy and quite another to provide material and moral support to the enemy. Prime Minister Rajiv Gandhi

did indeed ask the DMK to talk peace to the LTTE; the DMK, instead, equipped the LTTE to run a rear base in India to fight the Indian Army. The fact that the DMK even now is unable to see the distinction shows how unfit it is to be part of any government at the Centre.

There are two red herrings which have been drawn across our paths in the aftermath of the tabling of the Jain Commission Report. One is the allegation that what the DMK did was in consonance with the decision of the Rajiv Gandhi government to release some 150 LTTE militants held in Tamil Nadu jails even while the LTTE was engaged in armed hostilities with the IPKF. The fact is that the detainees were not flown from custody in Tamil Nadu to liberty in Sri Lanka. They were moved from custody in Tamil Nadu jails to the IPKF detention centre near the Kankesanthurai cement factory in Jaffna. Only a couple of them were released and that too after Army Intelligence, in consultation with local sources, had concluded that they 'would not constitute any threat to the IPKF,' as Gen. A.S. Kalkat, Commanding General of the IPKF, has said. The rest of them were held in custody throughout the entire period that the IPKF were in Sri Lanka. They were released on the orders of Prime Minister V.P. Singh only when the IPKF was withdrawn from the island.

**T**he second item of disinformation has been V.P. Singh's allegation that Murasoli Maran had been informed by Rajiv Gandhi that he, Rajiv, would 'secure Eelam for Prabhakaran.' In his deposition before the Jain Commission on 10.9.1996, LTTE central committee member, Kasi Anandan, who met Rajiv Gandhi in March 1991, said: 'I went to Shri Rajiv Gandhi with the purpose that he may support for a separate Eelam. He did not tell that he

will support Eelam. I did not insist for his promise for a separate Eelam. Till that day I knew that he was opposing to Eelam.' Murasoli Maran himself refused to endorse V. P. Singh's version of the Rajiv-Marani conversation although invited to do so by Justice Jain.

### Assassination

Rajiv Gandhi was killed by an assassination squad led by 'Sivarasan'. The same Sivarasan had led the assassination squad which massacred EPRLF leader Padmanabha and 15 others in Madras on 19 June 1990. Justice Jain has found 'striking similarities' between the two assassinations. (VII, 942)

**A** key piece of evidence confirming the DMK's role in letting Sivarasan and his accomplices get away with the Padmanabha killing is the sworn statement of R. Nagarajan, Home Secretary to the Karunanidhi government, before Judicial Magistrate I, Trichy, dated 30.11.1991. (XIII, 158-178) Justice Jain draws attention to Nagarajan's deposition where 'he said that whatever statement he gave before the Magistrate is a true statement and not a false one.' (VII, 687) The following quotations from Nagarajan's statement will establish the extent of the DMK's complicity with the LTTE:

\* 'The policy direction given by the chief minister was not to disturb anyone coming for treatment from Sri Lanka. The police could not screen them and result being that the LTTE cadres penetrated into our territory freely during this time. The real trouble started only because of this approach.'

\* 'The chief minister was told that the arrival of large numbers of LTTE cadres disguised as refugees would 'force a serious threat in the maintenance of law and order and ultimately would affect the security of the state. The chief minister has shown no response.'

\* After the incident at Pattinam Kathan on 18.2.90 where one police constable was killed and 10 others injured, Nagarajan says Q branch told him that 'the reason (there) was no improvement in the investigation' was that one of those involved in the shoot-out 'was a close friend of M. Alagiri, son of then chief minister.'

\* Nagarajan says DIG Ramnad was unable to apprehend the culprits responsible for the Pattinam Kathan incident because 'the scheduled operation date was changed under the oral orders of the chief minister.... When I checked up this with G. S. Ramanan (DIG, Ramnad), as well as with the DGP both confirmed it. DIG CID also confirmed it.... After few days, the operation was carried out, nothing was available at the spot.'

**I**t is against this background of what Justice Jain has described as 'the unusual ineffectiveness of the police... due to their awareness that the LTTE rank and file operating in Tamil Nadu has political patronage of the ruling Party' (VII, 941-942) that Nagarajan's sworn statement in respect of the Padmanabha massacre has to be evaluated. Nagarajan's statement says:

'At about 10.45 p.m. (on the day of the Padmanabha massacre), once again DGP contacted me and explained the arrangements done already, and when I asked him what steps were taken to apprehend the culprits, he informed me that the chief minister has asked me that the police need not evince keen interest to trace them out till his arrival next day... when I asked about the chief minister's instruction to the DGP, DIG CID Jaffar Ali also confirmed it.'

Justice Jain has also taken into account the depositions of J. Ramakrishnan, SP, who supervised the investigation into the case and the

affidavit filed by S. Sripal, former DGP. Justice Jain has also taken into account a detailed DIB memorandum dated 25.6.1990; (XIII, 338-343) The clinching evidence was provided by the report of the Tamil Nadu special investigation team (TANSIT). Of course, depositions made by M. Karunanidhi himself and others have been fully taken into account. Justice Jain concludes: '...as is seen from the oral evidence available before the Commission, it appears that the inaction on the part of the state government is being justified retrospectively... what cannot be justified is the non-performance of the entire state machinery when faced with such serious incidents of crimes committed by foreigners on Indian soil.' (VI, 578)

Justice Jain has found that 'investigations conducted after the assassination of Rajiv Gandhi disclose that Sivarasan— one of the key accused in both the cases— continued to move unhindered between Jaffna and Tamil Nadu even after the assassination of Padmanabha. During the period he was actively making preparations for the assassination of Rajiv Gandhi.' (VI, 583) Other LTTE members of the killer network still moving about even after the Padmanabha massacre and involved in the Rajiv assassination included Periya Saanthan, Ravi, Mahesh and Vicky. (VI, 583-584)

**J**ustice Jain has also examined measures taken by the DMK government after the Padmanabha massacre to assuage outraged public opinion and concluded that:

'The above steps, as enumerated by the concerned, do not give an impression that the assassination of Padmanabha in the heart of Madras has any serious effect leading to any serious streamlining of the functioning of the state administration.... There are reports during this

period of active connivance of some DMK leaders with the LTTE. It has also been reported in several intelligence inputs that the LTTE was in continuous interaction with the Chief Minister, Karunanidhi, primarily to ensure that their activities continue unhindered even after the Padmanabha killing.' (VI, 597-598)

**T**wo of the most important Intelligence Bureau reports cited in this connection are nos. 18 and 20, both dated 28.6.90, which have been summarised by the Jain Commission. (VI, 613-614) In these reports, it is stated *inter alia*:

'One Natesan, as LTTE emissary, met M. Karunanidhi on 26 June 1990. Karunanidhi desired that the LTTE should provide him advance information regarding their movements so that he could ensure that the movements were unhindered. It is reported that Karunanidhi endorsed the assassination of Padmanabha since he perceived Padmanabha as a betrayer deserving to be liquidated.... He also branded the former North East Council Chief Minister Varadaraja Perumal as a betrayer *who deserved to be liquidated as well*' (emphasis added).

Another key piece of evidence is LTTE activist Kasi Anandan's statement to the Special Investigation Team (SIT) of 7.7.91 and his deposition before the Commission. In that statement Kasi Anandan said: 'Karunanidhi directed Nagarajan the Home Secretary to render assistance to LTTE vehicles for unhindered run of the state.' In his deposition, Kasi Anandan said that he and Natesan had met M. Karunanidhi. 'He has met several times alone and once or twice with Natesan. Both of them met Karunanidhi more than once.' (VI, 626-633)

Nagarajan's statement before the Trichy magistrate recounts numerous other examples of collusion between the LTTE and the DMK for months after the Padmanabha killing: \* Regarding the incident at Thiruvannikovil: '...there was heavy local political pressure and one MLA from the ruling party namely, Malarmanan along with few party men prevailed upon police from entering into the premises and then *he was contacting the chief minister directly to get his order to local police...* the result was no weapon was recovered and only a bundle of clothes were available' (emphasis added).

\* Regarding supply of essential items and explosives, Nagarajan says DIG Trichy 'informed me that the chief minister during his camp at Trichy orally informed him that the transport of essential goods by LTTE men need not be obstructed. This was further confirmed by the DIG CID also.'

\* Regarding the raid at Thillai Nagar, Trichy, in which Kasi Anandan was caught but allowed to go, DIG CID informed Nagarajan that this was 'at the oral instruction of the chief minister.'

\* With reference to the Samayapuram incident, where 'huge quantities of gelatine sticks' were recovered, Nagarajan says only a small proportion was seized 'and the rest of the quantity were handed over to the same persons who stored earlier at Thillai Nagar house *after getting oral clearance from the DIG CID and the chief minister*' (emphasis added).

\* Regarding the arrest near the Pattukottai of five LTTE cadres involved in the Padmanabha murder case, Nagarajan says: 'it was brought to my notice that some of the personal assistants serving under the minister, namely Thiruvallargal Sundaram and Thangavelu stood for surety for the accused.'

\* Madras city police commissioner informed Nagarajan that 'a request

came from the minister Subbulakshmi Jegadesan to release him (a LTTE cadre) without registering a case.'

\* 'Q branch SP told me orally that the manufacturing of uniform clothes for LTTE men in Sri Lanka has been going on at Erode... and it was done at the instance of Subbulakshmi Jegadesan.'

\* DIG CID prepared a list of 26 persons 'who were aiding, abetting and smuggling of goods, explosives and other essential items' but when the list went to CM 'the then chief minister had given clearance for apprehending only six persons.'

\* IG law and order, informed Nagarajan that 'we carried out the orders of the chief minister to inspect the areas and deny the existence of the LTTE.'

\* 'It is known fact that the LTTE has enjoyed political patronage. *On the oral instruction by then chief minister*, the law enforcing missionary (*sic*) had given them encouragement and they enjoyed local support politically for their activities' (emphasis added).

IB reports show that the collaboration and connivance between the DMK and LTTE continued after Chandra Shekhar became the prime minister.

'Report no. 48 speaks of Kasi Anandan having received information in advance of the arrival of central para-military forces to the state... and Kasi Anandan therefore alerted the LTTE militants to scatter in order to avoid a swoop on them.' (VI, 631-632)

Justice Jain points out that 'the statement of Kasi Anandan contradicts the statement of Karunanidhi on several important aspects... from the statement of Kasi Anandan, thus, it would appear that the state machinery *including the chief minister* were helping and supporting the LTTE... the veracity of the IB reports is thus established and the same finds corroboration on some subjects from the statements

of V.P. Singh and Kasi Anandan.' (VI, 632-633; emphasis added).

Justice Jain has also relied heavily on IB and DIB reports, reproduced as annexures M-92 to M-102, (XIV, 387-419) dealing with numerous individual cases of collaboration and collusion between the DMK and the LTTE. This leads Justice Jain to the following conclusions:

\* 'If the IB reports of the period are looked into they would clearly present a picture of connivance of the DMK government in the LTTE activities surfacing on the soil of Tamil Nadu.' (VI, 669)

\* 'There are plenty of IB reports which made expressed mention of M. Karunanidhi's actual line of action in relation to the LTTE... the veracity of the Intelligence Reports during the period of V.P. Singh has not in any way been disputed or challenged by V.P. Singh. They stand as they are.' (VI, 670-671)

It is in this manner that the DMK collaborated with the LTTE in setting up and maintaining through the period January 1989 to January 1991 the network which first carried out the assassination of Padmanabha and, emboldened by the lack of action in that case, went on to assassinate Rajiv Gandhi.

### Rajiv Gandhi's Security

Justice Jain has found that, immediately after Rajiv Gandhi demitted the office of prime minister, the Research and Analysis Wing (RAW) and the Intelligence Bureau (IB) were asked to undertake a fresh threat assessment of the threat to Rajiv Gandhi as a former prime minister.

On 9.12.1989, RAW reported that while there was no particular threat to the new prime minister, V.P. Singh, the threat to Rajiv Gandhi had substantially increased. The reason for the

increased threat perception was that terrorists gunning for the Gandhi family anticipated that Rajiv's security would be lowered, thus making him more vulnerable. (XII, 80-85)

Justice Jain has also integrally reproduced IB assessments from Amritsar, Madras, Bombay and Jaipur in December 1989, which show that all these IB regional offices were of one view that far from the threat to the former prime minister having decreased since he demitted office, it had increased, and that too for the same reason as identified by RAW. (XII, 69-75)

**J**ustice Jain has also found that three of the senior officers most closely involved in Rajiv Gandhi's security as prime minister—Cabinet Secretary T.N. Seshan, Director Intelligence Bureau M.K. Narayanan, and Additional Secretary in the PMO R. Vasudevan—had all recommended the continuation of SPG cover or the provision of SPG-equivalent security. All three were summarily removed from their positions within the month of December itself. The only senior officer connected with security who was carried over into the entire period of V.P. Singh's premiership was the Principal Secretary to the Prime Minister, B.G. Deshmukh. Deshmukh alone had advised against amending the SPG Act to cover the former prime minister, over-ruling his Additional Secretary, K.R. Venugopal, who pressed till the end that this be done. (XII, 163)

Justice Jain has further found that the alternative security arrangement was put together when the IB was headless. Narayanan was removed at the end of December and it took more than two months for a replacement to be named. In the meanwhile, the alternative security arrangement was devised, never reviewed and its operation on the ground never monitored.

This headless Intelligence Bureau 'followed a flawed perception... which was contradicted by their own threat perception reports. The fallacious threat perception was contrary to, and inconsistent with, the inputs received by IB headquarters... such a calibration of inputs was nothing short of misrepresentation on the part of IB.' (IV, 333)

Indeed, it was not only IB that, with the summary dismissal of its chief, discovered the virtues of 'misrepresentation'. Justice Jain finds that 'The question of Rajiv Gandhi's security was not at all considered in its true and correct perspective.... At all three levels, i.e. security agencies, bureaucrats and the cabinet... vital factors were totally overlooked, especially the grave nature of LTTE threats to whom Rajiv Gandhi, a ex-prime minister, had become an easy and soft target—more vulnerable to attacks from such determined and deadly elements.' (IV, 232)

**D**id V.P. Singh have any alternative but to withdraw SPG protection? Justice Jain offers two such measures that might have been taken:

\* 'It was possible to have provided SPG protection to Rajiv Gandhi after he ceased to be prime minister by amending the SPG Act which would have been easily achieved; operational constraints... could have been overcome (IV, 330); or

\* 'The possibility of raising another specialised force (similar to SPG but under another name)... was not examined though it was suggested.' (IV, 332)

It is this 'casual consideration' of security for Rajiv Gandhi in the face of 'overwhelming evidence to indicate that threats to the life of Rajiv Gandhi increased after he ceased to be prime minister' that has shocked Justice Jain. Considering that Rajiv was

'the most threatened Indian in recent times' (III, 184), Justice Jain stresses that 'the level of these threats... further accentuated after he ceased to remain prime minister. This fact alone made his security considerations stand on a singular footing—unparalleled so far and not comparable to any other dignitary.' (IV, 329)

**T**he alternative security arrangements put into place after the withdrawal of SPG were deeply flawed. The personnel strength was slashed to a tenth of what it had been under SPG; the technical wing, which was the heart of the SPG security system, was removed. Advance Security Liaison (ASL), which was the core of the SPG security system on tour, was abandoned. Proximate security was reduced to a single personal security officer (PSO). Instead of the Blue Book, which contains security instructions for the most threatened individuals, the Yellow Book, which is for dignitaries (like ex-presidents) not so threatened, was made the basis of security arrangements for Rajiv Gandhi on tour.

State governments, which have no experience or expertise in the protection of the most threatened persons, were entrusted with the entire responsibility for providing protection. 'The efforts of the security system should be to create as many barriers as possible between the assassin and the target.... In the case of providing security cover to Rajiv Gandhi, especially from such rabidly determined killers as the LTTE, the implementation of this tenet is conspicuous by its absence.' (III, 187)

What is worse, neither the V.P. Singh government nor its successor called for any reports to see how the alternative security system was actually working on the ground. Justice Jain says: 'it also appears that no study of the actual operation of the

alternative security scheme was ever made. It did not go into the consideration that the LTTE had already spread its network... it also did not go into the consideration that during the election days particularly, the visits of Rajiv Gandhi would be more frequent and even in interior areas and countryside.' (IV, 335)

**I**t is on the basis of these finding that Justice Jain comes to his damning indictment of V.P. Singh, that his alternative security arrangements for Rajiv Gandhi 'cannot be said to be prompted by genuine and bonafide intentions... the consequence (assassination) may not have been intended but the devising such an inadequate alternative security scheme resulted into such an unintended consequence.' (IV, 339)

As regards the responsibility of the Chandra Shekhar government, Justice Jain draws attention to the assurance extended by Prime Minister Chandra Shekhar on the eve of his assuming office to Ratnakar Pandey, Congress Rajya Sabha MP from the same eastern U.P. region that Chandra Shekhar hails from, that he would upgrade the security arrangements. (IV, 325) Instead, says Justice Jain, 'it appear that no thought was given to the security of Rajiv Gandhi by the government led by Chandra Shekhar.... The threat scenario during his period had drastically changed and required a complete streamlining of the security arrangements for Rajiv Gandhi, which was not contemplated at all.' (IV, 317 and 341)

Pointing out that it was during Chandra Shekhar's prime ministership that 'the mastermind of the assassination, Sivarasan, was sighted in Madras in April 1991,' Justice Jain holds that 'even in such a scenario the Chandra Shekhar government did not care to provide the needed protective cover to

Rajiv Gandhi either in the form of SPG by effecting amendment in the Act or in any other form by providing protective cover of some other force comparable to SPG.' (IV, 313-314)

An attempt has been made to cover up Chandra Shekhar's responsibility by quoting out of context a reply to the prime minister from Rajiv Gandhi in February 1991 saying he did not want further protective measures taken. In fact, the letter referred only to some civil works proposed to be undertaken on the periphery of 10 Janpath and Rajiv's reply said that this should not be done until the proposals had been discussed with him.

**T**he inescapable conclusion to which one is led by any objective reading of the reports of the Verma and Jain Commissions is that while security arrangements at 10 Janpath were relatively satisfactory, they were impregnated with danger when Rajiv Gandhi was on tour. The intention clearly was to keep him bottled up in his home in Delhi so that he could tour the country only at immense personal risk. As Leader of the Opposition, it was Rajiv Gandhi's national duty to travel the length and breadth of the country whatever the risk to his person. Equally, it was the duty of the government of the day to provide him full protection wherever he went. The governments of V.P. Singh and Chandra Shekhar failed in their duty. Rajiv Gandhi fulfilled his – but had to pay with his life for exercising his fundamental right as a citizen of India to participate in the political life of the country.

Rajiv Gandhi is dead. But the truth of his assassination is slowly unravelling. The story of this entirely avoidable tragedy will be brought to a conclusion when Justice Jain submits next February the second and last part of his report. *Satyameva Jayate!*

# Judge and be judged

RAJEEV DHAVAN

THE close of 1997 is an appropriate time to review the status and work of India's increasingly controversial 'Supreme Court led' higher judiciary. On 31 December 1995, the daily newspaper Asian Age paid tribute to Chief Justice Ahmadi as the 'man of the year'. The year 1996 was the year of Justice Kuldeep Singh who batted with a verve for juristic innovation and the style of a one-day international cricketer to protect India's coastline, the Taj Mahal and Delhi from environmental damage. He also penalised ministerial corruption with exemplary damages. As the *hawala* case advanced with menacing speed to close in on leading politicians, Chief Justice Verma found himself on the cover of India Today.

The *hawala* trials were unsettled as politician after politician was released on the basis of a Delhi High Court ruling that the crucial diaries indicting them were inadmissible in evidence. Many of Justice Kuldeep

Singh's orders were reviewed and reversed. Clamouring for recompense, a political attempt was made to wrench judicial domination of recruitment to their own number. Complexity courted confusion as the year ended simultaneously with a furious controversy over whether Justice Punchi should be the next Chief Justice of India as well as a proposed ordinance to raise judicial salaries and pensions.

Judicial intervention was welcomed at a time when administrative malaise was compounded with large scale corruption. Yet, general – and not just political – doubt seized the public on whether the high profile 'justice' offered by strong judicial personalities was a reliable way to summon Indian democracy to find its strengths.

But, the question whether the judiciary can be trusted with the enormous powers through which it has found self-expression cannot simply be decided on an empirical review of its performance. It is no less fundamental to be clear about our expecta-

\* This paper was originally a PILSARC Working Paper and is reproduced with their permission.

tions of the judiciary as an institution of state and governance. Before the advent of the British, Indian society followed an entirely different jurist-led and civil society based concept of law and justice. If we know little about pre-British judiciary, it is because the judiciary of these earlier epochs was not a crucial institution of state or governance.

Jurist based legal systems are fundamentally different from those which rest their authority on the power and prestige of a powerful state. Neither the Dharmasastra nor the law of the Shariat needed an all powerful state to claim the exclusive monopoly to declare or enforce their legal norms.

**T**he new 'modern' system of law which requires a politically designated sovereign to create and enforce law is only three or four centuries old. In simple versions of modern law, the judiciary has always been regarded with suspicion. Political sovereigns have been wary about the possibility of their authority being questioned and undermined by judges. In this simple version, the judiciary is seen as being no more than a unique *bureaucracy of state*.

When the British introduced a new political system of law in India, they were gravely concerned, in the words of a famous Dispatch of 1834, about creating a 'judiciary utterly uncontrollable by the government and, on the contrary, controlling the government.' This echoed well-known Benthamite antipathies to judges and the common law. But, the British realised that faith in the governance of the Raj could not be achieved just by the army and administration.

Accordingly, the judiciary was roped in not just as a unique bureaucracy, but as an *institution of state* which was designed to be seen as independent of the administration.

This enhanced respect for the judiciary which, in any event, remained toothless in dealing with the executive because the latter had taken due care to ensure that the British judiciary in India did not possess any real and effective powers to strike down legislation or control or review the powers of the administration.

When India's Constitution was being drafted, the cabal at the helm of putting the constitution together expressed their fear of a powerful judiciary in no uncertain terms, with T.T. Krishnamachari straying into denigrating hyperbole when he called it (even the disempowered version of the judiciary envisaged by the Constitution) a 'Frankenstein monster'. The argument of fear prevailed.

The Constitution-makers denied the judiciary the power to impose 'due process' judicial standards on the administration and legislature. The judges were given the same power as those in England on the understanding that the judiciary of the United Kingdom was generally conservative and forbearing in the use of its powers. The Constitution of India as it was promulgated in 1950 was strongly founded on the intuition that the judiciary was generally not to be trusted.

**C**onservative expectations from the judiciary suited Nehru and his incoming government. Inspired by a mixture of Fabian socialism drawn from England, planning from the Soviet Union, regulatory 'New Deal' mechanisms from America and with full faith in the British inherited civil service, Nehru wanted to plan India's future by creating a huge regulatory and welfare state through the rule of law to create a viable technological infrastructure to enable economic growth whilst simultaneously transforming the social lives of the people

so that they could face the challenge of modernity without losing their past.

This mix of law and state (which in retrospect smacks of 'naive instrumentalism') did not give the judiciary too significant or creative a role. It was for Parliament to enact laws which would empower and enable change, for bureaucracy to instrument the change into effect, and for the judges to enable this empowerment in a non-obstructive manner. No less interested in change, the judges refused to be silent spectators. When they sought to bring in more equitable compensation in the zamindari abolition and land reform cases, they were confronted with amendments to the Constitution and were, in turn accused by Nehru of having purloined the Constitution.

**A**ll this is too well known to merit repetition. What survives for emphasis is the fact that social and political expectations of the judiciary in the fifties and sixties were that it should not stand in the way of progress – a view to which the judges demurred, claiming that they were sadly misunderstood.

Over the years, the judiciary responded to these political expectations in three distinct ways. First, to ward off the voodoo of the uncomfortable accusation that they were anti-national, the judges made it clear that – to borrow Justice Krishna Iyer's words – 'in the inevitable chemistry of social change, judges are certainly not anti-catalysts.' Second, a planning commission jurisprudence was born at the hands of strong judges like Chief Justice Gajendragadkar who exhorted the judiciary to use law for the purpose of social engineering.

The third response flowed from the second and promised 'committed' judges to the nation. But, it did not take long for the formula of 'committed' judges to mean 'regime' judges, result-

ing in the quip that some lawyers and judges know the law and some only need to know the law minister!

**P**olitical expectations of the judiciary were not the only expectations of the judiciary. A powerful constitutional arena can never work to measure. The agenda of the judiciary is not determined by the judges, but also by lawyers and litigants who file cases before the judiciary. In the dynamic that follows, many further expectations arise in the minds of the litigants, lawyers and, perforce, the judges themselves. It did not take long for Indian judges to realise that the judiciary was an institution of state in its own right which would be supported by lawyers, litigants and powerful forces who saw a duly empowered judiciary as a permanent self-standing arena to fight the government.

On their part, the judges were simply not prepared to be seen as falling below cosmopolitan standards of judicial review of the actions of the legislative and executive, even if among the judges themselves there were strong and 'weak' versions of the scope of such a review. It is the 'strong' version of judicial review (as manifested by Justices Fazl Ali, Mahajan, Mukerjea and Das in the fifties; Justice Subba Rao, Hidayatullah, Shah and Hegde in the sixties; Justice Krishna Iyer, Bhagwati, Chinappa Reddy and Desai in the eighties; Justice Venkatachaliah, Kuldeep Singh and Verma in the nineties) that have rung alarm bells in political circles and excited public controversy.

This is not to say that 'weak' versions of judicial review do not entail strong oversight of government. Although the judges faltered hopelessly during the Emergency (1975-77), and were accused of not just forbearance but cowardice for their performance during that period, even the normal

incidence of judicial review has been quite exacting. In that sense, irrespective of whether individual judges at various times have followed 'strong' or 'weak' versions of judicial review, they have set up the judiciary as a powerful and effective institution – a new forum in which private and public issues can be agitated.

In this configuration, it was no longer exclusively necessary for the Indian people to tout favours from honest or corrupt politicians and bureaucrats (which according to the Vohra Committee published in 1995 had become the normal method of doing business with the government and interrogating its power). Armed with law, the discontented could use the judiciary and place it in institutional polarity to the government.

**E**mbarrassed by their record during the Emergency, but greatly emboldened by their own impressive track record, the judiciary has slowly expanded the scope of judicial review. Although inspired by native institutions, the early breakthrough of the fifties and sixties were based on an imitative cosmopolitanism, inspired by judicial innovations in administrative law in England.

In the mid-sixties, Lord Reid and Lord Denning in England transformed judicial attitudes to the administration. India followed suit. But true creativity cannot just be derived from imitation. In many of the significant areas of judicial resistance – of which the most celebrated is the Fundamental Rights case (1973) where the Supreme Court told Parliament that the basic structure of the Constitution was inviolate from constitutional amendment – the Indian judiciary has set a pattern for other judiciaries of the world to follow.

As we review the history of the Supreme Court of India, it might not

be impertinent to note that much of the real innovative stuff has come from 'Indian' as opposed to 'western' educated judges. Controversial judgments have flowed from the judicial pen of a Justice Mahajan, Patanjali Sastri, Gajendragadkar, Krishna Iyer or Bhagwati who were solely educated in India and who were, perhaps, less enamoured and more practical in dealing with the English legal traditions which Indian law is heir to.

**T**he quantum juristic leap made by the Supreme Court came after the Emergency. Although associated with the work of a group of judges whom I affectionately call the 'gang of four' (comprising of Justice Krishna Iyer, Bhagwati, Chinappa Reddy and D.A. Desai), the vision for the change should be attributed to Justice Krishna Iyer.

A former politician, Justice Krishna Iyer instinctively knew that the days of 'naive instrumentalism' and 'committed judges' were over; and the judges had to take a decision about making the judiciary an *institution of governance* which served the Indian people to resolve Indian problems in an effective way. Carefully choosing the issues on which this change would be based, the new public interest law (PIL) movement was born.

Certain salient features of the new PIL should be noted. In the first place, it congealed an *invitation to democratic participation* to determine the agenda of the judiciary. Any bona fide public interest person or group could invoke the court's jurisdiction, albeit by writing a letter, with the judges reserving the power to examine any issue which had public implications, even if brought to their notice by the newspapers. But, who did all this provide an opportunity for? Surely not the general populace? Perhaps, for ambitious social activists

and lawyers who saw in this an opportunity to carve out a social niche for themselves.

Second, the new PIL was founded on a *new conception of social and economic justice* so that the poor and disadvantaged should not be just otherwise neglected beneficiaries of the Rawlsian 'difference principle', but protected from physical and economic deprivation and atrocity and put on the road to genuine equal opportunity and self-advancement. In time, this conception of social justice did not just confine itself to the disadvantaged, but more generally with the public interest, including issues concerning the environment, general corruption and the conduct of the administration.

**T**hird, the new PIL was *pre-eminently exploratory* in its procedure and geared towards an *efficacy of results*. The court devised new procedures of appointing fact-finding and expert commissions to apprise itself of the issues before it. It also created schematic remedies so that commissions and other enforcement mechanisms indicated by the courts could ensure that the relief granted by them was implemented. It is a moot question as to whether these new procedures and schematic remedies were, in fact, balanced and effective in their approach.

It was not surprising that the new PIL encountered critics both within and without the courts. Within the court, the judges were concerned that a public interest litigation was becoming a publicity interest litigation, with the public cause being fueled by private interests. Many judges were simply not willing to go along with the new PIL, forcing the court to re-examine its scope—an exercise which is still not complete.

By the early nineties, most activists had good cause to believe that less imaginative judges had straight jack-

eted PIL into conservative proportions. It was around this period that Indian governance took a turn for the worse. By 1992, the Vohra Committee had already concluded that India was in the hand of hoodlums at every level of administration. Operations in Punjab, Kashmir and the North East and elsewhere had resulted in levels of atrocity that were unconscionable. Nuns were raped in Uttar Pradesh and judges beaten up in Nadiad (Gujarat) without effective official action being taken. Led by Chief Justice Venkatachaliah, the court monitored these changes.

As the environment worsened, Justice Kuldeep Singh's *tour de force* in protecting the Taj, Delhi and various other areas became household news. Justice Verma's monitoring the hawala case against leading politicians showed that the judges were not willing to sit back and watch the subversion of the rule of law. As if to illustrate the point, Justice Verma also delivered the Babri Masjid and Hindutva judgments; and, more generally took the view that the judiciary should not be too interfering by venturing into areas and issues which were not judicially manageable.

Ironically, it was his orders in the Forest and Vehicular Pollution cases which led some critics to ask whether Justice Verma and his colleagues had crossed the *Lakshman rekha* of judicial propriety to take over the administration. Or, was it the case that the judges were simply ensuring that the administration did what it was supposed to under the law?

**W**e need not trouble ourselves with every twist and turn of contemporary controversies about the judiciary. A great deal of it is motivated by vested interests who have been hurt by judicial orders. Some of it is media hype, anxiously trying to catch

high profile stories and making issues more controversial in order to attain that profile.

But, general public concern about whether judges can be trusted with so much power without an appropriate framework of accountability cannot simply be wished away without further examination. The concern pivots around the circumstance that judges are neither democratically elected nor structurally accountable for their decisions. This concern deepens in the light of an exponential growth of *personality based judicial decision-making*, with the law being developed by particular judges amidst dissent by others.

**A**re judges accountable? If so, in what way? And, to whom? In considering this, we can make a distinction between *primary* and *secondary* accountability, primary responsibility being affixed, in this context, on those who create the law and not those who simply interpret it. There is also a decision to be made between *structural democratic* accountability (which requires the decision-maker to account to some other, preferably democratic, fora in respect of its decision-making) and *value* accountability where the decision-maker claims to give effect to certain inalienable (even if controversial) universally respected (even if not accepted) values identified with a civilized society.

By its very nature, the modern political concept of law reposes law-making in the hands of the political sovereign—be it a democratic legislature or a dictator. It is on this basis that judges seek to escape from the burden of primary responsibility by asserting that much of modern law is not made, but simply interpreted, by them.

Though some of the laws in India—such as tort law or personal laws

— continue to be judge-made, it is by and large true that the law and rule creation function has comprehensively moved towards and falls within the domain of the legislature and the executive. But, in hiding behind their so-called interpretative function and claiming only secondary accountability for their decision-making, lawyers and judges are being crafty rather than coy.

**E**ven while interpreting law within the interstices prescribed by the legislature, *judges do make law*. Every hermeneutic discipline (including theology or literary or art criticism) gives a great deal of scope to the 'interpreter' to be creative. The so-called rules of interpretation are themselves a social and political compromise to discipline interpretation without stifling it. Even secondary accountability carries with it the duty to be accountable.

Given a system in which the executive appoints judges on the advice of the judiciary (a system that does not always work well in India) and the huge discretionary powers which Indian judges have commandeered to their use, judges cannot escape the duty to be both primarily and secondarily accountable for their decision-making.

How do unelected judges with virtually life-long working tenures account for their judicial conduct? To say that they are appointed by a democratically accountable executive can only spawn incredulity as an effective answer. Judges cannot be democratically accountable in the same sense as elected legislature and executives, although there are various judicial systems which ordain elections, with indifferent and unconvincing results. Introducing a system of elected judicial appointments in India will kill the judiciary as an institution. We have only to witness what has taken place

not just in elections to legislatures, but also in elections to Bar Councils and Bar Associations to confirm any doubts that we may have of such a foolhardy prescription.

But, there is considerable room for the argument that the method of appointing judges in India can be vastly improved. In the two judgments that dealt with the issue in 1982 and 1993, the argument was almost solely about who should have the decisive say in making appointments to the judiciary: the executive or the judges? The awkward formula of making the Chief Justice of India's voice decisive in the matter of appointments may have resulted in concentrating too much power in one person. *There is a great need to evolve a judicial collegiate which would consider and make judicial appointments*. Several proposals in this regard have been put forward, but they have not come to fruition; nor even seriously considered.

**L**inked to the question of appointments is the problem of discipline and removal. During and after the Ramaswami affair (1991-94) when Parliament refused to confirm findings of a judicial committee by not voting in favour of impeachment, the Supreme Court evolved several informal mechanisms to deal with errant judges, including those accused of waywardness and corruption. One such important mechanism for High Court judges was to transfer them to other High Courts. While—at least, to me—it is abhorrent that High Court judges can be transferred like civil servants, the policy was used effectively in the nineties to 'clean up' many High Courts. Such informal mechanisms were used to deny Justice Ramaswami 'work' whilst impeachment proceedings were under way.

The informal mechanism route was also suggested in the latest

controversy over Justice Punchi and almost put into effect. It was subsequently withdrawn because of strong opposition from the Bar. It felt that strong informal mechanisms which prejudged the guilt of judges were usurpatory in nature and unfair to judges who must be presumed to be innocent like anyone else.

**T**he Bar and the judiciary in India is often factionally divided resulting in all kinds of untimely and doubtful accusations. Yet, there is reason to believe that the higher judiciary is not free from corruption and indiscipline. That is why *it is necessary to evolve mechanisms to deal with judicial indiscipline and corruption*. Most countries in the world have formally created such procedures to deal with judicial discipline and misconduct. There are even greater reasons for India to take urgent steps to ensure that its judiciary is above suspicion.

There remains the problem of judicial accountability for judicial decision-making. Such accountability can only be value based. The form in which this is expressed is to declare that *judges are accountable to the law*. The seeming contradiction in this defense of the judiciary is its circularity, in that judges claim to be accountable to a body of law which is of their own making. This is no doubt partly true.

But, judicial creativity is not unbounded. It is not just based on following rules, but in devising principles and values including those relating to human rights and justice. To the extent to which all discourse and disciplines are malleable, there will always be a wide judicial discretion to interpret and apply laws in any particular situation.

Be that as it may, what has to be borne in mind is that the judicial func-

tion contains within itself many safeguards which ensure accountability. All matters are decided after hearing the parties on the basis of rigorously laid down procedures. When the judges take a decision, they are obliged to give detailed reasons for their decision. Accountability of an exacting order is inbuilt into these procedures. Judges do make mistakes. Those who have the power to decide may err. Susceptibility to making mistakes in an otherwise closely monitored process cannot by itself affirm lack of accountability.

In order to evaluate the role of the judiciary in a democracy, an overview has to be taken of the evolution of various structures of political democracy over the past two hundred odd years. There is an inevitable tension between *majoritarian* principles (which require the will of the majority or the greatest good of the greatest number to be given effect to) and *value based* justice principles (which seek to immunize certain human values from the tyranny of majoritarianism).

If this tension did not exist, much of what is of value to governance would be lost with holocaustic results. While the need to recognise this tension has been accepted, it is not entirely clear how it would be given effect to. Most of the answers to keeping political rulers in check lie in civil society. But, civil society is not *sui generis*, containing as it does the awesome capacity to inflict majoritarian pressures and values on one and all.

The need for institutions of governance which will defend value based justice from the onslaught of majoritarianism has been deeply felt in this century which has seen two world wars, genocide and poverty on a scale that is unprecedented and has no parallel. Democracy is not, and

cannot be, wholly free in the pursuit of ends which subvert democracy itself. The judiciary was not a natural candidate to be an institution of governance which would monitor and find the balance between democracy and justice. Its track record was suspect, its affiliations class biased, and its decision making unpredictable.

But, over this century, it has improved its candidature for being the institutional guardian of value based justice. This is as true of India's judiciary as of other judiciaries around the world. No doubt, the performance of the judiciary has been uneven. But even after close scrutiny, it seems to come out ahead as an important institution of governance to help democracy find its strengths. It is on this basis that the judiciary justifies its new found pre-eminence as a unique institution of governance.

We should not be too disturbed by the new efflux of controversies about the Indian judiciary. Throughout its 47 years of existence the Supreme Court has always been controversial. In the fifties and sixties, an angry Nehru accused the judiciary of being socially irresponsible. Unable to cope with or understand judicial power, Indira Gandhi superseded judges in their claim to be Chief Justices of India on two occasions in the seventies and took several unsuccessful measures to curb the jurisdiction and power of the judiciary.

The judicial creation of PIL was always controversial. Sometimes – to invoke a distinction made by a Allahabad High Court judge – the judiciary was not controversial but simply got caught in controversies. But, real differences have also existed between judges and politicians; and the judiciary on its part (while permitting criticism of its work) has reacted sharply and punished politicians

who have suggested that the judges are class biased.

Yet, we have to recognise the transformation of the judiciary into a new and unique institution of Indian governance. From being a mere bureaucracy and an institution of state, it has become a self-standing institution of governance in its own right. At times, it has seemed a mere bureaucracy. For the British and Nehru, it was simply another important constitutional institution of governance. Given contemporary developments and India's plight these new developments, which have given the judiciary an increasingly important role as an institution of governance, are both necessary and proper.

Having created such an important institution of governance, India must be careful that the judiciary does not fall by the wayside as have many others throughout the world. The Malaysian crisis of the eighties was a reminder of what can happen to even a mildly courageous judiciary. If further proof is needed of a possible portentous state of things to come, the utter destruction of the power, status and prestige of the judiciary of Pakistan in late 1997 must give us pause.

Judges are aware that institutions of governance rest on a measure of public goodwill and political support. They know that they must be statesmanlike in the exercise of power. So far the Indian judiciary has combined wisdom with craft and courage. But, it has also shown itself to be erratic, personality based and not above suspicion.

As India's million mutinies creep up on the judiciary and cry out for a rule of law, the judges need to be careful. Indian governance, too, must realise that the judiciary is a fragile democratic gift. It must be subjected to criticism but never irresponsibly.

# Education and its market value

DINESH MOHAN

A FEW weeks ago I ran into an old friend who is currently one of the mandarins deciding India's economic and financial policies. He asked, 'And so, how is IIT doing?' As one can only indulge in friendly banter at such gatherings, I responded with 'Not so well actually. Your market-friendly policies have forced us to raise the fee, so we have 50% fewer Ph.D. applicants this year.' Not batting an eyelid, he shot back: 'Obviously. Your Ph.D. students don't have any market value.' Taken aback, I shifted to a more serious tone and tried to start a discussion on the need for research in these globalised times. But he had already walked away. The last word on the imperatives of the 'market' had been spoken.

Actually, this view of higher education should not have surprised me. Worthies who look at everything as consumer products classify higher education as a 'non-merit' good. Non-merit goods are those where only the individual benefits from acquiring them and not the society as a whole. Multilateral agencies like The World Bank have too been pushing countries like India to stop subsidies to higher education.

When Ron Brown, former US commerce secretary visited India, a

public meeting was organized at IIT Delhi. At that meeting I asked him: 'I understand that since the 19th century all the way up to the 1970s, most land grant and state universities in the US virtually provided free education to state citizens. Was that good for the economy, or should they have charged high fees in the early 20th century?' He replied, 'It was great for the economy. It was one of the best things that the US government did at that particular time in American history – building institutions of higher education which were accessible to the masses of the people. I think it is one of the reasons why our economy grew and prospered, one of the ways in which the US was able to close some of its social gaps. So people who lived in rural areas would have the same kind of access to higher education as people living in other parts of the country. It was one of the reasons for making America strong.'

Our policy-makers seem unaware that their mentors in the US did not follow policies at home which they now prescribe for other countries. Ron Brown's remarks summarize the importance policy-makers in the US place on higher education as a vehicle for upward mobility for the poorer sectors of their population.

81

Even today, a majority of Americans study in state-run institutions. Some of these institutions, like Berkeley and the Universities of Michigan, Illinois, Ohio, Wisconsin, and Texas are among the best in the world. The annual tuition charged from state residents (about \$5000 a year) is about a month's salary paid to a lecturer. Even this fee is waived for most students. In addition, students receive stipends for books, food and hostel charges. The basic principle is that no student who gets admission to a university should have to depend on parental support if it is not available.

Ron Brown's remarks went unnoticed in India. Every other day some luminary or the other opines that universities and technical education institutions should increase their charges and that such education should not be subsidized. Most editorials echo these sentiments. Eminent industrialists pontificate that we should run educational institutions like business houses. Visiting experts from the Bank and the IMF, in their newly emerging concern for the poor, advise us to divert funds from higher education to primary education.

**M**any of these arguments and suggestions are not only ill-informed and spurious but may even be mischievous. If we change our policies on such advice, we could end up destroying our technical expertise without managing to develop a vibrant and equitable school system. Without the availability of technical expertise in the country the question of 'competing globally' does not arise.

There are three sets of people most vociferous in demanding that we make education more expensive. The first comprise those who obtained the best education in India almost free, an education which enabled them to secure scholarships to the best univer-

sities abroad for postgraduate studies. They went on to join organizations like The World Bank, the UN, or multinational corporations, and have subsequently returned to India after accumulating substantial savings abroad. These resident NRIs now occupy influential positions in the Indian bureaucracy and corporate world. Many of them send their children abroad for university education, and the state of Indian institutions does not really concern them. This is why they can afford the position that children of middle class parents in India should not be subsidized for their university education. From a position of comfort they push their ideologies promoting free enterprise while showing 'concern' for the poor at the same time!

**T**he second set consists of those extremely well-off by our standards, but who find it difficult to get their children admitted to good colleges and institutions in India, possibly because there has been little growth in the number of good colleges in the country after the mid-70s. Simultaneously, competition for admission has increased because of the growth in numbers of the so called 'middle class' population. Since securing admission into a prestigious institution is difficult, increasing the cost of education is one way to 'reserve' some seats for rich children with less 'merit'.

The third includes middle class parents with children in capitation fee colleges. These parents end up using all their savings (including withdrawals from their provident fund) and often take loans from banks and relatives to provide their children a second-rate college education. Deprived of all their savings, these parents are a disgruntled lot, jealous of others whose children have obtained a better education at a much lower cost in

government-run institutions. They would like everyone to suffer like them.

Though the underlying reasons for supporting an increase in the cost of higher education are different for the three groups, all of them provide a similar rationale in defense of their arguments. They couch them in a language and logic that pretends to show concern for promoting greater equity in society by taxing the rich. But one must examine these arguments carefully because in other arenas of life these very people oppose progressive taxation or the establishment of a welfare state.

Let us consider these arguments. The most disingenuous one, couched in a concern for the poor, goes something like this. 'The students in our best colleges come from rich families and therefore should not be subsidized. They should pay fees that are higher than what they paid in school.' It is easy to get swayed by this pseudo logic. Only the top one percentile of the country's families may be comfortable with the expenses involved in sending children to private schools. A typical professional family in India does not have a disposable income of more than Rs 7,000 to 8,000 a month in the first 10 years of work.

**A** good school costs at least Rs 500 to 1,000 a month per child. Sending two children to school is a heavy financial burden, and most families spend a little more than what they can actually afford. Since this leaves them without savings for later years, they actually look forward to the day when their wards can get admission to a university where the fee is lower. That would be the time when they start saving for their retirement years, if they are lucky.

The main issue is not whether the rich should pay higher fees or not. The questions that need to be asked

are: Why do only the rich gain admission to our best institutions regardless of merit? What can we do to make sure that intelligent young people from lower income families also get an opportunity to study in the best institutions? Destroying our system of education by designing it for the paying capabilities of the top one per cent of Indian families is hardly an answer.

**W**henever we raise such issues, the usual response is, 'You can always give scholarships to the really deserving.' What this implies is that while all rich children have a right to higher education, only the 'really intelligent' among the less fortunate ones can claim the same right. In any case, even today, more than 95% of our population needs heavy subsidies to access good quality university education. Raising the cost of education would only perpetuate and strengthen the present unfair situation.

The problem, however, is a little more complex. Even with scholarships for the disadvantaged, most of these students would still not make it to good institutions. This is because good schooling in India is now virtually reserved for the important and the rich sections of society. Attending private school or a Kendriya Vidyalaya is no longer adequate to ensure admission to a good institution. Expensive private tuition and coaching classes too need to be arranged. So, as things stand, those from the lower middle classes and the poor have little chance of making it to a good institution.

Even the really outstanding students from poor families are discouraged by their parents from attending 'elite' academic institutions because of the high cost associated with hostel fees, food and books. The American, European and Japanese experience suggests that if we want the lower middle and working classes to aspire

to elite institutions, then these expenditures have to be arranged for. Raising fees and other costs will make it near impossible for the outstanding among the poor to even dream of higher education opportunities.

A second argument advanced is that students in western societies pay high fees. This is patently untrue. Higher education continues to be relatively inexpensive in most countries of western Europe. An exception to this is the UK following changes brought about by recent Thatcherite policies. But even there the fee charged from citizens is only a fraction of their per capita income. In addition, there are a host of private, official and institutional mechanisms that help the deserving. Recently, students protested Labour government plans to introduce £1,000 a year university tuition fee. Even this proposed fee is under 10% of the per capita income in the UK.

**T**he example of high fee most often cited is for the private universities in the US – 'Stanford charges \$20,000, so why should we have cheap education in India? There is no such thing as a free lunch.' These examples are misleading. A majority of Americans obtain good higher education in state institutions and not private ones. For state residents, the official fee charged is about \$4,000 a year which is only 15% of the US per capita income. Not only is this fee not paid by a large proportion of students since they obtain freeships, but many of them manage assistance for living expenses. Even in private institutions like Yale and Harvard, nearly 75% to 90% of postgraduate students do not pay fees out of their own pockets.

In Singapore the official fee in a technical university is about \$5,000 (Singapore). This is only 15% of per capita income. 15% of the per capita income in India amounts to only

Rs 2,000 per year. Therefore, even if we were to charge a higher fee, it should not exceed 15% of our per capita income. We cannot take cues only from the Thatcher and Reagan policies of the past few years, but what their societies did when they were in their own process of 'development' and upward mobility.

**R**eplicating the policies of relatively static, rich, middle class western societies in a poor and hierarchical society like India would be stupid. Increasing the cost of education has many other deleterious effects on society besides denying opportunities to the less advantaged. All societies that are considered 'successful' today, without exception, have provided near free high quality higher education to their deserving young people.

Raising the cost of higher education retards upward mobility. The proportion of Blacks attending university in the US has remained static or even gone down in the last 15 years as the cost of education has increased. This has resulted in greater social tensions and it is not surprising that crime rates in the US and UK are higher than those in western Europe.

Increasing cost of education may result in corrupting the students and skewing their educational choices toward pursuit of fashionable careers. When students need a great deal of money for education, they can obtain it only through loans or from their parents. This pressure could make them more narrow minded, pushing them into disregarding career options that may be commercially less rewarding. They will also be unable to pursue scholarship options which their parents do not approve of. This will result in a mismatch between students' real talents and fields chosen for study. When students spend large

amounts on higher education, the pressure on institutions to graduate them as soon as possible increases and the quality of education suffers. It is a mistaken assumption that fee paying students demand better quality education. All they actually demand is a degree in the shortest possible time. The capitation colleges in our country provide enough empirical evidence for this.

High fee paying students are not likely to show any loyalty to either the institution or society. They view the process of education as a business deal without any sense of social responsibility. In addition, such an arrangement is bound to create social tensions between scholarship holders, loan holders and students funding their own education. Upon graduation, they will be forced to aim for higher paying jobs even if they are unsuitable. This would reduce the probability of graduates going in for teaching jobs, working in NGOs or joining public services occupations.

**T**he medical and legal professions in the US provide a good example of this trend. Medical and law schools in the US have always charged a high fee, unlike other professional institutions. Not surprisingly, these two professions are the most money-minded and the legal and medical systems in the US are considered the worst in all industrialized countries.

Under financial pressure, students cannot risk participating in social movements, thereby reducing the vitality of universities as conscience keepers of society. It is unlikely that students would have participated in our freedom movement had they made large investments in education. The largest and most vociferous anti-war protests in the US came from state-funded universities, not private ones.

If we would like students to work in their areas of interest and competence, they must be financially independent of their parents. Otherwise they cannot really choose their professions. This implies that not only does the fee have to be low but arrangements must be made for young people to fund their living costs as well.

**H**igh cost of education ends up corrupting the parents also. Many individuals are willing to make do without fancy consumer goods to remain honest. But most may bend their morals to gather money for educating their children. Increasingly people take on a second job illegally and neglect their principal job to support their wards in college. Some accept demeaning jobs abroad just to support their children. Others are forced to be even more dishonest.

The lack of savings resulting from expensive school and college education will force society to become corrupt in some form or manner. 'Reforms' of any variety would then be unable to undo this harm. Promoting honesty as a value would become difficult if most parents and their children are forced into corruption due to the high costs of education. No country can aspire to be relatively honest if it makes education expensive for its citizens.

The increasing cost of higher education would affect women adversely. Under today's social mores, most parents would rather spend more on a boy's education than a girl's. Increasing the cost of education would mean losing the gains in levels of women's education, particularly in middle class and lower middle class families. These are the families in which young women need to be encouraged to take up higher education opportunities. Young women wanting to go into professional institutions

would be hit the hardest as these institutions tend to be more expensive.

All modern and successful societies recognize the importance of postgraduate education in general and professional education in particular. This is why postgraduate education is not only free but heavily subsidized for facilities and equipment in all industrialized countries (business schools may be the only exception). Postgraduate students get stipends that are usually 50 to 70% of the value of the salary they would have got in a regular government job. Unless students are given such help, taking up postgraduate studies would be difficult as parents would not want to spend any more money on their children once they are capable of earning a living.

**C**onclusive evidence for this phenomenon is provided by IIT Delhi. The institute raised its annual fee to Rs 25,000 per year for postgraduate students in July 1997. The student intake immediately dropped by 30 to 50% in most departments. This created a serious problem as the intake of postgraduate students has a direct correlation with the quality of the faculty in an institution. The IITs in India are able to attract excellent faculty with Ph.Ds from the best universities in India and abroad because they are able to pursue research careers. If there are no Ph.D. students, these young researchers would not join as faculty. This is clear from the experience of the regional and private engineering colleges in India and elsewhere.

The demand for free and compulsory schooling in India is both just and necessary. We have neglected primary and secondary school education for far too long. This is partly because private schooling is subsidized (cheap land for schools and other benefits) and the rich do not send their children to government schools. As a result

there is little moral or administrative pressure to upgrade the quality of government schools, especially in large cities.

Had we banned the 'public school' system or made it about three times as expensive, government schools would have improved automatically as all the bureaucrats' children would have been students in the latter. The failure to provide a good community school system has resulted in the present impasse. Instead of increasing the resource generation for education at all levels, what is now being proposed is that higher education too should be squeezed and funds transferred to school education. This will make us lose on both counts.

**A**s universities are increasingly starved for resources, their facilities and the learning environment are becoming even more dismal. School teachers are the products of universities. If universities become even more dysfunctional, so will their products – the school teachers. And if university education becomes more expensive, then fewer well-qualified men and women will opt for jobs as school teachers. Those who are forced to do so will extort money from parents under one pretext or another. Clearly, increasing budgetary allocations for school education at the expense of higher education will eventually benefit no one.

We have enough evidence that liberalisation and free-enterprise on their own do not ensure development of good quality institutions of higher learning. The recent economic success of Thailand, Indonesia and Malaysia has not resulted in the establishment of universities of excellence. Even Singapore finds it difficult to attract students to its technical postgraduate programmes. Such institutions have to be established con-

sciously, supported by society and a demand created for knowledge generation by appropriate industrial and economic policies. It takes a minimum of two generations to establish traditions and systems that make universities productive, innovative and capable of useful research and development.

**S**ocieties that aspire to compete internationally in the marketplace on a sustained basis must create knowledge to be capable of innovation. This is even more necessary in a world that is increasingly becoming deglobalised as far as technology and consumer goods are concerned. By deglobalisation we mean that there are now many more centres of production compared to half a century ago.

In the pre-independence era all technological goods sold around the world were manufactured in a few countries in Europe and the US. All were of similar design. The buses, trains, and tractors used in India were the same as those used in the UK. However, as our technological capabilities improved we now produce goods at lower cost and with designs different from those used in the richer countries. To improve upon on these technologies we will need to upgrade our scientific and technological skills more than we have in the past.

Along with development of deglobalised technologies we will need to acquire and use truly global technologies as well. For example, computers, cameras, televisions, passenger aircraft and many industrial processes and manufacturing methods. A continental economy like India cannot afford to completely depend on foreign skills and knowledge for the use and maintenance of these products.

Our efficiency and success in the development and use of both global and non-global technologies will depend entirely on the availability

of highly skilled professionals and well educated workers. This is only possible if we make arrangements for universal school education and an expanded university system. The universities can attract bright, motivated and hard working professionals from the middle and lower classes only if higher education is not made expensive. Promoting upward mobility of the lower middle classes and the poor is important. Young people from these strata of society are the ones who form the backbone of professional work in all industrialized societies.

**W**e have already wasted five decades neglecting school education. We have neglected higher education for about two decades and that is why capitation fee colleges have appeared on the scene. This pattern of low quality and expensive education can only destroy our chances of future development and technological advancement. The policy-makers in industrialized societies will discourage us from developing our own technological and scientific skills. They are afraid of the success of countries like Japan, China and South Korea. They will do anything in their power to make sure that India too does not become as competitive.

With great difficulty we have established a reasonable infrastructure for higher education over the past 50 years. This needs to be strengthened and improved. This will be possible only if the school system is improved along with increased allocation of resources for higher education. If we make higher education more expensive for students, we will destroy all we have achieved up to now. It is quite clear that we need much higher societal funding, both for school and university education. This cannot be done by drastically increasing charges.

# From Bombay to Mumbai

RAJDEEP SARDESAI

'Farewell, farewell to Alexandria as she is leaving...'

— C.P. Cavafy

BOMBAY was once an ethos, a state of the modern Indian mind, a byword for urban hope. But today we must say goodbye to received notions of the Bombay that was, the Bombay of Guru Dutt and J.R.D. Tata, Frank Moraes and Sahir Ludhianvi because the dream city on the western seaboard where the commerce was good and the poetry even better, is no more. Old Bombay with its genteel elitism and vibrant cosmopolitanism has died and we must sing its requiem.

Cities, like great empires, do rise and fall, the cycle of history condemns all metropolises to eventual decline. The Patna of today, for example, would scarcely be reminiscent of the ancient city of Patliputra, capital to the glorious empires of the past. Nor would a decaying Benaras compare with the crucible of high Indo-

Gangetic civilisation that it once was. The difference though is that the transition from Ashoka's dharma to Laloo's raj or from high Hindu culture to consumer piety, has been slow and gradual. Bombay's decline has been precipitous, encapsulated in two decades that have replaced its cosmopolitan ideal with a new cultural mantra that revolves around chauvinism, criminalisation and crass commercialism.

Today, Bal Thackeray and the Shiv Sena rule Mantralaya, their power based on the language of coercion and intimidation. No dissent is tolerated, no one dare question the *firman* of the supremo. When the editor of Maharashtra's most widely read daily, Lok Satta recently chose to criticise the Sena chief's remote control politics, he was threatened and warned that he would be beaten to pulp. Tenants who refuse to vacate precious real estate have been virtually pushed out by the footsoldiers of

the Sena army. The fact that most of these tenants happen to be middle class Maharashtrians, once the backbone of the Sena, scarcely matters. Nativism has been easily sacrificed at the altar of mammon.

Thackeray is not the only extra-constitutional authority lording over the city. Dubai is closer than Delhi is to Bombay. So, while an effete state in Lutyensland procrastinates, a former constable's son turned underworld don, Dawood Ibrahim runs his own sideshow from across the Arabian Sea. Extortions, hired killings (*supari* in local parlance), drug cartels and construction businesses, the D. Company has parcelled out Bombay among various ganglords. The killing of music baron, Gulshan Kumar in a crowded area only reflects the growing brazenness with which the gangs of Bombay conduct their operation.

In a sense, Dawoodbhai is the flip side of the Sena goons. The former uses gun power and street muscle to get his way. The latter uses state power and official sanction to get things done. Together they highlight the most dangerous trend in Bombay today: the merger of the parallel machinery with a lumpenised state.

Where did it all go so wrong? In the 1950s and '60s, the images of Bombay were defined by the Hindi film industry. As Raj Kapoor and Nargis danced and sang along the broad sidewalks of the Queens Necklace, there was a sense of liberation, a feeling that Bombay at last offered some relief from the stifling traditionalism of other Indian cities. It was an age of innocence, a belief that better times were just around the corner. To hear Johnny Walker croon in CID, *Ai dil hai mushkil jina yahan, jara hatke, jara bachke, yeh hai Bombay meri jan*, was to live the ultimate Indian dream. Bombay, with its entrepre-

neurial zeal and liberal ethos, was seen as the land of opportunity, a happy urban mirror to the future of a nascent nation.

Popular culture, in some ways, still defines the cityscape, only now it is the sound of gunfire in blood-spattered shoot-outs in crowded streets that has replaced the melodies of an earlier era. The innocence is gone, to be replaced by the rage and cynicism of a rootless population, best exemplified in Mani Ratnam's Bombay, a film on the post-Babri Masjid rioting in the city.

Those riots in 1992-93 that claimed over 1000 lives drove the final nail in Bombay's cosmopolitan myth. The violence of that horrific period brought together the various elements that had conspired to end the Bombay dream. The pent-up anger that lay under the surface of the so-called city of gold was finally released and its intensity consumed an entire population. The slumlords, the gangsters, the corrupt and communal politicians, the disillusioned middle class and a resentful underclass, were all guilty of being directly, or indirectly, involved in the carnage.

The riots then were only a culmination of a process of degeneration and loss of identity that had begun to manifest itself in the late 1960s. It is no coincidence that this is the time around which the Shiv Sena emerged as a political entity. The rise of the Sena is often attributed to the machinations of the Congress, considerations of realpolitik prompting the then Congress leadership to promote a force to counter the left unions. But its emergence also reflected a deeper social change taking place in Bombay. As descriptions of the early Sena rallies would suggest, a majority of those in attendance were middle class, white-collar Maharashtrians. The support for the anti-migrant politics of

the Sena mirrored the gradual alienation of the Maharashtrian middle class from the city.

Bombay has always been a city of migrants: the idea of *urbs prima in Indis* reinforced this. But by the '60s, as the in-migration increased, the sense of somehow losing one's identity reached a crisis point for the middle class Maharashtrian. This social group had provided a solid intellectual base to the city; even as the Gujaratis and Parsis had ensured that its productive capital was enhanced. The identity crisis faced by the Maharashtrian middle class has still not been resolved. Beyond a point, the Shiv Sena could never provide a coherent identity since it offered little beyond sloganeering and populist gestures like getting shopkeepers to rename their establishments in Marathi, or agitating to have an airport named after Shivaji.

If the Sena accelerated community divisions in Bombay, the economic cleavages were heightened further in the 1970s and '80s. It was in the early '70s that the then chief minister of Maharashtra, Vasantrao Naik, began his grand reclamation project. Naik was among the first to realise that real estate was Bombay's most precious equity. He began a tradition of politicians in tandem with builders wheeling and dealing in large construction projects. The Urban Land Ceiling Act provisions in 1976 only gave a boost to such underhand dealings. Scarce land, skyrocketing prices: the deadly combination changed Bombay's landscape. Proper housing became the privilege of a small elite with the so-called government housing board schemes collapsing. Granting additional floor space index and slum regularisation were high profit, low-risk ventures for the politician-builder nexus. Today, the nexus still flour-

ishes, by selling mill land in prime property or building large complexes in Bombay's satellite towns.

Even as the battle for scarce land intensified, there was little attention paid to infrastructure and the notion of urban renewal. Schemes to reduce traffic congestion, to create a green belt, to rationalise real estate prices, have never really taken off. Most importantly, the entire slum redevelopment project has been hijacked by the politician-builder lobby. When it came to power, the Shiv Sena promised that 40 lakh slum dwellers would get proper tenements. Under the scheme, builders would be given additional floor space index (FSI) for participating in slum redevelopment. Today, the grand project has only resulted in a few slum demolitions but no attempt at redevelopment.

**T**he fact is that in the last 20 years, with in-migration persisting, Bombay's slum population has grown relentlessly. Today, around 60 per cent of Bombay's population lives in make-shift slums, in conditions that are often unliveable. This footloose proletariat has no real stake in Bombay's future because the city is seen to have done little for them. Their anger is, in a sense, the counterpoint to the disillusionment of the middle class.

The social and economic crisis was aggravated in the 1980s during the long textile strike. When the strike failed in 1985 and over 75,000 workers were rendered jobless, an integral part of the city's economic backbone was broken. The working class of the textile unions of central Mumbai had resisted the rise of lumpenism and had supported the likes of S.A. Dange and George Fernandes in parliamentary elections in the 1960s. That today Fernandes has switched his loyalties to Bihar and is allied to the BJP, even while gangster Arun Gawli rules what

ever remains of mill land Mumbai's unions, is a sign of the increasingly dysfunctional nature of Bombay's political economy.

**T**oday, the textile looms have been gradually displaced by the computers of multinational banks, a reflection of how Bombay's economy is almost entirely service sector oriented. Lower Parel in central Mumbai has been rechristened Upper Worli, an upmarket business area populated by the likes of Citibank and Lintas. The labour class character of Bombay has totally disappeared, creating a further loss of identity. The bright lights of Nariman Point, where young executives can rattle off the trading figures on Wall street and Dalal street with equal dexterity, may be a pointer to a boundaryless India Inc., but they certainly haven't been able to give the city a distinctive ethos.

And so, as we push towards a new millenium, its goodbye Bombay and *namaste* Mumbai. Once first generation professional couples held hands and ate *pani-puri* along the balloon-fringed promenade of the sea; once literary soirees uncovered talented young artists and poets; once glitz and gamour glittered on Marine Drive and cafe drinkers raised a toast to urban camaraderie. Now overmade-up power seekers jostle at Chief Minister Manohar Joshi's birthday bash, anxious for a place under the Sena sun and the seamy underbelly of glamour is all too obvious in the blood spattered photos of Bollywood deaths. And even the grand *maidans*, once home to cricket – the city's pride and joy – are today overrun by encroachments. There is an ideological vacuum as the city's famous skyline recedes from vision, leaving in its place an overpopulated, squalid, sweating conglomeration of humanity, its spirit diminished, its soul legislated away.

# Crossing over

SARA RAI

I CANNOT say that my relationship with Allahabad, the town where I spent the first sixteen years of my life, was other than a tenuous one. Allahabad merely provided the outer shell to the kernel, if indeed our house on Drummond Road could be called that. The town seemed to exist simply as an extension of the space in which we spent our unhurried, unchanging days. The past has been called another country but the Allahabad of the past that I remember, sometimes unreliably, seems almost as familiar to me today as it was then. The relentless and dry summer months that changed into steamy monsoons moistening our skins as with warm breath; the short, delightful winter months with their rapid elision into the melancholy I always associated with *basant* or spring in Allahabad.

But apart from the cycle of seasons, the town itself has not changed much either, at least not in a purely physical sense. Certain traditions have died out and some new ones have taken their place, but the map of Allahabad is more or less the same. Give or take a few new shops and houses, some more cars on the road and a visible growth in population, the place would be once again in the sixties, caught, it could seem, in a time warp.

Drummond Road continues to be one of the most neglected and badly lighted roads of the town even though it is adjacent to Hastings Road on which the Circuit House is situated. Back in the sixties, it was little more than a dirt track aspiring to be called a road. There were perhaps five bungalows along the length of it on one side and ours was the second last. At night

a single yellow bulb glimmered at one end of the lane in a brave struggle against the pervading darkness, till it fused or got stolen. Tall grass sprang up on both sides of the desolate road in the rains, housing creatures of the insect and reptile world defying description.

**B**eyond the house immediately to our right was a deep nallah whose furrowed sides were composed entirely of the town's garbage. This was the place where the town supposedly ended. The Municipal Corporation transported the garbage there in monstrous trucks, hoping thus to reclaim some more land for the town. In fact it succeeded in doing this years later, the patch of land thus reclaimed being the present site of Allahabad's television tower. In those days, however, beyond this point stretched a dry wilderness tapering on to the *kachhar* leading to the Ganga. Whole families of swine lived on this stretch. Sometimes they set up a dreadful racket. We learnt later that this was because certain traders in swine cut their bristles to make brushes and other items. The pigs were often butchered and eaten too. This seemed shocking to us, immured as we were from violence of any kind.

When we sat on the roof of our house at night and looked out to the *kachhar*, we could see nothing but blackness. It could have been the edge of the world. It could have been the sea, or indeed, anything else that you imagined it to be. I always thought of it as the sea. Perilous waters in which razor sharp rocks lay just below the surface and eagles watched from lonely crags ships setting sail for distant destinations. The people who lived in my world by day were quite different from its nocturnal inhabitants. At night, witches with long hair and saliva dribbling mouths sat on midnight blue neem trees with legs

dangling down to the ground. There were jackals and civet cats and occasionally the odd jinn, who was, more often than not, a friendly ghost. Night came on suddenly and increased the size of the leaves on trees.

By day this world reorganized itself and took the shape once more of the tidy bungalow with orchards and gardens and familiar people. My father was often busy tapping away with his small hammer making pinewood frames for the paintings that were his current passion. There were times when he painted obsessively, right through the day, his studio littered with palettes, knives, brushes and bottles of linseed and turpentine oil. My mother spent half the day singing. She loved Hindustani classical music and had found her voice almost by accident as a child, when she and her friends took turns at singing into a *ghara* or earthen pot, just for fun. We children, for the most part, were left alone to do what we liked. This could mean flying kites, bathing in the pond under the mango tree, or collecting *birbahuti*, the small red velvet insects that could be seen crawling everywhere in the rains. Those insects have disappeared long since, as have many other things of those days. My sister and I sometimes trailed our brothers giving decent burials to squirrels and sparrows that they had brought down with their slings.

**O**nce in a while my father drove us to the Civil Lines for ice cream at Kwaliti in our sky blue Studebaker. The Studebaker had a long body and when it was started up, the engine sounded like an aeroplane. Dry leaves fluttered up behind the car under the onslaught of air that gushed out of the exhaust pipe and we waited expectantly for the machine to take off. My sister and I enjoyed the crackling sound our hair made as it stuck and

unstuck itself on the nylon material of the back seat when we moved our heads. The waiters in Kwaliti wore spotless white uniforms with red turbans and spoke in inaudible, refined tones. The Civil Lines then was two or three rows of shops, some offices and a restaurant or two. Guzder's, with its graceful lawns, occupied a prominent place. The gentry of the town went there in the evening for a drink and that was where my father offered me my first glass of beer at the age of eight. It was wonderfully frothy and bitter.

**W**e had to leave the house for school at eight thirty. We usually went to school by rickshaw, the latter having been hired for us on a monthly basis. The rickshaw-walla's teeth protruded and gave him a perpetually smiling expression. The road to school was flanked on both sides by ancient tamarind trees. We often stopped the rickshaw to hurl stones at the succulent tamarinds that swung just out of reach. This inevitably ended in a 'who can throw stones the highest' competition and made us late for school. Ours was a convent school and the nuns enforced strict discipline. You could have heard a pin drop in the corridors when the school was in full swing. What we dreaded most was bumping into Mother Joanna at the gate. She had an acid tongue and a pointed umbrella that she used as a weapon for the chastisement of recalcitrant students. We breathed a sigh of relief on the days we managed to get safely past this sentinel.

Classes were a routine affair with lots of written work in which commas and full stops were dictated to us. Poems had to be learnt by heart and recited in an appropriately 'sing-song' voice. Sometimes we had to parse lines of poems or whole paragraphs during a grammar lesson. This was tedious but occasionally the evocativeness of a line or phrase would take

me by surprise. For some reason, one line has stuck in my memory: 'The way was long, the wind was cold, the minstrel was infirm and old.'

The girls called the toilet 'fairy land'. This was a seedy grey cement building that stood apart from the main structure that housed the classrooms. While entering it, one had to guard against stepping on foul, wet and squishy substances. In fact, one tried not to enter it at all. After so many years I think I remember this abode of the fairies because of a friend who was expelled from school for writing 'dirty' messages on the walls of this pleasant building.

**L**unch break was something to be looked forward to. My sister, my brothers and I met near the broad, curving stone stairway of the St. Joseph's Cathedral and waited impatiently for the bearer to arrive with our food. In those days 'bearer' was the name generally employed for the manservant around the house, whose work was a bit like a butler's. For us he was literally the bearer of the food that my mother packed, piping hot, into tiffin carriers. There he would come, sailing along on his bicycle, his pajamas tightened at the bottom with wire hoops ballooning out in the breeze, his bald pate with its tufts of hair at the sides giving him a peculiar dignity. We called him William Shakespeare because of his astonishing resemblance to the great dramatist.

Our days seemed to be full of a succession of tutors. Now when I think about it there were only three, at various points of time, though they followed close upon each other's heels. Kedarnath was our Kathak dance teacher. He wore a stainless steel bangle on one wrist and was a short man who chewed betel endlessly. No sooner had my sister and I got back from school and settled down, after a

brief scuffle for the most comfortable chair, with tea and our respective story books than the familiar cough would be heard outside and we had to reluctantly make our way to the 'dance room'. Our dance teacher could make the most astonishing sounds with his feet when he showed us the steps but we could never manage to move our feet with the same force or precision.

**S**ometimes he rolled little cups from silver paper out of cigarette packets and stuck them on the ceiling of the 'dance room'. The process of rolling the cups and then sticking them onto the ceiling was an intricate one and required a measure of skill. It required just the right amount of lime from his betel box and a capacity to throw accurately. Given Master Sahib's height, this was no easy task and took up most of the dance time. Now this seems a somewhat unusual means of amusement but then it seemed natural enough. Indeed we looked forward to the days when Master Sahib would be in one of his frivolous moods. There were other times when dance class was painfully boring and I even remember days on which we actually hid in the bushes to escape the tedium of those classes. After some time dance classes were replaced by lessons in classical music, till the pressure of school examinations put an end to that as well.

Maulvi Sahib had been given living quarters in the outhouse in our compound, which meant that he could arrive for a lesson at any time and it was always time for a lesson. He was called Talib Jaipuri and he taught us Urdu. He was a shrunken, slightly bent old man who always wore a *shervani* to work and seemed an innocuous sort of person till we discovered that he was capable of delivering peremptory raps on the knuckles with his pencil if he found work wanting in any res-

pect. He died when he accidentally knocked over a kerosene lamp in his room and a fire broke out. His *shervani* that had miraculously escaped the fire hung on an iron hook in the charred room when we visited it a month later on returning from Ranikhet where we had gone for the summer vacation.

Not much that was unusual occurred in the leisured passage of our days. Once in a while though something did happen that gripped the general imagination for some time. One such instance was the 'miracle chapati'. This was a chapati shaped fungus that multiplied overnight when soaked in tea and was supposed to impart miraculously healing properties to the tea. Nobody found out whose research contributed to this discovery but suddenly the air was thick with stories of cancer and other terminal diseases having been cured by the drinking of the chapati-soaked tea.

**N**ewspapers carried pictures of the thing on the front page and soon the chapati had found its way into almost every house. Our chapati too, arrived from the neighbour's and my mother who was stricken with diabetes dreamed of days free of insulin injections. I had nothing to cure but myopia and I watched the hideous mushroom multiply with fascinated disgust. To this day I shudder when I remember the cold, flaccid feel of the fungus on my finger. It brought about no miracles, however, and the chapati disappeared with the same suddenness with which it had arrived. A couple of years later, no one remembered it, people's minds having moved on to other more interesting things.

We slept outdoors on summer nights. Our beds were laid out in a row under the mahua tree, complete with mosquito nets and looking like a fleet of odd square ships on the high seas. The sheets were white and moonlight

cool. Very early in the morning, when it was still dark, the ripe mahua fruit lightly plummeted from the high branches of the majestic tree. The servants took turns at gathering the fruit from which they brewed country liquor. We sometimes found ourselves trapped with mosquitoes inside the mosquito nets that were ostensibly there to keep them out. Then we found the light-winged creatures dull with a surfeit of blood, on the sides of the net in the morning.

**T**wo or three times in the year my maternal grandmother visited us from Benares. She was a Shia Muslim who was strict about observing all ritual that her religion demanded. It is strange to think about her now, in an age when stereotyping is the order of the day and everything, including people are stashed away neatly into boxes of a convenient size. I could not have found a box whose shape she could possibly fit, if I had tried. We were in love with Ammi. We waited for her visits and the day she was to arrive, there was a flutter of excitement in the house. I remember her arrival one blistering summer afternoon. She barely had time to take off the *burqa* that she customarily wore when one of us, eager to find out how long she would stay, indeed to make her stay for as long as possible, blurted out, 'Ammi, when will you go?' 'Right now, if you like, child!' was her characteristic reply.

There were reasons for her popularity. She had a prepossessing personality, full of enormous charm and wit, capable of captivating strangers with her gift for humorous repartee. Looking at her, one became convinced that Indian women, at least not all of them, were not the frail, dominated creatures that people imagined them to be. Physically strong, she was able to single-handedly lift off the

fire cauldrons heavy with food for the hundred odd people who habitually came to the house during Moharram. When she became too old to handle the kitchen any longer, two men had to be hired to do this job.

Gifted with the same genius for weaving patterns in her embroidery as for creating characters and settings in the stories she told us late into the night, she held us in a spell, her deeply textured voice always beckoning to us from the depths of some magical labyrinth. It is her deep voice that I remember filling the grey sky of dawn, with the verses in Arabic that she recited from the Qoran. She learnt how to read Devnagiri at the age of seventy-five in order to be able to read the Ramayana and the Mahabharata. We never failed to be surprised at the contrasts in her personality; at the beautiful unpoluted Urdu that formed her usual speech which could, on provocation, slide into an inventive swearing that embarrassed even the servants. At the fact that she wore a burqa to go out and smoked *biris* which she graciously allowed us to light for her. She didn't mind if we took a puff or two.

**W**e travelled to Benares a couple of times in the year. Usually we took a train on the small gauge that chugged along, smugly contemptuous of the short distance it was expected to cover in three hours, blowing smoke and soot in our faces. It stopped at every little somnolent station on the way, and if it capriciously skipped a station or two, there were always people on the train who pulled the chain to make it stop. Depending on the time, there were milkmen who got on with clanking milk-cans or students who carried their bicycles into the train to effect more speedy arrival and departure. Nearly every station had a peepul or a banyan tree, often with a sadhu sitting beneath it. The names of the stations,

carried a peculiar resonance and I rolled them on my tongue like a connoisseur tasting wine: Handia, Jangiganj, Kachhwa Road, Madhosingh, Raja Talab, Manduadih. They had about them something reminiscent of wet earth and samosas.

**O**ur house in Benares was two hundred years old and had seen successive generations of nawabs come into their own under its roof. Their eccentricities made up the fabric of some of the stories that Ammi told us and there were bizarre details concerning some ancestors whom we would have been loath to meet now. However, there were no nawabs left. Thousands of sparrows that had made their home in the ancient madhumalti vine that ran all along the walls of the inner courtyard started a raucous chirruping at daybreak; a symphony loud enough to infiltrate the deepest slumber. My aunt shook the vine and they flew into the sky with a tremendous whirring of wings that seemed to set the space around the madhumalti in motion.

There were old daguerreotype pictures on the walls. The great grandfather who had married the British priest's daughter; their son Horace who must be eighty five and alive somewhere in Kent; the daughter dressed in Indian clothes, dead at thirteen; cruel Kamran Chacha, the scourge of the family. The past overwhelmed the present with its portrait gallery of the dead, more numerous than those alive. The objects in the house had their own tales to tell. I studied the pestle in which my great grandmother had supposedly pounded to bits an enormous diamond fallen out of her ring, mistaking it for a betel nut. Some Wedgwood china plates were still around. They had false bottoms that held hot water to keep food warm and had survived the bouts of gener-

osity to which an extravagant nawab ancestor had been prone, in which he had given away whatever someone happened to fancy.

And somewhere beyond this Benares that we knew, breathed another Benares with markets and alleyways and *ghats* near the river dotted with straw umbrellas. There were ancient rams with curving horns, widows with shaven heads, foreign hippies, sadhus and *pahalwans* slick with oil who dived into the river at dawn. Once in a while we did stray into this other Benares too. As a matter of fact, Dadi Amma, my father's mother lived in Godowlia, in the heart of this other Benares. She lived on the second floor of an enormous red building with ornate wrought iron balustrades, a large central courtyard and green shutters in all the windows and doors. The house had scores of rooms, most of which were locked up because she could only live on one floor at a time. From the balconies it was possible to view the streets crawling with life below, with the perspective provided by distance and no fear of being stampeded.

**D**adi Amma was a small woman with a frail constitution. She had been a follower of Mahatma Gandhi and had spent some time in jail in the fiery years before Independence. She always dressed in a white *khadi* sari. Her eyes had turned an oceanic grey behind her round horn-rimmed glasses due to cataract. She was a woman of set habits, with a fetish for washing her hands. She always sent for chum-chums whenever we visited. They were syrupy sweets of a light orange colour, with grains of sugar stuck on them. Dadi Amma was supposed to have dominated my grandfather. Looking at her then, it was hard to believe.

We travelled to Ranikhet or Mussoorie every summer till I was nine or ten. Crossing over from the plains to

the hills was not a simple affair. It meant the relocation of the entire household, more or less. My father drove us there in the Studebaker, and before the Studebaker had been bought, in the Pick-up that my brothers once tried to roll down a hill in Ranikhet just for a dare. Pots and pans and kettles travelled in the unlikely company of satin quilts and patchwork bedspreads; books, toys, rolls of canvas and boxes of Winsor and Newton paints sat uneasily on canisters full of rice and dal. The parrot went in its cage and Caesar, the unpredictable Alsatian on a leash. It was a migration of no small dimensions.

**H**ouses in the hills had quaint English names: Macquarrie, Clyde Bank, Rose Mount, Oakley. We lived the longest in Oakley. The house was a wooden structure, built in three storeys, with extensive grounds thickly wooded with oak and pine. There was a cottage at the far end of the grounds in which the painter Ram Kumar lived with his wife and a three month old son. Mr. Holpin lived just below us, in the ground floor of the house. He was an old Englishman who wore a bowler hat and manufactured cheese at home. Crescents and spheres, rectangles and squares of cheese, cheese coated with red wax, yellow cheese with holes; there was a bewildering variety of cheese in the little cupboard in the kitchen.

Mr. Holpin selected a sphere of the largest size and looked at me with a twinkle in his eye – 'Sara?' He paused at the word, as though deliberating over a serious question. Then, apparently finding an answer, exclaimed, 'Ah! Saraduniya! The whole world!'

He handed the cheese with a sense of giving me the whole world. I graciously accepted it, exuberant about owning the world, though I did not know what to do with it.

# Remembering Partition

IN this year of our golden jubilee of Independence, the joyous memory of freedom is simultaneously tinged with one of regret. The anniversary is also one of the Partition massacres. Engagement with the latter seems, in a peculiar manner, to have overshadowed the memory of the freedom struggle. And notwithstanding bitter debates over the telecasting of Govind Nihlani's *Tamas*, we have seen this year the release of Pamela Rooks' *Train to Pakistan* based on Khushwant Singh's novel.

More intriguing than the fictional and cinematic recalling of those traumatic times is the new excitement in the portals of the academe to study the pain, the limits of violence epitomised by the Partition. And this time around, more than basing the studies on archival material, including the now de-classified documents on the transfer of power, the focus is on interviewing the victims. This exercise of re-writing history through excavating the memory of the erstwhile victims, through making them relive their pain, trauma, and anger raises contentious questions. Maybe, next time around, the researchers could focus on the more recent horrors of the Punjab, a Jammu and Kashmir, or the North East.

We present below extracts from a dialogue between **Javed Alam**, political scientist and activist, and **Suresh Sharma**, historian. They are troubled by the new-found interest in the Partition. They raise issues directed, not just towards those engaged in this new oral history venture, but at all of us as citizens. Memory, as they remind us, is not just about remembering, it is also about forgetting.

**JA:** We notice that in the last few years there has been a sudden interest in recollecting/reviving the memories of Partition. What we had earlier was fiction of many kinds – novels, short stories, poems. But this present revival is taking the form of history, of social science, as something important for a long-term remembrance of what happened to our people at a particular point in history. It is appropriate to start by asking why this sudden interest, why this sudden shift from a more conventional history to history written through recollection of memories of people?

**SS:** What you say about the memory of Partition as a self-consciously historical, social science inquiry, is significant. It isn't as if Partition was not remembered in the 1950s and '60s. It was, as you said, in fiction, in memoirs. I can think of at least one important novel – Yashpal's *Jhootha Sach*. At another level in personal conversations it figured more frequently than it does now.

The significance of the last few years lies in the way literary writings, personal memoirs and reports have been converted, in a very self-conscious way, into a project of self-understanding. I am not sure whether this shows a new confidence of being able to look at aspects which are extremely painful and traumatic. I would like to believe we now have the ability to handle this, to come to a proper, fuller, more truthful sense of what we are, what we could be, as much as what we ought not to be.

**JA:** I think this new interest in looking at Partition through memory has also to do with the general dissatisfaction with the way conventional history about Partition has been written. The scholars who are now

working on it have raised two points: one, that in our historical accounts there is a complete absence of the voice of the marginalised. It is important today to recapture that voice. Some have argued that this can only be recovered and recorded for posterity by going back to those very people who were the victims. The other question that many people have asked is: why is it that history has recorded the event but not the pain of that particular event.

It is not quite correct to say that the pain has not been recorded. It has – in fiction, novels, short stories, memoirs, plays and all that. It seems to me that these mediums can record pain much better than can a historical narrative. Then, there is the charge that most accounts of the Partition are excessively nationalistic in a narrow sense. To get away from this nationalist thrust, it is important to go back to the people who suffered, because it is they who were forced to become a part of this particular kind of making of a nation. In this making of a nation we have tried to wipe out these very people who were involved in or opposed to a notion of the nation that was imposed.

**SS:** You are right – these are indeed the broad arguments. One, the absence of human experience and pain in the larger historical narrative. Two, the historical narratives are cast within certain cardinal demarcations in terms of some notion of a national boundary, both in inner life as well as outer space. Together they create a play between the memory of an individual and the making of a collective identity. It has to do with what is understood as the politics of identity, the history of identity formation and the things one should be looking at in order to get to the truth. Besides, these questions and arguments are being formulated at a time when there has been a loss of certainty about the historical project itself; about historical method giving us clear insights into that historical project.

Let me mention another aspect which takes us to a much older debate as to the very nature of a historical event. It concerns the question raised with such prescience by Tolstoy in *War and Peace*. What is war constituted of? Is it the soldier lying writhing in blood, or the dispatches in the office of the General? Can it ever be grasped in its totality, and if so, can it be grasped through these discrete happenings? Is it that without these discrete happenings there is really nothing called war? This paradox has profound implications for the system of inquiry and knowledge called history.

**JA:** The point you raise is interesting, but I haven't heard any of those who are writing such history or social science ever mention it. They seem less concerned with

the relation between the discrete and the general, the overall form in which you look at the discrete, as Tolstoy does for example. It appears more a case of disenchantment, a sense of unease; a rejection of history written with a capital H, as a singularity which is based entirely on post-enlightenment rationality. Some have gone to the extent of stating that history doesn't make sense whereas memory is concrete. In other words, what is important is to recollect the past in our own ways rather than through this particular history written with a capital H.

**SS:** What do you think is the one main reason for trying to recover this memory as a knowledge statement? Once you take it beyond the point of people recounting their personal experiences, whether in memoirs, ordinary conversation, or through fiction, and get to it through the methods of social science, history, however diverse or fragmented it may have become, represents a new quest. What is the significance that you read into this quest?

**JA:** Many of them have yet to publish their final work. But I remain skeptical that it would lead to a knowledge system in the way that earlier history writing did.

Let's get back to some of the more concrete issues involved at this stage. Looking at Partition, there is something which strikes us as a particularity. There are innumerable cases of large-scale massacres mutually indulged in by people at a moment of loss of judgment, of a sense of proportion, at a moment of frenzy. There is no involvement of large organisations or the state as the instrument of mass killings. You can't therefore talk of these events as a general phenomena. Further, it is difficult to distinguish between the victim and the perpetrator. They are often one and the same. At one place people were killing other people in the name of religion, or community; at another place these very people were the victims. They were rolled into one in this large event, the memory of which people want to recover. Do you see any particularity in that?

**SS:** I do, and I share what you said. I think there is a distinctiveness to the Partition memory which takes us to larger questions. First, it is difficult to draw a neat line separating victims from the victimised, however you define a particular identity, a particular collective. This also means that the valorization of the victim in many of these inquiries, and in the minds of many people, is seriously flawed.

The question to ask would be as to why the dividing lines in India are so suffused and inherently blurred. In catastrophes in other parts of the world when people have torn each other apart, the demarcation

seems simpler. When, for example, Spain was reconquered by the Christians and the line was drawn after centuries of Moorish rule, it was wiped clean of the Muslim presence. Similarly in North Africa. The line drawn was neat and absolute; the Christian presence was wiped clean.

Partition as an accomplished fact is something of a blurred achievement. I say this not with unhappiness or with satisfaction but with a sense of humility. What happened in the Indian subcontinent was horrible and traumatic. Large expulsions took place. There was large scale cleansing. But the lines still stay blurred, both in terms of our mental life as well as in living demography. This is true not only of India but in what is now Pakistan as well. The presence there of the non-Muslim is of a much smaller magnitude, but it has not disappeared. That it happened in this way tells you something about the distinctive ground from whence the memory of Partition itself unfolds.

**JA:** This blurred boundary is an interesting concept. Not just today, when we look at the event 50 years after it happened, but even at the very moment when mutual killings were taking place the boundaries were blurred. This comes through in all accounts, whether in fiction or memoirs. For every instance of killing that we hear of, we also hear of somebody's attempt to help, to rescue, somebody giving a shoulder to lean on. If they could not save your property, they tried to save your life. They helped you escape, they helped you hide till you could get to a safer place. It wasn't like the army of Christians driving out the Moors or the Muslims doing the same to the Christians. It was both things happening simultaneously – acts of kindness and acts of massacre. A clear manifestation of deep humanity as well as the perpetration of the most heinous kinds of crime – loot, murder, butchery, rape.

I remember an interesting sentence of Krishna Sobti's in a recent interview where she says that the Partition is difficult to forget but dangerous to remember. It leads to a question about the ethics of remembrance. Is it morally justifiable today – 50 years after the event – to go back and talk to the people who were the victims, to ask them to vividly recollect what happened to them, to their families? One justification is that we are not simply studying the violence; we also want to record the pain. Others argue that they want to map the limits of violence. But we can't see the limits of violence unless we also ask people to recall what they went through, to recount the trauma. I have a lingering suspicion that this is something which ought not to be done, that it is morally not sustainable.

**SS:** Before I respond to your last comment I would like to take up your earlier statement about blurred boundaries even in the midst of the most heinous acts. That in fact constitutes the ground from which the blurred boundaries I talked of earlier in living demography and mental life arise and become possible. For things of this kind – effectiveness of the personal gesture, individual sensitivity – to sustain in an environment requires sustenance from without. They have to seek possibilities which are not in the direct control of the individual. If that is not available then even the most heroic gesture would not acquire its historical staying power. Even a minimalist gesture acquires effectiveness only when this blurring happens on a scale wider and deeper than the person who is giving expression to it. This is the distinctive historical civilizational ground from which the blurred demography, the blurring of the Partition line itself in India has happened.

To give another example, nearly 60 years after the expulsion of the Moors there were still a large number of them in Spain who had formally converted to Christianity. But many in the Christian church and others believed that they secretly remained Muslims. Although they went to church, acquired Christian names, had been baptised, they practised many customs which were seen as Moorish. These people had a special name given to them – Moriscos. But this blurring of boundaries was something which a reconquered Spain was not comfortable with. So there was another mass expulsion of the Moriscos.

In a situation like the Partition, we have to be sensitive to the distinctive nature of our civilizational ground and what a project of recovering memory may do to it. Memory itself subsumes both remembrance and forgetting. It is inconceivable as an act of total remembrance. The quest for total remembrance, or for that matter total history, is gravely misplaced and dangerous. In the words of Nietzsche, it does not, indeed it cannot make a distinction between a state of wakefulness and sleeplessness. As we all know, the condition of sleeplessness is a pathology.

The modern project of memory has inbuilt into it a strange paradox. It is memory which makes the human species peculiarly prone to erratic irrational behaviour. And yet it is in the recasting of that memory that we see as the way out for the human species to behave in a rational, sane way.

**JA:** Let me focus on the relationship between forgetfulness and remembering. The human mind cannot remember or force itself to remember everything that happens. That would be asking it to go insane. Com-

ing back to Partition, I have two major considerations and that is why I approvingly stated that it is dangerous to recall the memory of Partition. At an individual level: how does one live a life of sanity after trauma. A part of the therapy of making a person live sanely, a normal life after trauma, is to help him forget the impact of the trauma so that it doesn't remain central to his consciousness. It slowly fades off. Or else we will suffer neurosis.

It is not appropriate to draw a comparison with psychotherapy. In it the victim voluntarily presents himself to the analyst. And he, through a long dialogue, draws out the repressed side of the experience of the patient and through a complex process of 'transference' effects a cure in the victim. The situation is quite different here. The interviewer chases the victim and draws him by pushing him back into a forgotten memory.

At another level there is a political consideration. If large numbers of people in the name of communities have at some point in time done something to each other, killed, indulged in massacre, brutality, as happened at Partition, if these communities, Muslims and Hindus and the Sikhs, have to live together in peace and harmony and amity, it is important that they leave behind these events as something most traumatic, something tragic but something most unfortunate which ought not to have happened. That they also think that we were all equally responsible.

At both these levels, the psychological as well as the political, it is important that such a memory is left behind rather than continuously revived. Instead you ask the person to recount it, to tell you what happened. Even when you ask him whether anybody helped, he can't do so without simultaneously going into the whole problem of what happened to him, because the help came under that particular context of terror and trauma. Years back when I first came to Delhi, everybody in the city had a siege mentality. They talked about what happened during Partition, what they had lost, the terrible conditions they had come out from. A good thing that has happened and why I think Delhi has acquired a different kind of an identity is that this siege mentality is dying out. Fewer people talk about Partition, or live it as an experience.

A new generation has emerged for whom the Partition is a distant historical event. It has gone back into their memory, which is important for our politics, for our social lives, for normal interaction between communities. The everydayness of life becomes normal when you forget this experience. When we go to people

and ask them to remember all that had happened, to recount it for the record, for many others to read what one did to the other, it seems to me morally indefensible. This is not to say that nothing of violence and victimisation should ever be remembered. I am talking about this specific memory.

Why should this memory of violence and victimisation be forgotten? I find that there are three different ways in which people become victims of violence. First, when there is a state or a state-like body which makes people victims of violence by directly carrying out genocide or massacres. We see it all over the world. It happened in Germany, in Serbia recently, in Russia. As a variant of it one may cite the case of the 1984 riots: the state became a part of the violence against the Sikhs, a massacre that the state sat and watched. Second, there is the instance, for example, of the events leading to and following the demolition of the Babri Masjid. The state wasn't there as perpetrator but it could have controlled it and it did not. I think this violence was entirely due to the involvement of a very large organisation, the Viswa Hindu Parishad of the Sangh Parivar. Hundreds of people were killed.

There is also a third type where people become victims of violence where at a moment of a loss of sanity they start killing each other. It is this third type of violence which we saw at Partition. This should be left behind, should be forgotten, so that people may live in peace, socially normal everyday life, politically as well as individually in terms of the traumas they have gone through.

**SS:** What do you think of the proposition you had mentioned earlier about exploring the limits of violence?

**JA:** On that I would like to raise a larger issue. A number of people feel that in Europe the memory of the Holocaust, the large scale genocide of the Jews by the Nazi state, has been institutionalised and with good effect. This is a spurious argument, untenable because I don't see a comparison, except for a surface resemblance between Partition and the Holocaust in Europe.

**SS:** This desire to explore the limits of violence doesn't make much sense because there is no absolute limit to violence except in the total cessation of life. I share the sense that this loss of sanity which happened on a large scale should not be forgotten. But its memory has to be recovered with a sense of deep responsibility and compassion because the very people who indulged in this killing have subsequently worked out equations of co-living, certain norms of more or less sane interac-

tion. Anything that interferes with that simply because it may yield a good and seemingly complete historical record is, I think, worthless. First, no historical record can ever be complete. The level of detail that one can pursue is without final limits. It could just be one story after another. I am not suggesting that what is being done is merely collecting stories. To me it seems a quest for a knowledge statement through these experiences, and it is that which I would like to discuss in the context of the Holocaust.

**JA:** Do you see any similarity between Partition violence and the Holocaust?

**SS:** I see only a surface similarity, large-scale destruction and killing but nothing beyond that.

**JA:** But what about the exodus?

**SS:** Yes, there is a surface similarity between the exodus and the Partition. But I think that the nature of the exodus memory and the nature of the Partition memory rest on two different historical grounds. These differences have to do with the very constitution of that ground in which the demarcations and lines are blurred in one case and sharp in the other. It is a suffused and intense kind of blurring which constitutes the historical ground called India.

**JA:** During the Holocaust we knew the victim and the perpetrator. There was an organised state which represented the worst that human reason could think of – fascist is the right word for it. It built up a campaign over a long period, it mobilised every resource of the state, of science and technology, to herd people together, to take them to concentration camps, to gas them, kill them and perform the most horrible experiments on human bodies to understand the limits of pain. Even when we look at the exodus historically, it always took place in the face of terror. Today what makes the exodus so difficult to digest is because the national boundaries have become congealed. The national boundary also seeks to impose an identity which you can't escape. If you don't share that identity it drives you out. This process of driving out becomes an exodus in the present case unlike in earlier times. Then, empires and states had flexible frontiers where people could move and shuffle and still live properly.

What remains crucial is the presence of a state which is the perpetrator. It is the state straightforwardly killing people and therefore to draw an example from the Holocaust and argue that since its memory has been institutionalised, there is nothing wrong in what we do is spurious. It is right, even morally necessary, to institutionalise the memory of the Holocaust. We have to remind people repeatedly of the dangers that a

fascist, authoritarian, dictatorial state poses for the people. We have to remind people of the threat that large fascist organisations pose. This is important for healthy politics, for democratic life, for a sane society. Which is why we remind them. I consider the Holocaust within that category, unlike what happened in Partition.

**SS:** No, that is not my argument. The Holocaust and the Partition are distinct, but the absence of the state may not always be the most important factor. True, its presence gives to the artifacts of modern technology a reach and effectiveness otherwise impossible. But let us pursue this parallel with the Holocaust. When I say that memory subsumes forgetting and remembrance, it means that everything need not be remembered, that everything is not remembered and, that everything is not remembered all the time.

Even this project of trying to recover the memory of Partition in its fullness or rawness is something which had to wait 50 years. It was not something which people thought of doing 30 years ago or soon after the Partition. My problem with this project is that it does not recognize the principle that not everything need be remembered all the time. Second, I am not arguing that since something terrible has happened it should be forgotten. The memory of something evil provides an assurance that we will not allow it to repeat itself in any form. The project of total recovery I fear would contribute, not to an assurance, but to eroding equations of sanity.

The memory of the Holocaust is easier to institutionalise because the victim and the victimiser could be clearly separated. The victimiser was also someone who could be put into an abstract docket, namely the state, or the organisation. Some individuals may have been identified but they did not have natural lives beyond themselves. It was this assigning of an abstract institutional responsibility which permitted society to see this process as relatively externalised, as something it could deal with once it had exorcised it. But when one considers a memory like that of the Partition, precisely because the victim and the victimiser may be of the same identity, the same collective, such externalisation is not available.

**JA:** I also feel that just as the memory of Holocaust can help us fight, make us conscious and sensitive towards fascism and what it can mean to the people, it is important to build up a struggle wherever we see traces of it beginning. It is important to expose the state as in the case of the Sikh killings. It is important to remember the Babri Masjid and even the preceeding

and following killings. By so remembering we can build up our anti-communal politics which is the basis of good democracy and sane life. The memory of Partition, I fear, could feed into a re-enforcement of a communal consciousness and give strength to communal politics.

Should we now talk of a related question, how do we look at this project of replacing history with memory, the recovery of past through memory. How feasible is it as a general project, not just in relation to Partition? How much can one, through this kind of a recalling of events from memory, really build up and understand the collective past?

**SS:** That is really the problematic part: the relationship between memory and history as a form of self-understanding and knowledge. I am struck by two words which are widely used. One is *construction* and the other is *invention*. Reinventing the community, inventing the nation, constructing memory, constructing communalism, constructing nationalism – everything is an act of construction or invention. Invention is; as you can see, a looser word and seems to posit a certain free-floating freedom to the agent which makes no philosophical sense whatsoever. Construction is slightly modulated, but only slightly so. It too seems to posit a freedom to the agent to choose, as it were, whatever one likes. The idea of construction provides little room for the never fully concluded play between agency and the ground from whence it proceeds. This leaves unanswered the question that in choosing what one is constructing from whence comes the coherence which guides you, which leads you to picking up one thing and not another.

This really troubles me. On the one hand what is being said is that there are no pure entities. On the other, the key activating instrument and agency through which these entities take shape is demarcated as construction, or worse, as invention. The two propositions don't seem to hold together at all.

**JA:** Let me remind you here that the word construction has an old lineage, it comes from Aristotle. Aristotle talked of construction, but as a literary form. You can construct a literary form, but you can't construct a community. A community to him was ontologically given. Today, there is a complete shift of terrain. Further, a historical community is always integrated in the flow of time and it is, in this flow of time, this embeddedness, being continuously reconfigured. Within this reconfiguration are elements which actors may pick up and bring to prominence, give a certain desired shape, but this is not the same

as construction. If you detach this process from this notion of embeddedness and reconfiguration, I think it poses a problem.

Second, I have difficulty with this mode of doing history. There are large historical forces behind the little events that happen. The breach between Hindus and Muslims in the 19th century, it becoming politicised, leading through a very torturous course to Partition. I think, for example, of the role of the British state and its policy of systematic divide-and-rule, of playing one community against the other. How does one capture that? The use of memory as a way of building the collective past seems inadequate to capture these larger forces as important factors in the lives of these societies.

Let me end here with a distinction which I consider important. This mode of doing history mainly via memory is therefore not what we called oral history. Oral history has been a part of the larger historical project. It helped fill up the paucity of data or to enrich it, but it never positioned itself as an alternative to conventional history.

**SS:** The moment we use a word like construction or invention, then to talk of reconfiguration or embeddedness makes little sense. A literary artifact can be identified with a particular individual. But even a literary artifact finds placement in a certain stream of literary memory by taking in a flow of literary energy which lies beyond itself. It has to be able to mesh with, connect with, to respond to things which lie completely beyond that individual artifact.

To transpose it to the making of collective demarcations, whether we call them memory or identity or nationality or whatever, seems to assign to some agency a kind of decisive freedom to pick up elements which are lying around. It is akin to the act of walking into a workshop and picking up the materials we want or take fancy to and make something out of them. Such a freedom which the act of construction seems to imply cannot, in any deep sense, account for embeddedness, continual reconfiguration.

This lies beyond the immediate control of agency, howsoever that agency is identified, whether as an individual or as an organisation. Strangely this happens in a discourse which never ceases to remind us that everything is mediated. And yet it also proceeds to represent almost everything as an act of construction. These two do not hold together. We have two cardinal explanatory devices which negate each other. Surely that should be a cause for concern and reflection.

# The politics of apology

SIDDHARTH VARADARAJAN

THE end of the Cold War has ushered in a busy period for the assassins of memory,<sup>1</sup> for only when history officially 'ends' can it safely be anaesthetised, captured and destroyed. Remembrance has always been the most strategic of all battlefields – Habermas calls it 'the past as future' – and today, the fact that it is the site of such extraordinary violence should not surprise us much. Imperialism is determined to enter the 21st century with the curtain neatly drawn on its past crimes. Mediated by an amnesia that is carefully orchestrated, an inversion of reality is taking place: victimhood has become oppression, and subjugation, liberty. The defence of rights and sovereignty has become terrorism, and aggression democracy.

While this process is under way more or less on a global scale, the technology of forgetting varies from place

1. The phrase is borrowed from Pierre Vidal-Naquet's *Assassins of Memory: Essays on the Denial of the Holocaust* (New York: Columbia University Press, 1992), a classic polemical work directed at revisionist attempts at Holocaust denial.

to place. In South Africa, it goes by the name of the Truth and Reconciliation Commission, a body where the act of remembrance itself becomes an accomplice in the process of forgetting. But the broad contours of this strategy have already been tried and tested in both the Federal Republic of Germany and the United States of America, where the burden of the past has been cast aside rather effectively.

In a plaintive essay entitled 'A Past Which Refuses to Pass', the German historian Ernst Nolte protested that despite the passage of time – he was writing in 1986, forty one years after the defeat of Hitler – the Nazi era was not being allowed passage into that inert, emotionless, 'objective' territory called 'mere history'. Christian Meier, then the president of the German Historical Association, also complained that 'it is precisely this threshold to "mere history" that the 12 years from 1933 to 1945 seem unable to cross. This past does not pale, but on the contrary, becomes increasingly important and global in nature; it over-

shadows our lives with undiminished intensity.<sup>2</sup> The interventions of Nolte, Meier and others were part of a larger debate among German historians prompted by the May 1985 visit of Chancellor Helmut Kohl and US President Ronald Reagan to a cemetery in Bitburg where Nazi soldiers were buried. Taking a cue from Kohl and Reagan's benediction, many of them argued that it was time for Germany to move on, to become a 'normal' country, no different from others with a horrific past.

**C**entral to this project of normalisation was the historicising of Nazism, which itself involved a two part process. To begin with, the victims and perpetrators of Nazi war crimes were forcibly united in a common victimhood. Saul Friedlander cites as an example the German historian Andreas Hillgruber, who 'suggests by his descriptions... a symmetric framework of responsibility. The responsibility of the Nazis in exterminating their victims is certainly not denied... but it is, in a way, balanced against the responsibility of the Red Army for the crimes committed on German soil.' Friedlander argues that this doubling of perpetrators necessarily leads to the doubling of victims 'and thus to the transformation of the erstwhile tacit or explicit supporters of the Nazi system into victims, not unlike, in their suffering, for instance, the Jews.'<sup>3</sup> And if that seems like excessive extrapolation, consider what Reagan declared shortly before laying a wreath on the graves of the Wehrmacht and Waffen-SS men at Bitburg. 'Those young men,' he said, referring to the soldiers, 'are victims

of Nazism also... They were victims just as surely as the victims in the concentration camps.'<sup>4</sup>

The second part of the exculpatory project of historicisation involves an even more outlandish claim: that the Nazis' genocidal programme of world conquest was merely *reactive*. It was birthed by its victims, by *their* desire to annihilate Germany and all 'western' values. Nolte is the most prominent exponent of this view. 'Auschwitz is not primarily a result of traditional anti-Semitism. It was in its core not merely a "genocide" but was above all a reaction born out of the anxiety of the annihilating occurrences of the Russian Revolution.'<sup>5</sup> In Friedlander's view, Nolte has moved from the symmetry of executioners and victims to the fringes of a reversed representation of historical responsibility... The central actor within the global historical context is now the Bolshevik. The Bolshevik is the original perpetrator of global annihilation in modern history.'

**T**he Third Reich has had a chequered career in the official historiography of the Federal Republic and of the US and a full discussion of the rise and fall of different ways of looking at Hitlerism is beyond the scope of this essay. During the Cold War, however, the legacy of Nuremberg was a fetter from which even the most ardent advocate of anti-communist containment could not escape. Of course, the US and its allies had deep reservations about carrying the Nuremberg process too far. Great care was taken to separate the Hitlerites from the German

capitalists who had enthusiastically financed the Fuehrer. In Potsdam, the Allies had committed themselves to punishing Hitler's financiers but the denazification of economic activity was never carried out in the western zones of occupation. And once the rearmament of a West Germany firmly embedded in NATO began, the field was opened for the establishment of moral equivalence between fascism and socialism.

**T**he revisionist German historians were merely doing then, in the academic sphere, what western economic, political and military policies were doing in real life. In the words of Habermas—who bitterly fought Nolte and his revisionist colleagues—the Nazi period has been reformulated as 'an unfortunate sidetrack of a process of world civil war'—between democracy and socialism—a war whose predetermined battle lines could only be drawn after 1945, because Stalin and Roosevelt didn't identify each other as true adversaries in a timely way.'<sup>6</sup>

Between Bitburg and the fall of the Berlin Wall, a kind of closure was established which allowed not just the renaissance of German nationalism as a 'respectable' phenomenon but also the re-emergence, via a greatly strengthened European Union, of Germany's ambitions as a big power. The collapse of the Soviet Union and the German Democratic Republic and the reunification of Germany have led to renewed attempts to equate Nazism and Communism—and to extract from that equation a supposedly pure national soul, untainted by the crimes of the Third Reich. Even as Chancellor Kohl spearheads the creation of a new memorial to Germany's war dead in Berlin, statues of communist fighters against Hitler like Ernst Thaelmann (erected

5. Ernst Nolte, 'Between Myth and Revisionism? The Third Reich in the Perspective of the 1980s', in H.W. Koch (ed.), *Aspects of the Third Reich* (London: Macmillan, 1985).

6. Jürgen Habermas, *The Past as Future* (Lincoln: University of Nebraska Press, 1994).

by the East German government) have been pulled down. In October 1997, the world witnessed yet another grotesque irony. Even as regulators cleared the mega-merger between Krupp and Thyssen, two of Germany's largest conglomerates and the most prominent of Hitler's financiers, the German Constitutional Court threw out a case by a group of Jewish slave workers demanding back pay and compensation for their forced labour for German monopolies during the war. The Krupp-Thyssen merger, like other activities in the German business world in preparation for European monetary union in 1999, is what will allow Germany to once again be Germany; to acquire *lebensraum*, this time not for German people (which was always a pretext anyway) but for German capital. Nazism, then, has already been historicised. Its crimes have passed into 'mere history'.

In the US, other methods of forgetting the past have operated: a combination of tactical apologies—especially in response to shifts in the balance of power nationally and internationally—alongside the enthusiastic remembrance of other nations' pasts. It is no coincidence that outside of the Yad Vashem memorial in Israel, the most moving testament to the Jewish Holocaust lies in Washington DC and not in Bonn or Berlin. Nor is it a coincidence that the museum was built *after* the Cold War—and after the US interest in historicising Nazism—had ended. At the same time, those searching for museums in the US that depict the horrors of slavery or the annihilation of the Native Americans would be hard pressed to find anything even vaguely of the same magnitude.

When the past weighs so heavily on the present it is best to be amnesiac. Thus in 1995, when the Smithsonian Institute attempted to mount an exhibi-

tion of the Enola Gay along with explanatory panels which questioned the military necessity of dropping atomic bombs on Hiroshima and Nagasaki, the exhibition was withdrawn and the museum's director sacked.<sup>7</sup> Similarly, an attempt by UNESCO to have the shattered hulk of the building which was the sole survivor of Fat Boy in Hiroshima declared a world heritage site was bitterly opposed by the US. When the nuclear theology of the US rests so squarely on its self-professed claim to being a 'responsible' nation, any reopening of the Hiroshima question is clearly taboo.

It is also interesting to analyse how the politics of apology works in the US. Earlier this year, a tearful President Bill Clinton apologised for medical experiments in which Black Americans with syphilis were deliberately denied treatment in an attempt to see how the disease would debilitate the human body. The experiments in Tuskegee, Alabama, were part of a government programme which ran for several decades, and though knowledge about the tests first became public in the 1970s, it took more than 20 years for the government formally to apologise. The Tuskegee apology touched off demands for an official apology for slavery. At one stage, President Clinton hinted that he might consider such an apology but this evoked howls of protest from Congressmen and Senators. The argument in favour was that it might help to defuse racial tensions and assuage the feelings of those African-Americans who feel the US government discriminates against them (the second a highly questionable motive). The arguments against were various: that the US gov-

ernment today was not responsible for what happened more than a century ago; that by 'reopening old wounds', racial tensions might increase; and that an apology might lead to demands for monetary compensation.

At stake was more than just the cost of reminding the world about the undemocratic roots of the world's greatest democracy. Slavery amounted to unpaid labour. Even though US courts have repeatedly thrown out attempts by descendants of slaves to claim back wages rightfully due to them, an official apology would be seen as a mockery if it came without an adequate package of compensation. Jack E. White—a Time magazine columnist whose grandfather was a slave—has estimated a figure of \$222 billion on the basis of 244 years of forced labour by 10 million slaves at 25 cents per day, the going rate for unskilled work in those days. Once another \$222 billion is added for pain and suffering and a compound interest rate of 3 per cent for the 134 years since emancipation is factored in, the outstanding amount becomes \$24 trillion. That is, as he says, 'serious money'.<sup>8</sup> While acknowledging that such a sum could never be paid, White said the US government could spend the money over a number of years on programmes aimed at the socio-economic betterment of Blacks.

President Clinton, of course, said he was opposed to reparations for slavery<sup>9</sup> and the whole issue of an apology for the kidnapping and enslavement of Blacks was quietly shelved. More recently, a similar controversy arose about whether the British Queen should apologise for the massacre at Jallianwalla Bagh in 1919. In the lat-

7. See Edward Liventhal, *History Wars: The Enola Gay and other Battles* (New York: Henry Holt, 1997) for a full account of the controversy.

8. Jack E. White, 'Sorry Isn't Good Enough', *Time*, 30 June 1997.

9. Reparations for Allied losses in the Gulf War against Iraq are another matter entirely.

ter instance, too, no apology was forthcoming and it is worth asking why the two states most vocal about their official commitment to the protection of democracy and human rights around the world found it impossible to say sorry for injustices perpetrated by them so many years ago.

**T**he question of an apology for an act committed in the past arises only if there is continuity of state power. By this yardstick, the British and US governments are today fully responsible for all the actions of their respective states at least since 1688, 1215 or 1066, if not earlier (in the case of the former) and 1776 (in the case of the latter). Merely to claim that such-and-such event took place a long time ago, then, is no defence. On the other hand, when there is no continuity of state power – say, due to a revolution – the question of an apology does not arise.

There are, in general, three reasons why states or individuals refuse to apologise for their past. First, they may not believe they have done anything wrong. Rhodesia's Ian Smith and apartheid South Africa's P.W. Botha, for example, still believe that what they did was right. Pol Pot, leader of the murderous Khmer Rouge, has likewise defended the policies he followed when he was in power. That no former colonial power has ever apologised for colonialism is probably due to the same reason.

A second possible reason for not apologising could be that the state is still indulging in the same general practice for which it is being asked to apologise. Some people have linked the US government's refusal to apologise for slavery, for example, with the persistence of official racism against African-Americans today.

The most important reason for not wanting to own up to past wrong-

doing is, however, because states fear the enormous financial and political consequences. Can Britain really apologise for the crimes of colonialism without calling into question the moral validity of all its existing political and economic institutions? Prime Minister Tony Blair can issue a very limited apology for the fact that food was exported out of Ireland during the famine in that country during the 1850s but it will not be easy for him to apologise for turning Ireland into a colony, fostering communalism and eventually partitioning the country. If he did, the British position on Northern Ireland would be severely undermined.

**A**s far as Bill Clinton and Tony Blair are concerned, the criminality which pervades the history of their states is not systemic. Tuskegee and the Irish famine were mere accidents and did not stem from reasons intrinsic to the way the US and Britain are constituted and ruled. Likewise with slavery. The fact that the US Constitution once permitted the enslavement of human beings is irrelevant; it is not a burden on the conscience of the US any more. It must not be allowed to cast a shadow over the US's democratic credentials today.

If Clinton were ever to apologise for slavery, it would be for an abstract, extrinsic system of evil and not for a system whose remnants are imbricated in the very make up of the US today. Had the British Queen apologised for Jallianwalla Bagh, it would have been for General Dyer's criminality and not for the illegality on which the British Empire was built. States – and individuals connected with those states – apologise only when the alternative is more costly. Such apologies are not only insincere and worthless but dangerous precisely because they carry with them this

shield of irrelevance. They aim to put a closure on a sequence of events which hasn't ended, whose full accounting is yet to be done. Robert McNamara's *mea culpa* for the bombing of Indochina was published even as his successors in the US government were bombing Iraq and bullying other countries throughout the world. And even as the government of Vietnam was forced to repay \$70 million of debts accumulated by the former South Vietnamese puppet regime as the price for getting new investment from the US, the perpetrators of war crimes got away with a mere apology. The victims, on the other hand, must pay to dine at the same table with them.

Apologies between individuals occur in all societies but what does it mean when an apology is tendered on behalf of states, institutions and other corporate entities? Between individuals, an apology is not merely offered but must also be accepted. Forgiveness and the resumption of normal relations occur where there is genuine acknowledgement of hurt, genuine remorse and genuine attempts to right past wrongs. In the absence of this, apologies are meaningless both at the individual and state level and to make – or even demand – such an apology is tantamount to sweeping historical problems under the carpet. The demand from the anti-Narasimha Rao faction of the INC that the Congress apologise for failing to protect the Babri Masjid is only one example of this kind of apology.

**T**he most systematic and morally repugnant display of spurious apologies is going on today in South Africa. One by one, the assassins of the former apartheid regime have been coming forward – in the name of 'reconciliation' and 'healing' – to confess to their sins and reveal the manner in which members of the anti-apartheid resis-

tance were tortured and murdered. These confessions – made before the Truth and Reconciliation Commission (TRC) headed by Archbishop Desmond Tutu – are then dutifully entered into the archive and filed away, while the criminals walk off with an unconditional amnesty so long as they are deemed to have spoken the whole truth and to have shown that their crimes were ‘proportional’ and committed solely for political reasons. There are no arrests, no prosecutions, no jail sentences, no executions. It is almost as if the mere act of confession is absolution enough for all of apartheid’s crimes.

**T**hat the apartheid regime indulged in gross violations of human rights and constituted, by its very existence, a crime against humanity is well-known. Throughout the years of the armed struggle waged by the ANC and others, it was understood that those responsible would ultimately be held accountable for their crimes. This has been a cardinal principle of any freedom struggle and has become a customary norm of international law ever since Nuremberg. The logic of punishment is based not so much on retribution, as on emphasising that there are certain limits of behaviour which cannot be transgressed by individuals or states under any circumstances.

The idea of an amnesty was an integral part of the peaceful, negotiated transition which marked the end of apartheid. Built into the country’s new constitutional framework, the purpose of the Truth Commission was to ‘establish as complete a picture as possible of the causes, nature and extent of the gross violations of human rights which were committed during the (apartheid) period including the antecedents, circumstances, factors and context of such violations.’ But was the truth about apartheid so unknown

and reconciliation with its perpetrators so important that it required hundreds of thousands of victims to give up their right to justice?

**I**t is paradoxical that in a world where octogenarian Nazis can still be pursued around the globe and forced – quite rightly – to bear responsibility for their role in one crime against humanity, South Africans who have taken part in another should be allowed to get away scot free. The only way out of this paradox is to accept what former South African President F.W. de Klerk said in his second, nakedly unrepentant submission to the TRC in April 1997, that apartheid was not a crime against humanity but a well-intentioned policy of ‘separate development’ with ‘a strong sense of idealism’. Though he agreed apartheid was a ‘mistaken’ policy, he said the anti-apartheid resistance was responsible for helping to ‘create circumstances and an atmosphere which were conducive to human rights abuses’. Like the German historians who claimed a symmetry between the Nazis and their victims, de Klerk said that ‘no single side has a monopoly of virtue or should bear responsibility for all the abuses that occurred.’<sup>10</sup>

De Klerk has every right to enter his point of view into the historical record and it is the duty of others to refute it. However, the TRC’s terms of reference are such that symmetry between the actions of the apartheid state and the resistance fighters was established as the very starting point. Apart from de Klerk, therefore, leaders of the ANC, the Pan-Africanist Congress of Azania and others have

been forced to appear before the TRC to render qualified apologies for their conduct during the liberation struggle – surely a spectacle as bizarre as Mordecai Anielewicz and his comrades (had they survived) being summoned before a West German commission to apologise for any civilians killed during the Warsaw Ghetto Uprising.

**I**t is often argued that apartheid cannot be compared with the Holocaust because unlike Germans and Jews in post-Nazi Germany, South Africa’s blacks and whites continue to live in the same society. Thus, there is no room for Nuremberg-style justice. This is precisely the point made by Thabo Mbeki, vice-president of South Africa. In a recent interview with *The Guardian* of Lagos, he rejected the idea that reconciliation is not possible without an element of justice. ‘Well, we had to take a decision. We could take the route of justice, understood as police investigations, prosecutions and so on, so that you deliver justice so that people who were harmed (by apartheid) will feel that justice has been done.... (But) we decided to take the route of the Truth Commission because (otherwise) this conflict would have continued. You could not have had this peaceful transition in this country if some were to feel threatened.... In the end, what do you want to address? Do you want to get a sense of satisfaction after retribution? Or do you create conditions for the rebuilding of South Africa?’<sup>11</sup>

Not surprisingly, most of apartheid’s victims reject this logic: The widow of Harold Sefola – whose killers confessed before the TRC in 1996 – has challenged the right of the ANC and National Party leaders to deny her justice. Her submission to the TRC

10. The partial text of de Klerk’s first submission before the TRC was printed in *The Times* (London), 22 August 1996. For a report of his second submission, see M.S. Prabhakara, ‘de Klerk differentiates apartheid from “crimes”’, *The Hindu* (New Delhi), 30 March 1997.

11. *The Guardian* (Lagos), 4 November 1996.

made a distinction between forgiveness and justice and said the latter was the responsibility of the state. 'These people never came to ask us for forgiveness. The government is doing this on our behalf.... It is people who should forgive each other, not the government.' The widow of Steve Biko, leader of the Black Consciousness Movement who was killed by the apartheid regime in 1981, was even more forthright when the murderers of her husband applied for amnesty. She condemned the whole process as a travesty and demanded punishment as a right.

**W**hat Mbeki considers 'retribution' can be an obstacle to the 'rebuilding' of South Africa only if the intention is to 'rebuild' the country by keeping the economic edifice of apartheid intact. This is a truth which the TRC has not chosen to talk about. The criminals of apartheid cannot be punished because otherwise they would not have agreed to hand over power. Likewise, the assets and privileges of the big conglomerates, farmers and others who thrived on the basis of expropriated land and forced labour cannot be touched because they too would never have agreed to a transfer of power.

Because of the flawed manner in which apartheid ended – a transfer of power, preserving the continuity of the state, rather than overthrowing it, South Africans are being denied not only justice but the opportunity to reverse the legacy of the racist regime. Western-style fiscal conservatism is being pursued in the name of protecting the rand and not scaring off the same foreign investors whose presence in South Africa during the apartheid era was fiercely opposed by the ANC. Even something as fundamental as granting cast iron tenancy rights to peasants working on the estates of white farmers (culled from lands his-

torically expropriated from the blacks) has been stymied for fear of the economic repercussions.

The much-vaunted Rapid Development Plan for the provision of housing, sanitation, water, electricity and jobs for the millions of Black citizens has yet to get off the ground, mainly because the government has remained a hostage to the demands of South Africa's financial and corporate sector and of the international financial institutions which previously bankrolled apartheid. IMF support for apartheid included loans of more than one billion dollars in the aftermath of the financial crisis caused by the Soweto uprising in 1976 and the crash in gold prices in the early 1980s. The ANC at the time had bitterly criticised the IMF for bolstering the racist regime. Today, however, things have turned a full circle. In 1993, the IMF granted a huge loan to the new post-apartheid government which included secret conditionalities that the undemocratic economic policies of the apartheid days would not be reversed, as well as informal conditions that Mandela would leave the finance ministry and the SA Reserve Bank in the hands of de Klerk appointees.<sup>12</sup>

**T**he burden of truth without justice is too much for any society to bear, least of all one in which the elements of victimhood – political, economic and spiritual – continue to be present in such alarming abundance. Pamela Reynolds, an anthropologist at the University of Cape Town doing fieldwork among young militants who fought the regime, pointed out in a recent seminar at the Delhi School of Economics that many of them were refusing to tell their stories before the TRC. Apart from general cynicism

about the outcome, their objection was that apartheid oppressed a collective, it victimised and tortured an entire people, but the TRC was instituting an individualised approach.

**B**ut there is a further point. Not only does the TRC put victimhood at a purely individual plane (this is not necessarily so objectionable) but it treats victimisers as individuals as well: the torturers and hangmen of apartheid come and render an individual account; they are treated as individuals and not as footsoldiers of a system which was much larger than them. This is what allowed the last leader of that system, F.W. de Klerk, to baldly state before the TRC that 'within my knowledge and experience,' the strategies followed by the (apartheid) government 'never included the authorisation of assassination, murder, torture, rape, assault or the like.... Nor did I directly or indirectly ever suggest, order or authorise such action.'<sup>13</sup>

Professor Reynolds is apprehensive that those militants who deliberately stay away from the TRC will only ensure that what emerges is a 'skewed history' and since, according to Derrida, what is remembered (the archive) is a source of power, their silence will ultimately work against them. But surely the TRC itself is an act of violence against history and by refusing to go before it, the young militants are really saying that they refuse to be party to this violence. Thousands of apartheid victims have brought their fearsome stories to the TRC and each individual story has shocked the conscience of South Africa. But in the end, because there is no justice, each victim is becoming

12 Statement of the Campaign against Neoliberalism in South Africa, 16 October 1996.

13. *New Nation* (Johannesburg), 22 August 1996. The newspaper's editorial the next day, 'The Only Truth is the Whole Truth', noted that 'de Klerk stretches public credulity when

an accomplice in the exoneration of the crime committed against herself or himself. Remembrance has become instrumental in forgetting. The cataloguing system in what Derrida calls the 'archive' is all flawed and the only reconciliation it is designed to achieve is to reconcile the victims of apartheid to the fact that they will get no justice.

When the TRC issues its final report, the aim will be to put a closure not just on the past but on the remnants of apartheid which continue to permeate life in South Africa, especially in the economy. The only circumstance in which the shelving of prosecutions for individual cases might be ethically justifiable would be if South Africa had undergone a genuine revolution. The delivery of justice at the societal level would be the price for its non-delivery at the individual level. If South Africa had undergone a truly revolutionary transformation, in which the economic structures of apartheid were thoroughly dismantled, the TRC would have been a genuine instrument for establishing truth and reconciliation. In the absence of such change, all it is designed to do is to ease the passage of apartheid into 'mere history'. Whether it succeeds or not is still an open question. No closure of the past is possible by fiat. This is manifest in the revival of centuries-old claims for justice in Ireland and other countries. The more the lack of economic development and social justice become apparent, the more restive the people of South Africa will become. And no matter how hard anyone tries to eradicate their history, they are perfectly capable of creating it anew.

he denies personal knowledge of torture and rape during his reign. The same goes for his failure to offer any insight into the fate of scores of anti-apartheid activists who went missing while in police custody.... Unless the truth is told about all this, de Klerk's apology will amount to nought. Reconciliation then would be made impossible.

# Gandhi and history

SUNIL KHILNANI

I believe in the saying that a nation is happy that has no history. It is my pet theory that our Hindu ancestors solved the question for us by ignoring history as it is understood today and by building on slight events their philosophical structure. Such is the *Mahabharata*. And I look upon Gibbon and Motley as inferior editions of the *Mahabharata*.

M.K. Gandhi (1924)<sup>1</sup>

GANDHI was not a theorist but, like everyone else, he had theories. His fundamental innovation in the history of Indian nationalist politics was to force the abandonment of the notion of a heroic intellectual vanguard — variously composed (according to differing conceptions) of dissident theorists, would-be state technocrats, scholarly Brahminic reformists, or professional revolutionaries — that could transform India and lead her to genuine *swaraj*. The theoretical knowledges that such men claimed for themselves could not make the social and historical worlds transparent or manipulable. Rather, history and society were intelligible to the victims of history.

True heroism, Gandhi insisted, was to be found in the quiet tolerances unnoticed by history and its standard

1. In Raghavan Iyer (ed.), *The Moral and Political Writings of Mahatma Gandhi* (Oxford: Clarendon Press, 1986), vol 1, p.187.

representations but which in fact constituted the common life of men and women. It is the very ordinariness of Gandhi's theories and practices, their rootedness in the routine and mundane, which has endowed his life and thought with a deceptive familiarity – and this has made him at once prone to neglect and difficult to comprehend.

**H**ow did Gandhi position himself in the world? Not as an intellectual would do, by the adoption of the authoritative voice of theory, nor by the creation of a body of aesthetic work, nor merely through pure action, nor – as other nationalists have often done – by manipulation of the historical representations of the political community. Gandhi's own presence in history was, to use the English rendering of a Heideggerian phrase, intensely 'thingly' – his body and its routines, his gestures, voice, and dress, all embodied the at once profound fragility and awesome robustness which defined his life and thought.<sup>2</sup> Those who have complained of Gandhi that he did not leave behind a substantial enough body of 'political theory' in textual form betray a deep misunderstanding of him.

Gandhi chose to convey his meanings in other ways and he defies being understood in purely propositional terms. The clue to his meanings rests in what might be called the grammar that underlies his way of being: it was on the basis of this that he most manifestly defied the supposedly irreversible forward drift of history, a supposition axiomatic to all evolutionary and progressive conceptions of historical development. It enabled him to play adeptly with anachronism and to drag the historically *depassé* into the

gaze of public notice, so allowing him to reconfigure tradition. His capacity to do this disrupted all the conventions used to define the contemporary or the present, the modern, from the historical past and future. Gandhi was a man obsessed by time and punctuality (a pocket watch was one of his few constant material possessions), yet he refused the idea of unilinear historical time.

Gandhi aimed to give political significance to the everyday pictures of the world used by his fellow countrymen. In seeking to accomplish this, he had to take a position towards history, understood both as event and representation: for history had become – to both his fellow Indians as well as to their colonial rulers – the most important resource from which theories and theoretical claims about subjection and freedom could be generated.

**T**he colonial rulers justified their position by invoking particular stories both about their own culture and about Indian civilization. So too, Gandhi's nationalist contemporaries discovered in history a useful resource to construct theories with which to oppose the British. Like the earlier generation of 19th century anti-colonial critics, the economic nationalists of the early 20th century, as well as men like Nehru, all steeped themselves in history, shaping it into a theoretical weapon against British rule. Gandhi, however, shared none of these historical preoccupations: neither as event nor as representation did history present itself as a theoretical resource for him. Why? What can explain the paradox of a figure who while himself so evidently 'making history' was yet so curiously disinterested in history?

As several interpreters have forcefully insisted, Gandhi spoke from outside the assumptions of mod-

ern or post-enlightenment thought. He gave centrality to personal experience as a source of values, and he rejected the Hegelian view of history as the 'self-realisation of self-perfecting reason' – whether embodied through the chosen vehicles of nations and cultures, individuals, or by forms of economic and political organisation (for instance, capitalism or liberal democracy). Gandhi challenged the idea of Universal History, that great ambition of the modern European intellect. He did this by relativising the claims of such history: by showing up its own propensities to tell stories, he undermined its ambition to de-mythologise the world.

**H**aving done that, he did not recur to the standard alternatives of historical pessimism or cultural relativism. He opened up the possibility of plural histories, all the while maintaining firm criteria by which to assess and judge such histories – something post-modernists are unable to do. Gandhi challenged the teleologies around which modernity has constructed itself by challenging the presumption of unilinear History (and thus, of ideas of progress). In doing this, he challenged the child-adult image of historical development and also the idea that the West was the 'centre', outside which trailed the non-western, colonised, or primitive societies.<sup>3</sup> Gandhi's evasion of the etiquette of historical thought profoundly disturbed the idea of history – an idea central to the modern West's self-conception.

As is true of any genuinely original thinker there is no single Gandhian thought or politics. Every interpretation of him must steer between the poles of sentimentalism and cynical dismissal. Perhaps the right question

2. Martin Heidegger, 'The Origin of the Work of Art', in *Basic Writings* (London: Routledge, 1993).

3. Ashis Nandy, *The Intimate Enemy: Loss and Recovery of Self under Colonialism* (Delhi: Oxford University Press, 1983).

to ask is: 'What use can Gandhi be put to?' Most interpreters of Gandhi, where they have not simply deified or dismissed him have followed one of three strategies. Some have chosen to historicize him, seeing him essentially as a figure in the history of Indian nationalist politics; others have chosen to view him as a kind of anthropological or psychological curiosity, whose views and practices need to be translated into modern terms; while a third perspective has portrayed him as a political technologist, a purveyor of political techniques such as non-violent civil disobedience.

More recently, a fourth line of interpretation has emerged which sees him as the source of a still relevant critique of modernity and which has focused on Gandhi's criticism of the epistemic claims of modern rationality and science.<sup>4</sup> Almost all writing on Gandhi fumbles with the question of his 'relevance' today, a form of address which seems to be symptomatic of his oblivion; and of the fact that the body of writings somehow lack effective power in the absence of the man himself. Yet each of these interpretations misses the way in which his anachronistic historical presence or *habitus* was itself a form of criticism and action.

**G**andhi's understanding of the significance which representations of history had come to hold in the relations between colonised and coloniser was expressed most pointedly in *Hind Swaraj* (1909), his single-most sustained piece of writing. Running through the book was a polemical engagement with one of the central maxims of western historical con-

sciousness: *historia magistra vitae* – the idea that history and its representation in historical writing provided lessons, examples, even laws about the future of human action.<sup>5</sup> To the objections raised by the querulous interlocutor of *Hind Swaraj* that 'it has not occurred in history,' Gandhi replied that 'To believe that what has not occurred in history will not occur at all is to argue disbelief in the dignity of man.' 'History,' Gandhi insisted, 'is really a record of every interruption of the even working of the force of love or of the soul,' and it was only by kicking the English 'habit of writing history' that Indians could find the courage to release themselves from civilizational subjection.<sup>6</sup> This profound antipathy towards history and the burden of the past, so rare among those involved in nationalist politics, marks out just how distinctive both Gandhi's nationalism and his 'traditionalism' were.<sup>7</sup>

**Y**et Gandhi's rejection of the idea of historical progress did not signal the return to a pre-reflexive time of 'fate', an unmalleable world where human agency was reduced to insignificance. He stressed the opportunities of making and doing in the world – but equally, he was acutely sensitive to how that which was made or done cut itself free from the actor or author, and produced consequences that were

*Sciences* (New Delhi: Bookhive, 1970). While this line of criticism has produced some real and very useful insights, I doubt whether it is actually the most fruitful line to pursue.

5. A maxim formulated by Cicero, on the basis of Hellenistic historians like Polybius. See Reinhart Koselleck, 'Historia vitae magistra: The Dissolution of the Topos into the Perspective of a Modernized Historical Process', *Futures Past* (Cambridge, Mass: MIT Press, 1985).

6. *The Moral and Political Writings of Mahatma Gandhi*, op.cit, p 235.

7. There is of course a striking resonance here with Rabindranath Tagore's views: see his essay, 'The Course of Indian History' (1912).

unintended or unplanned. This is a perception that linear conceptions of history neglect and obscure, in favour of a view of a future where 'foresight, plan and execution would coincide seamlessly,' a future where precisely the end of history would be reached.<sup>8</sup> Although Gandhi did not repose any faith in this intellectual or technocratic view, he did not give up the idea of the 'makeability' of history.

**G**andhi's conviction that actions could not be reduced to their consequences can be traced to his understanding of both the Sankhya tradition of philosophy and the Bhagavad Gita. It allowed him to mount an attack on the utilitarian styles of thought which he believed dominated all modern activity. His dispute with utilitarianism turned not merely on a disagreement over whether moral action could be modelled by a means/ends calculus, but also, more significantly, on its conception of causality.

Utilitarianism assumed an atomistic picture of causality. But for Gandhi, one could not extract discrete cause-effect relations from the temporal flow of events and subject them to evaluation by the utilitarian calculus. This assumption was simplistic and self-delusive – anterior cause and future effect were intertwined not only with one another but with numerous other such chains, making it futile to entertain the belief that one could extract a single action and isolate its consequences from the intricate location of both in what was a densely populated field of cause and effect. Clearly, this view also bore upon conventional views of historical narrative and causation.

Linear conceptions of time which posit a continuum are, often

8. Koselleck, 'On the Disposability of History', *Futures Past*, op.cit., p. 207.

despite themselves and to their embarrassment, constituted by events which mark a rupture or discontinuity with the past. Such punctual moments often take the form of revolution (most obviously, 1789), war, or independence. These are events which can be used to represent a point of origin and to orient future history along a particular axis. But as Gandhi saw it, such ideas of history as linear progress were intrinsically linked to conflict and violence. Hence, for teleological thinkers such as Hegel and Marx, war or civil war (in the form of class conflict) served as the fundamental dynamic of historical progress. It was such teleological commitments which placed modern civilization perpetually in the shadow of catastrophe: trammelled by linear time, modern civilization was in Gandhi's image like an express train moving relentlessly forward towards disaster.<sup>9</sup>

**G**andhi did not *trust* history. History and politics were for him fundamentally domains of agency, and in order to operate within them, one could not trust in the invocation of an external principle (for example, the idea of progress, or capitalism, or democracy: adherents of such principles believed they would somehow resolve the perplexities of human agency). In order to act under conditions of uncertainty and contingency, one had to have immovable and publicly visible principles. Nothing else could reduce the hazards of political agency and establish a modicum of predictability and trust between agents. It was up to individual human beings to create for themselves relations of trust between one another. History would not do it for them. Gandhi's insistence on this derived from his sensitivity to the

ways in which an easy faith in progress served to dull awareness of our collective capacity to produce disasters.

**T**he point is not that Gandhi had no sense of history, nor that he was bound to a 'Hindu' cyclical view.<sup>10</sup> He had a very acute sense of history, but he self-consciously positioned himself outside debates framed in terms that appointed history a repository of theoretical knowledge and laws. It would have been impossible for anyone in Indian nationalist politics to ignore history – which, both as event and as representation, had since the late 19th century become an unavoidable terrain of conflict, and all political actors had to align themselves with some reading of it.<sup>11</sup>

Gandhi saw the extent to which both as reality and as narration history was subject to distortion by power, and could not therefore be a repository of epistemic truths nor a domain of cognitive disinterest. The deeper historical roots of this attitude might be seen to lie in the doctrines of the classical schools of Indian philosophy, none of which recognised history as a *pramana*, that is, as a source of cognitive knowledge, but rather viewed it as a species of inference or verbal testimony.<sup>12</sup>

There were various ways available to disturb the claims of the historical narratives of the colonizers: one could produce alternative histories

which precisely played up their own fictional character, one could reveal empirical inaccuracies in British history, or one could adopt critical positions which remained internal to the western tradition of historical self-consciousness (such as socialism and Marxism). Or one could, as Gandhi chose to do, play with historical events and their representation through gestures and actions. Gandhi, through his comportment and actions, conflated different historical and temporal planes, so drawing attention to the vacuousness of all claims that history progressed by a steady movement from barbarism to civilization, tradition to modernity, religious to secular, or from colonisation to independence.

**E**very one of Gandhi's words and gestures were designed to reveal how each of these predicaments contained elements of their supposed negation. The present, the contemporary was a constant reworking and reinterpretation of the past, and perpetually haunted by it. As Lutz Neithammer has noted, 'the Achilles' heel of the philosophy of history is the present,' and Gandhi made it his task to exploit this to the full.<sup>13</sup>

To understand something of Gandhi's complex historical playfulness, it is perhaps helpful to briefly locate him in the context of Indian nationalism. This not in order to historicize him, but rather to notice his capacity to constitute and address different audiences, each operating with differing temporalities. When Gandhi entered Indian nationalist politics, he found a fundamental split in the self-understandings and forms of anti-colonial action. This division has been noticed by subsequent interpreters in different ways: some have spoken of a split between modernist and

13. *Posthistoire* (London: Verso, 1993) p. 62.

*dharmic* idioms, others of a divide between elite and subaltern. Broadly, and speaking in shorthand, the nationalist movement was divided in two, between the newly created class of western educated intellectuals, for whom history and historical consciousness was an obsession and who disputed colonial domination on the terrain of and by means of history, and a 'subaltern' world, involved in a pattern of local, sporadic, but often very acute rebellions against the colonial state. This subaltern world was populated by groups 'without' history, in the sense that their being in the world did not involve a consciousness of a history which belonged exclusively to them, and which was constitutive of their collective selves and their capacities for action.

**G**andhi also faced another division in nationalist politics, between Hindu and Muslim interpretations of the political community. This is a complex matter, and I can only briefly signal it here. Gandhi clearly did have a notion of *Ramrajya*, a harmonious social and political order located outside of history; but he did not posit a mythic origin point of unity and harmony, nor did he see such harmony as located in some future resolution, where 'real nationalism' (as Nehru called it in *The Discovery of India*) would unite all Indians on the basis of a fusion of economic interests. Rather, his constant emphasis was on how a harmony of interests had to be achieved now, in the present.

It is difficult to find a vantage-point where Gandhi's diverse meanings and actions can be unified (here, one faces a complicated question about the coherence of Gandhi's life and thought – a coherence which he himself desired). But it was perhaps in Gandhi's own person, his bodily presence and actions, that some of

these diverse strands came together. He showed remarkable skill in manipulating temporality. He staged politics as a dramatic performance, well before the age of mass media: fasts, marches, silences, trials and imprisonment, were all ways of constituting an audience, uniting a community around an immediate spectacle.

**I**f, as Benedict Anderson has insisted, the newspaper was one crucial way of joining unconnected people together into an 'empty time' necessary to imagine the political community of the nation, so too were the spectacular dramas Gandhi staged.<sup>14</sup> They served at once both to frame an 'empty time', and to infuse life into popular imaginings of a mythic time punctuated by the appearance of saintly figures.<sup>15</sup>

Gandhi himself was of course fully fluent in the forensic skills necessary to work the British colonial legal and administrative order. But while he was fully and quite subtly literate, he had the astuteness never to forget what it was like to be illiterate – something most intellectuals would forget, but a vital remembrance in a country where the overwhelming majority were non-literates. This enabled him to build up command over a secondary language of material actions. Whether on trial or in prison, marching or spinning, fasting or observing silence, Gandhi *staged* these episodes: they were not endured merely to develop personal fortitude in the face of suffering. They had the peculiar paranthetic temporality of theatrical drama, which allows play with tem-

poral references to past and present. They were the mode whereby he created a radically novel public domain in Indian politics.

By engaging in such apparently outmoded historical practices as fasts and silences, processional marches, wearing a *dhori*, or weaving his own cloth, Gandhi discovered a powerful resource to infuse symbolic meanings into the world of high politics.<sup>16</sup> This helped connect high politics to the vocabulary of meanings which constituted the non-literate world, thus enabling the non-literate to enter and act within the political sphere. This pageant-like character of Gandhi's life and discourse was something that George Orwell – who otherwise was temperamentally so repelled by Gandhi – saw well when he observed that 'his whole life was a sort of pilgrimage in which every act was significant.'<sup>17</sup>

**A**lthough Gandhi was one of the most innovative political figures of the 20th century, he refused to portray himself as breaking with the past, tradition. He did not present himself as an originator, breaking radically with a monolithic and corrupt past. Rather he drew out the heterogeneity of Indian tradition, the presence within it of self-quarrelling elements, and in this way tried to eliminate the jarring elements and so make it more coherent.<sup>18</sup> One also finds this stress on continuity as opposed to rupture in his

understanding of the West and its impact on India. Modernity, processes of modernization and secularisation, were not – as they tended by preference to describe themselves – total breaks with a tradition-bound and religious past: rather they represented a constant reworking of traditional elements. Such elements of the religious past remained active and potentially able to ferment the present, so endowing it with new shape.

**S**o too, the subjection of India's traditional past to the British colonial version of modernity was not something achieved by a specific episode or event – say, Plassey. Rather, it had occurred through a slow, almost imperceptible seduction of the Indians by the 'baubles and trinkets' of the incoming commercial society. Most significantly, Gandhi insisted that it could not be seen to have happened at the political level – it was not the 'Indian state' (whatever that might be) which had capitulated to the British one, but a deeper civilizational subjection which had taken place. Hence genuine swaraj, self-rule, could never be simply a political issue: political independence was not enough to achieve it.

It was this perception of the porousness of temporal planes and causalities which fed his anachronism as a way of being in the world. As he tried to explain to Nehru in 1945, it was precisely the fact that the past was behind us, was ancient, yet continued into the modern world, that endowed it with value: 'While I appreciate modern thought. I find that an ancient thing considered in the light of this thought, looks so sweet.'<sup>19</sup> The ancient took on value and became attractive precisely

*Indian Thought* (Oxford: Clarendon Press, 1992), p. 275.

19. *The Moral and Political Writings of Mahatma Gandhi*, op.cit., vol. I, p. 286.

by its existence in the other time of the modern! It was this reframing which endowed value to the ancient. It was the special meanings and values generated by playing with such discrepancies which interested Gandhi. Thus, the Hindu and Buddhist epics gained a novel power precisely by being relocated and interpreted outside of their initial context, in the light of quite modern or contemporary political and moral concerns. Self-conscious anachronism, the wilful neglect of historical proprieties about what was past and what was contemporary, became in Gandhi's hands a sophisticated and powerful political weapon. Gandhi found an alternative political repertoire in traditions and in the past, which he skilfully reassembled into innovative contemporary forms. Needless to say, such plays with anachronism can of course have far less benign effects – witness India today.

**G**andhi's studied anachronism was a way of disturbing conventions about what defined and constituted the present or the contemporary, modernity itself. Instead of accepting modernity's own self-description that it marked a decisive break with what came before, Gandhi preferred to show ways in which the past seeped into the present, thus dissolving what were thought to be historical inevitabilities. He had an extraordinary capacity to tear through historical fixities and solidities, primarily, I think, because he understood so well the role of belief and consciousness in politics. He saw politics as fundamentally a struggle to make and unmake selves, individual and collective character. In this struggle he made use of the repertoire of history, but in quite unexpected ways, to reveal how it could never come to an end – for there was no single story which was being told.

# Backpage

WE are in for a long gloomy winter. And this time around the blame is not all El Niño's. A recessionary business environment, a lameduck government, and the impending 12th Lok Sabha elections which none seem to want is unlikely to lift spirits, notwithstanding New Year revelries.

But while the knowledgeable busy themselves with their favourite excitement, psephology, thousands of workers in the national capital wearily prepare themselves for deepening penury. All of us doomed to live in this historical city are aware that Delhi is one of the most dangerously polluted environs in the world. The CSE and its crusading Director, Anil Agarwal, has dinned this into our sub-conscious.

So when M.C. Mehta, our latest Magsaysay award winning environmental lawyer in conjunction with green Judge Kuldeep Singh ensured a Supreme Court order for relocating thousands of polluting industries outside the National Capital Region, there was much praise and relief. For once, the court had placed the concern of citizens—suffering from numerous pollution related disorders—in the centre.

So far so good. When queried about the workers who stood to lose their jobs, the normal refrain was: 'Oh! They will be provided adequate compensation. Also, orders have been passed which compel relocating firms to re-employ them, if necessary after providing new training. There is a temporary cost that the owners and workers will have to bear in the interest of society. Overall, the public good far outweighs the cost.'

Little do we realise that the cost, the 'temporary discomfort' is invariably borne by our poorer brethren. A survey of 100 firms carried out one year after the Supreme Court pronouncement revealed that *no compensation had been paid to any worker* in total disregard of the Supreme Court order. The only exception was one public sector textile concern. In the rare case wherein a factory announced plans of relocation, invariably to far off sites, the workers were not informed. Expectedly, many industries had begun a prior process of retrenchment in anticipation of the judgement. And worse, some factories even managed to continue production by challenging the criteria for selecting polluting units.

The assumption that orders, even judicial orders, have both thought through the implications and have 'planned' to mitigate the negative externalities is deeply flawed. Planning in these market-friendly days

is at a deep discount. And our courts, known for their zeal in overseeing the administration in pursuing investigations against corrupt politicians, plead helplessness and ignorance in cases where their guidelines for compensation and re-employment are flouted.

One wishes that these worthies had attended the public hearings on the mass displacement of workers organised by the Delhi Janwadi Adhikar Manch, a forum constituted by nearly two score democratic organisations. The stories of the thousands of workers and their families might have made them realise that knee-jerk pronouncements, even when well-intentioned, can result in untold misery.

Our case is not just that the state in India is withering away, with the left arm not knowing what the right is doing. Nor the oft-stated maxim about the class bias of our government. Nor even that our 'cushioned' elite suffers from a myopia when it comes to cognizing the poor and their problems. It is that we, the decision-makers, seem congenitally predisposed to increasing the miseries of the poor.

When Elizabeth II, the British (and our!) Queen remarked on the filthy state of Delhi, the administration, stung to the quick, moved rapidly to remove dozens of pavement markets. The appeal, in addition to aesthetics, was on improving traffic flow, providing space for pedestrians, even removing health hazards. And, it was claimed, alternative market sites would be provided. The operative phrase is 'would be'. Why this could not be done *prior* to the demolitions with the help of the Rapid Action Force is, I suspect, no mystery.

Any impression that this process is unique to Delhi can be countered by numerous similar instances from across the country. There is no doubt that we need stricter environmental legislation, and implementation. The issues are: who pays the cost; can these interventions be better planned; and, above all, why are these processes not transparent and democratic such that concerned citizens can demand accountability?

It should thus cause no surprise that at times like these the Malthusian imperative reigns supreme. In Rajasthan, orders have been issued for a resumption of mass sterilisation camps. That such a move can be initiated in the run-up to general elections demonstrates the irrelevance of the poor to the calculations of real-politik. If you can't get rid of poverty, at least get rid of the poor!

Harsh Sethi

## SEMINAR ISSUES 1997

SEMINAR 449: January 1997; **INDIA 1996**: a symposium on the year that was.

<b>Baru, Sanjaya</b>	Indian enterprise
<b>Batliwala, Srilatha</b>	Empowering women
<b>Bhatia, Gautam</b>	Kaliyug
<b>Das, Arvind N.</b>	Honour among thieves
<b>Dasgupta, Swapan</b>	India: a nice place to get out of
<b>Debroy, Bibek</b>	India's external sector
<b>Friese, Kai</b>	Local geography
<b>Goswami, Omkar</b>	Basta!
<b>Guzder, Cyrus</b>	Life in the death of our cities
<b>Karnad, Bharat</b>	Cooking our goose
<b>Katyal, Anjum</b>	Domesticating violence
<b>Khare, Harish</b>	Disorderly politics of a new order
<b>Khurshid, Salman</b>	Judges in a democracy
<b>Ninan, T.N.</b>	The year of the bear
<b>Rangarajan, Mahesh</b>	The politics of transition
<b>Roy, Aruna, Nikhil Dey</b>	
<b>and Shanker Singh</b>	Demanding accountability
<b>Sainath, P.</b>	Watershed elections
<b>Sanghvi, Vir</b>	The new intolerance

<b>Varshney, Ashutosh</b>	Three master narratives of Indian politics
<b>Visvanathan, Shiv</b>	May day, May day

SEMINAR 450: February 1997; **THE STATE OF BIHAR**: a symposium on the legacy of a troubled state.

<b>Bhatia, Bela</b>	Anatomy of a massacre
<b>Das, Arvind N.</b>	Para-banking and para-politics
<b>Gupta, Shajbal</b>	The enigma that is Bihar economy
<b>Hauser, Walter</b>	Changing images of caste and politics
<b>Jha, Hetukar</b>	A land called Mithila
<b>Lal, A.K.</b>	Bihar: old and new
<b>Mishra, Pankaj</b>	The problem
<b>Mukherjee, Meenakshi</b>	Who is a Bihari?
<b>Sachchidananda</b>	The changing village
<b>Singh, Ashok K.</b>	Interview with Chaturan Mishra
<b>Sinha, Arun</b>	Shadows of the poltergeists
<b>Sinha, Nikesh</b>	Bihar revisited
<b>Sinha-Kerkhoff, Kathinka</b>	Are Biharis uneducated?

SEMINAR 451: March 1997; **DEMOCRACY AND DEVELOPMENT**: a symposium on the social impact of our development choices.

Anitha, S.	A communitarian response
Baviskar, Amita	Who speaks for the victims?
Banerjee, Sumanta	Development projects and human rights
Berlin, Sir Isaiah	The freedom of choice (Interview by Jyotirmaya Sharma)
Ghosh, Sailendra Nath	A new paradigm
Hazarika, Sanjoy	Lessons from Bhopal
Jain, L.C.	Strengthening the foundations
Jayal, Niraja Gopal	The problem
Kumar, Krishna	A memory for democracy
Mehta, Ajay S.	Politics of voluntary action
Panchu, Sriram	In the public interest
Swaminadhan, Srilata	The neo-missionaries
Tandon, Rajesh	Grassroots democracy

SEMINAR 452: April 1997; **WORKERS AND UNIONS**: a symposium on the challenges facing labour organisations.

Bardhan, A.B.	Looking to the future
Bhowmik, Sharit K.	On worker takeovers
Jhabvala, Renana	Wages for unorganised labour
Mazumdar, Indrani and Subodh Varma	A divided city
Nigam, Aditya	The problem
Raman, A. Thothathri	A bumpy road ahead
Roy, Dunu	Liberalising labour
Satgar, Vishwas	Democratisation at an impasse
Sharma, Mukul	An end and a beginning
Singh, Rustam	Ontology of wage labour
Sushila	My story

SEMINAR 453: May 1997; **SYMBOLIC SPACES**: a symposium on media, text and design.

Bright, Kristy	Cool, cool beverage
Butcher, Melissa	Looking at Miss World
Chandra, Nandini	Market life of Amar Chitra Katha
DeNeve, Rose	Tourism and the imperial gaze
Geetha, V.	Two heroes of our times
Goswami, Urmi A.	Popular momances
Seminarist	The problem
Sundaram, Ravi	Technofutures
Visvanathan, Shiv	Gandhi goes to NID

SEMINAR 454: June 1997; **POLITICAL EXHAUSTION**: a symposium on some issues facing our polity.

Alam, Javeed	Nation and the regions
Bhargava, Rajeev	Why we must retain the majority-minority framework
Chakravarty, Kumaresh	A third front
Chatterjee, Manini	Left politics
Dutt, Barkha	The camera has two faces
Dutta, Bhaskar	In search of political stability
Gadgil, V.N.	What ails the Congress (Interview by Rajdeep Sardesai)
Gupta, Kanchan	Federal anarchy
Misra, Amaresh	Beyond coalition politics
Misra, Udayon	Limits of regional sectarianism
Mitra, Chandan	Unholy alliances
Parthasarathy, Malini	A defining moment
Reddy, Jaipal	Political continuity (Interview by Ashok Singh)
Seminarist	The problem

SEMINAR 455: July 1997; **ALTERNATIVES IN COMMUNICATION**: a symposium on mediums, innovations and practices.

Akerkar, Supriya	Feminist voices
Deshpande, Sudhanva	Of consumers and kings
Dogra, Bharat	Writer in the field (Interview by Deepti P. Mehrotra)
Forum for Independent Film and Video	Beyond commercial logic
Hamid and Bodhuram	The kalakar as puppet (Interview by Vibodh Parthasarathi)
Lal, Anupa	Writing for children
Murthy, N.V.K.	An overview
Pande, Ira	In praise of rumour
Parthasarathi, Vibodh	The problem
Rao, Vidya	Silence
Sangvai, Sanjay	Movements; media and mediations
Sarkar, Satyajit and Sharad Agarwal	Using the video

SEMINAR 456: August 1997; **RETHINKING INSTITUTIONS**: a symposium on state, civil society and mediating structures.

Acharya, Ashok	Civil society and liberal norms
Blomkvist, Hans	Caste and democracy

**BRIEF.** Quick and Crisp. *Outlook* presents one, two and three page stories that cut through the unnecessary and the repetitive to give you the essence of the news.

**COMPREHENSIVE.** Brevity doesn't mean less. It means more stories every week scanning a gamut of events from Pakistan's elections to cricket in South Africa. From Mumbai gang wars to witch hunts in Bihar. From the Miss World pageant to the Booker Prize in London.

**INVESTIGATIVE.** Since its launch in 1995, *Outlook* has broken a number of stories. Like Narasimha Rao's secret novel. Politicians with criminal links. Chandraswami with the LTTE. Going underground with the PWG. And match-fixing in cricket.

**FRESH.** Being a weekly, *Outlook* is uniquely placed to catch issues as they unfold, and give an expert interpretation of events when they are current, and not when they have receded into the past.

**SPECIAL.** *Outlook* has established a reputation for producing the finest special issues on a variety of subjects. Its special editions on Partition and 50 Years of Indian Independence have become collector's items.

**READABLE.** *Outlook* is unbiased and balanced. Our journalists report and analyse quickly and incisively, not laboriously.

**ATTRACTIVE.** Clean, lively and all colour. *Outlook* is a comfortable read. It is also visually pleasing with top drawn illustrations and photographs. And finally, it is slim and easy to carry and can be read at your convenience.

**OUTLOOK**  
THE WEEKLY NEWSMAGAZINE

# Centre for the Study of Developing Societies

29 Rajpur Road, Delhi 110054

Invites applications for the following posts:

**Associate Fellow** (2200-75-2800 EB-4000 unrevised) to serve as a Research Officer in the Centre's research programme *Lokniti: Institute for Comparative Democracy*. He/she will be expected to work on designing and coordinating elections-related and other surveys. Candidates should have a good Master's degree in the social sciences, preferably Political Science, with at least 3 years of experience in conducting and supervising large-scale elections-related surveys.

**Secretary** (2200-75-2800-EB-4000 unrevised) to the Centre. Candidates should have a good Master's degree in any of the social science disciplines with experience of have done independent research. The ability to coordinate academic programmes and a sound knowledge of financial and personnel matters are a must.

While both the vacancies are open to all categories, preference will be given to women and to those belonging to SC, ST or OBC.

Applications on plain paper with full particulars and offprints of two recent publications should reach the Administrative Officer latest by 30 January 1998.

O.P. Garkhel  
Administrative Officer

<b>Ilajah, Kancha</b>	Gaddar: embodying many institutions
<b>Krishna, Daya</b>	Building intellectual traditions (Interview by Shail Mayaram)
<b>Mathur, Kuldeep</b>	University under siege
<b>Mohapatra, Bishnu N.</b>	The problem
<b>Pandya, Sunil K.</b>	Public hospitals
<b>Rao, M.A. Vasudeva</b>	The Udupi Madhva Matha
<b>Reddy, Amulya</b>	
<b>Kumar N.</b>	Ensuring sustainability
<b>Saberwal, Satish</b>	Political parties and societal values
<b>Seminarist</b>	Cleaning up

SEMINAR 457: September 1997; **EMPOWERING WOMEN**: a symposium on political reservations for women.

<b>Al-Tamimi, Jumana.</b>	Arab women and politics
<b>Alva, Margaret</b>	Whither Indian women?
<b>Bhattacharya, Malini</b>	Democracy and reservation
<b>Dhagamwar, Vasudha</b>	Reservations about further reservation
<b>Mazumdar, Vina</b>	Historical soundings
<b>Menon, Nivedita</b>	Reservations and representation
<b>Nair, Janaki</b>	An important springboard
<b>Ramanathan, Usha</b>	Interrogating WRB 1996
<b>Singhvi, Abhishek M.</b>	The women's reservation bill
<b>Seminarist</b>	The problem

SEMINAR 458: October 1997; **MEDIA TRENDS**: a symposium on the press and TV in our times.

<b>Babani, Anoop</b>	Index on media
<b>Bhattacharjea, Ajit</b>	The problem
<b>Ghose, Sagarika</b>	The free market journalist
<b>Jeffrey, Robin</b>	Indian-language newspapers
<b>Jesudasan, Tony</b>	Media as commerce
<b>Jha, Raj Kamal</b>	The fault, dear Brutus
<b>Nicoll, Alexander</b>	Codes of conduct
<b>Prasad, H.Y. Sharada</b>	Down memory lane
<b>Sainath, P.</b>	Amnesia
<b>Sanghvi, Vir</b>	The dispensable editor
<b>Sethi, Harsh</b>	Activist journals
<b>Singh, Malvika</b>	TV tales
<b>Varma, Arun</b>	Business journalism

SEMINAR 459: November 1997; **UNITY OR INCOHERENCE**: a symposium on emerging issues in center-state relations.

<b>Banerjee, Ashis</b>	The federal coalition
<b>Baruah, Sanjib</b>	Cutting states to size
<b>Frankel, Francine R.</b>	The problem
<b>Radin, Beryl A.</b>	Instruments of federalism
<b>Singh, Nirvikar</b>	On federalism and reform in India
<b>Srivastava, D.K.</b>	Emerging fiscal and economic issues
<b>Stepan, Alfred</b>	Comparative democratic federalism
<b>Verney, Douglas V.</b>	A more federal India?

SEMINAR 560: December 1997; **FUTURES**: a symposium on critiques of dominant futures studies.

<b>Cubitt, Sean</b>	The art of the future
<b>Inayatullah, Sohail</b>	Evading the future eaters
<b>Lal, Vinay</b>	The future of knowledge
<b>May, Graham H.</b>	A surprise free future?
<b>Nandy, Ashis</b>	The future of dissent
<b>Pieterse, Jan Nederveen</b>	Global futures
<b>Sardar, Ziauddin</b>	The problem

## ATLAS OF THE LANGUAGES AND ETHNIC COMMUNITIES OF SOUTH ASIA

ROLAND J-L BRETON

This geographical atlas constitutes the first systematic presentation of the spatial and quantitative characteristics of the distribution of languages in the seven countries of South Asia. Utilizing a semiographic analysis and combining and comparing language data from various national censuses covering a forty year period, this atlas enables readers to actually see the geographical location, extension and linguistic affinities of any of the numerous languages spoken in South Asia.

1997 ■ 236 pages (including 60 plates)  
Rs 795 (cloth)

## LEVELING CROWDS

Ethnonationalist Conflicts and  
Collective Violence in South Asia

STANLEY J TAMBIAH

*His insights as a social scientist into the political and cultural history of South Asia are informed by a passionate humanism that gives us a new understanding of the dark tragedies of our time.*

Ainslie Embree,  
Columbia University

1997 ■ 408 pages ■ Rs 450 (cloth)  
A Vistaar Book

## COMMUNALISM CONTESTED

Religion, Modernity and Secularization

ACHIN VANAIK

*A deep, intense and wide-ranging discussion on problems of secularism and communalism in India. Vanik places the problem both in its theoretical and international context.*

Meghnad Desai in *Business Standard*

1997 ■ 384 pages ■ Rs 550 (cloth)  
Rs 250 (paper) ■ A Vistaar Book

## THE CHALLENGE IN KASHMIR

Democracy, Self-Determination  
and a Just Peace

SUMANTRA BOSE

*Based on extensive field research in the strife-torn regions, this lucid book is a distinctive contribution to policy-relevant scholarship on the conflict.*

Business Line

1997 ■ 216 pages ■ Rs 125 (cloth)

## CHILDREN, LAW AND JUSTICE

A South Asian Perspective  
SAVITRI GOONESEKERE

This volume provides an examination of the 1989 UN Convention on the Rights of the Child. Its primary objective is to outline the options available for using the Convention to create a legal environment favourable to the realisation of the rights of the child in South Asia. Goonesekere discusses the concept of child rights as expressed in the Convention, and the problems and prospects of realising these radical international standards.

1997 ■ 420 pages ■ Rs 310 (cloth)

## CAPITAL ACCUMULATION AND WOMEN'S LABOUR IN ASIAN ECONOMIES

PETER CUSTERS

Based on prolonged field research in India, Bangladesh and Japan, this ambitious book provides a theoretical interpretation of the rapidly changing economic conditions in contemporary Asia and their consequences for women.

1997 ■ 404 pages ■ Rs 260 (cloth)  
A Vistaar Book

## DYNAMICS OF STATE FORMATION

India and Europe Compared

edited by MARTIN DOORNBOS  
and SUDIPTA KAVIRAJ

This significant collection of original papers highlights the similarities and differences in the patterns of state formation in India and in Europe, offering in the process new insights on a variety of aspects.

Indo-Dutch Studies on Development  
Alternatives, Volume 19

1997 ■ 444 pages ■ Rs 475 (cloth)

## SPEAKING OUT

Women's Economic Empowerment in South Asia

edited by MARILYN CARR, MARTHA CHEN  
and RENANA JHABVALA

This book documents the experiences of seven NGOs in India, Pakistan, Bangladesh and Sri Lanka who have been successfully working with rural and urban poor women to evolve strategies for bringing about women's empowerment.

1997 ■ 252 pages ■ Rs 250 (paper)

**Political Evolution of Muslims in Tamilnadu and Madras, 1930-1947**

J.B.P. More

HB Rs 345.00

PB Rs 250.00

The Dravidian movement that took place during the anti-Hindu agitation of 1938, brought the Tamil-speaking Muslims to the forefront of Indian politics at the time of the freedom movement. It also highlighted the fact that religion and language were largely responsible for their political postures, voiced in the demand for a separate Muslim homeland.

Told in compelling language, this study of the recent history of Tamil Muslims is an important contribution to sociological and historical analyses of the movement.

**The Development Dictionary**

A Guide to Knowledge as Power

Wolfgang Sachs (Ed.)

Rs 375.00

In this collection of essays, some of the world's most eminent critics of development review the key concepts of the development discourse in the post-war era. Each essay examines one concept from a historical and anthropological point of view and highlights its particular bias. To encourage further studies in the cultural history of the development idea, each essay is followed by an annotated bibliography.

# ULIP

UNIT LINKED INSURANCE PLAN

**"I CHOSE ONE INVESTMENT PLAN AND GOT FOUR BENEFITS!"**

- Attractive Returns • Tax Savings
- Life Insurance • Accident Cover

Yes. It's true! When you invest in ULIP, you get a unique combination of multiple benefits:

In pure returns alone, ULIP has been delivering an impressive 16.5% dividend for the last 5 years.

Plus, Life Insurance cover of upto Rs.75,000. Without even a medical checkup! Plus, Personal Accident Insurance cover of Rs. 30,000. Plus, tax savings under Sec. 88 of I.T. Act 1961. Moreover, you can invest in the name of your spouse and children above

12 years of age, and still claim the tax rebate.

With the recent increase in target amount, you can now invest from Rs. 6,000 to Rs. 75,000 over two periods: ten years or fifteen years. Once you decide your target amount, you pay 1/10th or 1/15th of the target amount every year.

No wonder then, that today 1.6 million investors enjoy the ULIP advantage. How about you? ULIP is open for sale. So contact your UTI agent today! ULIP. More than just tax savings.

**UNIT TRUST OF INDIA**

*For your better tomorrow.*

Risk Factors: All investments in mutual funds and securities are subject to market risks and the NAV of schemes may go up or down depending upon the factors and forces affecting the securities market. Past performance is not a guarantee of future results. ULIP is only the name of the Scheme and does not in any manner indicate either the quality of the Scheme, future prospects or returns. There is no guarantee that the Schemes objectives will be achieved. Please read the offer document before investing.

### THREE HORSEMEN OF THE NEW APOCALYPSE

Nirad C. Chaudhuri

This book is a highly readable and visionary meditation on the twentieth century as it draws to a close. Chaudhuri's prescience, his measured prose, and his challenging and acerbic judgements on subjects as varied as English royalty, dress codes, nuclear weapons and American life make it an idiosyncratic, thought-provoking contribution to the history of our times. Full of astute observations, this work will remain an enduring monument to a man known throughout the world as one of India's finest and most important writers.

0 19 564189 2 1997 215x140 mm Rs 250 A

### SUBALTERNS AND SOVEREIGNS:

AN ANTHROPOLOGICAL HISTORY OF BASTAR 1854-1996

Nandini Sundar

This book is divided into three parts: the ethnohistorical first section portrays the pre-colonial economy and polity. The second part uses more standard archival sources. And the final section, 'Uncertain Futures', highlights the contradictions faced by tribal societies today.

0 19 564024 1 1997 215x140 mm Rs 495 A

### V.K. KRISHNA MENON: A PERSONAL MEMOIR

Janaki Ram

This is a very personal portrait of one of the most controversial — and misunderstood — figures in India politics, India's first High Commissioner in Britain, V.K. Krishna Menon. Janaki Ram, bases herself on a family archive of letters, personal recollections and interviews with Menon's friends and colleagues in an attempt at a fresh look at Menon's long public career.

## **WE SEE. SO WE ARE.**

**Vision is understanding** At Bajaj, giving wing to imagination and shape to idea is a way of life. And when the ideas find shape, you have products like Sunny Zip, Rave, Super Excel and Classic. Products born out of a close understanding of the market.

**Vision is performance** Our vision has enabled us to constantly change course and pace. To keep ahead of time and competition. The National Productivity Council's Award for 'Best Productivity Performance' (for two consecutive years) and the Engineering Export Promotion Council Award (special shield) for highest exports of consumer durables stand as testimony to our performance in a fiercely competitive market.

**Vision is leadership** The best way to lead we believe, is by example. By exploring the unknown. Taking the road not taken. We have done so by investing heavily in our R&D. And of course in our people. And in the process, our share in the 2.6 million Indian two wheeler market has grown from 38% in 1984 to 46% now.

**Vision is the future** It takes a leader's vision to unlock new possibilities and open new avenues. And now, with a target of 2 million vehicles by the turn of the century, Bajaj is clearly turning the wheels of the automotive industry.

We take as much care of the beds in the garden  
as we do of the ones in your room.

At Oberoi Hotels, we have a very simple philosophy when it comes to the environment.

We return to the earth, everything we take from it.

It is this belief that we put to practice before we design and build any of our hotels around the world.

Because we believe that we are living on land leased from nature.

Oberoi Hotels in Australia, Egypt, India, Indonesia, Saudi Arabia, Sri Lanka.

## THE ABC OF NATION-BUILDING BEGINS WITH YOU

For us, even a task as Herculean as building a nation appears simple as you become the focus of attention. As simple as learning the alphabet since we begin at the beginning—with the ABC. In our Tata Steel Rural Development Scheme, the TSRDS, there is a concerted emphasis on education at primary and secondary levels.

We also endeavour to make sure you never run out of water for drinking or irrigation, travel over wide roads and sturdy bridges and have access to modern health care.

Besides, in the fields of sports promotion, afforestation, family planning, community and tribal welfare, we have undertaken special programmes that keep your interests in mind. Because if you don't have benefits, we can't succeed in our endeavour to build this nation. An endeavour as complex as any, yet, thanks to you, as simple as ABC!

**TATA STEEL**  
Where you come first

HTA.3876.97-1

**BUILDING VALUES  
SHAPING DREAMS**

The Guinness Book of World Records lists The Farakka Barrage, India as the longest barrage in the world. It was built by HCC.

The Calcutta Metro is India's first metro project and justifiably the pride of the City of Joy. It was built by HCC.

Rajasthan's prestigious Atomic power project is India's first nuclear plant built by an Indian company. It was built by HCC.

The list can go on. But the point is this. It takes years and years of constant refining of methods and technologies to build not just structures - but towering monuments of Indian engineering excellence.

# WE'VE INVENTED THE MOST INGENIOUS TYRE INVENTORY CONTROL SYSTEM.

maadhyam

## FOR EVERY REPAIRABLE TYRE, YOU CAN NOW STOCK ONE NEW TYRE LESS.

Until now you didn't trust tyre repair and so you relied completely on new tyres. And to get the best out of your fleet, you had to maintain large tyre inventories. An expensive and uneconomical exercise.

OMNI precured tyre and tube repair systems now change all that. OMNI, a unique concept in tyre and tube repair has been brought to India in collaboration with Tech Rubber Co. Inc. of the U.S.A., pioneers and leaders in over 60 countries, worldwide.

- OMNI repair units are chemically treated and self vulcanising. Which means no heat is required.
- Punctures, cuts and bursts in the tube are sealed perfectly in minutes.
- OMNI tyre-repair units have a unique feather edge, that restores the original contour of the damaged tyre. Therefore, no wobbling. And no pinching of the tube, which the gaiter invariably did.
- OMNI repair units are available off-the-shelf, tailor-made for tyre & tube injuries of different sizes and to suit different tyre ply ratings. An ideal complement to both cold-process and hot-cap retreading.

If you are a fleet owner or a state transport undertaking and have not used OMNI, it's time you did. OMNI adds reliability and life to your tyre.

For more details on the best and most scientific tyre and tube repair system, call any of our offices or fill in the coupon and mail it to us. We'll do the rest.

# Power on your mind?

## Versatile engines for utilities, industry and IPPs

Wartsila NSD Corporation has established a strong presence worldwide in the utilities and IPP sectors for base-load and peaking power. With state-of-the-art, environment-friendly, multi-fuel diesel engines, Wartsila NSD offers optimum solutions if you have power on your mind. With station capacities of upto 200 MW, the Company offers stand-by, back-up or supplementary power supply systems for reliable, consistent and economic energy that is cheaper than grid power.

**POWER  
PARTNERS**

Illustrating our successes in the IPP and utilities sector are:

- \* Ringgold Cogeneration Plant in Pennsylvania, USA, designed and built by Wartsila NSD Corporation for Cogentrix, a leading IPP in the USA. This base load station uses natural gas for normal operation and has the flexibility to switch to liquid fuel when required.

- \* Five Wartsila Instant Power Plants (WIPP) set up in the UK for load management operation. These powerplants are economical for consumers, national grid companies and regional utilities.

In India, the Company has delivered power plants exceeding 1100 MW and its corporate vision envisages substantial increases in the near future. In addition, several 100 MW IPP projects are on the anvil.

So, if you need powerful solutions, come to Wartsila NSD. We will take the problem of power off your mind.

Sweet Memories

SAREES

DRESS MATERIAL

Mudra:A:RIL:4243B

We take as much care of the beds in the garden  
as we do of the ones in your room.

At Oberoi Hotels, we have a very simple philosophy when it comes to the environment.

We return to the earth, everything we take from it.

It is this belief that we put to practice before we design and build any of our hotels around the world.

Because we believe that we are living on land leased from nature.

Oberoi Hotels in Australia, Egypt, India, Indonesia, Saudi Arabia, Sri Lanka.

This is 3 year old Shreya.  
Her parents abandoned her  
and vanished. If you turn the page,  
you'll do the same.

CAUSE  
CÉLEBRE Created by Contract for a cause.

With no one left in the world, little Shreya doesn't have the slightest hope of facing the future, unless she gets an education. And that's where you come in. To make a dream called *Nanhi Kali* come true. Through *Nanhi Kali*, you can become the foster parent of a little girl like Shreya. By giving Rs. 100 a month towards her education, your 'daughter' will be put into school and in fact, you will receive regular reports about her progress including a photograph. *Nanhi Kali* is a special project of the K.C. Mahindra Education Trust - a Trust set-up by one of the most reputed industrial families in India. A Trust that's been working since 1953 to promote education and enlightenment across the country. Since *Nanhi Kali* literally means 'little flower', with people like you, we hope to repair the broken petals of thousands of such underprivileged little girls. So please don't turn the page yet.

**Nanhi kali**

A project of K. C. Mahindra Education Trust  
Cecil Court, Mahakavi Bhushan Marg, Mumbai - 1.  
Phone : 2021031. Fax : 2852441

Yes, I, \_\_\_\_\_ would like to adopt a 'Nanhi Kali' like Shreya. Enclosed is my cheque of Rs. 1200 (@ Rs. 100 p.m.) in favour of K.C. Mahindra Education Trust for one year's education. Please do send me progress reports and a photograph. Instead of one Nanhi Kali, I would like to adopt \_\_\_\_\_ Nanhi Kalis for \_\_\_\_\_ years. Thank you.  
• Anonymity of donor is assured. • All donations are exempted under section 80 G of the Income Tax Act.

# Ride a Hero Honda.

**Your children will breathe easier.**

Each time you ride a Hero Honda, you help protect the environment. And spare little children the evils of pollution.

Advanced Honda technology ensures that negligible amount of carbon monoxide gets into the air. And into children's unprotected lungs.

So think about a Hero Honda. Your children will thank you for it.

THE MONTHLY SYMPOSIUM POST BOX 338 NEW DELHI 11000

Founder Editors RAJ & ROMESH THAPAR

a journal which seeks to reflect through free discussion, every shade of Indian thought and aspiration. Each month, a single problem is debated by writers belonging to different persuasions. Opinions expressed have ranged from janata to congress, from sarvodaya to communist to independent. And

the non-political specialist too has voiced his views. In this way it has been possible to answer a real need of today, gather the facts and ideas of this age and to help thinking people arrive at a certain degree of cohesion and clarity in facing the problems of economics, of politics, of culture.

# The problem

THERE is no one picture of the young Indian child. The multiple life forms are real and specially so for Indian children. A one and a half year old, perched on a yet to fully mature hip bone of a seven year old, experiences the world meandering through heavy traffic, digesting the impermanence of images as cars whiz by. In another setting a toddler routinely wakes up in the arms of the mother sipping milk from a silver spoon, is massaged by the grandmother chanting rhymes and is indulged with a variety of food items. Both survive living their own reality.

Yet, the spontaneity of childhood is undeniable, regardless of social deprivation or abundance. A scarcely clad three year old child on the street put forward his second hand when given *prasād*, saying, 'I want some for my brother.' So did a four year old, demanding a 'return gift' for his uninvited older brother at a birthday party, adding, 'My brother had to stay home because mother says he is not invited.'

For understanding childhood it is important to demystify the glory of any one class, caste, region, gender or time. What needs to be highlighted is the growth and coexistence of children in several contexts.

Childhood is the first exciting wave in the sea of life. Poetic verses or definitions of childhood are unable to fully capture the dynamics and dynamism of children's expressions. Their awe and curiosity, their searching looks, the major connections that 'children's minds' can retain and reproduce, leave us adults perplexed, looking for doors and windows to unravel the complexities of their 'developing minds'.

How do we understand our young ones? Childhood is a state of being untouched by interfering social influences. The simplicity, forthrightness and playfulness of childhood is omnipresent and irrepressible. Recognition that spontaneity and exuberance is natural to children has to be a basic belief when discussing the reality of children. Orientation to children or being child-friendly does not diffuse issues of concern that need adult attention.

A little girl in a *sari* or a male child in a *dhoti* may appeal to adults, an image akin to Victorian children in heavy frilled garments. Yet they are small people in adult robes. The concept that children are miniature adults is 'researched falsehood' which needs to be

negated. This devaluation of the old dictum is necessary for a positive approach to children in tune with their specific cognitive, linguistic, social and emotional processes. Schools must begin to question why they screen three year olds for admission when the children are tense with anxiety at being separated from parents, as also having to perform before strangers. Both society and family need to review the rituals they create. 'Children are not mere extensions in the branches of the family tree but daughters and sons of life's yearning for continuity.'

It is sheer joy to see each infant create her own world. Every society indulges its young as can be seen in the games, rhymes and stories about children in all cultures. That infancy is a significant part of life for all human beings has been known intuitively and empirically through time. Exploring the repertoire of regional and linguistic heritage for socializing our young is necessary. Child care should be ecologically and culturally rooted – this is essential knowledge young parents should be familiar with.

Our society is stratified and divided with unequal opportunities. The fact that experience of childhood for growth and development is inequable is a truth that disturbs those of us with concern for our young. This inequality, though a part of the natural social structure, tampers with the human resource and the completeness of the circle of life.

Deprivation creates diverse and deep-rooted influences. Poverty can be devastating but it may not be singularly responsible for limiting children's growth. A lack of abundance, absence of ready-made play materials often catalyses innovation and invention. This creative spirit is present in children's play and organizers of children's programmes often cater to this specific proneness for exploration and adventure.

The culture of childhood has an oral code of transmission. Games, secret languages, jingles – a variety of interaction patterns pass from one generation to the next. Play and fun are children's major work. Most learning about social conduct, adjustment, assertion and self-protection are learnt in playfields. For children, toys are not just recreational objects but playmates with whom they relate in special ways.

Children seek children, yet adult protection is a necessity, willingly or grudgingly. This bond needs to be protected and treasured. We also need to assess the experiences we provide our progeny. Blaming the entry of television into our homes is no remedy for the unmonitored viewing we often permit our children.

Children learn by being in stimulating environments. One of the crucial ways in which a culture aids the intellectual growth of the child is through special dialogues between family and friends. The family setting is essential to nurturing and support. No care system can be a substitute for the multiple bonding provided by family ties. Perhaps sustaining the family structure may be a way to conserve the enriching influence of multiple one-to-one bonding.

Social institutions establish a routine, a daily schedule for the young. Children do not rebel against structure or rhythms, what they oppose are rigid and inflexible roles and rules. It is not school or homework they resent. Rather, they are frustrated by learning about their environment in dark, dingy rooms, cramming numbers from 1 to 100 and 100 to 1, in having to learn S for shoe, not *juta*, without knowing the relation of shoe to *juta*. We have been successful in declaring that learning centres exist within a kilometre of settlements (National Policy of Education, 1986). The dream of our young children prancing to a neighbourhood learning centre was justified, yet we have been unable to create temples of learning or sustain our *guru shishya parampara*. Our children go to school with heavy bags and heavy hearts. School playfields, corridors and free time brings out the exuberance of children.

Our schools are trying to cope with large numbers, a reality that needs to be accepted and dealt with, specially by teacher training units. Whether in a rural school, an experimental learning centre, or a government school, children thrive best when their identity is established. Both parents and teachers need to understand and acknowledge each child's varying cognitive and linguistic pace, along with their social and emotional space. Schools need to build home-school relations in new ways.

As parents we need to be aware of our children's experiences in school. With both spouses at work,

alternative child care perhaps needs professional attention and recognition. Child care is not guardianship or physical safety or feeding children as per schedule. For those who are caregivers, the primary message should be that it is important to save children from hunger and getting hurt. Equally significant is to know what new things the child is touching, the feelings and thoughts that are being expressed. Children seek exploration, excitement and adventure. The repetitive throwing of a spoon, the gurgling of sounds, the gazing at different objects are forms of communication. We as a society need to reflect on the joys of being children, rather than hurry them into becoming 'all grown up with nowhere to go.'

This issue of *Seminar* attempts to sensitize adults to their own childhood. A connectedness to childhood helps overcome limitations as also build on nostalgic memories such as 'We as children had people tell us stories' or 'We as children never talked back.' Human interactions are experiential; the past leads to the present and living the present in its fullness leads to a bright future. It is the understanding, enhancing and enriching of childhood experiences that we wish to address. As adults let us relearn

To listen to the birds,  
to run behind the butterfly,  
to watch the rainbow,  
to push the pebble.

Let us work on computers,  
yet remember the countless anecdotes,  
of our doting grandmothers,  
the countless leaves that rustle in the fields.

Let us aim to fly in the vastness of the sky  
explore the never ending fields,  
enjoy a tractor ride,  
not just be lost in the traffic tide.

The sea, the mountains, the desert beckon us.  
Let's learn to explore, discover and sustain  
our potential to be human and humane.

ASHA SINGH

# Learning to live

S ANANDAKASHMY

I SPENT a great deal of time ruminating when asked to write a paper on childhood in the Indian family and society for *Seminar*. What a vast universe of cultural factors to sample given the varied subcultures that constitute Indian society! It is not possible to write about the majority culture which, in the first instance, is difficult to define. While the concept of majority is clear, given a finite number of events or people, its application to cultures is difficult as cultures and subcultures have blurred boundaries.

Our pluralistic society has some continuities across time and regions, as well as discontinuities which are ecological or related to socio economic status. Where does a subculture begin and where does it end? When is an aspect of culture Indian and when is it borrowed? When is a custom seen as having originated outside India and what is the critical period for it to be considered Indian? There are no rules which can be consulted to answer these questions, so most social scientists are left to pick their own heuristic device.

Popular writing about children tends to think of children in two categories: rich and poor. It is commonly assumed that rich children have everything that money can buy: status, good schooling and opportunities for achievement, while the poor have inadequate nutrition, a few years of unsatisfactory schooling and a future which imprisons them in the downward spiral of disadvantage. While they do reflect a reality, these categories represent two ends of the curve, forgetting that there is a large middle section. There are no catchy epithets to identify children in the middle which spans a wide range on the affluence-poverty continuum. It is only an occasional ethnography that illumines this relatively unresearched section of Indian childhood.

It is in this context that I turned to the leaves of a two decade old field diary to present some aspects of childhood that tell us a great deal about society. The families were from a group called Chippa Namdev Vamshi who live in a fairly dense cluster in Sanganer, on the outskirts of Jaipur.

Their lives may help us understand what is Indian about childhood in India.

Traditionally, research on child-rearing has focused on the biological phases and the modes of coping with their mastery. Belief systems and ritual practices also influence parental socialization practices, and 'culture' is an important explanatory variable. But ecological factors like the nature of occupation and the relationship of human resources to other types of resources have generally been relegated to the background in published research.

**T**his study shifts focus from the management of the child's primary needs to the socialization of children for occupational roles. The methods used by parents and significant others in the fostering of responsibility, self-reliance and achievement in children between the ages of 6 and 16, are central to this approach. These variables have relevance for role performance in the years of adulthood.

The observations included the specific tasks allotted to children, the effectiveness of task performance, the degree of competence and the mode of learning a new task. Parents were interviewed at a pace and style suitable for them, often in small groups rather than individually, on the following aspects: their attitudes towards their own occupations and the extent to which these influenced their socialization practices; aspirations for their children; their perception of the link between present tasks and future roles for the children; and the pattern of reinforcements they used.

The study was of a traditional craft community engaged in hand-block printing. The respondents belonged to the caste of weavers who, according to their oral history, became textile printers in the 11th century. The community comprised of

200 families, most of them kinsfolk. Their printed fabrics had in the last decade received a big boom, and within a generation some of the families had moved from subsistence levels of living to a reasonable standard. Those among them with the means to invest in the flourishing trade had done extremely well for themselves, and three families had become affluent.

The child's gender was the most important factor in allocating domestic, craft-related and school-related duties. By the age of 10, girls were working at home, busy with tasks like sweeping, fetching water, washing clothes, or taking care of their younger siblings; some were at school, and almost all of them were helping with the craft in some way. One hardly saw a girl over the age of 10 who was idle. Obedience, not responsibility, was the essential attribute for children from the point of view of the parents. It appeared that in situations with little scope to demonstrate efficacy at school or in the outside world, a number of children took some pride in their craft work. Having something tangible to show for their efforts was an incentive in itself.

**T**here was no strict time schedule for the work. The lack of scheduling was not haphazard, but related to the availability of raw materials or the marketing of the product. They preferred an 'organic' approach rather than a 'mechanical' one in scheduling their work, and though low on economic status were high on autonomy.

Individualism as known in the West was not a prevailing value and yet it was believed that each child was born with his own fate, abilities and endowments. Parents felt that they could not have specific expectations of their children and were not in favour of moulding the child to fit a model. A child's abilities were considered to

emerge with his maturation. Maturation was seen as a leisurely process, different for each child, and one which did not admit acceleration. Childhood, it was agreed, was a time for play, fun and laughter; but when the family's survival needs had to be met, even children had to work.

**I**n the case of very young children, those under eight years of age, parental tolerance for transgressions and regressions was high, and yet, the average 12 year old in these communities demonstrated self-reliance and carried quite a heavy work-load. The finding that in many traditional cultures the child becomes occupationally a fully functioning adult around age 15, was also supported by this study.

The cloth printers of Sanganer came close to the ideal-type of a traditional way of life. Kinship and caste ties were highly valued and traditional rituals practised and preserved with great pride. They lived in two *mohallas* and most of the social interactions were among themselves. Sanganer in the 1970s was a town with a population of 11000, with five primary schools, two middle schools, and one high school. But effectively they had little interaction with the rest of the town. In a way, their world corresponded to the description of the traditional world as a 'small one in which the dramatis personae could be well known to each of the players.' The compass of daily life was finite and familiar in the limited sphere within his purview. Any person could learn about his effectiveness honestly and with less ambiguity than is characteristic of a complex modern society, since the feed-back was direct and the criteria were intrinsic.

Most children were not used to being confronted with questions about their future; children under 11 years

of age would either giggle, run away, or remain silent. Of the children between 11 and 16, only half of them answered the question. Of these, 75% of the boys mentioned high school education as their goal and the rest thought that a college education would be feasible. Most boys seemed to appreciate the advantages of a salaried job, but many of them wanted to practise their craft, at least on a part-time basis.

**T**he children attained a considerable mastery of the craft between the ages of 13 and 15. Imitation was the dominant mode of learning new skills. One of the articulate parents we interviewed said: 'From the time the child is born, he is surrounded by the craft. He can pick some blocks and try them out, imitating those around him. If he develops an interest, he can become one of us. If he does not show interest in the job, what use would our forcing be? If he does not like the craft he will not be a good craftsman.' This view summed up the essence of their approach to the socialization of their children, vis-a-vis pursuing the traditional occupation.

There is a parallel to this in the approach of some 'primitive peoples' with regard to the transmission of skills. In an article, Margaret Mead wrote about the educational emphasis of the West in primitive perspectives. She discussed how adults in primitive societies taught their children all they knew. In her words: 'Miscarriages in the smooth working of the transmission of the available skills and knowledge did occur, but they were not sufficient to focus the attention of the group upon the desirability of teaching as over against the desirability of learning' (Mead, 1942, p. 634).

In Sanganer, children between the ages of 6 and 9 learnt to take care of themselves. But it was clear from the way the mothers answered the

question, that in their thinking there was no specific norm with regard to the age of self-reliant behaviour. When asked if the child took care of his own things, there was a surprised look on their faces. There were few things a child owned, they said. His school books were his own, generally, and may be some clothes. But often even the clothes were jointly owned by children in the family, and the child wore whatever was clean and available. Bathing involved group participation, with all the cousins of the same-sex from the household getting together at the roadside water-tap. The children did not possess toys or other objects that they could call their own. They improvised games with empty dye-containers or printing blocks that were not in use, or with sticks and stones; but they grew up without any personal possessions.

**A**s for discipline, punishment was mild, generally scolding rather than anything physical, while reward for good behaviour was rare. Praising a child for doing something expected of him was not customary. Material rewards were also seldom given. There was a belief that praising children spoilt them and made them disobedient. The tasks of children, even of those who did work regularly, were not given verbal recognition.

Another reason for lack of praise lay in the organic way in which the family was perceived. The child is such an integral part of the family that praising him is like patting oneself on the back. Also, open admiration, especially of a child, could lead to the casting of the evil eye (even without evil intentions or envious feelings, the evil eye could be cast). In any case, the belief that exulting over one's good fortune or one's child's smartness carries a risk, was widely accepted within the culture.

The linear relationship between early socialization and later manifestation of competence was not obvious. Children who were careless about cleanliness turned into well-groomed youngsters around age 12; those who appeared unconcerned about future orientations at age 10 became responsible enough by age 14 to share the burden of providing for the family. No direct and simple relationship could be traced between the parents' efforts to socialise the child and the child's competence behaviour.

**T**he intervening variable may have been simply the function of growing up. The tremendous weight which we place on early experiences in childhood, especially in cognitive stimulation, may not be entirely justified. Even orthodox psychologists like Kagan and Klein (1973, p. 957) have cited data in a monograph that indicates that absolute retardation at the time of the emergence of universal cognitive competencies during infancy is not predictive of comparable deficits in memory, perceptual analysis, and inference during pre-adolescence. This finding is contrary to orthodox child development theories – and has tended to be ignored or be damned with faint praise.

It was not only the efforts of parents and other socialisers, but incidental factors, situational events, and specific life experiences that were found to be salient. For instance among the printers of Sanganer, a boy of 15, who showed a high degree of competence in all his activities, was found to be the sole supporter of his mother and the younger children after his father died. He performed well in school, stayed back at recess time to complete his assignments, and when he came home, got down to the printing with alacrity and vigour, making enough for the family's survival. In any

case, there were individual differences in parents and children that constantly acted as a brake against easy over-generalisation about the environment.

**L**ife in an extended family, it has been widely observed, calls for the development of traits different from those that are adaptive to life in a nuclear family. In an extended family, there appears to be high value for non-aggression, obedience, conformity and co-operation, as opposed to an emphasis on independence, individuality, achievement, and assertiveness, which find an implicit value in a nuclear household. When a group of people share resources, and are bound by ties of kinship and common traditions, the resulting system may be called familism – i.e., within the family, to each what he needs and from each what he can give.

Living in close proximity with kin of all ages also necessitates everyone being aware of the motivational states of the others in the family. Where consensus and compliance are necessary for the maintenance of family solidarity and integrity of kin and caste, a high degree of individualism may be dysfunctional. Both men and women would have to develop dependence, especially in the interpersonal field.

Given their occupation, the Sanganer families were above the threshold. There may have been physical deprivation and other limitations, but the craft itself made possible a feedback that acted as a reinforcement for the people. The satisfaction of making something gave them a sense of effectivity unachievable for others at the same level of living without this mode of expression. *Svadharama* (natural inclination) did lend some meaning to their lives and this core of subjective meaningfulness made life more liveable. The printers

in Sanganer had prospered with an increase in demand for their products. Correspondingly, there were better prospects of success for their children. The competence of the group was thus also a function of economics.

Finally, the issues I had raised in an earlier paper, 'How independent is the independent variable?' (1972) have received support here. In that article I had pointed out that caste and religion seemed to have pride of place in the independent variables selected for research in India and that they have often been treated as explanatory variables for a variety of behaviours that could not have been theoretically related to them. Had we argued that position in the caste hierarchy would predict competence socialization, we would have found no clear pattern emerging. The viability and prosperity of the craft was a better predictor of competence in parents' socialization and children's performance than either caste or religion.

**I**n Sanganer, where the craft had prospered, the youth made better use of public institutions like schools or colleges. Ecological factors like the amount of space, proximity to water, nearness of school, as well as craft related factors like availability of raw materials, space for storage, and facilities for working seemed important. Those who perceived the social structure as offering the possibility of a good life were more future oriented, and their perceptions were often very realistic.

While discussing the results in an attempt to identify the patterns that emerged from it, a member of our group felt that our definition of competence was perhaps ethnocentric (middle class). The people themselves may consider that being a good group member and getting on with others had greater value. In viewing

competence purely in terms of the individual, we had emphasised one modality of functioning. The other side of it would be group or community related.

**T**o include both the aspects of the individual and society, the core concept of competence may need to be divided into: individual competence, made up of achievement, self reliance, and responsibility; and inter personal competence, made up of the ability to cooperate with others, to be non-aggressive, and to work towards group goals.

To conclude:

1. Learning was more by imitation than by instruction. Therefore, learning became more important than teaching. Furthermore, the focus was on doing, more than on learning. Ecological factors determined what was done, how and by whom.
2. Since the roles to be adopted by the children were clear-cut and well-defined, competence in performance *per se* was not emphasised. Self reliance was expected to develop with maturation; achievement was underplayed, except occasionally. Responsibility was generally less valued than obedience. Nevertheless, in craft families, the children had developed a high level of craft competence and general competence by age 15.
3. There were almost no rules for very young children, who enjoyed freedom within their situational framework. But childhood ended rather soon and the boundary lines between childhood, adolescence and adulthood were blurred.
4. Gender roles were clearly differentiated and influenced socialization from birth. In a society with limited alternatives, the girls and women found that they had fewer choices than the male in every sphere of life. Young

girls had no control whatsoever over events that governed their life; it was only age and marital status that would confer the right to some authority over decisions in later life.

5. Family, kinsfolk, and caste were the major groups of identification for the child.

6. Families who were economically marginal and on a subsistence level showed less concern for competence. They had little confidence in the system and a realistic appraisal of their own control over their future or the future of their children. Families which were above the survival threshold made better use of social institutions in the larger system.

7. Child work in a family occupation is totally different from child labour. Prior to the Industrial Revolution in Europe, families included children in their occupational activity. When a child learnt the tasks to be done, it was seen as an apprenticeship. Traditional crafts families in India have the same perceptions as pre-industrial people. Theoretically, the following comments appear relevant:

a) In traditional, face-to-face communities inter-personal competence, or the ability to get on with the family and community without open aggression may be as highly valued as personal competence.

b) Ecological variables are clearly important as predictors of competent behaviour.

c) Not only is competence an individual's trait, it is also a trait of environments and of communities.

# Child care in Indian tradition

ANURADHA SINGH

'WHATEVER else a culture does or does not do, if it wishes to reproduce itself, it must produce new members. Because cultural reproduction depends upon human reproduction, questions of childbearing are invariably significant in the life of a culture, and significant changes in childbearing patterns often signal broad cultural change.'

Over the years broad cultural changes have occurred in mother and child health care practices in India. With the advent of modern medicine, and the consequent marginalisation of indigenous medical systems, traditional practices have fallen into disarray. India today is a curious mix of tradition and modernity, with an established continuity of its tradition along with change and innovations that are restructuring the contemporary social milieu.

Child care practices reflect this larger arena as well and inhere contradictions of our peculiar tradition-modernity nexus. Being part of a changing family structure and community, the child cannot be viewed in isolation. Caught between modern institutionalised medicine and people's knowledge of traditional practices inherited from the past, she surely does not deserve the confusion on child bearing and child rearing issues that reigns in contemporary times. Ill-cared and malnourished,<sup>2</sup> our children demand that we re-examine tradi-

2. India ranks next only to Bangladesh among all the countries in the world in child mal-

tional practices of mother-child care, and the associated rituals with understanding and empathy.

Underneath the rich and vivid cultural diversity that characterised our traditional society, there was, by and large, a uniform practice of child care, though the various regions left their own distinct cultural marks on such practices. Even with the advent of westernisation and modernisation of health delivery systems, these age-old practices are widely prevalent and continue to be relied upon.<sup>3</sup> These practices relate to the care of the pregnant mother, her post delivery care, care of the neonate, practices of giving prelacteal feed, initiation of breast feeding, and the rites and rituals related to the child during her growing years.<sup>4</sup> For understanding these practices and their basic structure, one has to look into Ayurveda. It provides the foundation of these practices, even of cultural and regional diversity in these practices.

**W**hat is currently termed 'mother and child health care' is part of a branch of Ayurveda called Kaumara Bhryta incorporating both obstetrics and paediatrics. Child care in Indian tradition, as reported in both classical Indian texts and folk practices found in various communities and regions, begins earlier than even conception itself. Susruta Samhita, a classical text

nutrition. It is a matter of concern that as many as 53% of children in India suffer from malnutrition according to UNICEF statistics. *The Progress of Nations 1996*, UNICEF, N.Y., pp. 18-19.

3. An all India multi-state survey on local beliefs and practices concerning health of women and children bears this out. Reported in Smita Bajpai, *Her Healing Heritage*. CHETNA, Ahmedabad, 1996.

4. A popular and authoritative introduction to these practices is given in M. Radhika and A.V. Balasubrahmanian, *Mother and Child Care in Traditional Medicine*, part 1 and 2. LSPSS, Madras, 1990.

of Ayurveda, explains how coordination of the four factors – 'menstrual period (ritu), healthy womb (ksetra), nutrient fluid (i.e., chyle of the digested food, ambu), healthy semen (bija) – along with the proper observance of the attendant rules is necessary for the conception and development of a healthy child.

'Just as the proper season (ritu), good soil (ksetra), water (nutrient fluid, ambu) and vigorous seeds (bija) together with proper care help the germination of strong and un-diseased sprouts, a child who is the fruit of such conception is destined to be beautiful, of good health, generous, long lived, virtuous, attached to the parents and capable of discharging her parental obligations.'<sup>5</sup>

**O**nce conception takes place the mother and the embryo requires a specific kind of food and nutrition. Normal growth of the child and her health, and the woman's body are of paramount importance at this juncture. Ayurveda texts provide a unique set of recommendations regarding food and conduct (ahara-vihara) for the pregnant mother. From the very first month, the pregnant woman is advised to take certain food products and avoid others, and the regime goes on to the ninth month. The diet prescribed during pregnancy takes into account the month-wise development of the foetus, as the food substances prescribed have nutritive qualities required for the organ development of the child. This nine monthly regimen not only nourishes the child, but also gives strength to the mother's body and takes care of problems commonly associated with pregnancy.

5. Susruta Samhita, section sarira sthana, chapter II, verse 33. *Susruta Samhita*, edited and translated into English by Kaviraj Kunjalal Bhishagratna, Chowkhamba Press, Varanasi, 1981.

The mother-child's preventive and promotive nutrition regime addresses problems such as nausea, water retention, swelling, blurred vision, constipation, diarrhoea, fever, burning sensation, pain in the abdomen and various other aches and pains. Thus to have a healthy progeny, to withstand the strain of childbirth and postpartum phase, the pregnant woman has been asked by the Ayurvedic acaryas to follow a systematic month-wise dietary regimen and prescriptions.<sup>6</sup>

**T**here are no parallel month-wise dietary practices provided in the modern medical tradition. The prescribed dietary regimen is followed across the country with, of course, habitual, regional and cultural variations. Though food substances and their preparation differ greatly across the country, the 'qualities' of food substances follow the rationale behind dietary regimen prescribed in Ayurveda. These prescriptions are widely practised by womenfolk in our society.

Without going into the vast area of management of childbirth and postpartum care of the mother, we come to the event of childbirth and the care of the new born (navjata paricarya). Childbirth is not seen as a medical event or a pathological phenomenon which requires professional intervention. It is seen as a celebration of motherhood and childbirth. As it is both a biological and a social event, it calls for a special handling of the mother and the new born by the family, as well

6. Caraka Samhita, section sarira sthana, chapter IV, verses 9-24; Susruta Samhita, section sarira sthana, chapter III, verses 18-30, and; Astanga Hrdaya, section sarira sthana, chapter I, verses 37-63. *Caraka Samhita*, edited and translated into English by P.V. Sharma, Chowkhamba Orientalia, Varanasi, 1981. *Astanga Hrdaya*, edited and translated into English by K.R. Srikantha Murty, Krishandas Academy, Varanasi, 1995.

as by the community. The traditional practices of neonate care cover preventive, promotive and curative practices. The moment the placenta is separated from the uterus, certain birth rituals are performed which in their entirety are called jatakarmas (rites after birth).

**T**he child, immediately after its birth, should be cleaned of the greasy matter on the skin (vernix caseosa) using rock salt (saindhava) and ghee (sarpisa). To relieve the fatigue of birth, it should be anointed with bala taila (sida cordifolia). For resuscitation sound should be made by striking the stones near the ears and hot/cold water should be splashed on the face. Palate, throat, tongue should be cleaned with rock salt and ghee in a small quantity to help the child vomit out the swallowed amniotic fluid and clear the air passage.<sup>7</sup>

The practice of inducing vomit in the new-born child is fairly unique. The anterior fontanelle of the child should be covered with cotton soaked with bala taila. After the child has become calm and comfortable, the umbilical cord should be tied with a thread at the level of four fingers above the navel and cut with a sharp knife. The instrument should be purified in fire. The umbilical stump should be anointed with kushta taila (saussurea lappa) and haldi (turmeric) for quick healing. Haldi of course has now been recognised by modern medicine for its antiseptic and anti-inflammatory qualities. Ayurveda does not mention binding of the stump. The child is treated like an injured and traumatised person and the wound is dressed accordingly.

To provide nourishment on the first day, all the primary-texts of

Ayurveda recommend giving pre-lacteal feed to the child before it is put to the breast.<sup>8</sup> It is said that, after cleaning the infant any one of the following prescribed food combinations can be given to the child. Some of the combinations suggested for licking by new-born child are honey and ghee (mixed in unequal quantity); honey, ghee, vacha (acorus calamus) and gold (rubbed in the linctus); brahmi (moneria bacopa), sankha pusapi (canscora deussata) gold (few rubs), ghee and honey; ghee, honey and the powder of amalaki; and haritaki, ghee and honey. The first feed is supposed to impart strength, improve the digestive power, memory and intellect, promote the growth and ensure a long life span by increasing immunity against disease.

**T**he practice of pre-lacteal feed, that is licking of specially prepared paste, is fairly universal in our traditions. Pre-lacteal feed has no status in modern medicine and hence is discouraged by westernised medical practitioners, as they fear that it may choke the child or is unhygienic or that it may delay the sucking response/instinct of the child. On the contrary, the vaidya community staunchly supports this practice. Vaidyas maintain that licking the prescribed paste enhances general immunity (pratirodhaka samata) of the child. The child is put on this nourishment for the first or second day, only after which mother's milk is given.

However, mother's milk is recognised as the best feed for the

child. But when is the child to be put to the breast? Different versions are found in traditional medical texts. Caraka Samhita advises breast milk on the very first day,<sup>9</sup> whereas Susruta Samhita and Astanga Hrdaya suggest breast-feed to be given on the third day.<sup>10</sup> However, all the acaryas agree that first few drops of the mother's milk should be discarded for purifying the tubules. This is a widely accepted practice in almost all traditional communities.

**A** study covering 53 societies and cultures recorded widespread practice of discarding colostrum and delaying breast-feed for two to three days.<sup>11</sup> Views prevalent within traditional communities, as also supported by the vaidyas, favours an initial discarding of the colostrum. It is advised in Ayurveda that colostrum be discarded by the gentle squeezing of the substance which is thick, pale and viscous from the breast since the child may find it hard to digest and it could lead to vomiting, indigestion, fever and so on in the neonate.<sup>12</sup>

The Ayurvedic rationale and debate on discarding piyusa or colostrum<sup>13</sup> needs to be examined with interest by modern medical researchers. Modern medical establishment rejects this practice as unscientific at face value, since it believes that colostrum contains antibodies beneficial

for immune system of the child. In contradistinction to the prevailing practices and Ayurvedic rationale, modern medicine strongly advises feeding the child with colostrum.

**I**t is advised that while feeding the child the mother should have a happy disposition, that she should avoid negative emotions like anger, fear and grief. She should be rested. Hunger, sexual excitement and physical fatigue lead to depletion of breast milk and hence should be avoided.<sup>14</sup>

If it is suspected that the mother does not have adequate milk and the child is not satisfied, various galactagogue medicines like kheer of poppy seeds, various decoctions of ajmoda (*apium graveolens*), satavari (*asparagus racemosus*), methi (*fenugrreek*), meat, ghee and milk should be given to the mother. Alternatively, if the mother is sick or unable to feed at all, the provision of a wet nurse (*dhatri*) for the child is suggested. Other substitutes are goat or cow milk. To make it like breast milk, cow's milk should be boiled with *laghu pancamula* (roots of five trees) and sugar added.

The postnatal traditional practice of isolating mother and the child from the household helps them to recuperate from the birthing phenomenon. Not only does it prevent exposure to any kind of malady, it provides for a psychological binding of the mother and child. The early recognition of the mother takes place through contact – fondling, hugging, cooing, and singing lullabies. It contributes to establishing a warm, stimulating and secure relationship between the two. This constrained practice, for purificatory rites of mother and child, is not recognised by modern sensibilities. Popular modern medical

approach only recommends the isolation of a pre-mature child from the mother.

Similarly, giving an oil massage to the child<sup>15</sup> before bath remains a widespread traditional practice. Massage, an extension of touch, is considered beneficial for imparting strength to the body of the child as it stimulates the circulatory system, improves muscle tone, kindles digestive power, improves skin complexion and provides a soothing effect to the nervous system. A few drops of oil are to be put in the ear and nose and applied on navel, orifice and head. The choice of oil depends on the region, the season and the constitution (*prakriti*) of the child.

**A**fter the massage, a warm water bath is preferred, but for the head normal water is recommended. Warm water is medicated with *nirgundi* (*vitex negundo*) and other herbs. Tulsi leaves are considered good during the rainy season. Giving bath with warm decoction of triphala (*amla*, *harada* and *baheda*) is also considered good for raising the immunity level of the child. Before the first bath the child needs to be anointed with *balā ashwaganddhā* oil. The decoction used for bath is hot or lukewarm according to the season and is treated with *ficus* group of drugs. Also mentioned is gold or silver treated water for the bath. The child is then wrapped in silken soft clothes.<sup>16</sup>

Along with the prenatal and postnatal health care practices, certain other traditional practices are mentioned in medical texts, as well as reportedly practised universally by the communities in one form or another. These are the rites and rituals

(*samskaras*) of childhood. On the sixth day of childbirth, a ceremony called *sastipuja* is performed. It is also known as *paksa sasthi* and *sutika sasthi*. It calls for performing protective rites. It is an application of five purificatory rites, which are measures for child's survival and well-being.<sup>17</sup> This ceremony is widely performed in the northern and western parts of India.

**T**he *sutika uthana* ceremony is performed on the tenth day of birth according to the customs of the family. *Sutaka* period indicates birth-related observance in the family as *pataka* period stands for death-related observance in which no auspicious activity is undertaken. *Sutika uthana* is a purification rite and denotes the end of the *sutaka* period when the taboo of not performing any other auspicious activity is lifted.

*Niskarmana samskara* follows the 12th or 13th day of birth, when the mother and child are shown the sun and are declared free to participate in family life. This is considered a milestone in the child's coming into the world. This ceremony is also known as *suraja puja* or *aditya darsana* and is widely practised by various communities across the country.<sup>18</sup>

*Namkarana samskara* (naming ceremony) is performed on the 12th day. Ayurvedic *acāryas* suggest that the child should be given a name related to the gods or the stars, or of relatives and with an even number of letters.<sup>19</sup>

17. *Astanga Hrdaya*, section *uttara sthana*, chapter 1, verse 21; *Kasyapa Samhita*, section on *balagraha*, verses 9-13. *Astanga Hrdaya* does not mention it as *sasthi* but has prescribed specific protective rites on sixth night after birth.

18. *Paraskara Grahastotra* I.17.5.6 and *Manu Smṛiti* II.134.

19. *Astanga Hrdaya*, section *uttara sthana*, chapter 1, verses 22-23.

14. *Astanga Hrdaya*, section *uttara sthana*, chapter 1, verses 17-19.

15. *Caraka Samhita*, section *sutra sthana*, chapter 5, verses 77-88.

16. *Astanga Hrdaya*, section *uttara sthana*, chapter 1, verses 5-7.

Anna prasana samskara, the first feeding of cereals or weaning away from the mother's milk, marks another significant stage in the child's life. After the sixth month, light, easily digestible food which imparts strength to the body, is to be given to the child.<sup>20</sup> The ritual is practised universally. The eldest member of the extended family usually feeds the child. This marks another milestone for the child whose sensory horizon of taste and smell are widened to incorporate what macrocosm has to offer to microcosm, i.e., her body.

**K**arnabhedan samskara (puncturing the ear lobe) is done during the sixth, seventh or eighth month. This ceremony is performed by a physician. Susruta says, the ears of a child should be bored for protection from diseases and for decoration.<sup>21</sup> He indirectly indicates that boring of the ears is prescribed for preventing hydrocele and hernia.<sup>22</sup> As a precautionary measure this samskara is done on both boys and girls.

Chudakarana samskara (tonsure ceremony) is performed at the end of the first year or before the end of the third year. The child's hair is tonsured and this samskara marks a final separation of a child from the womb. Further, the original hair of the child, that is hair from the womb, is gathered with great care and secretly thrown into the river so that no harm comes to the child.

From birth to death, through the entire life span of human being, 16 samskaras are popularly recognised though different enumerations are

found in various books.<sup>23</sup> These samskaras range from garbhadharana samskara (conception by womb) to vidyarambha samskara (beginning of the formal learning) and end with antyesti samskara (funeral ceremonies). These rites and rituals practised by various traditional communities with reasonable variations owing to regional and ideological diversity are an integral part of the socio-cultural fabric of Indian civilization. Each samskara prepares the child for qualitative shifts in life, they mark closure of old responsibilities and prepare him for new responsibilities in the journey of life. They also indicate shifts in health care regimen.

**T**hese samskaras are widely practised across regional and ideological boundaries and demonstrate the variety and diversity of practice that we see in our traditional society. Practices associated with these samskaras are foundationally justified by Ayurveda. Modern medicine and modern lifestyle has, however, made a dent on practices associated with these samskaras by either reformist prescriptions or by trivialising samskaras altogether.

The trivialising of these samskaras has occurred because of ritualistic ossification from our past as also because of condemnation by imitative westernisation. Particularly within the relatively well-off modernised strata, the conflict between Ayurveda or grandmother remedies/recipes on the one hand and modern medicine

on the other, has created a sense of confusion, bewilderment and adhocism. The child has been the victim.

Indigenous child health care practices along with associated rites and rituals hardly mirror the modernist world today. Rather, they invoke a rich cultural discourse that reflects on a particular version of reality, traditional reality, and on the institutionally confused embedding of that reality in the contemporary world. A justification for this exercise is that health-disease phenomena fall paradigmatically as much in the medical realm as in the cultural domain.

Our approach departs from conventional medical anthropology which rests on the epistemic disjunction of 'belief' and 'knowledge' on the one hand and the approach of adversely counterpoising tradition to modernity on the other. These 'perspectival obstacles' need to be seriously addressed to free the subject of child care from institutional and societal paralysis.

**A**n analysis of traditional medical system as 'belief systems' and traditional practices as 'cultural traits' is reflective of the empiricist paradigm within anthropological discourse. Indeterminacy and externality of 'truth' thus becomes a casualty. This paradigm still exerts a great deal of influence on the prevalent academic view of medical anthropology as an enterprise of studying beliefs and practices related to health-illness phenomena in diverse cultures. 'Belief' here becomes a central conceptual category connoting a disposition not free of doubt, error, uncertainty or falsehood whereas 'knowledge' claims certitude and truth.

This disjunction of 'belief' and 'knowledge' is then used to mirror the disjunction of traditional medical systems and contemporary clinical

20. Susruta Samhita, section sarira sthana, chapter X, verse 64; Astanga Hridaya, section, uttara sthana, chapter I, verse 37.

21. Susruta Samhita, section sarira sthana, chapter XVI, verse 1.

22. Susruta Samhita, section cikitsa sthana, chapter XIX, verses 8-12.

23. Parasara, Varaha and Baudhyana Grahastotra enumerate 13 samskaras whereas Asvalayana Grahastotra enumerates only 11; Manu Smriti also enumerate 13 samskaras; Vaikhansa Grahastotra enumerates 18, and; Gautama Dharmasutra gives altogether 40 samskaras. See Rajbali Pandey, *Hindu Samskaras: Socio-Religious Study of the Hindu Sacraments*. Motilal Banarsidass, New Delhi, 1994, pp. 19-21.

medical sciences. This mirror echoes power relations rather than justify reality. Using contemporary clinical practices and biomedical knowledge as a norm for comparing the healing practices of traditional societies has led to an impasse in uncovering the 'truth' of traditional medical knowledge and practices.

**N**owhere is this more pronounced than in the area of mother and child health care practices. Existing practice today clandestinely smuggle in elements of tradition even in entirely modernised quarters, largely because of the 'underground' power of grandmother's 'truth'. 'Untrained' dais and common womenfolk keep pushing cultural 'truth' in other quarters. Modern medicine and Ayurveda are unable to conduct a dialogue in the interest of truth. The state and its health delivery system are oblivious to the issues involved.

There are millions of housewives, womenfolk and elders with traditional knowledge of home remedies and herbal cures. There are about 7 lakh traditional birth attendants, about 3 lakh herbal healers of chronic ailments, about 60,000 bonesetters and thousands of practitioners taking care of specialities like eye problems, respiratory problems, dental problems, arthritis, wounds, burns and one could add to the list. Such a resource base is more comprehensively distributed in society and somehow provides health care to people where the official primary health care system does not reach. The traditional knowledge base is decentralised, dependent on locally available natural resources and community supported. This knowledge and skill, condemned to live underground, is expected to naturally disappear with time.

The traditional health care system in India manifests at two lev-

els – institutionally traditional, and institutionally modernised and official. The institutionally traditional level of suddha ayurveda bases its practice on the codified, formalised knowledge found in various books and manuscripts with a strong theoretical foundation.

The second level of modern Ayurveda practitioners acquire training through degree or diploma in one of the traditional medical systems like Ayurveda, Unani or Siddha. Though weak in the foundations of traditional medical systems, they are professionally qualified to set up medical practice. They operate more as extension workers of modern medicine though wearing the garb of traditional medical practitioners. They are embodiments of the current state of confusion regarding the truth of traditional and modern medicine. Local health practices or folk medicine though dispersed and region specific, is in a state of disarray because its institutional support structure has crumbled. Confusion abounds about its truth.

**W**hat we need is an honest, abiding and sustained dialogue on truth between suddha ayurveda acaryas and upright modern medicine men. Both are epistemically responsible and are not only loyal to their respective knowledges but have the capacity to empathise with lok vidya, people's knowledge and skill.

Let the 'truth' of both Ayurveda and modern medicine face each other in the interest of the child. Such a sustained dialogue is truly possible only after overcoming 'perspectival obstacles' in the interest of the people. This dialogue can pave the way for overcoming institutional dysfunctionality and confusion that reign today in our society. It should be made the basis of a campaign that promotes positive practices of child care.

# On being a parent

MEENAKSHI GAUTAM

May I join you in the doghouse, Rover?  
I wish to retire till the party's over.  
Since three o'clock I've done my best  
To entertain each tiny guest:  
I blew their bubbles, I sailed their boats,  
I kept them from each other's throats.  
I told them tales of magic lands.  
I took them out to wash their hands.  
I sorted their rubbers and tied their laces.  
I wiped their noses and dried their faces.  
My conscience now I've left behind me.  
And if they want me, let them find me.

THIS is a selection of lines from the 'Children's Party', another one of those Best of Ogden Nash's, and for all you long enduring fellow mums and dads who would like to feast your eyes on the rest, the title of the collection is: *Candy is Dandy: The Best of Ogden Nash*, published by Mandarin Humour Classics and reprinted in 1996.

But still we want children! We want that delicious babyhood that lingers on in memory long after those interminable bouts of fatigue have faded away. No longer does one remember our miserable failures as walking-talking tranquilisers – those endless treks across limited terrace spaces, rocking and cuddling the little monsters, cussed in their determination to stay awake. Gone are those sleepless, terror-stricken nights when the 'son and heir' seemed inconsolable and utterly unpredictable, disproving every single word in our collection of the world's most revered parenting guides.

The truth is, the only memories are to do with happiness – the first smile of recognition giving way to gurgling laughter, the first sounds of 'mamma' and 'appa', the first step, the

first wet and slobbery kiss... the first hesitant attempts to hold the bottle, the stubborn insistence on being the junior weightlifting champion, lifting huge spoons to fill a tiny mouth at meal time... all these and other images nullify the moments of teeth-grinding exasperation so aptly described by Nash.

I learned what parenting was all about six years ago, two years after acquiring a Masters in Child Development. For the first time I discovered the 'academics' of development converging and unfolding in real flesh and blood, my baby son's, and real sweat and tears – mine. I had the good fortune of being able to strike off a year and a half from my career graph to be a full-time mother when he came along. I also had the good fortune of belonging to a small social circle of baby boomers who, in a sense, grew up together along with the kids we bore.

This unending practicum helped me realise the meaning of much of that classroom text, which I thought I had 'licked' after flying through college with an honours degree. My first realisation, as my son grew, and, rather sinking in at first, was that children have a mind of their own! This was the sum total of all the theories of 'cognitive development' that unanimously proclaimed that 'children think differently, act differently, talk differently, behave differently; they are *not* miniature adults' – a commonly held medieval view. I noted with happiness that many of the con-

temporary parents I often exchanged notes with were far from medieval in their outlook, even though they did not possess that cutting edge of academic knowledge which I did. Nevertheless, there was a warm, positive and encouraging acceptance of the distinct character of childhood:

In summer, I am glad  
we children are so small  
For we can see a thousand things  
that men can't see at all.

They don't know much about the moss  
and all the stones they pass.  
They never lie and play among  
the forests in the grass.

They walk about a long way off  
And, when they are at sea  
Let Father stoop as best as he can  
He can't find things like me.

Of course, this caprice of childhood – charming in its unassuming transparency and boundless creativity – translates ever so often into an egotistical, selfish, tenacity: 'But I want to, naa!' It could be the book that he wants me to read to him just when I've settled down with the newspaper and a steaming mug of home-brewed coffee to pamper myself after a hard day. It could be the afternoon bicycle ride just when I'm contemplating a well-deserved afternoon nap, or the bedtime conversation that he eagerly waits for just when I start itching for my post-dinner walk. It could be the friend he wants to visit at 10 pm 'just because I want to be with him.' In short, 'But I want to, naa!'

A strong mind, however, is also open to strong logic. When whims are understood in their right perspective, for the needs that they express, and given in to whenever appropriate, children do open up to the powers of reasoning even when at their most unreasonable. Briefly, this points to the obvious choice that I have to make between his book and my newspaper,

his bicycle ride and my nap, his bedtime conversation and my walk... his life and mine! But miraculously, I have never encountered tantrums in toy shops, never was a tear shed over ice creams and colas forbidden on medical advice, and mealtimes have never been a battlefield.

Attention given whenever it is rightfully due, even though it may mean a sacrifice of personal comfort for one party, does set the stage for accepting that which is not so rightfully due.

It is not as though consumerism has not caught on. My husband swears that for the last three weeks the following conversation took place each time father and son drove out together in our ageing car. Sometimes as often as four times a day. It never changes.

Appa, when will we get a new car?

Soon as we save some money love.

Shall we take a BMW...?

No! a real wala.

Not just now, we don't have the money...

*Awww... jab mein born nahin hua tha tab jyada paise wali jobs nahin mili tume?*

Well...

*Lekin mujhe to mil sakti hain.*

Sure.

Yipeeee.

Well, this is reality too, and father and son dream on together. When there is happiness, honesty and comfort in the present, dreams can only add to the joy. My son has a whopper of a car collection built from a toy car fixation of the early years, aided and abetted by his father who made a picnic out of every weekend visit to the motor garage to fix the ailing Ambi. Even before he could distinguish colours, the apple of our eye could distinguish between various models even after dark, by observing their headlights. He is now picking up differences between steering wheels.

To my delight and unsurpassed pride, I find that his powers of observation sharpened through this activity, have percolated into other areas – as into amazing little details in his artworks – the palaces and chariots as well as the trucks, buses and space wars that he draws. And believe it or not, he even drew an incredibly detailed pyramid (and called it 'pyramint' – shyly – because he knew he was making a mistake).

Yes, progressive thinking informs us that all children are smart and know just where and when to draw the line, provided the line is drawn clear and sharp. But often it is the parents who are not smart enough to do that. Our friend SK's seven year old daughter is one such smart kid (which means SK is a smart parent, no doubt). As father walked daughter to the bus stop one morning, a few days short of her birthday, this is the conversation that took place.

You know what I want for my birthday?

What, darling?

I want a Barbie doll...

(Silence! SK is appalled but doesn't want to show it.)

...or I want a poodle... a pink poodle!

(More silence. SK is horrified!)

...But I know you will not give it to me.

I know you will give me a nice book of a casino or a game...

There was no animosity in the child's voice. Only a matter of fact, albeit humorous acceptance of her dad's political correctness and a disarming honesty that felt no fear at confessing her own desires in the face of that correctness. A parent-child relationship to be proud of, no doubt. But one that requires hard work and sacrifice, honesty and togetherness. And of course there are times when you want to hide out in the doghouse!

# Starting afresh

ROOPA SHANKER

THE long summer after the ISC exams was enjoyable. Friends, parties, late nights – all were allowed. When July set in and my mother asked what I wanted to do, I was confused. Like any other adolescent, I wanted to do many things – all at one time. After much debate and discussion, I joined Lady Irvin College. My mother agreed because it was away from the ‘campus’, my father because it was a girls college, and I because the college offered a course which I wanted to take – ‘child development’.

During the three years for my graduation I was convinced that I wanted to take my master’s degree in no other subject but child development. The next two years taught me how to deal with children, their personalities, their creativity, and many other facets and skills.

After marriage I moved to Lucknow and taught in a secondary

school for a year. The VIIIth class which I taught did not give me the same satisfaction I had enjoyed during my practical classes in the pre-school run by our department – Saraswati Puri. I realised that it was the children’s ‘age’ which bothered me, but since the salary was good, I continued.

By the summer of ’92 I had a beautiful child of my own. As I held the little girl in my arms, happy, it struck me that I wanted to start my own pre-school, where I could be with little children, see them grow, teach them new creative things, love them and above all make them happy. I dreamt of having a handful of children... among them my own daughter, playing on the swing, singing to the tune of the casio, listening to stories, running to hug me. I discussed the possibility with my husband. I thought he would laugh it off. I was wrong.

We shifted to Allahabad with our two month old daughter. He resigned from his central government job and I from the school in Lucknow. We were 'jobless' and with a little baby to take care of. I worried whether we had taken the right decision.

There was a vacant plot of land adjacent to our house which my husband decided would be appropriate for the school. The capital investment was huge—building, furniture, stationery, advertisement and maintenance. The family was apprehensive. My parents were unhappy that my husband had resigned a permanent government job and was thinking of starting his own practice in the High Court. No one in his family was an advocate and to build a practice would need time, patience and money.

**A**fter many 'round-table' conferences my husband decided to go ahead with the construction of the school. After getting three rooms ready, he told me that he would not, in any way, look after or manage the school. It was up to me to manage it as I pleased. He wanted to be free to practice law in the High Court—a profession that had fascinated him from childhood.

'Little Scholars' opened on 15 July 1993. Every morning I would get up at 6 am, get ready, leave my baby with mother and be in the office at 8 am sharp. No one came. Days passed and just when I thought my three month old would be the only one studying in Little Scholars, four children joined in the last week of July. Three more soon followed and I engaged a staff member—not really to 'teach' the children but for company.

Limited funds, limited children, a small baby and a husband who had started off 'on his own'. There were problems. I wanted to teach the way I did during my practical classes in college. I was impatient and wanted

instant success. I complained. I cried. I wanted to close down the school. There was no way I could teach seven children with no toys, no puzzles, no celebration of festivals. All that I had been taught in my college days, during my masters course, appeared a waste. I confided to my husband, but from his expressions I couldn't make out whether he agreed with me or not.

**E**arly one morning, he told me to plant a seed in the school garden. The very next day he asked me to check the colour of the flowers. God, I thought, this is the ultimate. He has gone mad. 'How do you expect to get flowers in a single day?' I asked. 'The same way you want to be successful in school in three months. When you plant a seed, you have to nurture it, water it, love it and care for it. Only then does it grow and blossom into a flower.'

I came back to my room and looked at my daughter. She had grown taller. I hadn't really 'seen' her the past a few months. I realised I had stopped enjoying the present—all the time thinking about the future and its problems. I couldn't tell when Srishti had given her first 'social smile'. I decided not to lose hope. I hugged my daughter. I cried. The next day, looking at those seven children in school, I was filled with enthusiasm. I decided to 'adapt' my school to Allahabad. After all, this is what I was taught. Teaching was not limited to sophisticated toys, ready-made puzzles, computers, or cassette players. I recalled my classes at the Mobile Creche and the 'slum'.

First I decided to give Suneeta, my colleague, an orientation course. I told her that it did not matter if the children coloured their elephants green or red, how hundreds of things could be made from paper. Instead of the usual nursery rhymes, I taught her rhymes related to children's everyday

activities which they could enjoy. I introduced a uniform for Little Scholars. All children cannot afford to wear new, colourful dresses to school everyday. There had to be a uniformity in dress so that the children coming from the lower income group did not feel deprived.

I introduced simple books and notebooks, bags, tiffin and water bottle as part of the school kit. I was aware that parents want to 'see' what their child has been taught in school. I had to give them what they expected in order to retain the children. Only then could I introduce children to activities other than writing skills. However, I was clear about not forcing a child to do what he could not. I started them off with plenty of pre-writing skills—circles, strokes, semi-circles, patterns and scribbling.

**I** introduced a sand pit in the school. It was lovely to see children engrossed in creating different things out of sand. It was as if they were in a dream world—making mountains, wells, temples, the moon, sun and stars. One day a parent asked me if there was any 'construction' going on in the school campus as he had found 'tonnes of sand' in his son's shoes. I burst out laughing. He was annoyed and wanted me to stop this 'dirty' game of the sand pit. I smiled but said it was not possible for me to deprive children of their dream world. He withdrew his child. The next four months, however, saw seven more admissions and our session of '92-93 ended with 13 children.

The next year began on a brighter note. I engaged another staff member, one maid and a *dai* to assist the little ones in their toilet and to keep a 'watch' over children when they were engaged in outdoor play. Another problem arose. A child's grandmother demanded that our maid not touch her child's bag, tiffin-box or water bottle.

as she was of a lower caste. I was shocked. So many years since Independence and we still practised untouchability and casteism. As I refused to terminate my dai's services, one more parent withdrew her child. It was depressing; how could I work in such circumstances?

**H**ere I was trying my utmost to give parents, guardians and their children my best. But instead of encouragement I was receiving sneers and criticism. This time it was Suneeta, my colleague and friend, who told me that we should continue to do what we thought right. I welcomed the advice of a person who had lived in the city all her life and probably knew the people's pulse.

Together, we decided to give our children the best possible time they could have in the four hours they were with us. We made puppets and put up puppet shows, organised fancy dress competitions, celebrated flag hoisting on Republic Day and played Holi. Soon another session came to an end.

The third academic year saw Little Scholars with three teachers. By this time I knew better what parents wanted from the school. I tried to organise a 'creativity workshop' for parents. They were asked to make different things from plasticine and *aata*. We welcomed their suggestions and criticism in order to make our school better. Saturday was planned as an 'activity day' with children engaged in gardening, salad eating, *rakhi* making, mask making and so on. We started to celebrate all festivals, and for the first time organised an annual day with children dancing and acting in small groups. All children were given an opportunity to be on the stage so that they could overcome 'stranger anxiety' and develop confidence. Gradually a separate room was constructed for use as a play house where

each child could do whatever he/she wanted for half an hour, be it painting, scribbling, puzzle making—in a group or all alone.

One day a couple came to me with their son who was hyperactive and a slow learner. I found that the boy suffered from various behavioural problems. He did not listen to his parents, was not toilet trained and would roll on the ground on the least pretext. I decided to admit him to Little Scholars. He had attended a special school, but 'mainstreaming' was what was called for. We were patient but firm and he gradually improved. Besides the school curriculum, we introduced him to different foods. He soon started eating things other than glucose biscuits.

**T**he parents were very co-operative and eager to help in the activities planned for their child. Today he can read, write and has passed the IInd standard exam. He enjoys being with other children. Besides, we now have another 'special child'. She was afflicted by meningitis at the age of two and had difficulty in reading, writing, walking and running due to paralysis of her left hand and leg. Together, we are attempting to help make her self-dependent.

Setting up a school and running it requires time and patience. Looking back, I often wonder how all this became possible. My dream has come true. My college, my teachers... the experiences have been manifold. They cannot all be put on paper. My husband, my parents, above all my mother-in-law encouraged me and stood by me in those initial years of struggle. Today Little Scholars has a reputation in the city as a school which teaches children to be creative, caring, happy and good human beings. I hope to continue to work for children. The only reward that I wish for is their happy and contented smiles.

# Reaching out to children

SONYA ACHARYA

THE first day in school is an emotional experience for a teacher. The older children have moved on to another class, yet relationships forged during the past year leave something of a vacuum which both teachers and children have to cope with. There is a new class full of fresh faces looking up expectantly at their new teacher in an unfamiliar classroom. Many are happy and carefree, their exuberance already brimming over. Others are shy, but one can tell that a little coaxing will draw them out of their shell. So many

expressions and emotions appear on these little faces. A closer look at some of them reveals deeply-etched feelings of insecurity, reticence, apprehension, even fear. One wants to reach out to these children, hoping to give them the best a teacher can offer.

The first task is to remove the fear of school, which to many a child is a nightmare, and make it an enjoyable place to be in. A bit of extra attention or a word of encouragement makes a huge difference in restoring confidence and self-esteem by giving

children the recognition and the approval they so desperately need. Assigning small responsibilities, like carrying books to another class or taking a note to the office, are prized tasks for little children which they view with great pride. By sometimes delegating these tasks to the less confident or the low-achieving child and by bestowing praise afterwards, their level of self-worth can be greatly enhanced.

**B**oth as teachers and parents, we often tend to forget that the child before us is just a child. From an early age tremendous pressures and high expectations are brought to bear upon the child both at home and at school, and the great emotional distress manifests itself in many ways. Some withdraw completely, others become socially aggressive, while many children are simply unable to cope with school work.

In my view, more than ever before, achieving high grades is not the be all and the end all of schooling. It is far more important to view the child holistically—looking at his emotional development, building his self-esteem and sensitizing him to his environment, his community and to his responsibilities. It is imperative to increase the child's awareness of events happening around him and sharpen his urge to learn. We have to constantly remind ourselves that a happy child is the better developed child, one who would be more equipped to cope with adulthood, be socially sensitive and form long-lasting relationships and acquire confidence to find happiness and contentment later in life.

Children though often emotionally transparent may carry hidden signs which can tell you about their inner tensions and anxieties. The emotional disturbance within is reflected in myriad ways. It may lead to frustra-

tion, fears and impulsive behaviour and render the child ineffectual in school. Much of this baggage comes from the home and may have roots in unfulfilled parental expectations or in troubled relationships among the parents. The birth of a sibling, or even the admission of a brother or sister to the same school, can sometimes trigger off behavioural changes.

Manmohini Gujral, a senior counsellor at Don Bosco School, attributes this situation to the breakdown of the joint family and insecure home conditions and feels that regular counselling, remedial teaching and parent-teacher meetings are essential to deal with the problem. Involving children in community work and in organizing social campaigns such as environmental conservation and anti-pollution drives, helps focus their attention in a positive manner, away from their own particular predicament.

**A**ccording to Shobha Gopalakrishnan, "The family is the child's first teacher; the home, his first school. The sooner both teachers and parents recognize this, the better it would be for the growth of the child. Unless both teachers and parents work in tandem, the child cannot benefit to the fullest. Often parents choose to depend entirely on the teacher, blaming every shortcoming on the school. On the flip side, teachers too point fingers at the parents accusing them of being indifferent, indulgent and ineffective as role models and facilitators."

"It is imperative that parents and teachers work together and make school an extension of the home, a home away from home as the cliché goes. For this, a convivial atmosphere, understanding, friendship, patience and discipline all play contributory roles. Parent-teacher meetings must not be across-the-desk report card encounters but should be frequent,

friendly and a two way process. Problems should be frankly discussed so that psychological factors are tactfully dealt with. Most importantly, as both school and home contribute to the child's upbringing, paradoxes must be avoided at all cost, otherwise the child will be thoroughly confused."

Dolly Majumdar speaks of poor performance as a major problem that teachers encounter in every class. The problem can be tackled by analyzing it and by getting to know the child. What is his home environment like? Are the parents helping the child to learn and grow? Are values practised at home and those imparted at school in conflict? Who are his friends? 'As a language teacher, I am entrusted with the task of equipping a child with the skills of communication. By involving the students in group work, pair work, enactment of roles and so on, they are given the scope to express themselves. It also helps me identify children who are diffident or shy to speak out. By making them in charge of a group or giving them the role of a spokesperson for the class helps instil confidence, and a word of praise from the teacher works wonders!'

**A**rtwork, theatre workshops and children's writings reveal a lot about their innermost fears and emotions, and exercises in class give me a better understanding of my students. Sentences beginning with 'I am sad when...'; 'I feel happy when...'; 'I hate...' are surprisingly candid. Using these insights I am able to handle the child and sometimes even deal with the parents. Unhappy relationships between parents can traumatize children and these situations need to be discussed. Difficulties at home and at school ought not be brushed under the carpet and must be handled in a sensitive way. I often deal with an individual child's problems in general

terms – without of course naming the child – and during the discussion other children reveal their own problems, their fears, insecurities and rivalries. This often acts as a catharsis for the class.

**I** approach these problems as if they are normal, that they occur in some way or another in every home. The issues could range from insecurity and fear arising from parental separation to feelings of inadequacy arising from linguistic disadvantages, 'my mother cannot speak English', to material needs, 'we don't have a car'; 'We cannot afford to have birthday parties, or even attend them.' It is my aim to build confidence and pride in what they have, to instil in them the need to appreciate different values.

It takes painstaking care to gain a child's trust and this requires a great deal of patience and sensitivity to the child's needs. This is especially true of children who are aggressive and even hostile, both to the teacher and to their playmates. These are children who frequently feel unwanted at home and are accustomed to being reprimanded, yelled at, possibly even beaten and battered. The teacher needs to hold the child's hand, and when the child puts it to the test, not to let go. The child's self-image has to be constantly bolstered and supported by positive, loving inputs. Often the teacher feels that a breakthrough has been achieved, but incidents at home or at school may cause a regression.

This is of course very frustrating and demoralizing for the teacher, and dealing with the situation in a cramped classroom of 40 children and more can be extremely taxing. Parents are called in for a dialogue, but often they do not respond. Or if they do make an appearance, many become defensive and even uncooperative. Still it is impor-

tant to plug away and try as far as possible to forge a partnership where parents, children and teachers could sort out the issues. Parents have to be encouraged to review their expectations of their children, to avoid comparing them with their more successful siblings or cousins, and to be more supportive of them. Parents too need to be reassured of their children's worth and teachers must reiterate the positive aspects of the child's character and behaviour.

It is disappointing when, for whatever reason, parents are unable or unwilling to take the necessary steps to change their attitudes towards their children. It then becomes increasingly incumbent upon the teacher to take charge of the child even though the response is not encouraging. Indeed, this must be carried over to the other teachers so that the support systems for the child are continually strengthened.

**T**hankfully this isn't always the case, and increasingly parents and teachers are both coming forward in the interest of the child. Parent-teacher meetings have become a regular feature in several schools and some even engage the services of professional counsellors. Some of the more affluent schools have smaller classrooms and the higher teacher-to-child ratio facilitates the giving of quality time and attention to the students.

We teachers have our own children to deal with and form partnerships with our children and their teachers. That in itself is a learning experience which we then carry into the classroom. If both teachers and parents were to remember that the focus of attention is the child and not our own personal problems and egos, we shall all benefit from this partnership. This will better equip the child to face the ever-increasing complexities of life and living.

# Parent involvement

ANKUR MADAN

PARENTS are often perceived as partners in their children's education. The teacher-parent dyad is viewed with much speculation and constitutes an area of interest for educationists, school administrators and policy-makers, both in India and the West.

The parent is viewed as a custodian, teacher aide, or helper in delivering services to children in the classroom. And 'parent involvement in school', by definition, is a process of actualizing the potential of parents, of helping them discover their strength, potentialities and talents and of using them for the benefit of themselves and the families. (Morrison, 1978).

Early research in the UK (Wall, 1947), stressed the following benefits of parent involvement in the education of their children: (a) it helped parents take a keen interest in their children's education; (b) helped the teacher to understand the child; (c) encouraged the child in his lessons. Wall, however, concluded that despite the expression of vaguely positive attitudes, it was hardly surprising that in many schools cooperation existed only where the need for it arose on both sides.

J. Krishnamurthy gave the role of the parent, the teacher, and the children equal importance in the educational process. He argued that the

family, with its separate tendencies, often encouraged the general process of isolation, thereby becoming a deteriorating factor in society. By being absorbed in their own problems, many parents shift the responsibility for the well-being of their children to the teacher. It is therefore important that the educator focuses on the education of the parents as well.

Associations between parental involvement in school and academic performance of children have been mapped by several researchers. The Plowden Report, CACE (1967) carried interviews with 3000 parents and found a clear association between parental encouragement and children's educational performance. However, it also pointed to the difficulty in working out the direction of causality. Parental attitude to education, involving interest in school, encouragement to children, and aspirations for children's educational and occupational careers were listed as some of the factors influencing the school performance of the child.

Family processes associated with academic success were identified by Dornbusch and Wood (1989). Among them was communication style. For instance, emphasis on conformity with others was associated with lower grades and emphasis on

diversity of ideas with higher grades. Similarly, early autonomy in decision-making as against joint decision-making in adolescence was associated with delinquent behaviour. Reaction to grades, parenting styles, and educational expectations of parents were some of the other processes identified by the authors.

**A**lthough available research corroborates the finding that if parents take an active interest in their children's schooling they tend to do better, common observation also suggests that parents, teachers and the school administration view parent involvement in a varied and sometimes narrow sense.

Perceptions of parents regarding their involvement in the education of their child are contrasting and sometimes confused. All parents express the need for greater participation and interaction with teachers and the administrative staff, but confusion arises when they are asked about the precise activities they would like to be part of and participate in. Parents primarily express concern about the academic progress of their child and have innumerable questions relating to their ward's performance in class and how they could improve. Parents have been reported to ask specific questions on how they could increase IQ levels, improve concentration abilities, and whether memory capsules work.

Interestingly, even teachers show greater interest in meeting parents of children who are not doing well in class. A parent was reportedly told that there was no need for her to attend the PTA meetings as her child was doing well in school. This preoccupation with academic success on the part of both parents and teachers is understandable within the current social scenario where tolerance for mediocrity and acceptance for the average

child is low. However, this obsession sometimes goes too far and the seemingly pleasant interaction between teachers and parents can take an ugly turn. What follows is often a cheap mud-slinging match where both opponents try to outdo one another. The following is an extract of one such interaction witnessed by the author:  
Parent: Madam, I do not think my daughter deserves a B grade in this test paper. She has made only two mistakes, you cannot penalize the child in this manner.

Teacher: I am sorry Sir, but you have no business to interfere with my work. I know my job and do not think there is anything wrong with the grading system I have adopted. I have intentionally given her a low grade so that she would work harder next time.

**C**omplaining about the child's performance and behaviour in class is a common observation at PTA meetings. Teachers have been heard discussing only what the child is not good at rather than what she may also be doing well in. Poor handwriting, slow in mental maths, talks too much in class, should improve her spellings are some comments that one hears far more often than: has good thinking skills, is imaginative, or enjoys reading story books. Not only do teachers communicate such negative sentiments, they also traumatise the child by seeking explanations for their past behaviour or performance, as if to reassure themselves of the authenticity of the charges levelled.

Parents on the other hand, make matters worse by making counter complaints, either about the teachers or against their own children's behaviour at home. Sometimes they also express disbelief at the teachers' allegations as they find the charges contradictory to what they have observed at home. Such a mismatch of

beliefs and an obvious lack of communication demonstrates the need to bridge gaps and find missing links.

**T**o reaffirm the need to improve parent-teacher relationships, views expressed by parents of children attending special education programmes in regular schools may be stated. While education professionals support the research on the all important role parents can play in the education of children with special needs, the reality is different. This was discovered by the author during the course of interviews with a few parents and teachers.

A number of parents expressed their dismay over the insufficiency of information they had been furnished about the special education programme their child had attended. Some parents had never met the teachers and had a vague idea about the components and objectives of the programme. A visibly concerned parent expressed helplessness in doing anything for her disabled child's learning. She had absolutely no idea about how she could work with her at home since the school had never made any effort to educate her. This lack of communication between the school and parents, particularly in the case of children with special needs, was highlighted at every interaction.

Parents of children in another school, however, gave a far more positive indication of the interaction. Parents were not only kept well-informed but were invited to the school on a regular basis to discuss their child's academic performance and behaviour. The parent of a child from a lower socio-economic background, attending a high-paying convent school, expressed sentiments not commonly observed. According to the mother, her child's success lay in the teacher adopting an affectionate, compassion-

ate and understanding attitude, not only towards her child but also towards the parents. She now wanted to establish a relationship wherein she could express her own personal feelings and discuss her domestic problems with her child's teachers.

**A**lthough parent-teacher meetings, seminars and workshops on child development and related issues are organized by many schools from time to time, most parents show little interest in attending them. Reasons quoted for this lack of enthusiasm vary: inconvenient timings, too crowded, irrelevant issues, prefer a personalized one-to-one interaction. Parents often seek clarification or answers to specific queries dealing with day-to-day practical problems they face with their children. The kind of food to be packed in the tiffin box, the need for written notification about change in uniform schedules, bus routes – are some of the common issues raised in parent-teacher interactions.

Parents concern about their children's behaviour or issues that deal with their psychological well being are expressed on fewer occasions as compared with those concerning academic performance. More often than not, teachers are more likely to broach the subject of behaviour, either through written communication in case of instances of gross misconduct, or during regular interactions.

Concern about the behaviour of an eight year old girl was communicated by a teacher during a meeting. It was heartening to see how much time the teacher spent with the parents in figuring out the reasons for the attention-seeking deviant behaviour of the child. During the discussion it was realized that the birth of a younger sibling may have made the child feel insecure, and hence the problem. When parents and teachers get together and

view the problem at hand as a common concern, it is likely that the problem will get resolved and be in the child's interest.

While parents complain of aloofness and lack of concern on the part of teachers, teachers perceive parents as either totally unconcerned or too interfering in their work, 'amateurs encroaching on their professional territory.' A special educator in a school conveyed her incapacity in being able to explain to parents of children with learning difficulties the nature of their child's problems. She felt that parents often found it difficult to accept the problem, became defensive, and deployed their energies in blaming the school and teachers for their child's condition. This in turn led to a lack of cooperation from their end, hampering the remedial process.

**P**arental involvement then, has many flavours, some bitter and some sweet. Efforts to make parents partners in their children's education have been made by administrators at different levels and to varying degrees. The range of activities that have been experimented with include incorporating means of information transfer, individual and group meetings at home and at school, deploying parents to help with fund-raising chores or with learning tasks in and out of the classroom, and establishing sundry community education programmes. Involvement of parents in child assessment and school governance has also seen a gradual development, particularly in the West (Topping, 1986).

Organising 'parent-melas', an innovative method adopted by an education board in the country, is an effort to bridge the gap between parents and schools and to provide a forum for exchange of views and voicing of concerns. Child development experts are invited to address ques-

tions raised by teachers, school principals and, of course, parents. Slide shows and films are used to generate discussion on issues that parents and teachers experience in their day-to-day interactions with children.

**P**arental involvement in the education of young children has been recognized as playing a pivotal role by researchers, educationists and thinkers alike. Active involvement of parents leading to better academic performance by children has received unanimous research support. However, there is considerable ambiguity as regards the actual role that parents can play in the process. Parents perception of their involvement sometimes conflicts with that held by teachers. Transaction of information leads to exchange of unpleasant or sometimes contradictory views, victimizing the child in the process.

Concerns regarding academic performance override other matters, both on the part of teachers and parents. While parents complain of being isolated and denied information, teachers also express an inability to convey messages to amateur listeners. Informal, pleasant and frequent interactions using expert opinion to mediate, and the media to communicate, could perhaps make the catch-phrase 'parents as partners' realize its true meaning.

# Experiences from child art

DEVI PRASAD

CHILD art provides a window to the world of the child. My experience of watching through that window over many years revealed to me a new world, a world that is not the same as that of the adult. In fact, they are two very different worlds—one the adult's and the other the child's. Without proper knowledge and understanding, it is not easy for grown-ups to enter and understand the child's world.

Some people think that a child draws pictures the way he does because of a lack of requisite skills to see things as they are in reality. A child, they believe, cannot draw realistically because he has not yet learnt to translate the three dimensional visual reality onto a two dimensional surface, i.e. on paper or board. Visually, the three dimensional aspect, many people think, is an essential element of the art of drawing and painting.

There is yet another argument often put forward. The child has to become an adult one day. Therefore, the effort of the child to communicate his experiences in the form of pictures is only a part of the larger learning process, i.e. learning to reach adulthood. Hence, children must learn to see visual reality the same way as most adults do. In other words, to reach adulthood children can learn only by imitating adults and through their guidance. I find this argument lacks respect for childhood. It also indicates an absence of a sound educational perspective.

My observations have provided me a different perspective to child development. Experts may probably call it naive or romantic! But I am convinced that if allowed and encouraged to enjoy and live healthily in their own world, and to climb their own ladder of development at their own pace,

children will be better prepared for adulthood. As well-fulfilled individuals, they will be prepared to face life boldly and intelligently, and with fewer inhibitions.

There is also the question of the artistic status of children's work. Some well-known authorities on cognitive development and children's art expression use the same yardstick for judging child art which they use for judging the art of the adult. These scholars do, however, accept that children's work has moved many people with its artistic quality; it has allured many a connoisseur. Yet, these experts argue that we cannot evade the issue whether child art holds the same meaning for a youngster as it does for an adult. They question whether a child artist is significantly involved with the production or is wholly enveloped by the processes of creation, or whatever his attitude towards his work, if his skill utilize processes akin to those marshalled by gifted adult artists.

I do not understand this approach. True, different kinds of elements are present in the act of children painting pictures—indeed, very different from those that are involved in the work of adult artists. However, they are two different worlds. And, is it not true that to expect a child to follow adult norms and practices is to deprive him of his own world, his childhood?

My experience with children expressing themselves through art and understanding the mind of the child, has convinced me that children's art must not be seen through the eyes of adults and judged by their standards. Whatever an uninhibited child does with pencil/colours and paper or with clay comes out as something that he has absorbed from the world he sees and

'knows'. This is different from what the adult eye and mind sees and knows.

We have to keep in mind that some things the child does bear characteristics of adulthood. But that kind of work need not be, and is often not, the product of the child's own personality. Whatever the child produces from his child-nature is his and his alone; this no adult can produce. It needs to be pointed out that adults, particularly parents, often do not have a grasp of the subject of child art. They are so extravagant in their praise of whatever the child draws or makes that it does not help in channelising the growth of the child. Hence, it is essential that they try to understand the child and his basic needs.

**T**he child's logic is so different from the adult's that one often wonders which is more logical. Franz Cizek once said: 'The wonderful logic of the child is often ruined by a spoiled logic of the adult. And wrong education cripples the child spiritually. The child thinks quite simply and logically. For instance, once a girl drew a house—a rectangle and a triangle—and asked me: "Is this right?" I answered: "Of course." But the child continued: "The teacher said it is wrong if one makes it so." "Why?" I asked. "He said that the roof must always project, otherwise the rain-water will run down along the walls of the house. But suddenly the child began to laugh. I asked why she laughed. "Because it cannot rain in a picture." How logical a child is!'

Franz Cizek was the first to use the term 'child art'. He gave the child dignity and freedom to express boldly and artistically. I feel that Cizek's vision of the child's mind is that kind of truth which every parent must realize and practice.

Some 20th century artists were so moved by child art that it became

an inspiration for their own creations. This is a phenomenon similar to the modern artists learning from the drawings and paintings of the cave dwellers and tribal people. But the fact is that the artistic status of true child art is different and unique; it belongs to the world of the child and not of the adult.

I want to draw attention to the diagnostic aspect of child art, particularly where it relates to the status of the child in the family. Teachers and parents of child artists must be aware that they can learn a tremendous amount about the mind of their children through their work. It would help them become aware about the needs of children as also about the experiences children pass through.

The individual is by nature an artist, a creator. Whatever he receives is not with passivity, and in his mind it is not an accurate physical representation of the objects felt and/or seen around. In his subconscious the individual continuously adapts, transforming it into human imagery tinged with values held to be part of his sentiment and imagination.

**T**he concept of art as essential to good education has been long known to human society. On the influence of art in the early stages of growing up, Plato wrote: 'We must look for artists and craftsmen capable of perceiving the real nature of what is beautiful, and then our young men living as it were in a healthy climate will benefit, because all the works of art they see and hear influence them for good, like the breeze from some healthy country, leading them from earliest childhood into close sympathy and conformity with beauty and reason.'

'And that is ... why this stage of education is crucial. For rhythm and harmony penetrate deeply into the mind and take a most powerful hold on it, and if education is good, it brings

and imparts grace and beauty, if it is bad, the reverse. And moreover, the proper training we propose to give will make a man quick to perceive the shortcomings of works of art or nature, whose ugliness he will rightly dislike. Anything beautiful he will welcome gladly, will make it his own and so grow in true goodness of character. Anything ugly he will rightly condemn and dislike, even when he is still young and cannot understand the reason for so doing, while when reason comes he will recognize and welcome her as a familiar friend because of his upbringing.... In my view that is the purpose of this stage of education.'

**P**lato asks the question: 'And are not these things which our young men must pursue, if they are to perform their function in life properly?' He himself provides the answer: 'They must. The graphic arts are full of the same qualities and so are the related crafts, weaving and embroidery, architecture and manufacture of furniture of all kinds; and the same is true of living things, animals and plants. For, in all of these we find beauty and ugliness. And ugliness of form and bad rhythm, and disharmony are akin to poor quality expression and character, and their opposites are akin to and represent good character and discipline.'

Music is one of the most powerful of mediums creating and influencing rhythm and harmony of the soul. Hence, firm bondage, if created between them, will in turn generate grace. One who has received that kind of an education, i.e. of the inner life, will have the skill to understand the weakness of particular arts as well as of nature. With good taste he will adore truth, draw joy from it and internalize it in his personality. He

1. Plato, *The Republic*. Penguin Books, 1955, p. 163.

2. *Ibid.*, p. 162.

will dislike the bad and the evil and decry it openly, even in his youth when he may not be fully aware of the reasons behind it. In other words, according to Plato, proper art education helps the individual to develop a sense of good and evil.

Creative activities provide the discipline in which the senses intuitively seek unity, harmony, proportion and wholeness of experience. The use of mediums and tools – clay, cotton, wool, leather, wood, stone, brushes, potter's wheel, the saw – impose on this discipline by their very physical nature. Moreover, they draw the creator closer to nature, which alone is the supreme example of harmony, sympathy and union. These are the same laws on which the human community depends for its own unity and integrity.

**A**rt activities create a deep sense of freedom in the child, which leads to full fruition of all his gifts and talents, to his true and stable happiness in adult life. Art, actually, leads the child out of himself. Children engaged in spontaneous creative activities are happier than those who may do well in their academic work but do not take part in art activities. Children's spontaneous paintings are direct evidence of their psychological and physiological disposition. Child art has more clinical value than any other form of evidence. Creative activities also help develop self-confidence in the child.

Art activities can liberate individuals from their aggression and other repressed instincts accumulated during early childhood. To give a simple example: At our school in Gandhi's *ashram*, we had a boy from the Gond tribal community. The Gonds were known as a warrior community. The boy's father, a worker in the national struggle against colonial rule, had been arrested and kept in solitary confinement for several years.

One can understand the psychological state of the family, particularly of the children. This boy of ten was not only endowed with lots of energy and tribal spirit, but was also emotionally tense. He often became violent with younger children and beat them up.

I admitted him to my class and provided him the freedom to spend as much time as he liked in art and craft activities. Within a few months he was drawing pictures of historical heroes. He was also encouraged to join a group of boys and girls to chop firewood for the kitchen. Chopping wood with an axe helped him to give vent to the extra energy and violence stored within. In a year or so he was a different person, responsible and active, and also a good artist. I often wonder what would have happened had he gone to an ordinary school.

In many homes I have observed that children who are engaged in art activities are happy and more alert. They have a close relationship with their families and become a source of joy for the parents. Even at a very early stage if the child is given an opportunity to handle simple art material, he starts scribbling in order to experiment with the material. He uses it to convey the urges of his inner world to a sympathetic spectator, to the parent from whom he expects an encouraging response. It provides an opportunity for dialogue between the child and parent. Until the age of three or four the average child has not developed a spoken language to the extent of being able to communicate with someone who is prepared to listen. However, artistic activities provide to the child a language he needs to give expression to his inner self. If the child is unable to express freely, his feelings get distorted and often become destructive.

It is not sufficient for the child to be able express himself through art.

He needs an audience that will give him recognition and appreciate his work. Franz Cizek, the Viennese painter, described one of his experiences: 'After drawing and painting for an hour, I discussed with a dozen children from three to seven, their pictures. That means we discussed them together. I had finished when six year old Susan started sobbing. When I asked her why she cried, she said: "But you have not criticized my picture." Needless to say, I had done it, but I did not know that Susan was outside when I discussed and praised her picture. Susan was a shy child, but when she did not get "significance" or thought she had not, she asked for it.'

**A** child needs this kind of recognition for building a healthy self-image. The role of the family is even more important in this regard. The child needs messages from his parents which will assure him that they trust him and respect his personality. After all, the health of the family depends upon the degree of intimacy in relationships and recognition of and respect for each other's personality. A family is happy in which the children are happy and active: Can human society be considered healthy if its units – individual families – are not happy?

Creative activities, during every stage of childhood, prepare the individual to communicate freely and courageously and at the same time to become an integral part of nature and life as a whole. I will conclude with a quote from Schiller: 'One of the most important tasks of culture is to submit man to the influence of form, even in his merely physical life: to make this life aesthetic by introducing the rule of beauty wherever possible; because only from the aesthetic, and not from the physical state, can morality develop.'<sup>3</sup>

# Restoring play

SUDARSHAN KHANNA

MY interest in toys was rekindled when I was in my mid-twenties. While teaching a course at NID (National Institute of Design) on creative manipulation of materials, I looked around for examples of intelligent use of common materials. Toys, particularly those made by artisans and sold at *melas*, were an outstanding example of not only material science but product design as well. This was some 25 years ago. Since then I have discovered other interesting things about these tiny products of play.

However, in the last two decades our great heritage of toys made by children, families and artisans is on a rapid decline. Left unattended and uncared for, it will slowly die. The organized sector of the toy industry, although growing rapidly in money terms every year, is not doing a good job. There is no product development, research or concern for 'good tools of play.' On the other hand, it is a joy to see a sparkle in the eyes of children when they make and play with real toys, often without spending any money.

Let me first give you an idea of what types of toys are available, their play value and the situation today.

Self-made toys constitute an invaluable play activity yet have remained largely uncared and unnoticed. As a child I could make 10-15 types of toys but these simple ideas are not known today. After some years of informal research, I had over 150 ideas listed. Most of them did not require any special materials or tools. These toys provided more than just play and fun. The making of these toys could introduce the basics of the 3H:

learning by hands, heart, and head. No other playthings can replace these 'toys which work.' Children learn a great deal by trying out and sharing the process of making these toys.

Let me give some examples. Children roll a leaf to make a toy flute. I remember that as a child it was fun not only to roll a flute but also help a younger child to do the same. Children often notice the sound quality of their flutes, perhaps their first lesson in the science and art of music.

As kids we made our own kites because we could make four kites for the price of one. We gained not only savings in terms of money but an introduction to the finer aspects of a flying object. A neighbourhood friend, a child of 10, once brought me a toy from Kerala, a spinning fan housed in a seed. The palm leaf fan blades rotated when the spindle, housed in a rubber plant seed, was rotated. The seed was made hollow to accommodate the spindle, i.e., the pulp inside the seed was removed, but without cutting or breaking the seed. This puzzled me till I learnt that children left the seeds near an ant hill. The ants ate away the inside of the seed and the children got a clean shell necessary for making the toy. This seemingly simple, innocent act of involving the co-operation of ants had a far reaching impact. Which toy in the market today can provide such a profound experience, that too at no cost?

There are many toys virtually made of 'nothing', and yet they provide endless fun to children. A tiny paper helicopter, a cracker, a jumping frog, a paper butterfly fluttering on the same law of physics as the one which

helps lift airplanes into the air. But alas, the culture of making toys by children of their own free will is disappearing. Occasionally I come across children in slums making these toys, primarily because they cost nothing. Yet they would be of great value to any child, rich or poor.

**F**amily made toys constitute the basic things of play. Making dolls out of rags was a common activity in the family, but now one rarely comes across family made dolls. Earlier, mothers made tiny animals and birds out of *atta*, kneaded flour. While baking chappatis these toys too were baked. A large variety of toys were made in every home. All this has almost disappeared.

Dynamic folk toys are made by artisans, as full-time work or as seasonal income supplementing activity – playthings which make sound, movements, action and so on. The flute, wind wheels, acrobatic figures, rattles, moving snakes, the striking snake are some examples. These toys were earlier sold at melas and fairs.

In 1972, I remember visiting a big fair in Ahmedabad on Janmashtami day. There were several stalls displaying the figurines of Krishna and Radha. Some smaller stalls sold hand-made scrap metal toys, typical of Ahmedabad. A few women were selling rag dolls. I also found over 100 toy makers selling a variety of action toys – wind wheels, flutes, paper snakes, reed striking snakes, jiggling puppets and so on. The place looked like a big roadside toy exposition, with toy makers giving demonstrations while selling their products.

I made it a point to visit this Janmashtami fair every year for the next 20 years. Every year the number of toy makers decreased, increasingly replaced by stalls selling cheap plastic toys. Last year I could count only

seven action toy makers. The loss is not only the artisans, but of thousands of children visiting the fair.

The toy mela I described is not unique to Ahmedabad. West Bengal and Orissa are 'treasure states' for toys. I visited over 50 fairs during a one year stay in West Bengal. I recollect a simple incident. While travelling in a bus, I saw a man walking with a bundle of jiggling puppets and acrobats. I jumped off the bus. Abbas was going to a one-day mela in the city. There were over 150 action toy makers with stalls on either side of the road. There was not a single plastic toy stall. The flutes, wind wheels, acrobats, drum carts, toy violins, rattles and other play-things were being sold by artisans. It had the air of an open air museum of toys. This was in 1977. Had I not noted this down, today it would be difficult to believe that such a great children's toy fair had taken place in the recent past. Thousands of people made their living from toys.

**F**estival toys are made by crafts communities as a seasonal activity. Many potters make icons and figurines for festivals and occasions like Janamashtmi and Ganesh Chaturthi. For a project related to the proposal for setting up a national centre for toys, I travelled all over India to meet craft communities engaged in toy making. This was in the early 1980s. I met crafts communities working with papier mache, bamboo, clay, terracotta, reeds, wood and soon. There were thousands of people engaged in this area of work. This too has declined.

Craft toys are made by communities specializing in toy making. During an all India survey in the late '70s and '80s, I found a number of well established craft groups exclusively involved in toy making. For instance, there was a large community of potters in Agra making thousands of

papier mache birds. Toy making communities located in Varanasi in U.P., Udaipur in Rajasthan, Channapatna in Karnataka and Idar in Gujarat made turned-wood lacquered toys by the millions. In Amritsar I came across groups of women artisans selling 'surkanda rattles'. This child-safe sculpture-like rattle was a popular toy for children. Even today the women folk of this community supplement their family income by making and selling this outstanding toy.

**B**ut what is the situation today? I revisited Varanasi and Udaipur after a gap of 15 years. Raw material now constitutes a major problem. No one listens to the crafts people. Toy makers have switched over to other areas of work. It is the same story everywhere – the usual tale of apathy and total unconcern for the promotion of indigenous toys and toymakers.

We then have the tiny things, mass produced toys by tiny industry. We often see hawkers carrying a range of tiny mass produced toys on a bamboo structure. The tiny puzzles, plastic whistles, balloons, are some of the common cheap toys mass produced by a tiny household industry. These are usually supplied against orders from wholesale shops. A few years ago we could have got a range of toys which were hand-made. But today it is only the cheap plastic moulded ones that are visible.

Finally, there is the upcoming market-driven toy manufacturing sector. The toys bought as birthday gifts are usually from this segment of industry. There are several medium scale industries engaged in this sector. From a modest Rs 1000 million annual turnover a decade ago, this sector has grown steadily in terms of its business turnover. Jokingly, I often ask my friends to get me one mass produced modern toy which is also indig-

enously designed and developed. I have yet to receive any such sample.

I am not opposed to the mass produced, mass marketed toys. But, at present, the products are expensive, with hardly any indigenous development. The designs are mere adoptions and imitations of popular western ones. The variety currently available has a limited play value. The modern toys produced by the organized sector of industry are often viewed as 'good but costly'. Lately many researchers and educationists are bringing out the 'other side' of these 'good looking toys.'

**A** major criticism of the mass marketed mono-cultural toys is that they offer limited scope for participation. Second, the toy industry is increasingly becoming a part of the entertainment and commodity industry. This shift has been clearly noticed in the methods adopted by commercially successful toys like the 'Barbie dolls'. Researchers have voiced their concern about the 'hidden agenda' behind the mass marketed 'advertising' or 'commodity' products. Children's emotions are being increasingly exploited. These toys are often status objects of ownership rather than play. There is also concern that many of them are in fact pseudo participative and only seem to promote the ego and greed.

Where are we headed to? It is tragic that our once great, vast, decentralized culture of toy making has been vastly eroded. Even 'educated' parents don't like to buy artisan-made toys, produced in 'slums' and 'dirty' homes. Many parents seem to consider self-made products, made of common discarded materials as 'junk'. In reality most modern toys are not only expensive but can be termed as junk as far as their play value is concerned. Second, the cultural value of

mono-cultural toys is questionable. If they are the first artifacts providing a socio-cultural context to young minds, then it is fair to ask what socio-cultural context is being promoted?

**T**he reasons behind the erosion and rapid decline of the culture of indigenous toys and toy makers are not difficult to discern. They are the same, for example, that are bringing about the steady, sickening and slow death of bio-diversity, our alternative health practices. Similar factors are behind our rivers becoming *naalas*, and our cities becoming high and low-level slums.

Today, grand allopathic hospitals are projected as the answer to people's health problems and cars as solutions for mass transportation needs. Why should mass produced, mass marketed, sleek toys then not be accepted as the 'best' tools of play? The problem is that the best is often associated with the imported, latest and faddist.

Often, parents ask how they should go about choosing toys. My advice is that expensive toys need not be the best things to play with. Judge a toy for play and participation rather than as a thing to possess. Focus on safety considerations and its child-friendliness. The thrill is provided by the concept of the toy.

If the spontaneous response of children is to be taken as reliable feedback, then toys made by children would be rated far higher. In my workshops for children and adults working with children, I can list numerous examples of joy and thrill, rarely associated with most of the modern commodity toys. Child-made toys have a profound and long lasting impact. They help children in creative use of their 3H: hands, heart and head.

For the younger ones, the experience of making toys is profound. For

older children, we often use a range of simple concepts to help them innovate and design new products. The response of children and adults is often surprising. It is not that mass produced, mass marketed, mono-cultural toys have no role but that it is a limited one. What we need is the co-existence of the old and new, traditional and modern. Both the indigenous and the mono-cultural toys have their own place and can co-exist.

But our present mindset seems to go for 'this or that', to choose the 'best', which often means choosing the imported, the latest and the faddist. Is it not ironical that while today there are more 'educated' parents, more child development departments and research centers, yet the quality of play material has deteriorated?

**W**hile the factory-made toy sector can take care of itself, the sectors of child-made and artisan-made indigenous toys need institutional support and promotion. We need to bring out the significance of these resources and relate them to genuine play and education. We need to promote diversity, decentralization, and democratization of our cultural resources. It would be difficult for hard-headed adults to realize that children too need a 'home grown foundation' for their play.

All said done, there is little to be gained by blaming the national or multinational toy companies. We have ourselves ruined our priceless heritage. Be it our toys, water resources or bio-diversity, there seems a design in the madness. But whose design is this and why are we not capable of doing something about it? While saving the rivers or salvaging the natural heritage may seem a massive task, beyond our individual capacity, the same cannot be said about supporting and promoting good play resources for children.

# Hunger

VEENA DAS

IN an impressive study on the impact of hunger on practices of child rearing in a small market town in Brazil, Nancy Scheper-Hughes<sup>1</sup> states the problem of child neglect in the following terms. 'I argue,' she says, 'that high expectancy of child death is a powerful shaper of maternal thinking and practice as evidenced, in particular, in delayed attachments to infants sometimes thought of as temporary "visitors".'

Questioning the commonly held notions of a universal mother love, Scheper-Hughes gives devastating descriptions of how mothers crazed with hunger find it difficult to harness material and emotional resources to ensure the survival of their children: babies viewed by their mothers as doomed to die because of their frailty are allowed to die. Her ethnography is designed to challenge our judgement of such mothers in terms of such facile notions as 'maternal neglect'.

Scheper-Hughes' contention that we need to produce a political

economy of emotion is well taken. There is a high expectancy of death, especially of children, in the town she studied. The ability to face death with equanimity and stoicism is highly valued. As an unintended consequence of these factors, patterns of nurturing are produced that lead to a differentiation within the infants between those who are thought of as 'thrivers' and 'keepers' and those who are thought of as born 'already wanting to die'.

In the thick ethnography that she has produced we come to see the life-world of mothers who can be so crazed by hunger that they view themselves in conflict with their babies for nourishment. Similarly, frequent pregnancies, highly unstable relations of conjugal or sexual solidarity find many mothers struggling alone with the task of ensuring the survival of their children.

In this paper I want to share some of my ethnographic experiences that center around children from families with very little food security, which in turn produces parental behaviour that may be interpreted as neglect if we do not see the totality of

---

circumstances in which it is produced. The examples are taken from poor households in the districts of Bilaspur and Sarguja in Madhya Pradesh. Studies by ICMR, based upon sampling procedures which have tried to measure moderate to severe malnutrition by methods of weekly recall, suggest that the extent of malnutrition among children from tribes classified as 'primitive' range from 30% to 45%. The infant mortality rate in Madhya Pradesh is 117 per thousand and in some tribal groups it has been found to be as high as 154 per thousand.

There have been several attempts at the macro level to explain the high incidence of infant mortality in the Hindi speaking states through evoking factors like the low level of literacy in these regions. There is, however, the direct impact of appalling poverty which makes it impossible for the family to ensure the survival of their children. This is much better captured by narrating the stories of such families rather than by any statistical overviews. One such story narrated here is by no means exceptional.

**T**he month was April '97. We had visited Tutpara, an important hamlet in a village in Sarguja, where prominent persons of the village had gathered to greet me. After talking to them I suggested to the sarpanch who was a young Oraon and another older person, also an Oraon, that we walk to the hamlets of the Pahadi Korvas which were situated at different heights in the nearby hills. We climbed up to Imlipara, a tiny hamlet of 10 related households, where we were first greeted by a tall man who completely dominated the small space on which some kind of temporary shelters had been built.

It was obvious that he was in an inebriated condition. He had come from a hamlet higher up on the hills to visit his daughter who was married

into this hamlet. A number of women (5 or 6) were sitting in a row outside one of the shelters. Children had gathered around and were staring from a distance. A little further away, under a tamarind tree (from which the hamlet derives its temporary name, for it is not counted as a separate hamlet in official records), sat a young mother (the intoxicated man's daughter) with a small baby in her lap who was suckling at her breasts. A couple of other men were standing around, but most of them were out. We were soon joined by a man who appeared to be the head of this hamlet. It was to his son that the first man's daughter was married.

**O**n inquiring about their sources of livelihood, the man who was intoxicated became aggressive. He said there was very little *patta* land (i.e. land over which they had title) that anyone owned, less than one acre per family. They had a little bit of *kabza* land (occupied land)—what they grew on it was so little, it was consumed within a month. 'What did they do for the rest of the year?' 'We do what we can do,' he said. 'What *banibhuti* we get, we do to fill our stomachs and if nothing is there we just drink water' (He gestures by putting a big glass to his mouth and swallowing it rapidly). Then he pointed to the young woman suckling her baby and said, 'Look, look there—that baby is burning with fever. Yesterday I walked all the way to a nearby town to get a pill. I spent whatever money I had earned in the town the day before and trudged back late at night, but the pill has made no difference.' I touched the baby's forehead. It was burning and he was suckling at the breast desperately but the mother did not seem to have much milk.

I asked the mother if she had eaten anything. She mistook my question and thought I was asking if the

baby had eaten something. Her father turned aggressive and said, 'What should we give him to eat—such a little thing—should we give him so much rice (gestured with his hands to indicate a large quantity)—how can he eat that?' 'No, no', I said, 'has the mother had anything to eat?' Now the others joined the conversation and said that they were waiting for some of the men to return. Whatever they got, rice or *kodo* or *kudki*—they would cook it with some tamarind. I asked if they knew about ORS (*jeevanghol*). They knew nothing about it. Evidently the ANM (auxiliary nurse midwife) never came up to the hamlet. It seemed that it was only during the polio eradication programme that they were all made to go to the school in the main hamlet with the babies who were given the drops.

**T**he sarpanch got quite defensive. He said that if these people did not come down, if they did not tell what troubled them, how could we help them? I tried to explain an alternate way of making the oral rehydration fluid. 'Were they going to make *pej*' (a thin rice gruel)? 'No, by the time the men come back there will be time only for one meal and they will make either rice or *kodo*' (a coarse cereal grown in the region with little nutritional value). I asked the sarpanch to explain to the young mother and the older woman sitting next to her how important it was for the baby to receive fluids. In his dialect, he began to explain. 'You have some salt in the house, don't you? Well take this much sugar, put it in this much water and boil it and then put a pinch of salt in it and squeeze a few drops of lemon. 'No sugar in the house?' Yes, but go down to someone—they may not give you sugar if it is for yourself, but if you say that it is needed to save the child they will give you a fistful.'

The women nodded. 'Where will you get the water from?' I asked. Now a new problem arose, for the hand pump was not working. They were all drinking water from a nearby stream. The sarpanch told the baby's grandfather that the water must be boiled and cooled. I was beginning to realise the hopelessness of the situation. No sugar, no source of clean drinking water, shortage of fuel. But the man who was inebriated again became aggressive. 'Whatever you say, we will not go to anyone's door to beg.' The women were listening more intently and I thought they intended to follow it up. 'But do not just feed it to him all at once,' I said. 'Give it in small sips.' (How shall I demonstrate that?) The woman took a leaf, folded it in the shape of a spoon and said, 'like this?' The sarpanch promised to help by getting a packet of ORS.

I then walked to a very old woman (a classificatory grandmother of the baby's father) who was sitting nearby and deseeding the tamarind fruit that she had been able to shake down from the tree with the help of a stick. 'What is your name, amma?' 'Mo nam, mon nam hai Budhbai - My name, my name is Budh Bai.' 'Who all are in the house (meaning how many members are there)?' She laughed loudly and said, 'mo aur mor gharmua.' There is exquisite irony in her usage for she had wittily substituted *gharwala*, the term for husband, one who is of the house, by *gharmua*, a mild curse meaning the death of the house, that could also express affection.

I learnt that she was too old and weak to labour. She sits under the tree gathering the tamarind fruit and then takes it down to the village and sells it at Rs 1 or 2 a kilo. Or she gets some coarse grain in exchange and that is what she has to eat. She confides that

she had not eaten anything today but had consumed some *mahuwa* liquor. 'Consider it my medicine,' she says, and laughs her head off. The official who was with me shook his head in disbelief. 'Nothing to eat,' he said, 'and still they will drink.' To me her drunken laughter had a different meaning altogether. In Nancy Scheper-Hughes' field they would have named it 'fool the hunger food.'

In this case, as in many others I encountered, no one just gives up on babies (though they often give up on old people). The macro factors in the region, however, make it difficult for families, especially for those of the Pahadi Korvas who have little land, to ensure that babies, young mothers and very old people get enough to eat. The terrain is hilly. There are no markets nearby. Work is not readily available. Since the economy is a single crop rain-fed one, demand for agricultural labour is limited. So the sight of women waiting for the men to come back with small amounts of rice or kodo-kudki is a common one.

In discussions with the local officials, such as the block development officers or project officers or medical officers, blame is often shifted to the tribal families for their poverty. The *adivasis* are like animals, an official told me, because they have no ambition to do better. Whatever *chara pani* (fodder) you put before them, they will eat and be satisfied. The *adivasis* think differently. In this case, the baby's grandfather had walked at least 20 kilometers through rough terrain to get to a 'doctor' in the nearest small town with the days wages he had just earned. The doctor took Rs 20 for what was probably an aspirin and sent him back with the *goli*. Although the district administration has an ambitious programme to make ordinary medicines available,

not only in the PHCs but in every *hat*; the poor still go to private practitioners who are little more than quacks. They end up paying large amounts relative to their incomes for useless drugs and injections. It is under such conditions that parents are often unable to save small babies and infants. The high infant mortality rate is indicative of a whole gamut of problems that families face in their struggle for survival.

The theme of *mahuwa* as medicine was to appear in many other contexts. In Batidanda, set up as a model village to demonstrate how the Pahadi Korvas had been successfully weaned away from a nomadic lifestyle to one of settled agriculture, I indeed found that the villagers of the main hamlet had successfully grown the *rabi* crop of wheat. In the houses I found that there was some stored grain, small fish, and vegetables grown in the household *badi*. Under a WHO sponsored scheme the hamlet had been provided with a bathroom for women, a public pump for water, *gobar* gas, and a few stone benches.

But just a little distance away from the 'model' hamlet was another in which lived some *adivasi* and some non-*adivasi* families, both equally poor. Since this was not part of the model hamlet, none of the benefits had reached them. The head of a Pahadi Korva family showed me several kinds of roots and leaves. The roots had exotic names such as *tejraj* (king of the luminous ones), *bhojraj* (one with a royal taste) and the leaves had a sour taste and could be ground into a chutney. In this hamlet the land owned by families was too small to be measured in acres - instead the measure was in terms of the number of fistfuls (*mutthis*) of seed that could be scattered on the land. In this slack season there was no stored grain in the

house. It was a question of managing some bit of rice or kodo-kudki every day. There was a jackfruit tree in the compound owned by one of the families, but basically the households foraged for work or went surreptitiously to the forest to steal wood which could be sold.

Before they came down from the hills to settle in this village, did they have enough to eat in the forest, I asked. They had practiced shifting cultivation in the forest up in the hills, they said, but there were many months of hunger. Our ancestors had planted these roots which have great power, the head of the Pahadi Korva household told me. What can we do? They do not fill the stomachs of our children, but when they become weak we feed them bits of roots so that the power of the ancestors can get into them. We also feed them mahuwa, very small amounts, because it acts as a medicine against hunger.

In the district where I travelled for a month, from village to village, and held many discussions with the children (and with adults) on food and hunger, one fact stood out. Whenever I asked the children what their favourite food was, I received the response – *khana* (food). Initially I would smile, thinking I had been unable to communicate my question. As my data on food practices accumulated, I found that out of 93 families I had interviewed in detail on food practices, only five reported that they could have three meals a day. No one had time to cook in the morning, so food consisted of *basi* (left-overs of the previous night's meal). Even this was not something all families could afford. 20 families out of 93 reported that they had *chaha*, tea without milk or sugar. In the afternoon they cooked *pej*, a thin rice gruel often eaten with leaves ground into a paste. Only at

night was a cooked meal of rice and some vegetable possible. It was rare not to be hungry. In this context, the favourite food of children simply referred to a cooked meal – *khana*. Hence the high point of school was *madhyannha*, the mid-day meal. The two to four year olds when asked what they did in the *anganwadi*, had a one word response – *daliya*.

Let me narrate one last example. Looking through the records of a PHC, I found that against the column on newborns, the ANM was required to fill in a column that asked her to put a tick mark against the choice – was the baby normal or weak (*kamzor*)? In the records, not a single baby was reported as having been born weak. I asked the female supervisor if there were any weak babies she had seen. She assured me that all births had been normal. Were the babies weighed on birth, I asked. No, she said, till recently they had not been issued weighing kits. So they filled that column on the basis of their experience. Just at that time a mother brought a three month old baby for treatment of a skin disorder. The baby was clearly underweight and listless. I asked the supervisor if that baby appeared normal to her. 'Now that you ask,' she said, 'the baby is perhaps weak, but then all babies are born weak here. Where is the food for the mothers to eat?'

And finally a comment by an eight year old on being asked: 'What have you eaten this morning, roti, chaha, basi?' 'Roti? – I have not even seen the visage of a roti – *roti ki to shakal bhi nahin dekhi*.'

In describing the illnesses of children, no mother referred to a child who was no more as one who had died. Instead, they would say '*vo to kharab ho gaya* – the child is spoilt,' much as one would talk of a flower or a fruit that had dried up.

# Listening to children

PRITI JOSHI

I WAS interested in documenting experiences of young children in school in the context of how they view themselves and others. I wanted to hear what they said about themselves and other children and get an opportunity to discover the meaning of identity and relationships from the children's perspective. In this process, children could be represented as individuals with unique identities rather than as a group which is assumed to be largely homogeneous. When we think of children as a group, it becomes impossible to understand individuals and the dynamics of their relationships. Focusing on heterogeneity also broadens our understanding of children who have been categorized as disabled and we can begin to see beyond their labels.

My work has been influenced by the theoretical frameworks of phenomenology (Husserl, 1962), symbolic interactionism (Mead, 1934; Goffman, 1959) and ethnomethodology (Garfinkel, 1967). In the context of children a phenomenological approach involves rejecting the preconceptions about children and their lives held by adults. Symbolic interactionism directs attention to the meaning of interaction to the participants themselves. This meaning may be different for children as well as

adults who are part of an interaction. Ethnomethodology focuses on practices of its members, with details of children's routines and practices in their everyday life. My emphasis was on listening to voices of children without urging them to speak, or asking adults what children mean, or suggesting answers when they were silent.

I spent time with children when they were in the classroom, at play or participating in activities like dancing, singing, clay modelling or reading in the library. During this period I learnt the importance of getting involved in children's practices and to wait, watch and listen without interrupting the flow of their activities. At times I chose themes which recurred in their conversations in an effort to discern how children gave meaning to them.

On my first day at school, I was introduced to 54 children who were addressed by a teacher as Class IV! This group identity was dominant in this setting. When encountering individual children outside the class, in corridors or play-ground, all adults wanted to know was their class and the name of the class teacher.

The interest shown in a child as distinct from the group related primarily to the child's academic performance. By this criteria only those

children who either performed very well or very poorly in their studies were recognized and identified. The rest were lost in the group. The only other children that the school system recognized were the 'troublemakers'.

**N**amita was a much talked about child of Class IV, a silent 'troublemaker' – a child who did not work or interact with others. In fact, no one had really heard her voice.

Smriti, Rhea, Meetu, Abha and Varsha were her classmates who sat near her. This is what they had to say: Smriti: Namita! Say 'Good morning' to Priti Ma'am.

Varsha: Not Ma'am, 'Didi'. She is not our teacher.

Smriti: Say, 'Good Morning' (Namita now smiles and looks at me guardedly).

Abha: Didi, she does not talk to everyone.

Rhea: She talks. I have heard her speak. In Hindi class when I asked her to read, she said, 'I don't know' (Namita poked a finger in her stomach and nodded and smiled as if agreeing with her).

Meetu: When she comes with a Didi in the morning she talks to her.

Rhea: And on the next day she came from behind and put her hand on my shoulder and said, 'Rhea!'

Meetu: Her voice is very husky. (She imitates Namita and the others laugh. So does Namita and hides her face.)

As I was drawn more closely into their social lives, children began to emphasize aspects of Namita's relationship with me.

Varsha: Didi, Namita was angry with you yesterday. Why didn't you come?

Abha: Now you stay with her here, in the class. We are going out to play.

Yesterday she sat alone when you didn't come.

Varsha: You give her paper to draw. Have you got colours today?

Abha: Ma'am saw her drawing yesterday. She said 'good!' Namita was very happy!

Namita's relationship with other children is illustrated by the following conversation. It highlights the control that she exercised over other children as also her ability to negotiate an advantageous position for herself.

Namita flashes a fist-sized deer which is actually an eraser and smiles invitingly at Aditi.

Aditi: Show!

Namita hands it to her. Other children gather around them, each wanting to feel and use it. Namita does not let them do so till they ask her. Aditi acts as the mediator who performs the act of giving and taking back of the object.

Then Namita takes out another object – a large, brightly coloured pencil sharpener. Children examine it and Namita allows one girl to take it home. Other children want this privilege too. Aditi opens a notebook and prepares a schedule listing out each child's turn, day-wise.

Aditi: Shall I give it to him Namita?

Namita gives her approval for all the children but she decides the day on which each child can take the sharpener home by indicating on paper the order in which Aditi has been listing out names of children.

**A**ccording to one teacher, children in Namita's class were given duties to look after her, like helping her to the toilet or taking out things from her bag. This had become quite a task for the girls. Namita did not get up to greet teachers nor did she obey simple instructions about class work, added another.

However, while paying close attention to Namita's interpersonal relations with the girls in her class, their talk about her and with her, it became clear that she was a different

person in their context. The teachers' perception about her did not ring true in this setting. The children were aware of how Namita appeared to others and this issue figured in their conversation and was questioned by them. Smriti says to Abha:

Smriti: She definitely cannot learn to sing if she does not speak. Mental... so boys call her 'mental'. But she is like us. Origami... she can go for origami.

I asked: Do girls also call her 'mental'?

Smriti: Never! She doesn't speak in school. She only talks like this (imitates Namita). With her mother she talks by 'speaking'. One day Namita told her mother that she was Smriti and would stay with me (Smriti says delightedly).

**I** noticed a difference in the teachers' interaction with Namita. They focused obsessively on what she could not or does not do. With them, her interaction tended to become confrontational, particularly when they insisted that she greet them or express herself verbally. She obeyed these commands with complete silence which was 'read' as extreme stubbornness. Additionally, in her interactions with adults she was expected to show evidence of having learnt something from them. This mode of interaction was limited to one of the adult teaching the child.

In her social relations with children, it was important for them to communicate with each other. Namita did so on her own terms, as did other children. Her refusal to speak, poor academic performance and 'behaviour problems' did not feature as significant aspects of her identity in her relation with most children in the class. Instead, it was her generosity and gentleness that seemed important to the children. With them she

appeared confident as the activities and interactions proceeded in ways that built up her strengths.

Another conversation with children made me re-think the situation when with friends Namita was allowed to feel differently and how she acquired this identity. Children who were close to her spontaneously changed their ways as they were interested in her, not in her ability to accomplish a particular task which was a crucial aspect of adult-child relationship in school.

**A**s this emphasis made her appear like a troublemaker, the expectation was for her to change. With children there was no such demand. In fact, children expected others to behave differently as well so that Namita could continue to assume a positive identity without being challenged or having to constantly prove herself.

The children were drawing. Arti talks to Manu and me.

Manu: Have you drawn this? (Namita smiles agreeing with Manu.)

Arti: Yes she has, haven't you Namita! What a lovely picture. (Namita is delighted.)

I: Wasn't Ritu drawing for her?

Manu: (sounds puzzled) Ritu has drawn for her?

Arti looked at me, signals that I should keep quiet and under her breath says, Arti: Didi, don't say that please, she will cry. She can do it, it is true. Yes! Yes!

So what was the criterion on which children based their decision to exclude a child from their activities? Bani, Ritu, Manu and Ankit spoke to me about some other children in their class. In the course of this exchange they mentioned 'bad kids' several times. So I tried to explore what this term meant to them.

Bani: Veenu opened Ma'am's register and told everyone her age. And

gave Ma'am a birthday card and wrote 'Dear Ma'am.' Is Ma'am her friend? I wrote 'Respected Ma'am.' She has no respect.

Veenu: You liar!

Manu, Ankit: You wrote that!

Veenu: Shut up!

Everyone: See, how she talks.

Manu: She also says that I will break your arm and give it in your hand.

Veenu: Just shut up!

Manu: If only you learn manners you will be a good kid.

Bani: Thank god, she will be absent tomorrow.

Ankit: Only bad kids talk to her.

I: Bad kids?

Ankit: Like Arun, Meetu, Hari....

Only they sit with each other. See, if I sit with a bad child I will learn a bad thing from him and next day another child will sit with me and learn a bad thing and bad children will multiply.

Manu: Didi, listen, Arun said to Ankit that his family is mad! No manners.

Bani: Meetu has no manners. She got C grade in discipline.

Manu: You know she told Veenu that there was a worm in her noodles.

Veenu gave her lunch box to her and Meetu ate up her food.

Ritu: But Didi, Mayur in our class is really bad. He told me not to drink water from the tap because a 'mental' has water from there.

Bani: He is a bad kid, he names other children... when he dropped an ink bottle he named Rakesh. He sang a dirty song too: Leaves don't shed, winds shed them; Boys are not mad, girls madden them.

Ritu: At least he doesn't hit like others. Vikas goes around hitting everyone.

Manu: Vikas is rude. He burst paper crackers even when Ma'am requested him not to. She did not shout, just told him not to, but he still did it. Didi he is... there he is... Ma'am will tell his father, 'you take him away. I have had enough.'

Ankit: He said, 'Don't hold Geetu's hand, she is mental.' Didi, her legs shake when she tries to play, she gets nervous(?). She said to Ritu, 'I feel lonely.' She is nice. She can't run and doesn't answer questions. He is proud, he is the class monitor. I said 'Keep quiet' to some children in our class and he said you can't say that. Why can't I? I am only asking children to be quiet. He is proud. No one makes friends with him.

**O**ne aspect of my work related to the dilemma I faced because of my involvement and close interaction with children. This confusion centred around my role in their setting. I was affected by what happened to and with them and in such situations doubted myself and my actions or lack thereof. When children were harshly scolded or beaten I wondered what I should do. Or when a teacher shouted at children to scare them into silence. Was it that I had been posted there to watch and report their misdeeds? I could not clarify my role to the children. It would have meant proving their teacher wrong.

The voices of children ring in my ears and I often catch myself repeating their conversations in my head. In going over what they say I find they had two requests which I could fulfill only rarely. My conversation with Abha and Mayank points to this.

Abha: Didi, don't go now. Go in the 7th period. Sixth period is free. We will chat.

I: I have to reach college soon.

Abha: You stay for the whole day tomorrow. You can tape in the library, it will not be noisy.

I: Tomorrow I will. Can you talk in the library with me? Won't the librarian be upset.

Abha: She won't come to know.

Mayank: Promise, you will sit on this side tomorrow.

I: Promise. Tell me what happens if I sit near your seat?

Mayank: Something... something happens.

I felt disturbed to leave in this manner as only I determined when it was time for me to go. The children did not control the situation as much as I did. I tried to keep the promises I made to them. I also shared my experiences with them of the times when I was absent or recounted those events which connected the end of one visit to the beginning of another. Relating an experience that could be shared made leave-taking easier for me.

Being with children with whom I was closely involved and reflecting on the process of inquiry made me conscious of situations when adults question children to check if they know the 'right' answer which the adult already knows. Or they amuse themselves or feign interest in children only in order to appear 'interested' to their parents or other adults. This limits our comprehension about children as we fail to understand how they actually define their experiences. We rarely consider the fact that children too have experiences which we may not have had. We believe that being older we are 'more experienced' to judge the validity, meaningfulness and adequacy of children's experiences.

Can we not reconsider the frame of reference on which adult-child interactions are based? A shift can come about if we do not deny children their perspectives:

# The politics of child care

VANDANA PRASAD

HISTORICALLY, child care in all its dimensions has been considered the domain of the mother or, at best, the family. However, in the last few decades, the issue has increasingly made its presence felt as one that is fundamentally related to, and with wide implications for, society as a whole. Simultaneously, there has been a growing impatience with the fact that the state has largely failed in its responsibility towards the child.

Nobody can deny that children are important and need looking after. Why is it that the issue of child care, urgent and critical to those of us working with children, continues to be a victim of ignorance, laxity and neglect?

The reasons are manifold and complex. Children across cultures or class are the most invisible section of society. Considered voiceless, they entirely depend upon adults to present their case. Their non-participation in the 'vote bank' denies them space in the political agenda and even the well-intentioned, including their parents, do not fully understand or acknowledge their needs, rights, or even the fact that they have rights at all. What is not adequately acknowledged is that for children to avail of their right to childhood, demands informed and caring adults and, of course, resources.

The absence of a well informed, fully sensitized and effective lobby is further compounded by the fact that the problems of children are inextricably linked to the entire gamut of the

social and political ailments of the country of which they are the 'ultimate victims'. And within this stratification, the girl child forms the lowest rung.

There is little doubt that the gap between rich and poor has only increased over the years. The poor have also increased in numbers. Where 33% families existed below the poverty line in 1987-88, that number has now increased to almost 50%.<sup>1</sup> Increasing unemployment within the organized sector has led to a simultaneous increase in women (and children) joining the workforce as casual labour in fields, factories, on construction sites, as domestic workers or as home-based workers on contract. They are paid less and are easier to exploit. Many more families now solely depend for their very existence upon such women, who often travel vast distances to earn a none too certain daily wage, coming back to cook, clean and prepare for another day.

Entire families migrate in search of work and wages, losing out on traditional support systems, particularly those relating to child care. It is not difficult to imagine where the young child fits into this scenario. Crying atop a heap of rubble or left at home in the care of a slightly older child, the situation is hardly one that nurtures survival, growth or development.

The facts of a woman's life are such that she manages, at great but unacknowledged cost, to combine all this with child bearing and rearing for the large part of her life. In situations of paucity, the last to be considered are women and children, particularly the girl child. The cyclic effect of this deprivation, both real and relative, is devastating. Undernourished, sick girls

become mothers and produce low birth weight sickly babies handicapped from birth. The fact that one third of the babies born in India are underweight is a telling comment on the status of the entire female race in the country.

To look at women or children in isolation is to look at only half the picture, and to plan for one without the other, as has been the case so far, is to leave plans quite incomplete. For instance, no income generation or adult literacy scheme can be considered well-formulated without provisions for child care to allow women to participate. No scheme that intends to improve the lot of the child can afford to exclude her family, community and environment. In particular, it must target the girl child and the pregnant woman to break the vicious cycle of poverty breeding poverty.

Today, there is a growing awareness of the importance of early childhood care and development (ECCD) as a worthwhile investment, even in terms of resource management alone. What could be more logical than trying to prevent or 'manage' the problems children, 'future adults', are likely to face from the start of life itself, rather than intervening at a later stage?

That there is a need for state intervention in the eradication or even alleviation of poverty would not need discussion if political manifestos were anything to go by. Significantly, most of these, like the minimum needs programme, leave out child care facilities as a basic requirement without which many of the other 'needs' are impossible to meet, specially those of elementary and adult education. This highlights the lack of political awareness, or will, regarding the rights of children and their importance for society.

In the present scenario wherein families are unable to provide adequate child care, and children are in no position to partake of these programmes directly as individuals, a vehicle must be created to reach them. What is needed are arrangements for child care—from providing creches at work sites where a working woman can breast feed, pre-school facilities for the child of 3-6 years, to empowering the woman at home to look after a baby better through supporting her stay at home and promoting informal neighbourhood child care arrangements, including for her older children. The pre-school and day care centres, if well run, can promote good health; nutrition, growth and development for the child, prepare her for school, and prevent the child from being placed in situations of abuse. The advantages to the woman are obvious.

Unfortunately none of these arguments have resulted in effective measures to tackle what is a crisis requiring immediate and committed action. To quote a few alarming facts and figures: 15 crore women living below the poverty line constitute our female workforce. More than 90% of these women work in the unorganized sector.<sup>2</sup> 16% of the rural population earns less than Rs 3 per day, and another 18% less than Rs 5.<sup>3</sup> 60 million children under six years belong to a group whose mothers have to work for their survival. Of these only 18.5 million are covered under government schemes.

A paltry 360,000 benefit from government and statutory creche services.<sup>4</sup> A total of 14,313 creches are

2. Forum for Creche and Childcare Services (FORCES).

3. NCAER study of 33,000 rural households, 1994.

4. Department of Women and Child Development, 1994-95.

1. *The Times of India*, 4 February 1996.

being presently run by the government.<sup>5</sup> Even these tend to convert to *balwadis* as they cannot cope with babies under two years for lack of required manpower and facilities. The rest are largely taken care of by older siblings (5-14 years), often girls, who then remain out of school.

Female literacy is at a poor 38% as compared to male literacy at 66%.<sup>6</sup> India has the world's largest percentage of malnourished children at 53% of total under fives, exceeding even Sub Saharan countries at 31%.<sup>7</sup> India has the largest child workforce in the world at 45 million.<sup>8</sup> 50% of children in the age group 5-15 years do not go to school.<sup>9</sup> Childhood mortality rates as indicators of child care present a depressing picture.<sup>10</sup>

**T**he Maternal Mortality Rate indicates that 570 women out of every 100,000 die due to complications from pregnancy or childbirth as compared to 140 in Sri Lanka and 13 in industrialized nations. The prevalence of anaemia among pregnant women is 88%.<sup>11</sup>

There is no denying that the state has promised to address the problems of child care and that there are no simple solutions. However, even today, there is a tendency to hold back from specific measures that could translate concern into action. Our policies are characterized by 'vagueness' and lack of detail and treat various

manifestations of inadequate child care in a patchy manner rather than comprehensively attacking root causes.

When translated into programmes, they remain similarly vague, short-sighted, patchy, and the resource allocation is invariably insufficient to cover even the provisions made, whereas the need is for a nationwide comprehensive and integrated campaign that focuses

on prevention, uses a multi-pronged approach, with sufficient resources to allow for success.

For instance, the Directive Principles of State Policy guarantee the right to education and the protection of the child. Article 24 promises prohibition of employment of children in factories, Article 42 maternity relief, and Article 45 free and compulsory education for children below the age of 14 years. Of course, the child is privy to all the fundamental rights accorded to all citizens by the Constitution.

**A** major policy step was the National Policy For Children (1974) as an attempt to follow up on the Directive Principles and the UN Declaration of the Rights of the Child, 1959. It reaffirmed the importance of children as a 'supremely important asset' and aimed for 'equal opportunities for development to all children.' It also stated that to achieve the above aim, 'the state will provide necessary legislative and administrative support within a reasonable time,' a statement now 23 years old.

The Convention on the Rights of the Child adopted by the UN General Assembly in 1989, and to which India

acceded in 1992, expanded the concept of child care to cover the rights of the child to survival, development, protection and participation; and enjoined its signatories to bring their legislation in line with the provisions of the convention. India also signed the World Declaration for the Survival, Protection and Development of Children and the Plan of Action (September 1990).

**T**o this end, in 1992 a National Plan of Action was formulated by the Department of Women and Child Development, Ministry of HRD, in conjunction with NGOs and social activists. This set out targets, objectives and programmes for achieving these in the sectors of health, nutrition, water and sanitation, education, children in especially difficult circumstances, girl child, adolescent girls, children and the environment, women and advocacy, and people's participation.

1994 saw yet another national consultation organized jointly by the Indian Council of Child Welfare, UNICEF and the Department of Women and Child Development to determine the extent to which the rights of the child had become a real-

ity following India's ratification of the CRC. However, the final report of this consultation is not yet available.

Day care services, central to the implementation of the CRC for the young child and derived legally from Article 45 of the Constitution, did not receive a formal reference in policy till the New Education Policy of 1986. Subsequently, the Shram Shakti Report (1988) and the Ramamurthy Commission Report (1990) identified day care services as crucial to the empowerment of women and children, specifically the girl child, and spelled out strategies in this regard. These were finally incorporated in the Plan of Action of the NEP in 1992.

**A**part from problems of inadequate definition, some policies have by their rhetoric created a conceptual environment of helplessness and acceptance that has been far more inimical to real change. The above mentioned NEP is a perfect example. Its basic assumption, highly debatable in the light of widespread NGO experience since, was that income from child labour is what kept the home fires burning. This led to the reinforcement of non formal education as a major thrust area for the population that 'cannot' be enrolled into local schools. It also accepted child labour as a 'harsh reality' without confronting its root causes (poverty, adult unemployment, unavailability of relevant primary education and so on). Ten years later, the struggle against child labour continues and free and compulsory primary education for all children remains a dream.

Apart from the provisions of the directive principles and the fundamental rights as laid down in the constitution, some industrial acts (The Factories Act, The Plantations Act, The Mines Act, and The Interstate Migrant Workers Act) provide for day

care services at the workplace. However, these cover only a few sectors of organized labour. This has often led to a backlash creating discrimination against the employment of women.

The ICDS (Integrated Child Development Services Scheme) is the main state run programme for child care. Started in 1975, this scheme has remained the prime vehicle for reproductive and child development services for women in the reproductive age group and children under six. It aims at improving nutritional and health status, thereby reducing malnutrition, morbidity and mortality, laying the foundations of healthy all round development of children, and providing health and child care education to their mothers. However, there are many implementation difficulties that are intrinsic to the structure of the scheme. Day care has not even been mentioned as one of the functions of the scheme, though some *anganwadis* in a few states have started to provide day care, funded by the National Creche Fund.

**M**oreover, the entire three hour programme, including extension work in the community, hinges upon a single *anganwadi* worker who is paid an 'honorarium' of Rs 400 (recently increased to about Rs 500 after country-wide agitations for a raise). Though the scheme is meant to impact children from birth to 2+ (a period considered crucial to growth and development) through providing immunisation and nutritional support, coverage remains limited because full day care services are not provided and the working mother is never available during the centres working hours. The scheme is therefore primarily accessed by older children who can make their own way to the centre and back, younger children remaining largely untouched. Nevertheless, it

did provide a conceptual framework for integrated mother and child care services and partially fulfilled its mandate to the population reached, with maximal impact on immunisation.

**T**he ICDS reaches out to 3.7 million expectant and nursing mothers and 18.6 million children under 6 years. Of these, 10.8 million (3-6 years) participate in centre based pre school activities.<sup>12</sup> It was expanded during the eighth five year plan and now stands sanctioned in all 5320 development blocks of the country, besides 310 urban slums. However, considering that this is practically the only scheme existing for mother and child services, and soaks up the lion's share of the budget for the same (Rs 682 crore out of the total Rs 847 crore allocated to the Department of Women and Child Development, 1996-97), no attempt has been made to simultaneously resolve the problems listed above.

Creches/day care centres for children of working /ailing mothers: This scheme is being implemented through the Central Social Welfare Board, Bhartiya Adim Jati Sewak Sangh and the Indian Council for Child Welfare cumulatively running 12470 creches. The number of creches under this scheme has remained the same since 1990, catering to only about 3 million children, though the requirement is about 20 times greater. Unfortunately these creches cater largely to the 3-6 years old child, given inadequate staff, money, time and facilities.

National Creche Fund: Set up during 1993-94 largely as a response to concerted pressure by the growing child care lobby, including the 47 member organisation networks Forum for Creches and Child care Services (FORCES), this gives assistance to voluntary organisations to set up

12. Annual Report 1996-97. Department of Women and Child Development.

creches. It runs on the interest from a corpus fund of Rs 19.9 crore (though a Rs 100 crore budget is estimated to meet creche requirements for underprivileged children!) and is currently supporting 1843 creches.

**E**arly Childhood Education Scheme: Started in 1982, this scheme was designed to prepare children of the age group 3-6 years for school entry. Currently 4365 ECE centres are being run by voluntary organisations in nine educationally backward states. Financial assistance to each centre amounts to Rs 7980 per annum, which includes an honorarium for one teacher. This scheme is to be phased out with the universalisation of the ICDS.

Development of Women and Children in Rural Areas (DWCRA): This scheme, introduced in 1982 to provide focus to the already existing Integrated Rural Development Programme, aims to enhance women's earnings by encouraging selfemployment. It has now been extended to all districts. Community Based Convergent Services (CBCS) were added as a component in 1991 to provide an umbrella for all the various schemes and programmes that benefit rural women and children. Child care activities were incorporated during 1995-96 to provide day care, literacy

for women, fill in critical gaps in immunisation, nutrition and so on, to provide assistance and facilities to the physically handicapped, and immediate relief and legal assistance in cases of physical abuse of the girl child. Of all the current schemes operating for women and children this 'new'

DWCRA seems the most progressive in terms of the stated mandate of the scheme.

Urban Basic Services Programme: The urban poor account for 80 million of our population<sup>13</sup> of which 65% are women and children. This group is characterized by widespread migration to and from rural areas and is subject to the most abject living conditions. The UBSP was started during the seventh five year plan to alleviate urban poverty by a process of community participation and convergence of schemes and programmes, and identified women and children as a key target group. Though balwadis have been organized by community participation, creches are conspicuous by their absence.

**N**utrition and health programmes: The major ones are the child survival and safe motherhood programme consisting of universal immunisation, Vitamin A prophylaxis, diarrhoeal diseases control, programme for control of acute respiratory infections, and safe motherhood initiatives for the six high MMR states. Nutrition related programmes include special nutrition programme, the balwadi, midday meal, ICDS, Iodine deficiency disorders control, and prophylaxis against

13. 1991 Census.

nutritional anaemia. The National Maternity Benefit Scheme (NMBS) gives a lump sum of Rs 300 each for the first two live births of a woman over 19 years who is below the poverty line. Obviously, this scheme is short-sighted and inadequate.

**S**uccessive five year plans have reaffirmed an increasing commitment to the Indian child. The ninth five year plan acknowledges that growth during the last five years has not benefited the poor and the underprivileged. It also prioritises schemes that benefit women and children. A greater integration of DWCRA with IRDP and TRYSEM (Training of Rural Youth for Self Employment) is to be attempted to provide women's groups with greater access to financial resources and training. Apart from meeting targets for mother and child health, the plan promises to provide 'need based, client centered, demand driven high quality, integrated reproductive and child health care.' The ICDS is to be universalised, with priority to the child below two years. Mini anganwadis have been envisaged to cover remote pockets inhabited by scheduled tribes and primitive tribal groups. Supplementary feeding programmes are to be universalised with a special package for the girl child and children between 6 and 23 months.

The existing National Policy for Children is to be suitably reviewed in the context of the CRC. Child care through day care does not find a specific place in the ninth plan, either as a strategy for empowering women or as a means of implementing the focus on the child below two years. Nor does the plan suggest universalising, or even extending the limited creche component of the ICDS. In other words, though providing hope in terms of a favourable direction, it stops short of making a firm commit-

ment, as has been the precedent with other policy statements.

No policy is implementable without adequate resources and these are not likely to be allocated for activities not specifically mentioned within a programme. These dual problems have already been highlighted in the preceding sections of this article. The relative lack of resources for the ICDS, the national creche fund, the ECE programme, only serve to prove the relatively low priority set for child care, even though investing in child care offers benefits other than programme efficacy and efficiency. Unfortunately, this kind of far sightedness is rarely reflected in the country's budgets, the current one being no exception.

**T**he current budget expenditure is estimated at Rs 232,176 crore of which 2.5% (Rs 6025 crore) has been allocated to schemes for the poor i.e., an allocation of 2.5% for 40% of the population. Rs 330 crore has been set aside for slum development – not even sufficient for the development of slums in one major city!<sup>14</sup> In comparison, the defence budget is Rs 35,620 crore. Also, almost half the savings under central plan spending in the previous year have been as a result of cut-backs in crucial areas of welfare, such as the 40% (Rs 600 crore) cut-back in the budgeted expenditure on the mid-day meal scheme and the Rs 460 crore cutback in rural employment and other development schemes.<sup>15</sup>

In the period 1996-97, the total expenditure of the central government was Rs 87086.2 crore, of which education received 3.9%, health 0.9%, and family welfare 1.8% as compared to 11.7% for defense.<sup>16</sup> Development

expenditure in terms of percentage of GDP has declined from 12.5% in 1985-86 to 7.7% in 1996-97, indicating the withdrawal of the state from the sector which is at complete variance with the objectives outlined in our policy statements.<sup>17</sup>

It is estimated that the resources for closing the poverty gap and eliminating extreme poverty amount to about 4% of the national income. Therefore, it is largely a myth that government cannot afford to guarantee basic positive rights, specially adequate nutrition, primary health care and basic education for all children.<sup>18</sup> It has also been computed that as little as Rs 5 per child per day can ensure full and good quality day care. This would imply barely 1% of the GNP to cover 60 million children.

Only recently, the United Front government promised 6% of the GNP for education by 2000 AD as per the minimum needs programme. Though this is by no means sufficient for what is needed since it includes the cost of the mid-day meal programme, it would be better invested had some thought (and resource allocation) been given simultaneously to day care.

**T**hough some advance has been made in terms of policy, whatever be the lacunae in implementation, the rights approach demands that the state be legally accountable to its children. The reason why this process remains far from satisfactory despite public and vocal commitment is because the role of the state in determining the manner in which children are to be cared for raises concerns about the harassment of parents. Also there are fears regarding the ability of the state

to implement such laws.

The first argument is hardly valid given that we have legislation on all sorts of private activities – from marriage to the protection of civil rights. The second argument views the issue from the administrative side alone, not recognising the importance of legislation as a tool for social activists to act against the state (or perhaps recognising this only too well!). That is, appropriate legislation is an enabling provision whereby the state can be compelled to take action.<sup>19</sup>

**I**t is therefore, worthwhile to examine existing laws and their deficiencies. The child enjoys all the fundamental rights available to any citizen of the country. However, the difficulties in implementation, the need to translate directive principles into legislative policies, the special vulnerability of children and their distinct developmental needs – all have resulted in specific central and state legislations which focus on protection and are negative in character.

Though an analysis of all the existing laws does not lie within the purview of this article, priority areas can be demarcated. These include the reviewing of laws to enable and facilitate affirmative action by the state, the need to address existing lacunae, strengthening enforcement machinery, ensuring a uniform definition of the child as a person below the age of 18 and a comprehensive review of the Juvenile Justice Act to make it more effective and child friendly.<sup>20</sup> Comprehensive legislation under a national child care and maternity umbrella is essential to fulfil our commitment to the CRC.

19. Child Labour and Legislation for Compulsory Education, Shantha Seth. 'The Child and The Law', UNICEF, 1994.

20. Draft Report of National Consultation on Rights of the Child, 1994.

Some legal provisions such as the long overdue promise of free and compulsory education must be implemented immediately. The specific needs of the girl child need to be addressed urgently, with more stringent laws banning sex selective foeticide, enforcing minimum age of marriage and stopping dowry.<sup>21</sup> Better laws are required for preventing sale of children, child prostitution, child pornography, child sexual abuse and so on.

**W**omen must be legally empowered to breast feed exclusively for six months and to continue breast feeding into the second year. Paternity benefits should be introduced so that men too can participate in child rearing. The only law that deals directly with this issue, the Maternity Benefits Act, 1961, is a negatively worded law prohibiting dismissal or discharge during pregnancy and arduous work for 10 weeks preceding pregnancy if objected to. It also allows for up to three months of maternity leave, with an additional month of leave with pay in case of pregnancy related complications. Apart from the obvious inadequacies, it excludes from its ambit all working women in the unorganized sector.

Further, we need to sensitise our judicial institutions, law enforcing agencies and the development administration to become more child friendly and demystify the concept of the rights of the child.

Child care needs to be recognised as a profession, more so since it deals with a growing and specially vulnerable group, the well-being of which is fundamental to the health of society. Though expensive, it should be seen as a worthwhile, long run investment, specially since it facilitates returns from other investments in the developmental sector and ulti-

mately helps cut down the need for such investments through its positive cyclic effect. It must be supported through meaningful policies and effective programmes, as also by positive and enabling laws.

There is an urgent need to focus on women in the unorganized sector as they are the needy majority, the ones invariably sidelined, and are the most difficult to reach. Laws and policies for women and children should be converged for effective coordination, proper estimation of resource requirements and for identification of gaps and overlaps. Existing laws and policies for women and older children must be modified to ensure that provisions for children and child care does not suffer.

**N**eeds assessment, programme design and planning, implementation, monitoring and evaluation must be decentralised as far as possible, preferably to *panchayats*, in recognition of the fact that child care needs are intimately related to the specific situation of the child and the community she belongs to.

Raising resources for these programmes must continue to be the responsibility of the state, like with other poverty alleviation and minimum needs programmes. Since our socio-economic situation does not allow for a withdrawal by the state, a fixed minimum proportion of the national income should be kept aside for this purpose. This in no way rules out community resource mobilisation and management wherever possible.

None of this can happen without political commitment and will, which if not spontaneously forthcoming will have to be created by advocacy at all levels through a determined nationwide campaign by all those who are concerned for the child and the future of our society.

# Books

**CHILDREN, LAW AND JUSTICE: A South Asian Perspective** by Savitri Goonesekere. Sage Publications, New Delhi, 1997.

CHILDREN, Law and Justice is a very exciting book. It treats a subject of vital and growing importance and makes an impressive contribution to the study of child rights in our part of the world. Goonesekere gives plenty of information on the state of children in India, Sri Lanka, Pakistan and Bangladesh. Further, it provides a detailed analysis of child rights as given in the Convention on the Rights of the Child (CRC) as well as other instruments of international law. Finally, it examines the relationship between the child, the family and the state, a thematic that remains a proverbial chestnut to be pulled out of the fire.

The treatise examines the CRC in great detail and from every possible angle. The primary objective is to indicate the ways in which it can be used to protect the child, especially in South Asia. The three main facets to the study are permeated by this living, constant awareness of a need to make the CRC a part of our child related policies and dispute resolutions.

Many of us are ignorant about the state of affairs, legal and actual, in our neighbouring countries. Thus, this book will open unknown vistas to many readers which will help to shed ethnocentric preconceptions about our problems being unique and insoluble. We cannot look to the West to solve our problems about which they know little. Studying the experiences of those who are in a similar predicament would be more instructive for us.

Take for example the thorny question of child marriage. Pakistan, Bangladesh and India share the same Child Marriage Restraint Act, a law that punishes the parents and husband of a minor girl (if he is over 18) but leaves the marriage valid and binding. India passed the Hindu Marriage Act in 1955, which at one stroke rendered invalid all bigamous marriages. It was accepted that women married to bigamous husbands did not do so for 'love', that most of them were given away in marriage by their guardians. Yet, such mar-

riages are *void ab initio* – the women seen as only a mistress, her children as illegitimate. But in the case of child marriage no lobby is in favour of making it void ab initio. Everyone wants to know where the 'poor' girl will go – a question they never ask of the bigamously married bride, whether a major or a minor. The question of how to abolish child marriage still haunts us. We are also unwilling to make registration of marriages compulsory and a prerequisite for recognition by law. We are afraid that unsuspecting women will be ruined by dishonest husbands who may not register the religious ceremony.

Sri Lanka's experience is informative on all these points. The author discusses the salutary effect of Sri Lanka's policies, arguing that providing 'accessible facilities for registration of marriages, and free education from primary to university level (which) have contributed to female literacy and so eliminated child marriage in non-Muslim communities' (pp. 127-28). She further remarks that the incidence of child marriage among the Muslims has also gone down. The author does not use the word 'compulsory' in connection with either registration of marriage or education. It appears that both produce the desired effects once they are easily available and if education is provided at little or no cost to the parents.

The critical comparison of the CRC with the Convention for Elimination of Discrimination Against Women is revealing. The author's comment that while the concept of women in development has sometimes resulted in a linkage to child rights, 'women's organisations and groups within Asia as elsewhere, in general, tended to delink children's issues from women's issues' is apt and timely (p. 27, ch. 1). Instances of this delinking are experienced from time to time. For example during the Campaign Against the Child Labour (Regulation and Abolition) Bill in 1986, we found that women *beedi* workers and women in other trades were not in favour of banning child labour. Second, during the current debate in India on population policy, women activists have been heard to say that poor women need their children's earnings. This

delinkage has proved particularly harmful to the cause of introducing free and universal compulsory education at the primary level, as also to attempts to eradicate child labour. In both these areas we have failed to make any headway. The overall conclusion drawn by the author helps us understand the reasons for this failure.

Equally perceptive and perspicacious is the author's examination of public interest litigation or social action litigation in India. She is quick to point out 'a non adversarial procedure is therefore not a timid effort at law enforcement, but a vital and realistic process for ensuring that legal rights give relief and redress' (p. 67). This provides a healthy corrective for Indian activists who are generally too busy to see when (and that is quite often) the government fails to come up to the mark, or even ignores the courts' directives to take note when the government does act on the orders. The author's comments on the nature and limitations of judicial activism should compel them to acknowledge the basic fact that the judiciary cannot achieve everything by itself.

The personal law base makes a new law familiar, and it is therefore more easily obeyed or honoured. On the other hand, the same personal law base limits the extent of reform one can build into it because each system has its own logic and life. From what the author herself says, the notion that the child is an individual graduating from protection to participation, a notion that he is part of the patriarchal family to a recognition of his or her rights, which can even be enforced against the family and the state which is not necessarily *loco parentis*, is not built into personal laws. How she sees us getting around these serious obstacles and reconciling the contradictions inherent in personal laws is of great relevance today.

The author rightly points out that the age of consent, the minimum age for marriage and the minimum age for employment often vary within a given country, thus not coming to a definite conclusion about the upper age limit for childhood (pp. 80-84). In her opinion this lack of a definition of childhood has led to apathy in allocating resources for education and has also left the Child Marriage Restraint Act 'mere policy statements when they are undermined by other policies on education and child labour' (pp. 80-88). In my opinion this is not the full explanation of the reason for which the Child Marriage Act has remained a mere policy statement.

Marriage is governed by family or personal law. All indigenous legal systems, including Islam, recognise child marriage although Islam also gave a

girl bride the option at puberty to repudiate her marriage at the age of 18 years, if it was not consummated. As Goonesekere notes, it was British policy not to intervene in personal law. Their intervention therefore was half-hearted. Perhaps they had no choice. If all customary laws considered the marriage as binding, and for non-Muslims as irrevocable, the British probably did not know how to deal with the fate of children given in marriage. If they made it illegal, customary law would treat them as being married, but the state law would not extend to them the rights that accompany a married status. Among upper castes who disallowed divorce and remarriage to women, child brides would be particularly affected. They would forever be in limbo. Even among Muslims it would be worth investigating how many brides used the option at puberty, or were entitled to do so, and also how remarriage was viewed, especially among the upper class Muslims. The British therefore enacted a most irrational, illogical law. It made child marriage illegal yet valid – a position that would have made Blackstone, Bentham and Macaulay turn in their graves. Imagine any of them drafting a bill which declared that a particular act would be punishable as an offence against the law and yet create rights for the offenders!

When the Child Marriage Restraint Act was passed, the minimum age for marriage for girls was put at 14 years in British India. Under S.375 IPC the age of consent for sexual intercourse was 14 years, but intercourse with one's wife was not rape if she was over 13 years of age. In 1978 the minimum age for marriage for girls was raised to 18 and for boys to 21 years. Yet the age of consent for sexual intercourse remains at 16 years and intercourse with one's wife is not rape if she is over 15 years of age. The law on rape has taken social reality (the continuing practice of child marriage) into account; it has also fixed the age of consent on the basis of notions of early maturity of girls in the tropics. The Child Marriage Restraint Act pays heed to neither. Reportedly, the need for population control (as well as the need to be seen as a progressive state) led to the age of marriage being raised in 1978. However, child marriage itself remains valid and binding. To echo the author, the Indian government still lacks the political will to make it void ab initio.

As Goonesekere points out, S.125 Cr.PC (S. 88 in old Cr.PC) is in harmony with the 'feasibility' approach of UN documents on Human Rights (p. 62). But this section requires a parent to support the child only if the parent is able to, and if the child itself is cannot do so. It may be generous to interpret the latter

condition as a child not having a fixed income from properties or from other guardians. But the child himself or herself, however young, must support the parents. This may not be the law, but is the result of the laws which permit children to do paid work or allow parents to use them in place of paid labour.

There is no prohibition of child labour, at least under Indian law. It is only prohibited – apart from ports and railways where the child's entry is forbidden – in hazardous employment in certain specified occupations until the child is 14 years of age. The Act has enough loopholes for it to be ineffective. A child may legally work in a fireworks factory doing 'safe' jobs, whatever they may be. His presence alone is not enough to indict the employer. The list of occupations in which certain jobs are seen as hazardous is extremely limited. For example, domestic work and hotel work are allowed, even though the child may be working with fire, lifting heavy objects, or working long hours. All this is not because there is no synchronisation of the upper age limit of childhood but because children's wages are seen as a necessary supplement to family income, an earning to which the family has a right. It is also because the rights of parents are seen to be superior to those of the child's own right to childhood, education, development and welfare.

This argument surfaced not only during the debate on child rights, but even during the current debate on population policy and development in connection with the Cairo meeting. The traditional notion that the child is the parents' property, to do with as they like, surfaced yet again when female infanticide among certain low caste Tamilians was exposed. The mothers (and the fathers concurred) had argued that if they could give birth to a child, they also had a right to take away its life.<sup>1</sup>

The traditional attitude of the family to the child is also exemplified by the long-standing practices of female infanticide and sacrifice. Sacrifice of one's own child in fulfilment of a vow by beheading it or throwing it into the sea or at the very least abandoning it at a fair in the name of a deity was not unknown to Hindus in India, although the oldest recorded case of child sacrifice is probably from elsewhere – viz. of Abraham sacrificing his son Isaac. There is a similar story in the Puranas about the good king Sriyal and his obedient queen Changuna. A particularly evil tempered *Rishi*, with a reputation for putting a curse on anyone who displeased him, visited the royal couple uninvited and

demanding to be fed the flesh of prince Chilaya, their only son. The *Rishi* ordered the mother to kill the boy, dress the meat, cook it, and smile throughout the ritual. As good hosts, the couple rushed to do his bidding. The sage is said to have used his powers to restore the child to his parents by resurrecting him. Both tales suggest that the child was a possession of the father, to do with as he wished.

The author has devoted an entire chapter to participation rights of the child (ch. 8); the CRC refers to them because it envisages the child as a person, not as a possession of its parents or guardians. It is ironic that these perceptions have been used by some proponents of child labour to call for the right of children to work. If the child wishes to work, who are we to say nay? It indicates that no argument is without its pitfalls and requires further study.

Savitri Goonesekere has drawn pertinent conclusions about the problems created by legal pluralism in the area of family law, a legacy of British rule, and correctly remarks that post-independence governments lacked the political will to cope with this heritage and to introduce uniform laws (p. 50). This point could be taken further. I have given one example when discussing the reasons for the non-implementation of the Child Marriage Act.

The author's comments on the necessity for a uniform civil legal system code needs elaboration. Does she contemplate a code that has incorporated the best from personal, family, religious, customary and indigenous laws as seems to be implied in her remarks (pp. 19-22 *passim*) or does she contemplate one in which the inspiration is drawn from the Convention? (p. 59) The latter might make a logically crafted cohesive whole; but it could be alien to the people and more difficult to implement.

The former will be familiar, more easily obeyed, but difficult to make perfect or cohesive. There are limits to the alterations that can be introduced in a legal system, especially one that is endorsed by religion. This is what happened with the judgment in the Shah Bano<sup>2</sup> case to which Goonesekere extensively refers (pp. 55-56), where denial of maintenance to Muslim divorcees was sought to be justified in terms of the Shariat (pp. 13-14).

Before ending the review of this extremely thought provoking book, I would like to point to a few inaccuracies. The codified Hindu law confers legitimacy on any child *in utero* at any given point of time

1. *Female Infanticide* by R. Venkatachalam and Viji Srinivasan. Har-Anand Publications, Delhi, 1997.

2. Mohd. Ahmed Khan vs. Shah Bano Begum, AIR 1985 SC 945.

when the marriage was in subsistence. Thus, even if dissolution of a marriage is obtained before the child is born on the ground that the wife was, unknown to her husband, pregnant at the time of the marriage by a man other than the husband, the child is still considered a legitimate child born of that marriage and will inherit from the father though not from other relatives.

Under S.20 of the Hindu Adoption and Maintenance Act 1956, a legitimate as well as an illegitimate child is entitled to maintenance so long as the child is a minor. Under S.16 of the Hindu Marriage Act, children of a marriage that is voidable under S.12 and in which a decree of nullity has been obtained, are legitimate children of the marriage. However, in such cases the father does not obtain guardianship of the child.

There was a substantial difference between custody and guardianship in British India. This is still the position today. The latter is a superior right which subsists even when the child is in another's custody. The mother is usually given custody till the child is of a certain age. The guardianship, even then, is of the father. In divorce cases even now, custody is usually given to the mother but not guardianship. A guardian taking his child away from the custodian commits no offence, certainly not of kidnapping, which in the Indian Penal Code S. 359 is defined as an offence against guardianship. A mother's signature is frequently not acceptable, not being that of the guardian.

But these are minor points which do not take away from the work in any significant way. It treats a subject of vital and growing importance and makes an impressive contribution to the study of child rights in our part of the world. The Convention on the Rights of the Child is yet to permeate thinking in South Asia, which makes this work all the more valuable.

This work concentrates on India and Sri Lanka. There is a limited discussion of the Pakistan and Bangladesh situation, but little on Nepal and almost nothing on Bhutan and Maldives. We need to know more about the laws for children, as well as their actual situation and problems in these countries. Nepal has offered legitimacy to children born outside wedlock. If a woman claims that a man has fathered her child, it will be acknowledged as legitimate. But if the man is married, both of them will be prosecuted for adultery. Bangladesh has reformed the Shariat law on inheritance. Under the Shariat, inheritance passes in an unbroken line from father to son. Should the middle link, i.e. the father be dead, the grandson cannot inherit from the grandfather. Legislation which would do precisely that had been enacted by Bangladesh in 1992.

The child whose father has died can now inherit from his grandfather.

The manner in which Savitri Goonesekere's information as well as arguments are presented is persuasive rather than polemical or combative. It encourages even the most dogmatic of persons taking the opposite view to listen.

This work can be read with great profit by law teachers, students of law and, of course, judges and lawyers; most certainly by our politicians and bureaucrats – should any of them be presumed to have serious reading habits. Any campaign to first create and then increase the impact of the Convention on domestic laws must include this class.

Savitri Goonesekere ably displays a wealth of knowledge to present her thinking, albeit in a dense and compact style. But the reward for getting past this hurdle will be great indeed.

**CENTURIES OF CHILDHOOD** by Philippe Aries.  
Vintage, New York, 1962.

**DIVASWAPNA** by Gijubhai Badheka. National Book Trust, Delhi, 1990 (first published in 1931).

**MISEDUCATION: Pre-schoolers at Risk** by D. Elkind. Routledge and Keagan Paul, London, 1987.

**THE MAGICAL CHILD** by Joseph Chilton Pearce.  
Bantam Books, Toronto, 1977.

THE dominant view of childhood invariably reflects the spirit of the times. The prevalent philosophy is mirrored in the manifold publications on the issue, each of which highlight the writer's standpoint. We see ourselves today as being child-centred and child-focused. But this is in actuality a fallacy. We have only to examine our educational policies and the expectations parents have of their children to realise that we are merely paying lip-service to the concept of child-centredness. Ultimately it is parental dictates that are paramount.

There are many books on the subject of childhood – some which can be read, re-read, chewed and digested, which would occupy pride of place on any bookshelf. Three of the books referred to here belong to that category; the fourth suffers somewhat in comparison.

*Centuries of Childhood* by Philippe Aries is a path-breaking effort by a social historian, an incisive, informative work that seeks to determine the place of the child in the context of social history. In the West the child has received little recognition as having needs distinct from those of the adult. The child was seen only as a 'miniature adult' who consequently could be treated as an adult with no distinct status. It was only the efforts of educationists and some social philosophers which contributed to the current understanding of the 'rights' of the child as distinct from those of the adult. Concurrently, the belief evolved that the child be treated differently, finally leading to legislative measures targeted specifically at the child.

The understanding of the child's nature altered depending on the philosophy, ranging from a tabula rasa to the noble savage, from the mechanical mirror to the organic lamp. Today we see the child as an active participant involved in the shaping of his life. This is a 20th century perspective. Earlier eras preferred to have the child as someone to be seen not heard; someone passive on whom adult dictates would be inscribed; someone who had no independent entity or voice of his own.

Aries's book, published in 1962, is an erudite expression of historical perspectives of childhood in the western context. It is perhaps ironical that the much-lauded child-centredness is of fairly recent origin in the West, dating back to only about a century. In contrast, the Orient has always been more receptive to the needs of the child, as is demonstrated through its folklore, songs and epic tales. *Centuries of Childhood* is essential reading for anyone interested in the understanding of the evolution of the concept of childhood which is so central to understanding the child.

Recently I read a parable on education. The title of the book intrigued me. *Divaswapna* by Gijubhai Badheka. The title itself means a day-dream, wishful thinking that could not come to fruition. I was moved and read it from cover to cover in a single sitting. Though written in 1931, the book retains a freshness that makes reading it a pleasure.

It is an allegorical tale of an idealistic teacher determined to use new systems of teaching to revitalise learning. It enumerates the strategies through which a teacher can interest and motivate the student to learn. The fictional school-teacher runs into various obstacles – the student, parents, colleagues, superiors on the Education Board – all of whom regard his unconventional approach with a scepticism bordering on disbelief. After muddling along for a while, the results

begin to show; his students become desirous to learn, curious, questioning, and develop a zest for life and learning that sets them apart from other children in the school.

The book presents an idealistic vision of a classroom where the teacher serves as a facilitator, steering children in the direction of knowledge; where everyday life situations are used to teach physics, maths and grammar. Piaget would have been delighted to read the book as it provides first-hand evidence on the importance of a committed teacher who instills in his students the desire to learn by doing. It reaffirms that the teacher needs to answer questions, be motivated, have a firm set of convictions to adhere to and climb down from the ivory tower in which he is ensconced. A 'must read' for all educationists and those interested in children.

Elkind's book, *Miseducation: Pre-schoolers at Risk*, was published in 1987. It is a damning indictment of the state of pre-school education prevailing in America. It should be read along with *The Hurried Child* to give a complete picture of the hazards of not allowing children to develop at their own pace. It conjures up a nightmarish picture of a childhood divorced from the joys associated with it. It is particularly relevant for urban Indians, preoccupied as they are with accelerating learning. Elkind warns of the dangers that could arise if the expectations of parents and teachers determine education policy. His is a voice of moderation, speaking for the child.

I could conjure up clear images of an ideal pre-school – a warm, nurturing teacher, an ideal teacher-child ratio of 1:15, well-lit airy classrooms with plenty of materials which the children are encouraged to play with, an emphasis on social interaction between children rather than on formal education, and adequate outdoor space. It seems a pity that pre-schools, originally intended for gradually orienting a child to an environment other than the family, rarely serve this function any longer. They have been subverted, serving instead as training grounds for ensuring admission of children into good primary schools. Good being determined by academic achievement, rather than the holistic development of a child who is interested in learning, who feels that asking a question will not merit punishment or reprimand, who is not in danger of suffering burn-out. Elkind demonstrates a rare concern for the needs of the pre-school child to develop at her own pace.

The message communicated by Elkind is to create an ethos of genuine care for the child – cognitively, emotionally, socially and physically. This is a book.

likely to prod those involved in education into thinking. All pre-schools that have mushroomed in various parts of the country should take a page or two from the book. It is a serious, insightful book written by one who is truly committed to the child.

In a different vein is the much talked about book by a pop guru of our times, *The Magical Child* by Chilton Pearce. While the contents of the book are above suspicion, its tone is one of condescension and, worse, of flippancy. It is a book that tries to make a 'profound statement.' The abiding impression at the end of the book is one of 'so what?', accompanied by a feeling of being let-down. Though not intended as a conventional text for lay persons, it ultimately ends up being just that.

These are only a few of the books for the discerning reader on childhood, a phenomenon which has preoccupied us for the last three decades or so. In our fiftieth year of independence, we need to celebrate childhood and all it implies.

**Sujata Sriram**

**JUVENILE JUSTICE AND JUVENILE CORRECTION: *Pride and Prudence* by M.S. Sabnis.**  
Somaiya Publications, Bombay, 1996.

SOCIAL defence, penology, correction, and the juvenile justice system are the four inter-related concentric sub-disciplines of the more comprehensive, composite discipline of sociological criminology. The juvenile justice system which addresses itself primarily to the juvenile offender, and secondarily to the neglected or socially deprived child, or the child 'at social risk', may conceptually be viewed as occupying the centre of the inner circle of correction. The social and legal processes to which the juvenile is exposed derive their validity from the principles, procedures and programmes of all the four sub-disciplines.

The juvenile justice system radials may be viewed as intersecting at various points of the circumference of the four circles (sub-disciplines). This ensures a pivotal place for juvenile justice in the social defence system, simultaneously laying varying emphasis on all its six main elements: detection, deterrence, adjudication and disposition, institutionalisation (correctional treatment), or non-institutional treatment, prevention and rehabilitation.

These concepts form the main themes of discussion in M.S. Sabnis' work. This volume attempts to describe what is and what ought to be in the field of

child welfare and juvenile justice in the country. It also provides an overview of the historical and sociological processes that account for the present state of child welfare services.

The purpose of writing the book is: (a) to bring under one canopy the different ideas and concepts which the author assimilated through his reading and discussions with teachers, scholars, practitioners and workers at various levels in child welfare, social welfare and correctional administration; (b) to stimulate the thinking of students of sociology and social administration, professional child welfare workers, probation officers and others engaged in work relating to child welfare and juvenile justice; and (c) to interest the lay reader in programmes of social development and social security which have the potential to influence the specific programmes for child welfare and child development.

This book is a collection of articles by the author published earlier in professional journals or presented at various conferences. They embrace a variety of social issues which influence the conduct, character and development of the child and the young adolescent. Among the more important social issues discussed are: juvenile deviance, juvenile welfare and juvenile justice, juvenile vagrancy and juvenile delinquency, prevention and social defence and juvenile correction and rehabilitation.

Juvenile deviance is but a small portion of the larger phenomenon of social deviance. A deviant act is almost always a socially disapproved non-conformist one or, sometimes, a legally prohibited act. Such an act is considered to lie beyond permissible observance limits, the limits set either by the culturally determined, socially approved conduct norms or by the statutorily defined, legal norms (p. 99).

Social change affects traditions, social institutions, beliefs and attitudes. Social mobility, demographic pressures, social and economic disparities, increased social tensions, clash of ideologies and problems arising out of social, industrial, scientific and technological change—all these and more have brought about a transformation of established social, economic and cultural institutions and value systems. Thus today society or, more accurately, the younger generation faces a vivid 'crisis of values' (p. 108).

If the home, family, school, peers, near relatives and neighbours could provide the wherewithal for the satisfaction of the basic needs of children and a right environment for their physical, emotional and intellectual nourishment, the possibility of their being drawn

into the vortex of deviant behaviour would be considered remote (p. 99).

To better understand the concept of delinquency, the author rightly draws a distinction between 'classification of delinquency' and 'classification of delinquents' (p. 141). He has also discussed in detail the various theories of causes of crime or delinquency and other forms of social deviance (p. 129).

The author analyses juvenile vagrancy, its causes and the preventive measures needed to curb it. He argues that a large number of pre-delinquents in a metropolis like Bombay, come from the migratory or seasonally migratory population (p. 111). Their children continuously live at a tangent and form the major juvenile vagrant population. Thus one has to think in terms of controlling in-migration at certain points, and deal with them in a planned, organised and concerted way (p. 112).

Discussing the history of child welfare legislation in India, the author says that social legislation for the protection, care, training and rehabilitation of deprived or neglected children in India has been more a matter of covert charity and concealed patronage than the outcome of a consciously conceived, co-ordinated, coherent social policy (p. 4).

The Juvenile Justice Act 1986 (JJA) is a judicious mix of old wine contained in the Children Act 1960 with some vintage wine contained in a state enactment like the Bombay Children Act, 1948. Juvenile justice does not merely consist in undoing injustice. State intervention and official action envisaged in the JJA is calculated to undo, or to mitigate the consequences of, an act of injustice done to the juvenile who is found to be living in, or exposed to, an unfavourable social environment. The central thesis is that endeavour at social development must aim at social justice, equality of opportunity, and removal of social disabilities in every form (p. 51).

The author discusses the principles of UN Standard Minimum Rules for Administration of Juvenile Justice (better known as the Beijing Rules), the provisions of JJA and their inter-relationship, the institutional and non-institutional treatment of juveniles (specially delinquent juveniles), juvenile correction and welfare ethics, and aftercare and rehabilitation of juveniles.

The book, however, does not locate the judicial decisions within the larger discourse. This is a serious omission. The book refers to juvenile institutions as juvenile correctional institutions. Though the author clarifies that the concept of correction has undergone an overall change and that juvenile correction differs

from systems of adult correction, it is advisable that in order to minimise the social stigma attached to criminal persecution we avoid the use of criminal proceeding terminologies, particularly while discussing juvenile justice.

The National Policy for Children declares that, 'The nation's children are a supremely important asset. Their nurture is our responsibility.' The book is a reminder that despite building a basic framework for the welfare of socio-economically deprived children, little has been done for them. Though often tedious and repetitive, the book underlines the importance of protecting juveniles in the political, administrative, judicial and social circles.

**Ananya Dasgupta**

**MENTAL HEALTH IN INDIAN SCHOOLS** by  
Malavika Kapur. Sage Publications, New Delhi,  
1997.

SCHOOLS play a vital role in the psycho-social development of children and adolescents. A close bond with a nurturing, sensitive teacher can go a long way in preventing mental and emotional disorders in adulthood. Unfortunately, awareness about primary prevention and mental health issues is lacking in most Indian schools.

Malavika Kapur's book, *Mental Health in Indian Schools*, documents her effort to create awareness by introducing mental health programmes within the school setting. This comprehensive work systematically outlines the design and implementation of an impressive number of projects undertaken by the author (a Professor in the Department of Clinical Psychology at NIMHANS, Bangalore) and her team over a period of 20 years. The subject material is organized in chapters entitled, Interventions in school settings, Training in counselling, Specific strategies to help children with problems, School mental health in rural areas, Evaluation of service research, Policy perspectives and child mental health in India, and Implications of the work in India for developing countries and in the global context.

The description of intervention strategies for children with specific problems at school demonstrates the possibility of manageable, cost-effective school-based programmes. The author used play therapy for children with emotional disorders, behaviour modification in a group setting for those with hyperkinetic conduct disorders, and remedial coaching for children with scho-

lastic backwardness. The simple programmes have been lucidly described and illustrated with case studies. Unfortunately, although the author reviews the potential for working with groups of adolescents in school settings, it does not seem to have been followed through.

In the chapter on school mental health in rural areas, the author and her colleagues have ventured 'where angels fear to tread' – into a village called Doddamalur, 95 km from Bangalore – where they set up a consultancy and training programme within a school. Despite initial resistance from some teachers, they managed to identify and help many children, families and the community at large. They concluded that first, work in rural settings often has to take the form of concrete services like liaising with available medical services in the catchment area and providing adequate play and study material. Second, working as a mental health consultant attached to a school can provide opportunities for community based, social action work in problem areas such as alcoholism and gambling.

The programmes included orientation courses on mental health (ch. 2) which were conducted in schools all over the country. The courses educated teachers and principals through lecture sessions, case discussions, role-plays, summarized handouts of the lectures and information about where to refer the identified cases of epilepsy, speech, language or psychiatric problems. Following the orientation courses, schools were offered teacher training in counselling. Four schools opted for training which was carried out over 12 sessions of 90 minutes each spread out over an entire academic year. The training involved reading the manual entitled, 'Process in Counselling' designed by the author and group discussions regarding case management.

A limitation of the programme was that there was no recorded input on actual counselling skills like empathy, clarification, probing and reflecting that make up most training programmes on counselling. These could have been included through role plays, as that was a method in the orientation programmes described by most teachers as useful. The interventions by teachers in the documented case-studies makes one wonder about the effectiveness of training in counselling. The interventions described show that the teachers were dedicated and caring, and often that alone can help many students. Perhaps the counsellor training increased their awareness of reasons for problem behaviour (mentioned in the evaluation) and provided a forum for them to discuss situations where they were

stuck. But did it succeed in training teachers to be counsellors?

The inclusion of additional case-vignettes and qualitative rather than quantitative data would have helped bring the subject matter to life and provide the reader with insights about the nature of the problems encountered as well as possible interventions. Working with support groups for parents who have children with specific problems or facilitating workshops for parents within the schools is another area not dealt with by the author.

Mental Health In Indian Schools generates exciting ideas about the ways in which mental health practitioners, given a lack of financial resources, can contribute in the crucial area of primary prevention through school-based programmes. The author works sensitively with school, family and community systems and with class, culture and context. Her book offers hope that we can pioneer, sustain and continuously assess mental health programmes in India.

Reenee Singh

**CLIMB EVERY MOUNTAIN: Radhika's Story**  
by Indeera Chand. HarperCollins, Delhi, 1997.

Radhika's Story is Indeera Chand's account of her daughter who is a Down's child. The term 'Mongoloid', now outdated, was once used for such people because they are characterized by slightly slanting eyes.

Chand says it was a nightmare to think that her child may not live beyond the age of twenty and may never learn to speak. That was in fact the fate of many Down's children who were regarded as "severely retarded" (and) raised in unspeakable neglect. Radhika Chand is now twenty-five years old. Over the years, her parents have struggled to understand Down's syndrome. They learnt that most Down's children range from a 'mild to moderate' range of retardation and that their potential has not yet been realized. Chand is emphatic, however, that retardation is quite different from being mentally challenged as Radhika is. She is able to learn, though in ways different to the mass of children.

The Chand's also sought better facilities for their daughter than they found in most places in India. They were fortunate to have the wherewithal to take Radhika from city to city. In Calcutta and Bombay they found gifted teachers who worked on a virtually one-to-one basis with Down's children. But the school system necessary to help them adjust to larger social groups was

missing. They then went to other countries. In Australia they found a wonderful school as well as social support which helped Radhika to become semi-independent. There they learnt the 'sober truth' that though she was intellectually subnormal, Radhika was not 'that "idiot" of her mother's nightmare.' Her immense talent as a painter was discovered and nurtured. She has held exhibitions and – very reluctantly – sold her paintings. Currently, she has a job as a teaching assistant to an art teacher in a regular school. She plays the piano and conducts herself with dignity in public. In the characteristic Down's way, she is warmly affectionate.

She is also yet another reminder of what was pointed out to me by my students years ago when a physically challenged girl joined their class. 'Ma'am, *she* makes it easy for us to be with her. We were all so embarrassed to even look at her in the beginning.' We 'normal' people do put the onus of becoming acceptable on the 'not-normal'. It increases the burden on the challenged individuals and their families, but every so often the family takes up the challenge of educating us as Chand has done.

Medical knowledge about Down's syndrome may still be inadequate but parents of Down's children are truly desperate for information about what to expect by way of a daily routine, the joys and fears of parents and children, the possibility of social rejection and how to handle it, rejection from schools, where to find help for their children, how to get reliable information about their condition. Radhika's Story fills that gap.

Chand starts at the beginning with the signs of a possibly abnormal foetus during her pregnancy, and her subsequent refusal to accept that there was anything unusual about the child. After this came the fear, anger and guilt. Chand is ruthlessly honest. Surely that is what will help other parents who too may feel guilty for feeling angry that life has been unfair to them. In fact, a reviewer who also has a mentally challenged child has appreciated Chand's frankness about a mother's guilt. Chand's guilt and anger resurfaced over the years with varying emphases. But her lasting anxiety is that Radhika will never be entirely independent, and after the parents who will care for her?

Inevitably, the book is about the parents as well as the daughter. The parents had to learn how to repeat instructions to Radhika and in what order so that she would understand their importance and retain them. They rejoiced when Radhika rejoiced and learnt to be patient when she lost her temper in frustration. They

discovered that just as Radhika was being taught by them, they too were learning from Radhika, especially the joy of what would have been small achievements in 'normal' children.

Down's children have characteristic physical problems, such as feet that tend to turn inward, soft bones, bad eyesight and poor skin. In Radhika's case most of these were not too difficult to resolve. But bad teeth remained a problem. Radhika is terrified of dentists and that adds to the trauma of treatment. Then there have been Radhika's milestones, each raising new challenges, especially during adolescence. Because of her slowness in absorbing a new idea, she had to be prepared well in advance of the anticipated changes in her body, with each aspect taught to her separately and slowly. For instance, she was prepared for menstruation by her mother showing her what it is and how to use sanitary protection. Like all Down's children, Radhika's trusting openness makes her talk about everything in public. So she had to be told over and over again that menstruation is not talked about in public.

Yet, although help for the Down's child must come from within the home, institutional support is desperately needed. Chand details Radhika's routine in her Sydney school, turning it into a blueprint for possible replication here.

Radhika's Story has already been extensively reviewed. The sillier reviews have talked of Chand's 'wistfulness' and 'indirect appeal' to our better selves, and, missing the point entirely, wished that Chand had not been so 'repellingly' honest about her daughter's personal problems since the child deserves her privacy. Others have rightly seen it as a guide for concerned people. Chand is direct and unsqueamish in detailing each action and the exact words she used to teach Radhika. So her book stays well out of the range of 'wistfulness'. It is a practical, 'How to' book to help parents, teachers and all those interested in helping the relatively helpless Down's child. Chand's language is so clear and direct that even the technical details about the syndrome are easy for a lay person to follow.

Radhika's Story has already increased awareness about Down's syndrome. A principal of a junior school, for instance, told me that after reading it she felt terribly guilty for having turned away such children in the past since she had been completely ignorant about Down's syndrome.

The book must be widely read. And for it to be of real help, it must be translated as well.

**Shobhana Bhattacharji**

# Research

WITHIN home science education, the discipline of child development has acquired greater salience. Today, other than our universities, agricultural colleges (through their home science courses) and medical college (through the preventive and social medicine course) offer training in child development. The pioneering institutions, however, have been Lady Irwin College, Delhi and the home science department at the MS University, Baroda. We provide below a summary of research in the last 25 years (1972 to 1995) at the child development department of Lady Irwin College, Delhi. It attempts to focus on research concerns that help understand children in different social and cultural contexts. The research is compiled under three sub-heads (i) infant care (ii) early childhood education and (iii) disability. It is extracted from Meeting the Needs of the Child in India, Conference Report, 1-3 February 1996.

## (I) Review of Research in Infant Care

There have been several studies on infancy conducted at the department. By and large, this age group has been relatively less researched due to its lower accessibility. The studies in this area can be categorized into the following: (i) infant care practices in various ethnic groups; (ii) different aspects of infant care; (iii) evaluation of early child care practices; (iv) role of father in infant care; (v) special cases of parent-infant dyads; and (vi) infant care and stimulation.

### *Infant Care Practices in Various Ethnic Groups*

The ethnic groups studied include the Nairs of Kerala, Mizos, Nicobarees, Mitta Gond tribals of Jagdalpur, Tankul Nagas of Manipur, Punjabis, and Kashmiri Pandits. These studies have taken students to far-flung regions like Pauri Garhwal and Bhutan. Data was gathered through observations and interviews of parents and caregivers. Major areas of investigation

include pregnancy, childbirth, dietary patterns of mothers during pregnancy and lactation and practices in care. Some findings from the studies are presented below.

Pregnant mothers in all communities face several restrictions on their movement to ensure the birth of a healthy baby. For example, pregnant mothers in Aizwal were advised not to sit with their back towards the fire as heat was believed to dry up the uterus which could lead to the death of the mother. There were several practices in each community related to food intake during pregnancy and lactation. Mother's cravings for specific products were often explained as being indicative of specific features in the child. Across all communities, special foods were given to the lactating mother to help her regain strength and vitality after childbirth.

Most children in the families studied were born in hospital settings rather than the home. Traditional practices related to childbirth have varied across communities. Adult neighbours and relatives were often reported to have assisted midwives during delivery. In the Mitta Gond tribals, no male member was allowed inside the room during delivery whereas in Thimpu, Bhutan, and among Tankul Nagas of Nagaland, the husband actively assisted his wife during and after childbirth.

The mother and her infant stayed in confinement for a period varying between three and forty days in all families.

*Different Aspects of Infant Care:* In all the families and communities studied, breast-feeding of the infant was on demand. Traditionally, mothers discarded the colostrum after birth. It was found that under the doctor's advice, many mothers were now feeding this to their children. The influence of modernization was seen in the weaning foods given to the infants with the mother's displaying a clear preference for Farex and Cerelac over traditional foods until the next pregnancy or until lactation stopped.

Bathing the child was a daily ritual usually preceded by a massage. Mothers traditionally used natural oils for the massage. Some of the popular brands of baby oils were also being frequently used. Toilet training was reported to be gradual and without strict regulation. Infants invariably slept with the parents, whether on beds or on the floor. Infants were put to sleep by rocking, crooning, stroking and patting, often accompanied by traditional songs. Thus, all communities provided for infants to experience the joy of movement and songs.

All respondents reported the use of home remedies for treatment of minor illnesses in the child. Visits to the hospital were restricted to major episodes. Folk practices were more frequent in families which resided in joint households as compared to nuclear families.

*Evaluation of Early Child Care Practices:* The availability and quality of care in day-care centres was evaluated to assess alternatives available to the working mother in Delhi. This indicated that the care available was primarily custodial, with the cognitive and affective components of care being neglected. Interviews with parents revealed that the need for cognitive interaction was not perceived as an important aspect by them as well. There was a clear absence of a child-oriented approach in planning the early child care services.

*Role of the Father in Infant Care:* Physical care of the young child has seldom been the responsibility of men in traditional Indian society. However, the image of the father that emerged from these studies was one of an enthusiastic, eager and nurturant parent, who looks forward to being involved in the infant's life right from the foetal stage. The findings indicate that 'play' was an important dimension of the father's interactions. However, fathers did not participate in looking after the baby during an illness and bathing the child. In families where the mother was employed, the father was more involved in the care of the infant. It was also found that the father's participation increased with the age of the infant, particularly in case of male infants.

*Special Cases of Parent-Infant Dyads:* Parenting which is often a demanding task for most people, becomes even more so if either the parent or the infant has some special needs. Investigations of infants of visually impaired parents showed that blind parents could, in general, perform the infant care activities adequately. The absence of eye-to-eye contact did not lead to deficits in attachment and other areas of development. However, there were some areas where the interactions were affected such as monitoring the infant's behaviour, particularly mobility, expressive language of the baby, and rough and tumble play of the infant. Infants were found to be growing up to become sensitive to their parent's needs. A follow-up study showed that some of the inadequacies in parenting had been overcome partly because of the child's maturity and because of the impact of interventions carried out as a result of the earlier study.

*Infant Care and Stimulation:* A project undertaken by the department examined research reports of

infant care practices and early child care programmes. For this purpose several kinds of functionaries in health and welfare were interviewed. Their responses pointed towards a general lack of attention to the need for social, cognitive and verbal interaction with the infant.

(II) Review of Research in Early Childhood Education Research in this area has focused on the following: (i) evaluation of preschool programmes; (ii) influence of the preschool on later education; (iii) impact of the ICDS experience on academic performance; and (iv) preparation of educational aids.

*Evaluation of Preschool Programmes:* The studies in this area have used several techniques to assemble comprehensive assessments of ongoing programmes. These include check-lists, observations, interviews of teachers and parents. The institutions covered were *balwadis*, *anganwadis* and nursery schools run by individuals. The findings reveal that the physical infrastructure, facilities, equipment and material was below the minimum standards required of preschool programmes prescribed by NCERT. In case of the *balwadi* programme, financial constraints were found to be the main reason for poor quality. However, this was not found to interfere with the provision of educational services to children attending the programme. Teacher motivation was high as was the motivation of the community to send their children.

In the privately run small nursery school too, the services were much below the desirable standard. Further, these were found to be mere centres of custodial care for children where little else besides the teaching of the three R's took place. These centres seemed to provide for the parents' 'desires' rather than the children's needs.

Some of the recommendations of the studies are:

- \* Need to develop child-centred, well-defined programmes.
- \* Programmes, policies and practices should give increased attention to interpersonal relationships between parents and the school.
- \* Programmes should include periodic and ongoing evaluation.
- \* Teachers need to be sensitized towards the developmental needs of children.
- \* There should be a continuation of these aspects in the formal school system to reinforce and strengthen positive developmental gains in children.
- \* Comprehensive, explicit and realistic legislation should be evolved to regulate the standards of services.

*Influence of Preschool on Later Education:* The findings in this area indicate that multitude of factors of early education influence later education and adjustment rather than any one isolated factor like attendance of nursery school. Adjustment during the transition from preschool to formal school was an important variable investigated since it is the key determinant influencing performance at school. It was reported that in cases where children had attended mere downward extensions of grade I in preschool, they did not benefit much from the experience. Further, it was suggested that the extension of preschool education strategies into later education may also lead to boredom in the older child. Thus, developmentally appropriate classrooms are essential to sustain children's interests and facilitate learning.

Another finding was that the preschool attended was not the only factor influencing adjustment. An interaction between the home and the school was found to be essential in facilitating school adjustment. Other variables were the child's self-concept, feelings regarding school, teacher and parental expectations. Children attending good, child-centred preschools were found to do significantly better on cognitive and other tasks.

Location of the school was an important factor determining the choice of school in middle class families. There was a wide variety in the responses of the parents regarding the significance of preschool education. It could be concluded that there was actually a widespread lack of awareness in this area.

Though parents expressed concern regarding the movement of the child from the preschool to formal school, the findings did not demonstrate any such difficulty. Teachers also expressed the view that adjustment was not a problem at this level.

*Impact of ICDS Experience on Academic Performance:* Findings from studies comparing ICDS to non-ICDS children in later classes indicate that there are no significant differences in performance between the two groups. This was found to be lower than expected for both groups. This was explained by the inadequacy of the preschool component in the ICDS programme, the attitude of the teacher, who was often overworked, and poor family support for preschool education.

*Preparation of Educational Aids:* The kits developed focused on the area of language development in a sequential manner and various language skills like alphabet learning, word recognition, sentence structure, articulation and communication.

The area of early childhood education has been a priority in the research of the department. It is

important at this juncture to identify key issues in the process of early learning and consolidate findings from close observations of teaching-learning situations rather than merely rely on surveys of educational programmes now readily available from several sources.

### (III) Review of Research in Disability

The department of child development is committed to comprehensive and innovative research. There is strong orientation towards working in applied areas, childhood disability being one of the major concerns.

The child with special needs is offered as a special course at the Master's level. In addition, there are three programmes for children with special needs affiliated to the department. These include Sangam, under the Raj Kumari Amrit Kaur Centre; Anubhav, a programme of the DSA scheme of the UGC; and the Enabling Centre, funded by the Ministry of HRD. The objective of these activities is to extend expertise to the community, prepare professionals, and strengthen research in the field of childhood disability. Since 1972, 26 Masters' dissertations have researched different aspects of disability and generated extensive data. A summary of these is presented under the following areas: (i) education for children with special needs; (ii) family dynamics; (iii) psycho-social profile of children with disability; and (iv) community awareness and attitudes.

#### *Education of Children with Special Needs:*

Research in this area has focused on:

- \* Cognitive development of children with mental retardation;
- \* Development of material for teaching specific concepts;
- \* Integrated education.

These studies have been comparative and exploratory with some leading to intervention in the area of education. An outcome of the studies has been the identification of significant factors in the micro-environment of the educational setting like classrooms, instructional strategies and attitudes of others. The studies point towards the need to investigate the child as a whole rather than as someone who is simply assessed, categorized and given special treatment. It is important to view the child as valued and belonging to a supportive society by the researcher and the educationist.

*Family Dynamics:* Studies in this area have attempted to discern the impact of the disability on the family, familial attitudes towards the child, coping

mechanisms of the family and their influence on the socialization of the child. These are case studies of children and their families with the objective of understanding family dynamics. The importance of providing support to the family in the care and education of the child has been repeatedly highlighted. However, the uniqueness of each family with a disabled child and the difficulties faced by them always stands out. Somehow, the case studies have not been successful in highlighting the strengths of families which have been able to sustain themselves despite stressful situations. The area of advocacy by parents for themselves and the child is an theme that needs more attention.

*Psycho-social Profiles:* Studies have focused on the perceptions of children with disability about the self, family, community, peers, marriage and stressful situations such as hospitalization. These studies have relied on the case study method and have generated valuable data on the needs of children as expressed by them. An important emerging research issue is the need to view the disabled child as a person before studying the disabling condition. An effort needs to be made to develop a more sensitive perspective of children with special needs.

*Community Awareness and Attitudes:* Prejudices and attitudes towards children with disability have been studied using intervention techniques for reducing prejudice. The techniques for removing misconceptions about disability and the disabling condition are establishing contact with children, using role-play and discussing these issues with the community that the children are part of. How the members of the community can be involved to support the children, and how children and families can themselves seek support from others and what could be effective communication strategies remain important unanswered questions.

The researches on disability highlight the need to:

- \* View the child with special needs as first and foremost a child;
- \* Recognize the strengths of individual children and their families;
- \* Understand the importance of community support in order to facilitate optimal development of the child;
- \* Make the parents aware that they must speak for themselves and for the child and form linkages with other parents and organizations.

Further research in the area of disability must help in promoting, supporting and providing for families with children with special needs.

# Institutional support

AS parents, educators and adults we need to provide familial as well as out of family care to our children. There is an awareness of this need for varied services and opportunities for the young. Both government effort and non-governmental enterprise are attempting to create an optimal environment for the growth and development of children. Individuals and organisations have developed programmes to provide care, protection, education, recreation and remedial supportive work to our children.

Some centres are described below. This is not an exhaustive listing, only an attempt to introduce the nature of existing facilities available for children.

**National Institute for the Visually Handicapped, Dehradun.**

This institution, set up by the Ministry of Education, is the apex body for the welfare of the blind. The institute's objectives are: (i) training of personnel to work with the blind; (ii) research and development to evolve services and programmes for the blind; and (iii) information and public education through awareness about the blind.

The institute runs the following programmes: (a) a pre school for the blind; (b) a training centre for the adult blind in conventional and non conventional trades for men and women in the ages 18-40 years; (c) a crisis intervention centre to provide therapeutic assistance and adjustment training to the newly blinded; (d) workshops on aids and appliances to produce reading, computing and recreational aids at subsidised prices; (e) a central braille press; and (f) a national library for the print handicapped—a library of braille books.

**National Institute for the Mentally Handicapped (NIMH), Hyderabad.**

Set up by the Ministry of Welfare, NIMH is committed to: (i) developing models of care for the mentally handicapped; (ii) conducting research in the area of MR (mental retardation); and (iii) promoting human resource development to work with MR.

NIMH provides: (a) extension services to identify disability and involve the community to work for the MR; (b) day care centre for providing care facilities; (c) a model school for MR children; (d) guidance for parents: directional help for parents of MR children; and (e) placement cell: vocation for MR children. Further,

it provides a structured environment for research with the aim to strengthen teachers skills, enhance competence of parents, training of MR children, and training of personnel through diploma and short term courses, seminars and workshops, early intervention, and materials for MR children and social workers.

**National Institute for the Orthopaedically Handicapped (NIOH), Calcutta.**

Set up by the Ministry of Welfare, NIOH provides comprehensive rehabilitation and trains personnel for manpower development. It conducts 3 long-term courses: diploma in physiotherapy, occupational therapy and orthotics and prosthetic engineering.

Its services include *Research*: (a) designing of improved low cost aids and appliances; (b) corrective treatment methods; (c) survey of disabilities and problems of disabled persons; (d) materials for creating awareness for disability. *Standardising*: (a) distribution of aids and appliances; (b) compilation of directory of organisations working for the locomotor disabled in India. *Specialised Services for*: (a) spinal cord injuries; (b) post polio syndrome; (c) amputees; (d) cerebral palsy; (e) arthritis; (f) muscular dystrophy. *Reachout Programme*: outreach and extension services for the rural disabled through the camps. *Comprehensive Rehabilitation*: NIOH works through a team to cater to individual situations and contexts.

**Ali Yavar Jung National Institute for the Hearing Handicapped, Mumbai.**

Regional centres at Calcutta, Delhi, Hyderabad, Bhubaneswar, Ministry of Welfare. Objectives: (a) to reach out to 3.02 million hearing impaired; (b) to train 50,000 required teachers; (c) organise training through degree courses, e.g., BSc. in audiology and speech therapy and BED special education for the deaf; (d) short term training programmes to acquaint professionals with aspects of hearing impairment; (e) custom ear mould making and hearing aid repairs; (f) refresher courses for the educators of the deaf, speech and hearing experts; (g) orientation programmes for ENT specialists, GP's, social workers, regular teachers; and (h) workshops, symposia and seminars for professionals and parents. Research is major concern of the institute. Clinical, therapeutic and educational services are also provided for the hearing handicapped.

National Creche Fund (NCF), Department of Women and Child Development, GOI, Jeevan Deep Building, New Delhi 110001.

This creche fund provides assistance to voluntary organisation and state governments to run creches throughout the country. The creches are for children between birth to five years to provide: (i) day care services; (ii) supplementary nutrition; (iii) immunization; (iv) medical and health care; and (v) recreational facilities. NCF also promotes a movement to motivate individuals to donate funds for providing child care services as 8,00,000 creches are required to meet the needs of children with working mothers. A single contribution of Rs 30,000 can take care of 25 children at a creche centre.

Indian Council for Child Welfare (ICCW), Deen Dayal Upadhyaya Marg, New Delhi 110002.

ICCW was established in 1952 to work as a national voluntary organisation to strive for the optimal growth of children. The council now has 28 state branches. The aims are: (i) initiating and undertaking child welfare services in India; (ii) promoting enactment of legislation and reforms for the benefit of children; (iii) organising training schemes, orientation courses and refresher courses; (iv) organising conferences, seminars related to child welfare; and (v) cooperating and collaborating with government and other agencies to meet the needs of children.

Some of the programmes of ICCW are: (i) national awards for bravery for children; (ii) training grassroot level workers for anganwadi and creche; (iii) centres for preschool training in tribal areas; and (iv) adoption: recognised by the Supreme Court for intra-country and inter-country adoption.

Centre for Environment Education (CEE), Thatlej Tekra, Ahmedabad 380054.

CEE, set up in 1984, is supported by the Ministry of Environment and Forests, GOI, in association with the Nehru Foundation for Development. The objectives are: (a) creating an awareness among children, youth and decision-makers about the environment, conservation of nature and natural resources; and (b) enhancing knowledge about all aspects of the environment. The major thrust of CEE is: (i) environment education in schools; (ii) interpretation; (iii) training; and (iv) eco-development. CEE develops innovative programmes and educational material. These are field tested for their validity and effectiveness. The centre has regional cells in Bangalore and Guwahati.

Centre for Learning Resources (CLR), 8 Deccan College Road, Behind B.K. Apartments, Yerawada, Pune 411006.

The CLR provides a variety of services to schools and non formal educational programmes for children. Its objective is to introduce educational innovation and change at the basic classroom level. CLR provides in-service training to teachers and trainers and develops low cost, innovative instructional materials in various curricular areas, including audio-visual materials for environmental education. The organisers and staff provide both learning materials to all regions and serve as a resource for training to enrich educational procedures.

Parents Forum for Meaningful Education (PFME), A-21, Swasthya Vihar, New Delhi 110092.

PFME enables concerned parents to intervene in the area of real education for children. Children's education suffers from a deep malaise—deficient textbooks, inadequate curriculum, inefficient teaching—leading to a proliferation of expensive coaching classes and guide books. There is a lack of laboratory and library facilities and above all a decayed examination system. PFME aims to improve the education system at all levels through: (i) mobilisation of public opinion through seminars, symposia, workshops, lectures and group discussions; (ii) publication of articles, newsletters and monographs promoting a pedagogically sound basis for meaningful education; and (iii) enrolment of members to promote greater interaction between the parents, teachers and students.

Madras Dyslexia Association (MDA), 10/1, Sambasivam Street, T. Nagar, Chennai, Tamil Nadu.

This voluntary organisation helps people overcome learning disabilities such as the inability to spell, read and retain a sequential verbal thinking order. Its main objective is to reach out to parents and act as a support by bringing together people with similar constraints and limitations. MDA helps to start new centres in different cities, edits a newsletter and reaches out to the decision-makers to address the difficulties of the learning disabled. It organises the training of teachers with other leading organisations.

Samadhan, J-32, South Extension, New Delhi 110049.

Samadhan offers opportunities to maximise the potential of children with mental handicap through early intervention and helping parents bring up infants and preschool children with specially designed intensive stimulation programmes.

Services available: (i) early intervention centre; (ii) home based programme; and (iii) long distance education. Samadhan works with parent groups, advising on several aspects of how to help children with special needs through (a) a child guidance centre; (b) a special school working for mentally handicapped children; (c) paediatric departments of hospitals; (d) a parent's association; and the (e) local or regional office of the National Institute for the Mentally Handicapped.

Jan Madhyam, 148, Zamrudpur, New Delhi 110048.

Jan Madhyam reaches out to children with disability, but more specifically to children with learning disability and intellectual disabilities.

Jan Madhyam focuses on: (i) remedial work with mentally retarded children using games, songs, puppets, besides the plastic arts; (ii) vocational training and rehabilitation of children with mixed abilities to prepare children to manage basic needs like cooking, personal hygiene, first aid and crisis management, be economically productive, as also socially and emotionally integrated; (iii) training people to work with the handicapped through workshop sessions; and (iv) spreading awareness about disability.

#### Counselling and Therapy

Large families, an open neighbourhood, flexibility in child rearing within structured frames provided natural therapy necessary for interpersonal relationships. However, nuclear families, secluded urban living and rigid disciplinary codes have necessitated out of family support. Professional support is available for families, individuals and children at several places: (i) counselling services at hospitals; (ii) private counsellors and psychiatrists; and (iii) school counsellors. There are services and organisations which reach people in distress through individual or group sessions. They also run newsletters and provide services like training individuals.

In Delhi, counselling for children, families and also home training programme for children with disabilities is available at Rajkumari Amrit Kaur Child Study Centre, Lady Irwin College, National Institute for Public Cooperation and Child Development, The Spastic Society of Northern India, and Sanjeevani.

Indian Association of Preschool Education (IAPE), SNDT University, Mumbai.

A registered voluntary organisation working through state level organisations to enrich the pre-school child's environment. Its various activities are:

(i) newsletter for teachers and parents; (ii) organising conferences to familiarise teachers with innovative modes and materials in working with young children; (iii) enhancing awareness about preschool children; and (iv) organising workshops, seminars, and lecture demonstrations.

Bal Bhavan, Kotla Marg, New Delhi 110002.

Conceptualised in the early fifties for the education and recreation of refugee children, the Bal Bhavan movement in its present form was established in 1956. This educational recreational programme is fully supported by the Government of India through the department of education. This venture has the potential for enhancing children's creativity. Bal Bhavan centres exist all over the country. The Delhi centre has a multiple range of activities where children can explore, experiment and create in several media like the plastic arts, performing arts, science and photography. The institution has established a science park, children's museum and a library. The staff comprises of skilled craftsmen and artistes with special talent to work with children.

Theatre in Education (Rangoli) The National School of Drama (NSD), Bhawalpur House, New Delhi 110001.

At the NSD a theatre in education company was established with the financial support of the Department of Education. Its objectives are: (i) to provide theatre opportunities for children to enhance their creative potential; (ii) conduct workshops for teachers to work creatively with children; and (iii) produce plays, theatre games and exercises to generate child oriented methods for interactions.

TIE produces plays for children on a regular basis and uses several intervention techniques to increase audience participation. On invitation the company visits other cities with its productions and conducts workshops with teachers and parents through the school system.

Traffic Parks for Children, Baba Kharak Singh Marg, Punjabi Bagh and Pragati Maidan, all in Delhi.

A venture of the Delhi traffic police, this programme familiarises children with traffic lights, crossings and road signs. These parks have existed for long, yet their use is limited because few know of their existence. There is also a paucity of operating vehicles. This is a fun place for children to experience being in simulated settings.

### POLITICAL PHILOSOPHY

Jean Hampton

Political philosophy, perhaps even more than other branches of philosophy, calls for constant renewal to reflect not just readings of the tradition, but also the demands of current events. In this lively and readable survey, Jean Hampton has created a text for the 1990s that does justice to the great traditions of the field and the newest developments. In a marvellous feat of synthesis, she links the classical tradition, the giants of the modern period and the dominant topics of the 20th century.

### INDIA'S AGONY OVER RELIGION

Gerald James Larson

This book is a comprehensive approach to the contemporary crises over religion in India. It is precisely Gerald James Larson's competence in classical indology that allows him to explain lucidly and perceptively the present situation. The stunning December 6, 1992 event of the destruction of Babri masjid in Ayodhya pinpointed the 'agony' that is the subject of this book.

# Communication

WHEN I read the essay, 'The Hindu view of a multi-religious society' by Swami Agnivesh, reproduced in *Seminar* (December 1997) from *Communalism Combat*, I was so impressed and moved that I rang up Swami Agnivesh and told him so. He was pleased, but said, sadly, that it had brought charges against him of being communal and inciting communal hatred.

Astounded, I re-read his piece and the reactions (in *Communalism Combat*). Frankly, I was dismayed by the subjectivity in each of the critical reactions. Not one of them has looked at the totality or the context of his argument. I am left with the impression that Agnivesh has struck where it hurts and the response has been reactive – either emotional or then evasive, hair-splitting and extraneous.

To accuse Agnivesh of being in the VHP mould because he talks about the rise of Hindu fundamentalism as a reaction to national and international Muslim fundamentalism, or that Hindus have their reservations against proselytizing faiths, or that both Christianity and Islam advocate, in their holy books, the missionary command, is escapism.

Being of a minority community, an ex-communist, I laud Swami Agnivesh's bold attempt to take the bull by the horns, abjure goody-goodyism and call a spade a spade – whether about Hinduism, Islam or Christianity. He has been unsparingly critical of each, where it has violated basic human rights and his call for rising above scripture in the quest for truth takes courage from a man of the cloth.

That there are profound differences between paganism and religions of the book can hardly be gained. That the latter have, historically and essentially, regarded the former with repugnance as satanic and to be overcome by all means, is a fact not totally in abeyance even today. That the innumerable invasions, wars and bloody massacres in history in the name of God, were as much about the conquest of territory and people as about saving souls and destroying the heathen, is also undeniable.

As long as any sacred book is propagated as the immutable and infallible word of God the children of all other gods (and goddesses) will continue to be regarded dubiously and with mistrust if not with hatred or contempt. This is the context in which fears of the missionary command must be situated – and not speciously dismissed as a denial of religious choice.

Whatever the momentary or even, in cases, sustained syncretism over the millennia, the fact that Hinduism and Hindus (for want of a more accurate nomenclature) were the victims of a thousand years of conquest by people(s) of the book(s) who, overwhelmingly, found them repugnant in their beliefs and practices has, indeed, left scars. These will not heal by merely wishing the truth away and whitewashing what happened over the centuries in the banalities of *bhai-bhaism*. For in truth, not only have all the major religions given rise periodically to the most dreadful practices in their name, but each has its own strengths and its own weaknesses and contradictions which have given rise to manifold odious interpretations as well.

As Agnivesh points out, to negate or suppress things, especially such that are also embedded in history and in memory, can explode in the hysteria and horror of what demagogues like Hitler could accomplish. That we have such potential here is surely borne out by the events of December 1992 and November 1984.

Locating the quest for truth above the written word underlines a value which, as Swamiji says, can be upheld and secured only by a secular order. Whether or not the time, even today and at least in our country, is ripe for genuine, fearless inter-religious dialogue is doubtful. Given the response to Agnivesh's endeavour, I would say, not yet. Even at the 'university' level and among 'professionals' there is, clearly, too much defensiveness and too little courage.

If at least some people in the business could be so bold as to take Agnivesh's example and declare against the obvious infirmities contained in their own, as well as other, scriptures by virtue of their place in time if nothing else; if these 'professionals' could agree that scripture and practice and interpretation are dynamic and subject to change when the times warrant it; if they could, (hail the day) agree that there are, indubitably, certain crass proclamations and pronouncements in the (otherwise) lofty scriptures of all creeds, which violate fundamental human rights and must be cast out; if this were possible then, indeed, we might begin a process of socio-spiritual dialogue and renewal. As things stand, I fear that Agnivesh is crying in the wilderness.

Incidentally, minorities in Pakistan may have their personal laws but their official status is second class and they are restricted by law to a communal vote. That is, if they have not been excommunicated for their beliefs.

**Primila Lewis, New Delhi**

## Perils of manufactured 'popularity'

MANY journalists, political commentators and a large section of the urban middle class seem to be convinced that Atal Behari Vajpayee will be the next prime minister. There has been a rush from the Congress and Janata Dal, and thus the possibility of the BJP entering into fruitful alliances with breakaway groups of the Congress and JD. The BJP has succeeded in roping in Jayalalitha. These developments have contributed to the euphoria of the BJP, raising the possibility of the party ultimately realising its dream of ruling at the centre. Even commentators generally perceived to be critical of the BJP are hastening to discover its virtues. It is being eulogised as a suitable candidate to occupy the space vacated by the marginalisation, if not liquidation, of the Congress. The psephologists are predicting a comfortable majority for the BJP and its allies in the next Lok Sabha. More interesting is a pre-poll survey conducted by 'C-voter', an agency of unknown credentials, which simultaneously released its fantastic findings to a couple of national dailies predicting a 'wave' in the BJP's favour.

A crucial component of this media hype is the skilful attempt to 'promote' Vajpayee as a celebrity –

even as a product. In colourful sponsored supplements, he is being promoted as the 'man India awaits'. Leading authors have called him 'handsome', well-known fashion designers are eager to outfit him in designer kurta pyjamas for campaigning, and composers are vying to provide melodies for his poems. The attempts to promote Vajpayee as a commercial product, and to reduce the elections to single point affairs, are obviously coterminous. The handsomeness of the PM seems more important than the issues, image management more crucial than ideological positions, and political power more important than the political process itself. The most *Bharatiya* of all our political parties is most comfortable with this all-American style of campaigning. The so-called value based politics of the BJP has unwittingly exposed itself for what it is: the politics of images!

In this context, the statement by Atal Behari Vajpayee (Star News, 21st December) is extremely significant. According to him, 'there is no essential difference of opinion among political parties on issues like poverty – the difference is only regarding the implementation of policies.' If a commonality of concern

about poverty was meant no one would quibble. The point, however, is that the policies which are sought to be 'implemented' are rooted in certain conceptual frameworks, and elections provide the voter with an opportunity to indicate preferences about contesting conceptual frameworks.

Atalji is too seasoned a politician not to appreciate such a basic point. The import of his apparently simplistic statement is that it epitomises the BJP's strategy for the coming elections: to reduce the election to the one and only issue of 'stability'; and to correspondingly promote Vajpayee – the genial '*Mukhota*' (to borrow the very apt description from Govindacharya) of the BJP as a commodity in an attractive package. This is quite natural from the BJP point of view, as it sees the present historical juncture as a 'now or never' opportunity to catapult itself to power. The idea is to flaunt the USP of stability with such fanfare that all questions of social politics and political morality are drowned in its din – at least for the time being. The BJP hopes to appeal to an electorate, which according to its assessment is quite exasperated at the fate of the UF government.

But the astute strategists of the BJP – unlike its imbecile enthusiasts among the journalist community – are also aware of its critical limitations in terms of social base and geographical spread in the country. Hence the 'pragmatic idealism' (duly approved by the RSS) of entering into all kinds of alliances. This has led to a peculiar situation where the BJP advances precisely the same argument in defence of Jayalalitha which it refused to accept in the case of Laloo Prasad Yadav. More interesting are its attempts to woo the Muslims, Dalits and women in order to drastically refurbish its image.

These attempts, incidentally, are a forced tribute to the nature of the Indian polity, which by its pluralistic nature ensures the isolation of those who depend on the politics of exclusion. Having reached the zenith of its political mobilisation, aimed exclusively at its chosen base, any political formation must either remain content with a regional or a specific caste/or community identity. Should it wish to rule at the centre, it has to look for allies with different social and regional bases. The Congress was unique because of its historical legacy. It simultaneously functioned as a political party and as a coalition of various social/regional interests. It started to lose its dexterity of maintaining this fine balance in Indira Gandhi's latter years. The results are there for everyone to see.

The BJP, with its hitherto exclusionist policies, will have to accept a political destiny essentially simi-

lar to that of the DMK or the Akalis. It has chosen to outgrow itself and yet it is virtually non-existent in south and east India. Impatient with gradual growth, it is forcing the pace through various social and political alliances.

Setting aside our own assessment of the BJP's political praxis, let us objectively consider its electoral prospects. In the last Lok Sabha the BJP did not win a single seat of the 145 in the eastern belt from Bengal to Tamil Nadu. It had only one in the entire North East. In spite of its tall claims of being Bharatiya, the BJP has done little more than open its account in the south and in the east beyond Bihar. It is no surprise that the party is seeking alliances in these areas with whomsoever is willing.

The trouble, purely from an electoral point of view, is that the popularity of these new allies is yet to be tested; so is their fidelity to a 'stable government under an able leader.' Mamata Banerjee and Lakshmi Parvati have their own compulsions and designs; so has the BJD in Orissa. The BJP cannot hope to make any tangible gains for itself in Tamil Nadu, though it can claim that it now has the support of a Dravida party. The problem, however, is that with this psychological advantage the BJP has sacrificed its moral stance on corruption – one of its favourite issues. It is not certain that the kind of 'stability' which the BJP is projecting as its USP has the expected mass appeal in areas which are crucial for its expansion. In the numbers game, the BJP can expect gains only in Orissa and Karnataka, which ironically could be balanced by losses in Haryana and south Bihar.

In fact, a fundamental presupposition in the euphoria surrounding the BJP has been the decay of the Congress. But in politics things change very quickly. It has taken only a fortnight of Sonia Gandhi's active involvement in the election campaign to galvanise her party and to put the process of desertions from the Congress into reverse gear. Even before that, no leader with a real mass base (Mamata being the only exception) had deserted the Congress.

More importantly, no OBC leader of any consequence has defected to the BJP. Balram Singh Yadav deserted the Congress only to make up with his old adversary – Mulayam Singh Yadav. The import of this fact cannot be ignored; in the Hindi heartland, where the social politics of caste groups is now being vocally articulated in party politics, the BJP is considered to be a party of the upper castes.

It is socially significant that the Samata Party (a Kurmi party in caste terms) has chosen to underline its

'serious differences' with the BJP on issues like uniform civil code, Ayodhya and the alliance with Jayalalitha. It is but natural that the Samata Party is keen to distance itself from the political agenda of the BJP which is rooted in the upper caste imagination of the Indian nation. Besides the task of expansion, the BJP also faces the challenge of maintaining its present numerical strength which is under serious threat, at least in Maharashtra. An alliance, or even a tacit understanding among the Congress, SP and RPI is capable of influencing the verdict in at least 10 out of 33 seats won by the BJP-SS combine last time.

The potential impact of such an understanding has not been lost on Bal Thackeray. His generous suggestion of constructing a national monument in Ayodhya and to put the 'damn thing' at rest must be viewed in this context. Overall, the BJP strategists are not unaware that the issue of stability can ensure only limited results. The forthcoming election does not show signs of throwing up a single issue capable of capturing the imagination of all segments of society. In fact, stability *à la* the BJP is perceived by many as referring to the fears and fantasies of those who see the 'nation' only as a euphemism for their own power interests and egocentric selves.

In the parlance of the elite and the middle class, 'national integration' instead of referring to a genuinely participative process leading to the empowerment of hitherto marginalised groups has come to signify their appropriation into an unjust order of political economy. Unfortunately for the BJP and its supporters, the marginalised groups have already reached a certain degree of political articulation and have seen through the rhetoric of stability. That is why the BSP can rather provocatively declare 'political instability' as most suitable for the empowerment of Dalit Bahujans. To the BSP, Election '98 is an opportunity for ensuring a political dispensation which is perforce more actively sensitive to Dalit self assertion.

The coming polls are unlikely to witness a wave cutting across given loyalties, or giving an upper hand to any particular slogan. Most likely it will be a repeat of the 1989 elections, when the most hyped issue of corruption failed to deliver a majority for any party. Given all this, the BJP and its allies cannot realistically hope for more than 200 seats in the next Lok Sabha.

In fact, it is an awareness of this prospect which informs the BJP (or rather the RSS) strategy of creating a sponsored media hype in its favour. It aims to generate what can be described as a *media simulated voting pattern* (MSVP) to make up for the lack of genuine

enthusiasm for the BJP among ordinary people. How far this strategy of MSVP will succeed remains to be seen.

So far as the much trumpeted 'change of heart' in the BJP is concerned, we must consider the all important role of the RSS, which is deliberately downplayed by supporters of the BJP and naively ignored by professional commentators. The RSS is absolutely correct in calling itself a cultural organisation because it attributes to itself a cultural project distinct from the merely political. In its vocabulary the political signifies only the everyday details of parliamentary and extra parliamentary politics, while the cultural signifies a comprehensive agenda for the creation of a *controlled space* for the exercise of immediate political options. In other words, the 'culture' of the RSS refers to social politics—as distinct from party politics—and to the discourse of power at the social plane.

The BJP is a devoted member of the Sangh Parivar to whom has been assigned the task of creating the space in party politics for the long-term political project of the RSS. Any genuine 'change of heart' in the BJP has to necessarily emanate from the RSS, which has repeatedly refused to either democratise itself or to genuinely internalise the virtues of plurality. The RSS could have played a positive role if only it had devoted itself to the creative evolution of pluralistic Indic traditions. But the *raison de etre* of the RSS has been to appropriate Hindu traditions and symbols in order to create an Indian variant of an aggressive and sectarian nationalism of the Nazi type. The RSS represents neither the Hindu view of life nor the broader Indian culture—it only articulates the fears and fantasies of the upper castes in a culturally alien idiom. Naturally therefore, it only seeks to appropriate the aspirations of the marginalised sections of the Hindu community to its own fantasy of a Hindu Rashtra.

The Sangh Parivar must make its social base genuinely responsive to the need of empowering the marginalised groups as a matter of right. It has to internalise the traditional Indian ethos of pluralism. Without this change, a 'shift' in the BJP's position is only a politically expedient projection. It may bear fruit in the short run, but will push it into a situation of trading its traditional support for yet uncertain expansion. The BJP may end up like the father and son in the well known fable of Aesop who end up making a fool of themselves in their attempts to please everyone, just as a matter of expediency.

# Backpage

IT is a marker of the times that the fiftieth *barsi* of our Martyr's Day is likely to pass without much notice. 30 January 1948, as many of our countrymen seem to have forgotten, was the fateful day when Mohandas Gandhi, the Mahatma and the Father of the Nation, fell to the bullets of a Hindu fanatic. Not the first, but by far the most significant sacrifice to the cause of inter-communal amity. His crime: insisting that our government pay off our dues to Pakistan.

In the run-up to the forthcoming elections – one admittedly bereft of significant policy debate but suffused with empty sloganeering of secularism, sacrifice and swaraj, the relative neglect of the Mahatma is surprising. Particularly since Gandhi, as complex a personality as we are ever likely to encounter, has been more than others subjected to varying and sectional use (and abuse).

The Congress, a party which most often claims monopoly over his legacy, is so excited by the eventual acceding by Sonia Gandhi to function as star campaigner that the only sacrifice it can recall is of the Nehru-Gandhi mother and son. Without for a moment downplaying the tragedy of their assassinations, it is worth recalling that both Indira and Rajiv Gandhi became victims of their realpolitik. One paid for the 'assault' on the Golden Temple; the other for the Indo-Lanka Accord and the decision to embroil the Indian Army into the Sri Lankan ethnic cauldron. Not quite issues of principle.

In an electoral fray marked by unprincipled alliances to keep the BJP out of power, not holding out Gandhi as our ultimate symbol of secularism is a serious flaw. Our secularists seem to recall him only when their 'other', the BJP seeks to incorporate him in their pantheon of greats, gleefully pointing out that it was a Hindu extremist who was responsible for his assassination. Rarely do they bother to point to his innovation of adding *Ishwar Allah Tero Naam* to the *Tulsidas Ram dhun Raghupati Raghav Raja Ram*. Or that this was one innovation which received ready acceptance in popular culture; that it became the inspiration of one of the most popular bhajans to come out of Bollywood *Allah Tero Naam, Ishwar Tero Naam; Sabko Sanmati De Bhagwan*. No better example of our syncretic cultural traditions, and yet, even our cultural activists would rather iconise Kabir.

Gandhi's legacy of *swaraj* presents greater problems, more so in these days of unbridled consumerism, preferably with western goodies. His slogan of keeping all his windows open, yet remaining firm on his feet, has at best been read as reworking our reforms package while keeping domestic industry (read industrialists) satisfied. Not austerity, not self-reliance, not building upon domestic creativity and innovation, and not, definitely not doing the right thing by the poor. *Garibi Hatao* worked in 1971. Today the focus is on becoming rich.

One would have thought that given our penchant for anniversaries, 1998 would be the year of Gandhi. Are we not still celebrating the golden jubilee of our Independence; and does not Gandhi legitimately claim his place in our memory? Surely, it could not all be due to his unswerving emphasis on service, his refrain that the Congress party disband itself after Independence. Or to his scepticism about narrow nationalism and the state. The last, given the middle class obsession with stability, another popular electoral slogan, is today a virtual anathema. In a polity marked most by the objective of 'victory at any cost', principles do not stand much of a chance.

It is not our plea that our greats, even one as significant as Gandhi, need to be eulogised, that all writing should be hagiographic. Or that succeeding generations do not, should not, focus on new personalities as their favoured symbols. But if the response to the recently staged play *Gandhi vs Mahatma* is any indication, it is feasible to present the man critically but sympathetically. His 'failures' and his warts, particularly with his family, only add to his believability. After all, do we not owe gratitude to a man who consciously eschewed the building up of a dynasty, much as we might sympathise with Harilal.

More than Vajpayee, 'the man India awaits', and Sonia Gandhi as the 'courageous queen' willing to shoulder the responsibility of leading her bereft subjects, the original Gandhi comes across as a more fitting candidate for the times. Since these elections are more likely to be fought around symbols and slogans than substance, our image makers would do well to re-examine their favoured constructs.

In the final Kumbh of the millennium, we should at least perform Gandhi's *shradh* with grace.

MARCH 199

## Travel first class. Pay economy.

Welcome aboard the Premier Diesel Deluxe. A car that is specially designed to make travelling a pleasure.

The Premier Diesel Deluxe is available with a range of luxurious features.

Ergonomically designed bucket seats with adjustable headrests. Plush carpets and velour upholstery. Tinted glass. 118NE Synchromesh gearbox. PU steering wheel. A back-lit instrument cluster with a quartz clock.

It's fitted with a quiet, eco-friendly engine designed by FNM, Italy, that accelerates rapidly within seconds. Giving you unmatched economy of over 18 kms\* from every litre.

Premier Diesel Deluxe. All the comfort without the expense.

To see the car on display, visit the dealer showroom today. A.C. version also available.

*High on performance. Low on maintenance*

This is 3 year old Shreya.  
Her parents abandoned her  
and vanished. If you turn the page,  
you'll do the same.

CAUSE  
CELEBRE Created by Contract for a cause.

With no one left in the world, little  
Shreya doesn't have the slightest  
hope of facing the future, unless she  
gets an education. And that's where  
you come in. To make a dream called  
*Nanhi Kali* come true. Through  
*Nanhi Kali*, you can become the foster  
parent of a little girl like Shreya.

By giving Rs. 100 a month towards  
her education, your 'daughter' will be  
put into school and in fact, you will  
receive regular reports about her  
progress including a photograph.

*Nanhi Kali* is a special project of the  
K.C. Mahindra Education Trust - a

Trust set up by one of the most  
reputed industrial families in India.

A Trust that's been working since  
1953 to promote education and  
enlightenment across the country.

Since *Nanhi Kali* literally means  
'little flower', with people like you,  
we hope to repair the broken  
petals of thousands of such  
underprivileged little-girls.

So please don't turn the page yet.

**Nanhi Kali**

THE MONTHLY SYMPOSIUM POST BOX 338 NEW DELHI 11000

Founder Editors RAJ & ROMESH THAPAR

a journal which seeks to reflect through free discussion, every shade of Indian thought and aspiration. Each month, a single problem is debated by writers belonging to different persuasions. Opinions expressed have ranged from janata to congress, from sarvodaya to communist to independent. And

the non-political specialist too has voiced his views. In this way it has been possible to answer a real need of today, gather the facts and ideas of this age, and to help thinking people arrive at a certain degree of cohesion and clarity in facing the problems of economics, of politics, of culture.

## The problem

THE Government of India presently sits on the executive committee of the United Nations High Commissioner for Refugees (UNHCR). It has not ratified the 1951 Convention Relating to the Status of Refugees and its Additional Protocol of 1967. India rightly holds that the 1951 Convention and its Additional Protocol does not relate to the situation prevalent in South Asia or for that matter in much of the developing world. The existing convention is based on a legal regime of individual determination of refugee claims. India and its neighbours deal with negligible claims at an individual level. Refugee flows into this area have been mass exoduses of people fleeing civil war and internal conflict. Clearly, there is a case for re-visiting the convention.

India, however, is hamstrung by an absence of a domestic legal regime to address refugee concerns. At one level, it claims not to have given full status to the office of the UNHCR in India and has recently given marching orders to UNHCR's Chief of Mission in New Delhi. UNHCR has no access to Burmese or Bhutanese refugees in the North East. It also does not have access to Sri Lankan Tamil refugees in the camps in Tamil Nadu. It supports a mere 2500 urban refugees in India getting a lot of undue political mileage in the process,

thanks in the main to Government of India's failure to create a domestic legal regime for refugees. The government, which often cries itself hoarse on intrusiveness on sovereignty issues, allows refugee determinations to take place by UNHCR for urban refugees in New Delhi. UNHCR is not accountable to any legal mechanisms, national or international. Its refugee determination procedures allow for no legal challenge outside its own portals. It does not allow legal representation for the refugee, and like old Furry in Alice in Wonderland proclaims, 'I'll be Judge, I'll be Jury.'

At another level, the Government of India is tying itself in legal knots in attempting to extradite Rongthong Kunley Dorji, the Bhutanese leader in exile. It holds LTTE suspects in special detention camps under procedures that amount to administrative detention and deports Chin refugees from Burma without even the modicum of a legal procedure. The situation is one in which adhocism reigns supreme, where neither government nor public opinion is aware of the crucial difference between political refugee and economic migrant.

Globally, UNHCR is dismantling its basic tenet of providing protection to refugees. It has slowly con-

verted itself into an emergency relief organisation. UNHCR cannot tilt at Schengen and Fortress Europe, so it is easier to play inter-governmental Mother Teresa distributing blankets, tents and rice. At another level, it waves the big stick of international accountability at countries like Rwanda and the former Zaire. Yet it meows like a cat when the United States and Italy interdict Haitian and Albanian refugees on the high seas, or allows France to refoul refugees through a shotgun legal process.

The 1951 Convention is a sacred cow. Nobody wants to rewrite it, claiming that there is no minimum political consensus. Yet, at the same time, UNHCR is trying to expand its mandate to cover internally displaced people, an issue that presently lies under the purview of the International Committee of the Red Cross (ICRC) under the Geneva Conventions. In spite of a mandate to address the issue of statelessness, it has taken an ostrich-like attitude to the issue of stateless peoples in Arunachal Pradesh in India or among the hill tribes in Northern Thailand, to name only two Asian situations.

With the international protection regime for refugees clearly inadequate, one way forward would be to

increasingly rely on existing human rights mechanisms. UNHCR is loathe to admit that it has in effect given up on protection itself. The UN human rights bureaucracy does not want to be seen treading on what has traditionally been UNHCR territory. The challenge is to question these shibboleths.

An ad hoc legal regime at the domestic level, a withering away of the protection mandate of UNHCR at the international level, new refugee control mechanisms at the national level – like sanctions on carriers and tighter visa controls – is leading to greater illegal and irregular movement of refugees. All adding up. The refugee, a person in distress, often finds himself fleeing persecution from his country, jumping from the frying pan into the fire.

This issue of *Seminar* brings together case studies of ground level situations and politico-legal analyses of the refugee regime in an effort to focus attention on a situation most often shrouded in secrecy. We, who proudly boast of a heritage of *Vasudev Kutumbakam*, need to ponder over this. Otherwise we should be prepared to shed such claims.

RAVI NAIR

# Who is a refugee?

RADHA KUMAR

WHO is a refugee? Conventionally, a refugee is a person who is driven from his or her native land by violence or deprivation, for being a member of a hated community, race, sect or ethnos, or by virtue of political opinion.<sup>1</sup> The category, however, lumps together people who are very differently treated, not only by their persecutors but by their new hosts. There is a difference between persecution on ideological rather than biological grounds. Thus, for example, until the end of the Cold War, groups who were made refugee by totalitarian regimes or in the course of an ideological conflict were accorded a better reception than groups who were expelled for race, religion or language.

And while there was always some distinction made by the influential host countries between who was persecuted for what – the classic example of relatively favoured ideological refugees being the Cubans in the US, and the classic example of

relatively ill-treated refugees being the 'boat people' from Vietnam – even the British felt free to forcibly return Vietnamese refugees (sheltering in Hong Kong) only after the Cold War ended. (Incidentally, the first country to deport Vietnamese refugees was the newly democratic Czechoslovakia in 1990-1). To this extent the disintegration of the Cold War released countries from conforming to even the cynical ethics which it imposed, for the ideological compulsion to offer sanctuary to an enemy's enemy disappeared.

If there is a difference between persecution on ideological rather than biological grounds, there is an even greater difference between the exiled individual and the individual expelled together with a community. The popular image of the refugee is of a poor, half-starved, generally Asian or African victim of a tyrannical or Third World state. Until recently, it was taken for granted that there was and would be a steady but largely manageable stream of refugees of this kind, but that the great refugee exoduses were created by inter-state or large-scale wars.

This assumption was made partly because the refugee was defined at the end of World War II, when there were an estimated 30 million refugees in

---

1. A refugee is a person who, 'owing to a well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group or political opinion, is outside the country of his nationality and is unable or, owing to such fear, is unwilling to avail himself of the protection of that country.' (1951 Convention Relating to the Status of Refugees).

Europe. At the time, it was assumed that such large numbers of outcasts would only be seen again if there was a third world war. Less than 50 years later, however, it is the collapse of the Cold War which is marked by an astounding rise in refugee figures, albeit yet to rival the World War II scale. In 1992, there were 16.4 million refugees and 23.7 million internally displaced people. As against this, there were 9.7 million refugees and 5 million internally displaced in 1969, and 7.7 million refugees in 1982 (no figures for internally displaced people are given).<sup>2</sup> In 1993, the UNHCR estimated that one out of every 130 persons in world population was a refugee. By 1997, this figure had grown to one out of every 120 persons.<sup>3</sup>

**C**oncern over an increasing flow of refugees was initially voiced after the Berlin Wall came down in 1989; Europe's gates, its richer western parts feared, would be flooded by economic and political migrants from the East. As the East rapidly reconstellated, however, and conflict erupted in the former Yugoslavia, the Trans-Dniester, the Transcaucasus and Transylvania, attention shifted to ethnic and communal wars as the chief causes of contemporary refugee flight. In 1991 the Pentagon issued a paper arguing that the threat of 'new conflicts' in the East and South required new forms of intervention. The new conflicts, it said, would appear as protracted low intensity wars which would not confine themselves within state borders; on the contrary, they were wars which targeted civilians and created massive

refugee movements which could destabilize a widening circle of countries and regions.

**T**he term which was increasingly used to describe what fuelled these wars was 'ethnic nationalism'. Initially, an *ethnie* was broadly construed as a community which collectively defined itself by language, custom, religion, race or culture; ethnic nationalists asserted the primacy of ethnic identities in creating nation states or governing them. In this sense, ethnic nationalism could be defined as qualitatively different from either the European nationalism of the 19th century or the anti-colonial nationalism of the 20th century: while the latter two inclined to egalitarianism and based themselves on citizenship, the former was hierarchical and placed collective rights above individual ones.<sup>4</sup>

However, as ethnic nationalism proliferated, it became clear that the wide definition of *ethnie* was itself problematic as far as the relationship between identity and conflict was concerned. Historically, in the drive to ethnic war, one form of ethnic identity tended to eclipse the others and that was religious identity, or, as the South Asian term will have it, communalism, i.e., ethnic conflict based on religious identity. In this context, the Yugoslav wars, based as they were not only on dissolving the federation but on redrawing its borders communally – between Sláv Muslims, Orthodox and Catholics – brought back a spectre which Europeans thought they had laid to rest, of religious conflict in Europe.

As the aims of the Serbian and Croatian political leadership to divide Bosnia-Herzegovina between them grew increasingly to dominate the wars, a bewildered Europe and the US began to re-examine images of the refugee: no longer a poor victim of a tyrannical or Third World state, but white, and a member of East Europe's most developed and liberal state; no longer a victim of large-scale interstate wars, but of protracted low intensity communal conflicts which could amount to genocide. Significantly, as the Bosnian war dragged on, television images of cosmopolitan protest, as embodied by Sarajevo's cultural elite, began to be replaced by images of bedraggled Muslim women in headscarves, gaunt peasants, and starved men in concentration camps. The point that they did not make, nor even seriously imply, was the way in which this war was eliminating an entire middle class, only a few of whom would find honourable exile as writers and artists in Western Europe and the US.

**W**ith the image of the terrible devastation wrought on intelligentsias by ideological conflicts such as the Spanish Civil War, Stalinism and China's Cultural Revolution, we have tended to misrepresent the similar destruction wrought by ethnic and communal conflicts, partly because Europe, the continent in which communalism reached its apogee in the Holocaust and the protracted demonisation of Islam, has managed to present communalism as a primitive tribal phenomenon rather than a consequential political one.

Yet one of the most damaging long-term consequences of the partition of India was the removal of almost the entire Muslim middle class to Pakistan; one of the ugliest aspects of the Bangladesh war was the deli-

2. Myron Weiner, 'Bad Neighbours, Bad Neighbourhoods', *International Security*, 21:1, Summer 1996, pp.12-17.

3. Sadako Ogata, *The State of the World's Refugees, 1993: The Challenges of Protection*, Oxford University Press, New York, 1993; 'UNHCR at a Glance', AG9707b.pm5/25 July 1997.

4. E.J. Hobsbawm, *Nations and Nationalism Since 1780: Progress, Myth, Reality*, Canto Press, Cambridge, 1991, p.164; Mary Kaldor and Radha Kumar: 'New Forms of Conflict', in *Conflicts in Europe*, Helsinki Citizens' Assembly Publication Series No.7, Prague, 1993, pp.12-15.

berate targeting of the Bengali intelligentsia; one of the most tragic achievements of Israel has been its wilful oblivion – mounting to hatred – of the Palestinian intelligentsia; and one of the most grim fallouts of the Afghan war has been how its communalisation, through the US-Pakistan support for the Taliban, turned upon the expulsion of its middle class. Indeed, the extent to which Germany has been able to recover from the flight from Nazism of its intelligentsia is a moot point.

**H**ow to interpret the new emphasis on ethnic and communal conflicts is, however, debatable. While the number of ethnic conflicts has certainly grown, from 14 in 1969 to (at least) 21 in 1992,<sup>5</sup> and they now comprise over half the number of conflicts producing refugees (21 out of 36 in 1992 as against 14 out of 34 in 1969), the ratio of refugees from ethnic to non-ethnic conflicts has remained roughly the same. Refugees from ethnic and communal conflicts constituted roughly half the total number of refugees in 1969 and also in 1992.<sup>6</sup>

Moreover, in sheer scale no ethnic conflict has produced the massive expulsions that the conflict in Afghanistan, which began under the Cold War, has. The largest number of refugees which the UNHCR deals with – and has dealt with for the last 17

years – is Afghan. At its peak, in 1990, the number of Afghan refugees, including internally displaced people, was over 6 million (in other words, over a third of the population).<sup>7</sup> In comparison, the peak number of Rwandan refugees in 1994 was over 2 million, and from Iraq in 1991 1.7 million, while the wars in former Yugoslavia created 1.7 million refugees.

**I**n fact, it is the 3.2 million Palestinian refugees who are second in numbers to Afghans, but because their care devolves upon a separate UN agency, the UN Relief and Works Agency for Palestinian Refugees (UNRWA), their statistics are not generally included in the global refugee figures given by the UNHCR but are separately stated, and they appear to be under-reported by the US Committee for Refugees surveys.<sup>8</sup> The irony of this fact is further compounded by the fact that President Arafat has all but agreed to Israel's stipulation that the bulk of Palestinian refugees – especially in Lebanon – have no right to return to the Palestinian territories, but selected Palestinians in exile – including those with US citizenship, do. Who indeed, one may ask, is a refugee, when the term as applied to Palestinians acquires an ancestral meaning for some and becomes a point of difference for others?

In our time-honoured fashion, the Indian subcontinent has given the normal definition of refugee a surreal twist. Take the case of the Biharis in Bangladesh. Now, in 1998, Pakistan

is debating a tentative decision to repatriate some 250,000 Biharis who became refugee when East Bengal seceded from Pakistan. The decision was reached on the 25th anniversary of Bangladesh and the 50th anniversary of Pakistan and independent India, against the backdrop of the three-nation cricket Independence Cup tournament in Bangladesh (which received much greater coverage than the issue of the Biharis).

**U**p until 1972, the Biharis were average citizens of East Pakistan, who had lived there for some 25 years since the 1947 partition of India. When the war for Bangladesh started in 1971, the Biharis – rather like the Serbs of Knin in Croatia in 1990-1 – played a significant role in Pakistan's defense, forming local militias which acted with considerable savagery against Bengalis. After the war ended, the new Bangladesh government interned them in prisoner of war camps. As usual, the majority of internees were women and children. Neither the Pakistan nor the Bangladesh governments were prepared to offer the Biharis citizenship, though in the same years the Pakistani government offered some 150,000 Bengalis citizenship. Now the current Pakistani and Bangladeshi governments have tentatively agreed to repatriate these Biharis at the rate of 25,000 per year, that is, over a period of 10 years.

The repatriation of Biharis is a curious concept. We South Asians have a gift for turning nonsense phrases. Bihar is in India, but I have yet to hear of a Bihari Muslim who wishes to return to that beautiful and godforsaken land. As to that, the East Pakistani Biharis never lived in West Pakistan, so here we have a notional patria, or else the Muslim whose identity is defined by exclusion, as being a non-Bengali. (That at the same time

5. I have used Myron Weiner's figures here, which combine data from the annual reports of the US Committee for Refugees with data from the UNHCR, but have departed from his scheme of classification. Weiner categorizes the 1948 and 1967 Arab-Israeli wars and the Armenia-Azerbaijan conflict over Nagorno-Karabakh as interstate rather than ethnic/communal conflicts. In other words, he defines ethnic conflicts as only those which are not interstate, a distinction which blurs rather than clarifies the category of ethnic/communal conflict. *Op. cit.*, pp. 13-17.

6. 4.8 million out of 9.7 million in 1969, and 8.3 million out of 16.5 million in 1992.

7. Though the last census of Afghanistan was conducted in 1973, estimates based on statistical projections concluded that the Afghan population on the eve of the Soviet invasion was roughly 16 million.

8. Thus, for example, while the UN gives the figure of 3.2 million, the US surveys give the figure of 2.6 million in their 1993 report. Interestingly, this is up from 1.9 million in their 1983 survey and 1.4 million in their 1970 survey. Weiner, *op. cit.*

the Bangladesh government is in the process of making peace with those other non-Bengali but accredited citizens, the tribals of the Chittagong Hill Tracts, appears to be another matter. But then, as Bangladesh Foreign Minister Abdus Samad Azad pointed out, the Biharis were once offered Bangladeshi citizenship and rejected it).<sup>9</sup>

**R**egional identities are, however, difficult to get away from. Thus, the Pakistan Sindhis oppose the repatriation of Biharis because they fear that they will swell the ranks of the *Mohajirs* (Bihari Muslims who came to West Pakistan at the time of Partition and settled in Sindh), and further exacerbate the ongoing conflict between native Sindhis and Mohajirs there. The Pakistan government has offered to settle the new Biharis in Punjab, but the Sindhis say they will inevitably trickle into Sindh, where they have compatriots who might – possibly – make them feel more welcome.<sup>10</sup> And who is to gainsay them? Even with our peculiarly shallow notions of citizenship, we South Asians have generally not restricted internal freedom of movement.

Except, perhaps, in the case of Jammu and Kashmir. The refugees of the 1948 Kashmir war, which resulted in the partition of the state into Pakistan-held Azad Kashmir (sic) and Indian-held Jammu and Kashmir have yet to receive Kashmiri/Indian citizenship. In the early 1950s, Sheikh Abdullah, the first Chief Minister of Jammu and Kashmir, refused to give the refugees from Azad Kashmir, the majority of whom were Hindu and

Sikh but who also included Muslims, citizenship. Sheikh Abdullah's refusal was largely because of land hunger, and partly because the status of Azad Kashmir was disputed and thus the question of the refugees' right to return remained open.

The Indian government also refused them citizenship, though Bangladeshi refugees were later resettled as far from Bengal as Delhi, again because both the status of Azad Kashmir and of Jammu and Kashmir were disputed. The curious fact in all this is that though some of the 1948 refugees have 'trickled through' to parts of India, and a considerable number to Delhi, the majority remain in Jammu and very few indeed have made their way to the Kashmir Valley (which has from the very start been the chief bone of contention among Kashmiris and between India and Pakistan).

**T**his said, the South Asian experience points up the curious anomalies of refugee and host existence. Predictably, the 1991 Pentagon warning about the refugee threat to the West of new ethnic and communal conflicts in the East and South proved both ahistorical and misplaced. Despite ongoing conflicts in several parts of the former Soviet Union, refugee flows – even from one republic to another – have been relatively limited (with the exception of Nagorno-Karabakh, 90% of whose Azerbaijani population is now in Azerbaijan proper). The bulk of African refugees remain in Africa, and, as has been the case for decades, it is close neighbours who have taken the bulk of refugees from ongoing ethnic conflicts. Iran and Pakistan took in almost the entire Afghan refugee population: in 1990 there were 2.9 million Afghan refugees in Iran and 3.2 million in Pakistan. The bulk of refugees from the

wars in former Yugoslavia are in its new republics: Croat and Muslim refugees in Croatia, Serb refugees from Croatia in Bosnia-Herzegovina and Serb and Muslim refugees in Serbia. The only two other major host countries are Germany and Turkey. Yet pressure for the return of refugees to former Yugoslavia has come from the Scandinavian countries and Germany.

**S**peaking of the reception given to Afghan refugees by Iran and Pakistan, the UNHCR representative, Sri Wijeratne, commented, 'both countries responded with a generosity of spirit that has not been paralleled since.'<sup>11</sup> Perhaps the real if unrecognized point of the Pentagon's warning of new refugee threats was both to give grist to Europe's new delimitation and to point to a new post-Cold War role for NATO (humanitarian intervention or peace-enforcement as a way of keeping refugees at home).

Before we hasten to conclude that we non-Europeans are, as we always knew, infinitely more hospitable than the Europeans, two points should be made. Though in general the southern and Middle Eastern countries have not built walls against refugees or migrants as the northern and western countries have, since we leave our own citizens to make do as best they can, there is little virtue in that. Second, ill-founded as the fears of new refugee threats to the West might be, emerging trends such as the war crimes tribunals for former Yugoslavia and Rwanda, support for free media and aid for infrastructural and educational development indicate that they might yield more support to build institutions of democracy in weak or failing states.

# In international law

B. S. CHIMNI

THE international legal regime for the protection of refugees is constituted by a complex network of national and international laws which operate in conjunction. The present essay merely offers a conspectus on international laws (as opposed to national laws) which govern the world of refugees.

*The 1951 Convention Relating to the Status of Refugees:* The end of the Second World War saw millions of people displaced and led to the adoption of the 1951 UN Convention relating to the status of refugees (hereafter the 1951 Convention) which was drafted at the initiative of the UN Commission on Human Rights by concerned UN bodies between 1948-51. It has been ratified by 130 countries. India is not a party to the convention. The 1951 Convention has several achievements to its credit.

First, it contains a general definition of the term 'refugee'. Article 1(2)(A) states that the term refugee shall apply to any person who: '...as a result of events occurring before 1 January 1951 and owing to well-founded fear of being persecuted for

reasons of race, religion, nationality, membership of a particular social group or political opinion, is outside the country of his nationality and is unable or, owing to such fear, is unwilling to avail himself of the protection of that country; or who, not having a nationality and being outside the country of his former habitual residence as a result of such events, is unable or, owing to such fear, is unwilling to return to it.'

A key feature of the definition is that refugees are people who have crossed an international border and therefore are to be distinguished from internally displaced persons (IDPs) who, vide the international law principles of sovereignty and non intervention, are the concern of states of which they are nationals.

Second, it incorporates the principle of *non-refoulement*, the cardinal principle of international refugee law. Article 33(1) of the convention states: 'No contracting state shall expel or return ("refouler") a refugee in any manner whatsoever to the frontiers of territories where his life or freedom

would be threatened on account of his race, religion, nationality, membership of a particular social group or political opinion.'

The principle of non refoulement has also come to be included in other international instruments (e.g. Article 3 of the 1984 Convention against Torture). It is important not to confuse the principle of non refoulement with the duty of states to grant asylum; the former only requires admission to safety and exemption from forcible return and not recognition of an individual right of asylum. The benefit of the principle of non-refoulement is, however, not available to a refugee who is regarded as a danger to the security of the country in which she is present.

**T**hird, the convention outlines the minimum standard of treatment of refugees, including the basic rights to which they are entitled. It also notes the duties which refugees owe to the country of refuge. Fourth, it contains provisions concerning their juridical status, gainful employment and welfare. The convention also embodies provisions regarding the issue of identity and travel documents, naturalization and other administrative matters. Fifth, the convention vide Article 35 requires contracting states to cooperate with the office of the United Nations High Commissioner for Refugees (UNHCR) in the exercise of its functions, in particular to facilitate its duty of supervising the application of its provisions.

However, the 1951 Convention possessed some disturbing features. First, despite objections by Third World countries, the scope of the convention was limited to events occurring before 1951, and further, states were given the option to limit the geographical scope of these events to Europe, thus confining their obligations

under the convention to European refugees alone. Second, the definition of refugee confined protection to those who feared persecution because of their civil or political, as opposed to their socio-economic, status. This allowed the instrument to be used as a political weapon against the former socialist states which were more vulnerable in this area.

**N**early 95 per cent of refugees admitted to the US over the years have come from the former socialist states revealing how the 1951 Convention became an instrument of Cold War politics. This is confirmed by the fact that the end of the Cold War has seen western countries shutting the doors to refugees for they no longer possess either ideological or geopolitical value. I will return to this theme in the last section.

*The 1967 Protocol on Status of Refugees:* In 1967 a protocol on the status of refugees was adopted. Its key feature was that it prospectively removed the temporal and geographical limitations contained in the 1951 Convention. However, there was no attempt to reconsider the definition of the term 'refugee'. This meant that most Third World refugees continued to remain *de facto* excluded as their flight is frequently prompted by natural disaster, war, or political and economic turmoil, rather than by 'persecution', at least as that term is understood in the western context.

*The 1969 OAU Convention on Refugees:* In 1969, the Organisation of African Unity (OAU) adopted a Convention Governing the Specific Aspects of Refugee Problems in Africa which came into force in 1974. It was the first regional arrangement concerned with the protection of refugees and arrived at in the background of ongoing anti-colonial struggles. It had several firsts to its credit. First,

it expanded the definition of refugee. Over and above the 1951 Convention it states that: 'The term "refugee" shall also apply to every person who, owing to external aggression, occupation, foreign domination or events seriously disturbing public order in either part or whole of his country of origin or nationality, is compelled to leave his place of habitual residence in order to seek refuge in another place outside his country of origin or nationality.'

The addition implies a move away from the 1951 Convention's well-founded fear of persecution standard. It stresses that refugees include persons fleeing civil disturbances, violence and war, irrespective of whether or not they have a well-founded fear of persecution.

**S**Second, the principle of non-refoulement received a broader interpretation in the OAU Convention. Article II(3) talks about non-rejection 'at the frontier', the absence of which phrase has allowed developed states (as we shall see later) to enforce a number of restrictive measures at the border without being found in strict violation of the 1951 Convention. Third, in contrast to the 1951 Convention, the OAU Convention emphasizes the actual grant of asylum. Article II entitled 'Asylum' calls upon states to 'use their best endeavours consistent with their respective legislations to receive refugees and to secure the settlement of those refugees....'

Fourth, it is the only international instrument to contain a provision on voluntary repatriation, the preferred solution to the refugee problem. Article V entitled 'Voluntary Repatriation' emphasizes the essentially voluntary character of repatriation and lists the obligations placed on the country of origin to facilitate the resettlement of refugees who return.

Fifth, it contains an explicit provision articulating the principle of burden sharing. Article II (4) *inter alia* states: '...Member states shall in the spirit of African solidarity and international co-operation take appropriate measures to lighten the burden of the member state granting asylum. The principle of burden sharing deserves to be a focus of attention today when western states are practicing burden-shifting by closing their doors to refugees and being unwilling to share the financial burden of the poor countries hosting refugees.' Sixth, the OAU Convention vide Article VIII places a duty on every refugee to abstain from subversive activities against other member states.

*The Cartagena Declaration:* There is no other regional convention comparable to the OAU Convention. However, in 1984, the UNHCR convened a colloquium composed of government representatives and distinguished Latin American jurists which met in Cartagena, Colombia and adopted the Cartagena Declaration on Refugees. The declaration recommends a definition similar to that contained in the OAU Convention. While this declaration is not binding, it was approved by the General Assembly of the Organisation of American States (OAS) in 1985. It has proved influential and its provisions have been incorporated in the domestic legislation of a number of states in the region.

Insofar as Asia is concerned, mention may be made of the principles concerning treatment of refugees adopted by the Asian-African Legal Consultative Committee (AALCC) in 1966. These principles are non binding and have not exercised the kind of influence that the Cartagena Declaration has in the Latin American region. On the other hand, none of the coun-

tries of South Asia are parties to the 1951 Convention. There are complex historical and political reasons peculiar to the region which account for this non-participation.<sup>1</sup>

The refusal to become a party is also understandable in view of the fact that western states have shown little respect for the letter and spirit of the 1951 Convention. What is unfortunate, however, is that a number of these countries, India included, have not adopted a national legislation for the protection of refugees. In India's case the judiciary has been helpful when approached with individual cases. However, as Chief Justice J.S. Verma recently observed, 'The attempt to fill the void by judicial creativity can only be a temporary phase. Legislation alone will provide permanent solution.'<sup>2</sup>

A few words on the UNHCR, the principal international agency for providing assistance and protection to refugees. The UNHCR was set up on 1 January 1951 for a period of three years in accordance with UN General Assembly (GA) resolutions 319(IV) of 3 December 1949 and 428(V) of 14 December 1950. The mandate is renewed every five years. The office was established as a subsidiary organ of the GA under Article 22 of the UN Charter. The High Commissioner acts under the policy directives given from time to time by the GA and the Economic and Social Council (ECOSOC).

The work of the UNHCR, according to paragraph 2 of the statute of the

office, is to be entirely non-political in character. Its basic functions are the protection of refugees and seeking durable solutions to their problems. In both contexts the UNHCR works in close association with NGOs, an action permitted by the statute establishing the office.

The UNHCR is financed by a very limited subsidy from the regular budget of the UN (to be used exclusively for administrative costs) and through voluntary contributions from governments, NGOs and individuals. If financial power is not to be used to initiate policy changes not in consonance with the protection profile of the UNHCR, it is critical that states undertake to make mandatory contributions. The policy within the institution is shaped by the executive committee which today consists of 52 members and which from time to time adopts 'conclusions' which guide the office in its work. India became a member of the executive committee in 1995.

The notion of 'persons of concern' in the statute of the office of the UNHCR adopted by the GA on 14 December 1950 is similar to the refugee definition contained in the 1951 Convention. However, the notion has evolved over the years, in particular to meet situations in the Third World where the application of an individualistic definition was impractical and recourse was had to *prima facie* group determination of refugee status. This has been done through resolutions adopted by the UNGA and the ECOSOC.

The competence of the UNHCR has also been extended through authorising it to use its 'good offices' to transmit contributions to those who are not 'persons of concern' under the statute. Further, GA resolutions have authorised the UNHCR to assist and protect persons displaced outside their country of origin who may not strictly

1. For a brief review of the reasons why India is not a member, see B.S. Chimni, 'The Legal Condition of Refugees in India', *Journal of Refugee Studies*, vol. 7, 1994, pp. 378-401 at pp. 394-98.

2. J.S. Verma, 'Refugees in SAARC Region: Building a Legal Framework', Inaugural address at a seminar on Refugees in the SAARC Region: Building a Legal Framework, New Delhi, 2 May 1997, pp. 3-9.

fulfil the refugee definition, extending its competence to persons who would be deemed refugees under the OAU Convention and the Cartagena Declaration.

Finally, the office of the UNHCR has been asked to come to the assistance of IDPs in certain limited circumstances. However, in recent years the involvement of the UNHCR with IDPs is increasing. Experts feel that its extensive involvement with IDPs may take place at the expense of diluting its concern for the rights of refugees, in particular the right to seek asylum.

**T**he three traditional solutions to the refugee problem are resettlement in a third country, local integration and voluntary repatriation – with the last being described as the most preferred solution. In recent years it is the solution of voluntary repatriation which is emphasized as resettlement has lost its use for western states after the end of the Cold War.<sup>3</sup> Even throughout the 1980s the number of resettlement cases averaged 122,000 per year. However, by 1992 the number had plummeted to a mere 37,000 or 0.2 per cent of the total number of refugees in the world. Local integration, on the other hand, is a rare event.

The international legal framework of voluntary repatriation is not adequately developed. There is no single universally binding legal instrument which lays down the principle of voluntary repatriation. In general terms one can, of course, make ready reference to Article 13(2) of the Universal Declaration of Human Rights which states that 'Everyone has the right to leave any country, including his own, and to return to his country.'

The 1969 OAU Convention remains the only international legal

instrument which establishes norms concerning voluntary repatriation. Reference may, however, be made to the conclusions adopted by the executive committee of the UNHCR on the subject of voluntary repatriation. While these conclusions are not legally binding they offer guidance as to the standards and practices which should govern voluntary repatriation. The first set of conclusions were adopted in 1980 (conclusion 18) and the second set in 1985 (conclusion 40). In the last few years the consensus contained in these texts is being increasingly questioned.

In this context there is a continuous need to stress that repatriation should only be voluntary and be carried out in conditions of absolute safety. In the only case decided on the issue in India, the Madras High Court in *P. Neduraman and Dr. S. Ramadoss v. The Union of India and the State of Tamil Nadu* (1992) emphasized the need to guarantee the voluntary character of repatriation.

**I**n this section I would like to draw the attention of the reader to certain disturbing developments in recent years concerning the institution of asylum.<sup>4</sup> A whole host of restrictive practices have been institutionalized in the western world to prevent refugees fleeing underdeveloped countries from arriving at its doorsteps. The Canadian sociologist Anthony Richmond has gone so far as to call this an attempt to construct global apartheid. I will identify below a few of the measures and interpretations which have been mobilized for the containment of refugees.

4. B.S. Chimni, 'The Language of Protection and the Reality of Rejection: End of Cold War and Crisis in Refugee Law', in K.P. Saksena (ed.), *Human Rights: Perspective and Challenges*, Lancer Books, New Delhi, 1994; B.S. Chimni, 'Globalization and Refugee Blues', *Journal of Refugee Studies*, vol. 8, 1995, pp. 298-99.

First, there are the restrictive visa policies and carrier sanctions; the latter making airline carriers liable to fines for carrying passengers without proper papers. Second, 'international zones' have been demarcated in airports where physical presence does not amount to legal presence and from where summary and arbitrary removal is permissible. Third, safety zones have been created inside countries – as in Northern Iraq and former Yugoslavia – to stop asylum seekers moving out and seeking refuge. As it turned out, these safe zones were the most unsafe you could imagine.<sup>5</sup>

**F**ourth, the principle of non-refoulement has been given an extremely narrow interpretation. For example, in *Sale v. Haitian Centers Council* [113 S.Ct 2549 (1993)] the US Supreme Court decided that the act of interdicting Haitian refugees on the high seas and returning them to their country of origin irrespective of the claims to having a well founded fear of persecution was not violative of Article 33 of the 1951 Convention. This decision met with near universal disapproval and has been described by the High Commissioner for Refugees as 'a setback to modern international refugee law.'

Fifth, most countries in Europe and the US since 1 April 1997, are implementing the 'safe third country' concept whereby asylum seekers are denied access to a comprehensive asylum determination procedure because they could apparently have sought protection in countries they passed through to reach their ultimate destination. This concept has grave conse-

3. B.S. Chimni, 'Voluntary Repatriation: A Critical Note', *International Journal of Refugee Law*, vol. 3, 1991, pp. 541-547.

5. B.S. Chimni, 'The Incarceration of Victims: Deconstructing Safety Zones', in N. Al-Nauimi and R. Meese (eds.), *International Legal Issues Arising Under the United Nations Decade of International Law*, Kluwer Law International, The Netherlands, 1995, pp. 823-854.

quences for the asylum seeker and has led to chain deportations, often back to the country from which the refugee fled. In an unfortunate decision, the German Federal Constitutional Court, in May 1996, upheld the German safe third country law legitimizing its practice in other countries as well. A recent report of the USCR, however, recommends that 'the use of national safe third country national laws and practices should be discontinued immediately.'<sup>6</sup>

**S**ixth, on the same theme, mention may be made of attempts to harmonise internal procedures in Europe. This has led to the adoption of two conventions known as the Dublin and Schengen Conventions which have recently come into force. The USCR has recommended the scrapping of these conventions as well insofar as the criteria used for determining claims of asylum seekers is concerned. It recommends that 'the country where the asylum seeker first chooses to seek asylum, rather than the country of first arrival, should normally assume responsibility for adjudicating the asylum claim.'<sup>7</sup>

Seventh, asylum seekers have been held in offshore camps which have been effectively declared rights free zones. For example, when the US started holding Haitian and Cuban refugees at Guantánamo Bay, a territory leased out from Cuba, a US Court of Appeals ruled in *Cuban American Bar Association (CABA) v. Christopher* [43 F.3d 1412 (11th Cir. 1995)] that refugees in 'safe haven' camps outside the US did not have constitutional rights of due process or equal protection, and were not protected against forced return. This is, accord-

ing to Bill Frelick of the United States Committee on Refugees (USCR), 'an open invitation for abusive and arbitrary conduct.'

**E**ighth, where an asylum seeker manages to cross these hurdles a very restrictive interpretation is given to the definition of refugee contained in the 1951 Convention. For example, asylum seekers fleeing former Yugoslavia, most of whom met the 1951 Convention definition, have been denied refugee status. Some countries (Canada, for example) have also invoked the internal flight alternative (IFA) test to deny refugee status.

A positive development in the realm of definition is that a number of countries including Canada (1993) and the US (1995) have issued guidelines on women refugees fearing gender-related persecution. These guidelines recognize that women may experience discrimination unique to their gender and that in some cases they can meet the standards for refugee status. However, in view of the legal barriers designed to keep asylum seekers out, women will not be able to access the status determination procedures in these countries.

Together, these interpretations and measures manifest a language of rejection which threatens the very institution of asylum. It needs to be urgently replaced with the customary language of protection which demands empathy and solidarity with the pain of victims, a complete respect for the principle of non-refoulement to ensure that the basic rights of refugees are respected, and finally guarantees that refugees are not coerced to go back to situations from which they have fled in the first place. In sum, it demands that solidarity, and not rejection and segregation, be the edifice on which to construct a new world order.

# Refugees and human rights

BRIAN GORLICK

'... it is on human rights issues which affect refugees and displaced persons that the sincerity of the international community will be tested.'

Sadako Ogata,  
UN High Commissioner  
for Refugees

HUMAN rights are freedoms which are granted equally to all persons without distinction. In a sense, human rights are universally recognized standards of behaviour. The violation of these standards by states, or other agents, may give rise to situations which lead to the creation of refugees. Refugees, by definition, are victims of human rights violations.<sup>1</sup>

Viewing the refugee problem in the context of human rights is clearly relevant. In fact, the origin of the international system of refugee protection, as codified in international refugee law, grew out of concern for the plight of refugees fleeing the troubles of post-war Europe. Regrettably, protecting and assisting victims of human rights violations which result in forced displacement is as relevant today as it was some 50 years ago. Refugees are not simply victims of human rights

1. A key element of the refugee definition as found in the 1951 Refugee Convention is fleeing one's country of origin 'owing to a well-founded fear of persecution.' Persecution is not defined in international refugee or human rights law. However, one commentator has offered the following description: '...persecution may be defined as the sustained or systematic violation of basic human rights demonstrative of a failure of state protection. A well-founded fear of persecution exists

violations, however, as they represent a distinct group of individuals who are without the protection of a national state. Hence, the international system of refugee law was adopted in order to replace the protection which is normally provided, or is at least the responsibility of national governments for their citizens.

The idea of developing a system of law which protects the human rights of individuals is also not new. Many states have been established on the basis that individuals have certain inherent rights which must be respected by the state. The idea of establishing a system of human rights law at the international level is a more recent development which has been catalysed through the United Nations. The UN Charter proclaims in its preamble that 'promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language or religion' is a primary purpose of the United Nations. Member states of the UN pledge themselves to take action in cooperation with the United Nations to achieve this purpose.

when one reasonably anticipates that the failure to leave the country may result in a form of serious harm which government cannot or will not prevent....' James Hathaway, 'Fear of Persecution and the Law of Human Rights', *Bulletin of Human Rights*, 91/1, United Nations, New York, 1992, p. 99.

2. There are currently 132 state parties to the 1951 Convention and/or the 1967 Protocol

With the adoption of the UN Charter in 1945 and the Convention relating to the Status of Refugees in 1951,<sup>2</sup> a number of other international human rights instruments have been developed and adopted by member states of the United Nations. These include the Universal Declaration on Human Rights (1948), the International Covenant on Civil and Political Rights (1966), the International Covenant on Economic, Social and Cultural Rights (1966) – collectively known as the International Bill of Rights – the Convention on the Prevention and Punishment of the Crime of Genocide (1948), the Convention relating to the Status of Stateless Persons (1954), and the Convention on the Elimination of Racial Discrimination (1965). More recently, the Convention on the Elimination of Discrimination against Women (1979), the Convention against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment (1984) and the Convention on the Rights of the Child (1989) have been developed at the international level.

In addition to the central foundational status of the Universal Declaration of Human Rights, more than 186 states have ratified or adhered to at least one (or in a majority of cases more) of these international treaties, thus establishing binding legal obligations of a continuing nature. Several South Asian states are party to a number of these major human rights conventions, in addition to the 1949 Geneva Conventions and their 1977 Additional Protocols concerning the laws of war.

relating to the Status of Refugees. Article 1(A) of the 1951 Convention defines a refugee as any person who: '...owing to a well founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group or political opinion, is outside the country of his or her nationality and is

Among the international human rights treaties, India is party to the two international covenants in addition to the International Convention on the Elimination of All Forms of Racial Discrimination, the Convention on the Rights of the Child, and the Convention on the Elimination of All Forms of Discrimination Against Women. India has also ratified the Convention on the Political Rights of Women, Convention on the Suppression and Punishment of the Crime of Apartheid, Convention on the Non-Applicability of Statutory Limitations to War Crimes and Crimes against Humanity, and the Convention on the Prevention and Punishment of the Crime of Genocide. India recently ratified the 1984 Convention Against Torture.<sup>3</sup>

On a regional basis, a number of human rights treaties have also been adopted including the European Convention for the Protection of Human Rights and Fundamental Freedoms (1950), the American Convention on Human Rights (1969), and the African Charter on Human and People's Rights

unable or, owing to such fear, is unwilling to avail him or herself of the protection of that country; or who, not having a nationality and being outside the country of his or her habitual residence as a result of such events, is unable or owing to such fear, is unwilling to return to it....'

3. *The Asian Age*, 17 August 1997, quoted a statement issued by the Indian Ministry of External Affairs that India's accession to the Convention Against Torture is part of 'India's determination to uphold the greatest values of Indian civilisation and our policy to work with other members of the international community to promote and protect human rights.'

In the refugee context, ratification of the Convention Against Torture is extremely important as Article 3(1) provides that: 'No State Party shall expel, return (refouler) or extradite a person to another State where there are substantial grounds for believing that he or she would be in danger of being subjected to torture.' Article 3(2) further provides that: 'For the purpose of determining whether there

(1981). In South Asia, despite efforts in this direction, no regional human rights framework has been established. However, some states, including India, have enacted national human rights legislation and have established human rights commissions.

In India the relevant legislation is The Protection of Human Rights Act (1993), which established the National Human Rights Commission (NHRC). Under this act, the NHRC has authority to inquire *suo moto* or on petition by a victim or any person on his or her behalf into a complaint of violation of human rights. Till date, the NHRC has investigated a number of complaints involving refugees. The 1996 Indian Supreme Court case of *National Human Rights Commission v. State of Arunachal Pradesh and another*,<sup>4</sup> is hailed as a landmark judgment in the area of refugee protection in the context of India and underlines the usefulness of engaging a national human rights machinery for refugee protection.

Besides the development of legal instruments and mechanisms, whether international, regional, or national, there is increasing agreement among states on the universal, indivisible and interdependent nature of all human rights – civil, political, economic, social and cultural. The 1993 Vienna World Conference on Human Rights, attended by some 5000 delegates from 171 states, reaffirmed the importance of the international system of human rights protection. The Vienna Declaration included a specific section

are such grounds, the competent authorities shall take into account all relevant considerations including, where applicable, the existence in the state concerned of a consistent pattern of gross, flagrant or mass violations of human rights.'

4. *National Human Rights Commission v. State of Arunachal Pradesh and another*, (1996) 1 SCC 295.

on refugees. It reaffirmed the right of everyone to seek and enjoy asylum, as well as the right to return to one's own country. It also emphasized the importance of addressing 'the root causes' of forced displacements and identified 'the responsibilities of states, particularly as they related to the countries of origin.'

In the international system of human rights protection, the grant of asylum by a state to persons entitled to invoke Article 14 of the UDHR cannot be regarded as an unfriendly act by another state. Similarly, and particularly in the post-Cold War context, it is widely acknowledged that international attention to human rights violations is not an interference in a country's domestic affairs, but is rather part of routine international diplomacy. Although some states will go to great lengths to avoid scrutiny or criticism before international human rights bodies, the international community has identified a need to strengthen and improve application and enforcement of the international system of human rights protection.

This has been realized through, for example, the UN-sponsored human rights missions in Cambodia, El Salvador, Guatemala, Haiti, the former Yugoslavia and Rwanda; the establishment of international criminal tribunals for the former Yugoslavia and Rwanda; and technical cooperation in the field of human rights with governments and other actors. Of course, the degree varies, ranging from assistance and advice, to monitoring and reporting and direct protection.

In its own policies and programmes the office of the United Nations High Commissioner for Refugees, or UNHCR, has incorporated a number of human rights principles. Its protection activities in countries of asylum and countries of origin include working

with states in the areas of legal rehabilitation, institution building, law reform and enforcement of the rule of law and providing humanitarian assistance to internally displaced persons (IDPs). Increased cooperation with international and regional human rights mechanisms are also new areas of involvement for UNHCR.

Of course, these activities add to an already overburdened agenda. Some states have expressed concern that UNHCR should not undertake tasks which go beyond its formal mandate. This concern is well taken. These activities are placing considerable strain on UNHCR's limited resources. Further, the question of whether UNHCR has the capacity and capability to do these tasks must be addressed. However, in this era of downsizing and reform of the UN system in general, it seems unlikely that UNHCR will be allowed to continue its activities along traditional lines.

In efforts to prevent refugee flows the UN and others, notably NGOs, are providing technical assistance to states within a general human rights framework. This includes the promotion of human rights standards through the training of judges, lawyers, and human rights activists; giving substance to educational rights by funding the construction of new schools in war-torn countries; and promoting economic rights through community based projects focused on providing assistance to returning refugees. Promoting enactment and enforceability of domestic refugee and human rights laws, promotion of national human rights institutions, and training of government authorities are other prevention oriented activities in which the UN, governments, and NGOs are increasingly engaged.

As part of the development of human rights principles through UN

conventions, a number of international treaty bodies, or committees, have been established to investigate violations, enforce standards, and assist states in implementing their treaty obligations. These bodies have the authority to examine periodic state party reports regarding implementation of the treaty provisions. And with the agreement of states, some treaty bodies have the competence to investigate and decide upon individual and inter-state complaints and undertake field missions in order to monitor implementation measures.

**D**uring examination of state party reports the committees may prepare formal conclusions and observations on the performance of states in complying with international human rights law. They may also formulate specific recommendations to governments. In recent years, some of these committees such as the Human Rights Committee, the Committee on the Rights of the Child, and the Committee Against Torture, have regularly raised issues about the treatment of refugees by state parties to the respective conventions.<sup>5</sup>

In general, the UN human rights machinery has paid great attention to the plight of refugees. This raises awareness of refugee protection issues

5. Most recently, the third periodic report of India was examined by the UN Human Rights Committee during its 60th session held at Geneva. In its 'Concluding Observations' under the heading 'Subjects of Concern and Committee's Recommendations', the committee remarked as follows: The committee, noting that international treaties are not self-executing in India, recommends that steps be taken to incorporate fully the provisions of the covenant into domestic law, so that individuals may invoke them directly before the courts. The committee also recommends that consideration be given by the authorities to ratifying the Optional Protocol to the (International Covenant on Civil and Political Rights), enabling the committee to receive individual communications relating to India. (Para 13).

through promoting legal standards for refugees and internally displaced persons in addition to sharing information concerning incidents of violations of refugees' rights. Human rights NGOs and UNHCR have played a key role in educating members of the international and domestic human rights communities on the linkages between safeguarding human rights and refugee protection. These initiatives have firmly entrenched human rights issues in relation to the refugee problem.<sup>6</sup>

**T**he refugee issue in India, and throughout South Asia, is an age-old problem. Indeed, the formation of the modern Indian state coincided with a massive exodus and influx of displaced persons. Some 30 million persons travelled across the newly formed borders. Today, the refugee population in India is about 260,000 persons. The largest groups comprise about 100,000 Tibetans followed by 64,000 Sri Lankan Tamils, 44,500 Chakmas from Bangladesh, 19,000 Afghans and a 1,000 of other nationalities mainly from Iran, Iraq, Somalia, Sudan and Myanmar.

While the Government of India recognizes Tibetans, Chakmas and Sri Lankan Tamils as refugees, other groups are not recognized and are con-

sidered foreign nationals temporarily residing in India. The 20,000 refugees not recognized by the GOI are assisted by UNHCR and provided international protection and assistance under its mandate.<sup>7</sup> Regrettably, given the present political turmoil in neighbouring countries, particularly in Sri Lanka, Afghanistan and Myanmar, it is expected that the number of persons seeking refuge in India will continue to increase.

**T**he legal authority to deal with issues of citizenship, naturalization, and foreigners rests with the Union legislature. In the Indian context, influx of refugees has been handled by administrative decisions rather than through specific legislative enactments. Some specific groups of asylum seekers from neighbouring countries have been accorded asylum by the Indian government on the basis that they are considered refugees. In fact, India accepts large groups of refugees who are fleeing not just for reasons relating to *persecution*, but also due to *generalized violence* (eg., Sri Lankan Tamils). It means India *de facto* accepts the definition of 'refugee' as found in the 1969 Organization of African Unity Convention, rather than

7. UNHCR is authorized *inter alia* to 'assume the function of providing international protection, under the auspices of the United Nations, to refugees who fall within the scope of the present Statute and of seeking permanent solutions to the problem of refugees by assisting governments....' In practice, these functions include determining the status of individual applicants for refugee status, as is the case for non-government assisted refugees in India and other countries of South Asia, and seeking durable solutions to their problems which may require promoting local integration, facilitating voluntary repatriation, or resettlement to a third country. The statute of the UNHCR is appended to UN General Assembly resolution 428(V) of 1950.

8. In addition to the refugee definition contained in the 1951 Refugee Convention and its 1967 Protocol, which are the primary international legal instruments for refugee status

the narrower definition provided in the 1951 Refugee Convention.<sup>8</sup>

However, this does not hold good for all groups. Certain refugees like Afghans, Iranians, Iraqis, Somalis, Sudanese, and Myanmar are not recognized by the Indian government. Consequently, UNHCR had to intervene through determining and granting refugee status under its mandate. This differential treatment of refugees is a fundamental problem. It negates the provision of legal rights and assistance which would normally be granted by an asylum country. Moreover, it is not clear what legal status or rights accrue to a person as a result of registration by the GOI as a refugee, nor the relationship between 'refugee' status granted by the government and corresponding national laws governing the entry and stay of foreigners.

**T**he host of international human rights instruments which have been ratified by India and other South Asian countries may significantly strengthen the international regime of human rights protection in South Asia.<sup>9</sup> Curiously, however, none of the South Asian countries have acceded to the international refugee instruments. Nor have any of them enacted a domestic legal framework in the form of a

applied by states, later international refugee instruments such as the Organization of African Unity (OAU) Convention governing the specific aspects of refugee problems in Africa broadened the scope of the term 'refugee', so as to include: '...every person who, owing to external aggression, occupation, foreign domination or events seriously disturbing the public order in either part or the whole of his or her country of origin or nationality, is compelled to leave his or her place of habitual residence in order to seek refuge in another place outside his or her country of origin or nationality....'

9. As concerns the application of international human rights standards in domestic law, the Chief Justice of India, J.S. Verma, recently noted in a speech at the SAARC Law and

Concerning refugees, the Human Rights Committee further stated: The committee expresses concern at reports of forcible repatriation of asylum seekers, including those from Myanmar (Chins), the Chittagong Hills and the Chakmas (sic). It recommends that, in the process of repatriation of asylum seekers or refugees, due attention be paid to the provisions of the covenant and other applicable international norms. (Para 30) See UN Document CCPR/C/60/IND/3 of 30 July 1997.

6. A useful compilation of the various activities of the UN human rights bodies concerning refugees and issues of forced displacement is found in the UN Commission on Human Rights Report entitled 'Human Rights, Mass Exodus and Displaced Persons' (ref: E/CN.4/1997/42 of 14 January 1997).

refugee or asylum law, or at least a determination procedure.

Furthermore, in light of existing human rights standards in South Asia, both through accession to international instruments and domestic laws, some may argue that it is unnecessary to adopt a law which provides specific recognition and protection to refugees. Others have suggested that such an exercise is too burdensome and would only create another set of legal obligations which the state will have difficulty fulfilling. Moreover, for a developing country such as India, the financial burden of hosting large numbers of refugees and ensuring that certain legal rights are fulfilled is simply too much to bear.

It is true that the international refugee instruments such as the 1951 Refugee Convention, in addition to defining who is a refugee, contain certain 'rights' provisions. This includes protection from refoulement, or forced

UNHCR seminar on Refugees in the SAARC Region held in New Delhi on 2 May 1997 that: 'In the absence of national laws satisfying the need (to protect refugees), the provisions of the (1951 Refugee) Convention and its Protocol can be relied on when there is no conflict with any provision in the municipal laws. This is a cannon of construction, recognized by the courts in enforcing the obligations of the state for the protection of the basic human rights of individuals. It is more so when the country is a signatory to the international convention which implies its consent and obligation to be bound by the international convention, even in the absence of expressly enacted municipal laws to that effect....' For a recent judicial application of this reasoning, see the Indian Supreme Court judgment of *Vishaka et al. v. State of Rajasthan et al.*, Writ Petition (Criminal) Nos. 666-70 of 1992, unreported judgment of 13 August 1997.

Certain 'rights' provisions of the Indian Constitution such as Article 14 (right to equality) and Article 21 (right to life and liberty) are available to non-citizens, including refugees. See the *National Human Rights Commission v. State of Arunachal Pradesh and another*, op cit. and *Khudiram Chakma v. Union of India*, (1994) Supp. 1 SCC 614.

return, protection against unlawful expulsion or detention, the right to employment and education, access to the courts, and freedom of movement, to name a few. In respect of many of these rights, refugees are supposed to receive the same treatment as nationals in the country of residence. Of course, certain provisions of the international refugee regime such as access to education and employment may incur financial hardship on developing countries. Many of these countries cannot cater to the basic needs of their own people.

However, it is not expected that a state would be obliged to fully implement the provisions of the international treaties overnight. These particular legal obligations, in the realm of socioeconomic rights, could be progressively implemented while taking into account the economic situation of the country concerned.

Finally, an oft-voiced criticism is that the international refugee regime is out of date and is being flouted by the industrialized countries. Thus, it is argued, a new legal regime should be enacted and efforts made to better enforce the international protection regime for refugees. Of course, a fundamental difficulty of international law is how to enforce it. Although a majority of the world's countries are state parties to the international refugee instruments and related human rights treaties which provide protection to refugees, it is extremely difficult for the international community or UNHCR to challenge the practices of some states who take a restrictive approach to refugees, whether through developments in the law or administrative arrangements. Unlike the human rights treaties, no supervisory committee exists in international refugee law to enforce implementation of the 1951 Refugee Convention or its 1967

Protocol through a formal process of interstate scrutiny.

Nevertheless, given the generally positive record of receiving and hosting refugees, it may be time for South Asian countries to codify their 'good practice' through acceding to the international refugee instruments and enacting national refugee laws. It is not a sound argument to suggest that as a result of an already generous approach to refugees no specific law is required. This would be like saying that because a state respects the rights of its people, there is no need for a constitution. The protection of the rights of asylum seekers and refugees through national human rights machinery should be further explored, as it is clear that the complementarity of international refugee and human rights law in the context of national procedures could provide a suitable legal framework within which to develop principles of refugee protection.

In this context, a greater challenge for the countries of South Asia may be to accede to the 1951 Refugee Convention or its Protocol and demonstrate to the industrialized world how the spirit and scope of the refugee treaties can be implemented and respected. This would enhance South Asia's image as committed to upholding the human rights of all persons, including refugees. It would also be consistent with their broader human rights obligations as members states of the United Nations.

Ironically, three South Asian countries – Bangladesh, India and Pakistan – are members of the UNHCR executive committee. And yet, as noted, none of these countries have formalized their commitment to protecting and assisting refugees through adopting an international or national legal framework. Isn't it time to do so?

# Having lost our homeland

AHILAN ARULANATHAN and  
ELIZBETH van SCHAAK

ALTHOUGH precise numbers are not readily available, since 1983 Sri Lanka's civil war has claimed the lives of over 40,000 people.<sup>1</sup> Furthermore, over one million<sup>2</sup> people have been internally displaced by the conflict between the government and the Liberation Tigers of Tamil Eelam (LTTE) and over 200,000 have fled to India since the early 1990s. While some of these refugees have integrated into Tamil society in South India, most (69,000) reside in state-run refugee camps scattered throughout Tamil Nadu.<sup>3</sup> Over the past few years, government statistics and newspaper

reports suggest that the flight of Tamils from Sri Lanka to India has gained momentum despite the increasing scarcity of boats and close monitoring of refugee movements by the Sri Lankan and Indian navies.<sup>4</sup>

This essay examines the situation and treatment of Sri Lankan Tamil refugees living in camps in Tamil Nadu. It is based on field studies conducted by the South Asia Human Rights Documentation Centre (SAHRDC). Although, the GOI has not ratified the 1951 Convention Relating to the Status of Refugees and its Optional Protocols, the treatment and protection of refugees, in particular the principle of *non-refoulement*, has become a part of

4. Government statistics indicate that in the last five months of 1996, 7108 Tamils arrived at Rameswaram or Dhanushkodi, and a further 910 arrived between 1 January and 8 May 1997. Refugee flows continued for quite some time.

customary international law. International human rights instruments and in particular the Convention Against Torture recognize the principle of non refoulement. India as a member of the executive committee of the UNHCR and assignatory to many human rights instruments is obliged to abide by them.

NGOs attempting to aid the Sri Lankan Tamil refugees have faced numerous impediments in carrying out their activities. All NGOs were restricted from working in the refugee camps as a result of an order (Ir.no. C2.4095/92) promulgated by the Tamil Nadu government in June 1993. The government, however, tolerated OfERR, a refugee organization, providing some essential services.

**A**fter the Dravida Munetra Kazhagam (DMK) came to power in June 1996, the situation has slightly improved. In January 1997, the GOI, after consulting with the DMK-led government, in an order (letter no. 45043/96-4) relaxed the restrictions on NGO operations in the camps.

Under the current official policy, NGOs with security clearance and which receive government approval may serve the refugee population. However, they are not allowed to provide relief 'directly' and must operate through government organizations. Some NGOs like OfERR have reached a 'working arrangement' with the government whereby, after informing the appropriate authorities, they are able to provide services directly to the refugees.<sup>5</sup>

But, the precise status (and legality) of the NGO operations in the camps remains ambiguous. This uncertainty creates disparities in their

ability to provide services to the refugees. At any time and in any area, government agents may suddenly decide to enforce the rules, resulting in a restriction of services for the refugee population. Since March 1997, in Uchapatti camp of Madurai district, OfERR has not been allowed to distribute the Bengal gram protein supplement (given to children between 2 and 5 years old). Finally, as with NGOs elsewhere in India, they may only receive foreign funds with the prior approval of the Government of India.

It is a part of the GOI's policy to ignore the refugee problem by neglecting camp conditions in an attempt to pressurise the refugees to leave (overtly and covertly) when the situation in Sri Lanka allows it. The operations of the Indian Navy also make it exceedingly difficult for refugees to reach India. The government has created 'special camps', ostensibly to segregate Tamil militants from the rest of the refugee population.

The DMK government has been somewhat responsive to requests for improvements in camp conditions leading to a few positive developments like lifting the ban on refugees attending universities in June 1996. However, it remains at least as harsh as the previous AIADMK regime in its attempts to discourage refugees from coming to the country, and in its handling of the security situation in the camps.

**T**he 1951 Convention and other international human rights instruments provide guidelines for housing, food, water, nutrition, health care, education, and employment of the refugees. During the field visits,

vices in the presence of government officials because, in most cases, the officials do not live in the camps, and therefore are unlikely to be available on every occasion that services are provided.

SAHRDC sought information on the following aspects of camp life: shelter, sanitation, food, government stipend (or dole), water, health care, education, movement restriction and social welfare.

The situation in the camps appears appalling. People live in extremely cramped quarters that in most cases were clearly designed for temporary accommodation. Food rations are inadequate, water sources are scarce, and children are alarmingly small for their age. Under international law, the condition of any refugee camp is to be evaluated in the context of the living conditions of the local population. Food and water shortages, and malnutrition exist in other parts of Tamil Nadu and, at least in theory, the refugees have access to the same government ration system utilized by the poorer sections of the local population.

**U**nfortunately, the refugees are at a disadvantage relative to the general population in several key respects. First, NGOs seeking to provide services to the refugees are subject to constraints and they cannot operate 'directly' in the camps. They may only operate with foreign funds subject to approval from the GOI. Additionally, orders restricting the movement of refugees promulgated during the previous AIADMK regime persist. Consequently, refugees living in areas where employment is scarce are legally barred from travelling long distances to work. Although the rules restricting freedom of movement are not enforced strictly, their very existence makes the refugees vulnerable to exploitation by government officials.

SAHRDC visits revealed that even in 'ideal' situations, where the refugees did not suffer from movement restrictions and employment opportunities near the camp were plen-

5. OfERR workers attested to the existence of this working arrangement. An OfERR worker stated that it would be practically impossible for them to actually carry out all of their ser-

tiful, three major problems were near universal. First, the lack of adequate sanitation facilities is a problem even in the best of camps. Second, the number of drinking water sources remains unacceptably low in nearly every camp. Finally, even where movement restrictions are not enforced, they still exist on the books, leaving refugees vulnerable to mistreatment should a particular *tahsildar* (revenue official), collector, or other authority figure be so inclined. At almost all times, refugees are forced to act illegally in order to survive.

**A**rticle 21 of the refugee convention requires that they be granted housing provisions that are, 'as favourable as possible and, in any event, not less favourable than that accorded to aliens generally.' Although their presence is a great burden upon the host country, refugees should receive all necessary assistance and be provided with the basic necessities of life, including shelter. Housing in the Tamil Nadu refugee camps falls well below universal standards.

The most common form of housing in the camps is a tar sheet hut. In general, tar sheets last about two years. However, many tar sheet huts were erected seven to eight years ago. Many have holes and therefore are unable to keep water out, especially during the rainy season. Substantial repairs are expensive: each tar sheet costs approximately Rs 50 and the roof of a typical tar sheet hut is composed of 30 tar sheets. Refugees do not have money to repair them and most have simply learnt to live with a leaking roof. Even if the huts are fully repaired, tar sheets have little ventilation, and therefore the interiors become extremely hot. During the dry season, when temperatures regularly reach over 37 degrees celsius, the huts become uninhabitable.

Many refugees who do not live in tar sheet huts live in 'godowns', large warehouses originally meant for the storage of grain (therefore intentionally designed to be poorly ventilated). Multiple families live in these structures, separated only by sheets. The lack of privacy serves to exacerbate social problems existing in refugee camps. Even where the refugees have more permanent housing, it is often inadequate and sub-standard. In the Athicatanoor camp in Salem, they are housed in semi-permanent tile structures with solid walls that were built to house Burmese refugees in 1958. Forty years later, the tiles are breaking in various spots and many houses leak.

**C**amp report information from the March-June 1996 data set indicates that sanitation facilities are grossly inadequate, both in terms of quantity and quality. The camps were originally supposed to provide a latrine for every 10 families, but none meets this standard. Of the 11 camps in the sample, four have no usable latrines, and another four have less than one working latrine for 100 people. The worst situation is in Paramathy camp with no functioning latrines for 1,166 refugees. Only one camp, Pambar, was anywhere near the suggested ratio of one latrine for 20 people. Even then, at the time of data collection, it had only 16 latrines for a population of 396. Moreover, that camp appears to be anomalous, as the second best conditions described in the data set, in the Thottanuttu camp, provide only one latrine for every 51 persons.<sup>6</sup>

Visits by SAHRDC researchers suggest that the figures in the data set may be relatively optimistic. Gummidipoondi, a relatively affluent camp

6. A visit to Thottanuttu camp revealed that since the data collection, several other latrines had become unusable, such that the camp

of 2,500 people near Chennai, has no working latrines. In Athicatanoor camp in Salem district, there have been no latrines for the past 2-3 years, and residents have often had to surreptitiously go outside as the farmers in the surrounding areas do not like them using the neighbouring lands. The nearby Pavalathanoor camp has no latrines for its 1,300 residents. The camp residents use a neighbouring road as a divider for men's and women's side.

The prevalence of inadequate sanitation creates numerous problems. People are forced to use the open air, which increases the spread of infectious diseases such as typhoid, particularly during the rainy season. Medical assessments indicate that such diseases are common. The use of open air also gives rise to social difficulties, particularly for female refugees.

**W**ithin the camps, the food and money situation is inextricably linked; the amount of money a family has is a key determinant of the food it is able to buy. The government provides a stipend at the following rate: the head of every family receives Rs 150/month, each other adult (above age 12) Rs 120/month.<sup>7</sup> For children (age 12 and below), the first child receives Rs 75/month, and each additional child Rs 37.5/month. Additionally, towards the end of 1997, there was a flat increase in the stipend of Rs 50/family (irrespective of family size).

The government also provides subsidized rice to the refugees. Each adult (above 8 years of age) receives 400 grams of rice/day at 57 paise/kilo. Each child (8 years and under) receives 200 grams/day at the same rate. Finally, the government's general ration of subsidized kerosene, sugar

currently has only two working latrines for approximately 540 people.

7. This was corroborated by many workers familiar with the situation, as well as refugees.

and wheat flour which it provides to the local population is also available to the refugees. The subsidized rice given to them, however, is of inferior quality.

**N**early everyone says that the government stipend (or dole as it is called) and rations are insufficient to ensure adequate food, especially for people with children. Rampant malnutrition also suggests that food is inadequate. While the recent increase in stipend payments undoubtedly helps, it is almost certainly not enough. Apart from the sheer lack of money, additional problems arise because the stipend arrives late. The dole is supposed to arrive in two installments – one on the first day of the month, the other on the 16th day. While the number of late deliveries has decreased under the current government, the consistency of timely dole deliveries depends on local government officials. For example, in Korukapatti camp (Salem district), the dole due on 1 July 1997 was not distributed until 14 July.

In some camps, subsidized rice and other goods from the government are only available on one or two days each month. Therefore, when the dole is late, refugees are forced to either borrow money to get the rations that day or buy these essentials outside the camp at market rates. In other cases, even when the dole arrives on time, the rations consistently arrive late. In the Pambar Dam camp in Dharmapuri, one woman reported that the dole money usually runs out by the time rations are available, as rations are usually 12 days late. She said she had been forced to take loans to meet her food requirements.

The combined effect of inadequate dole and food provisions is a well-documented widespread malnutrition among the refugee population. The most comprehensive study of the

nutrition situation in the camps, undertaken by Dutch Inter-Church Aid (DIA) and published in November 1995, described the following situation: 'The percentage of low birth weight (small for gestational age) was found to be high at 53% below 2.5 kg (2.5 kg is the average birth weight for this population)... Whilst no anthropometric data on adult women are available, the short stature of many women in the camps is visibly striking... Levels of underweight among children under 5 years of age remain surprisingly high, with 38-53% being moderately to severely undernourished. The trend is towards (an) increase in these levels.'<sup>8</sup> The study also found that malnutrition in the camps stems primarily from income-related food shortages.

**T**he government dole has remained unchanged since 1990 and, at 1995 prices, can purchase only 40% of the basic 'food basket'. A family has to be guaranteed access to 20 days of labour at adult male rates to ensure enough additional income to provide a complete, basic diet. Most families cannot do so, as government restrictions on movement of refugees limits access to sources of employment outside the camps.<sup>9</sup>

Since the release of the study, there has been a flat increase in the dole of Rs 50 per family. However, given the size of the 'gap' described above, coupled with the many needs of the refugee population (particularly housing), this increase is unlikely to be sufficient to solve the malnutrition problem. Given that the refugees' malnutrition problems are so closely

8. The Femconsult/Dutch Inter Church Aid/OiERR study, 'An Assessment of the Nutrition Enhancement and the Income Generation Programmes of OiERR', November 1995, p. 10, 12.

9. *Ibid.*, 10, 20.

related to the availability of money, which in turn is limited by the movement restriction policy, the late arrival of dole (on occasion), and the curbs on NGO activity, it is clear that the GOI plays a major role in contributing to the malnutrition problem of the Tamil refugees.

**T**he existence of a safe drinking water supply plays a crucial role in ensuring the health of a given community. Contaminated drinking water is a major source of disease. Additionally, general dehydration can be a contributing factor to many health problems. In general, the potable water systems in the camps are inadequate. Drinking water is drawn either from tube wells (constructed with a bore) or water pumps, which access water from 'tanks' which harvest rainwater. The reliability of the water supply depends on the season. During the rainy season, tanks are more likely to be full and the tube well supply stronger. However, even during the monsoon, refugees living in camps which have a low water source to population ratio are forced to wait in long lines for water.

During the dry season, the supply situation becomes precarious. SAHRDC was told that at the Chinnappalli Kuppum camp the water situation is particularly bad during the dry season, when people routinely wait 2 to 3 hours for water from the tube wells. People have to queue up to get water before leaving for work, thus requiring them to stand in line at 4 am. Overall, Chinnappalli Kuppum has only one source of potable water for 811 people.

The situation is worse in Palarannaikuttu camp, Vellore district (population 947), where there is actually no drinking water source within the camp. There are two bore wells, but the water is salty. The nearest potable water source is approximately

2 km from the camp—a natural spring which is not more than six or seven feet below the ground level. A stagnant pool is close by, and while the camp health worker told SAHRDC that the water source was not connected to the murky water, she acknowledged that in the rainy season run-off from one to the other was inevitable.

**N**umerous international instruments emphasize the importance of the availability of health care; *a fortiori* for particularly vulnerable groups. Unfortunately, the medical treatment available to Tamil refugees living in camps in Tamil Nadu does not even meet the 'United Nations Standard Minimum Rules for the Treatment of Prisoners.' Detailed information about health conditions is hard to come by. Despite the lack of hard data, certain aspects of the health problem in the camps are clearly visible. Most readily apparent is the strikingly stunted growth which is evident in all camps. This is a sure sign of malnutrition.

The presence of numerous communicable diseases presents a second substantial health problem. Though hard epidemiological data is lacking, doctors and health workers report that diarrhoea and respiratory illnesses are the most common diseases seen by health workers in the camps. The presence of these diseases is not surprising given the absence of reliable and adequate water supplies, the absence of lavatories in most camps, and the crowded housing conditions in which refugees live. Health workers report the presence of typhoid, tuberculosis and malaria. Though no epidemics of rat-borne diseases have been reported, health workers confirm the presence of rats in refugee camps.

In the context of these substantial health problems, access to health care poses unique difficulties. While

the local public health care system is generally open to refugees, such that most of them are in fact cared for by local public health authorities, their access to health services is limited, because camps are often in isolated areas and the government restricts their movements. Distance problems often force them to use local private practitioners, who charge much more.

The movement restrictions create problems because permission to leave the camp is needed prior to the time of departure. If the onset of illness is sudden, refugees cannot legally leave the camp to receive treatment as tahsildars live outside the camp. The restriction interferes with the operation of the health worker education/training programme in the same way that it interferes with refugee employment. Thus, the movement restriction decreases the availability of health services provided by the refugees to other refugees.

**E**ducation in Tamil Nadu is compulsory and free (except for certain yearly school fees) through the 12th standard. Until 1991, refugee children enjoyed access to primary education and various post-secondary courses in the surrounding community and in a variety of subjects. Refugee children received free textbooks, school uniforms and bus fare. Special admission quotas were reserved for refugee children over and above the usual enrolment of Indian students in medicine, polytechnic, engineering and other graduate and postgraduate programmes.

According to one refugee, these provisions for the education of refugee children represented perhaps the best treatment ever given to refugees by a host nation. However, in 1991, amidst the backlash against the Sri Lankan refugees following Rajiv Gandhi's assassination, admission to

the higher education facilities mentioned above was revoked pursuant to a state government order.

In 1994, in response to demands made by individuals and organizations within India, orders were passed allowing refugee children to resume their education, but only through 12th standard. In 1997, following the election of the DMK government, refugees were allowed to enter universities. However, the concessions on school and examination fees were not reinstated.

Although the DMK government lifted the restriction, parents continue to experience difficulties in securing admission for their children to certain government schools. Many college authorities refuse to admit Sri Lankan refugees until they receive confirmation that the order permitting admission which was valid last year is still valid at this time. Nonetheless, most refugee children study in government schools. Some private schools also admit refugees. Generally, once the government authorizes admission, it is forthcoming.

**A**lthough the movement restrictions are not employment restrictions as such, they serve to limit the refugees' ability to secure adequate gainful employment. The restriction on the freedom of movement undermines their self-sufficiency. The orders restricting the movement of refugees issued in 1991 remain on the books. Camp residents are required to be in the camp at a certain time each morning and night. Moreover, they are allowed to leave for longer than that only for three days each month. Camp residents wishing to work outside the immediate vicinity usually cannot return in time for the registration checks. In camps where guards are strict, absent residents are reported to local police authorities. In other

camps, dole is deducted for the days when refugees are absent. Even in the most lenient camps, refugees must be present on days when the dole is distributed. Given the inadequacy of the dole, the effect of the movement restriction is debilitating.

**R**efugees commonly make an 'arrangement' with camp guards, collectors or tahsildars, allowing them to stay outside the camp to work for certain periods. In exchange, camp officials keep the refugees' dole. Refugees are commonly forced to choose between work and the dole, a choice the government should be discouraging rather than encouraging.

The movement restriction also prevents refugees from securing permanent productive employment that would allow them to properly integrate into Indian society. In the Kotupattu camp, one resident told SAHRDC that though he had a Bachelor's degree in commerce, he had no permanent job because to get a job suited to his qualifications he would have to travel far from the camp. Instead, he opted for daily labour jobs which were available nearby, including building and painting houses.

Originally, restrictions of movement were justified on security grounds: the rationale being that Tamil militants operate from the camps and the authorities need to monitor the movement of refugees. However, even if the refugee registration system ever served as an effective deterrent to militant activities, it seems inappropriate now. Many of the same refugees have lived in Indian camps for six or seven years. Presently its primary function is to inhibit the movement of health workers, the elderly, and others.

Health workers report widespread psychological problems among the refugee population. Many

also suffer from post-traumatic stress disorders. Alcoholism, intra-familial violence, anxiety, depression, and a large number of suicides,<sup>10</sup> often among young people, indicate that the psychiatric problems in the refugee population are due more to situational conditions than to fundamental psychiatric disturbances. The reported incidence of early marriages in the camps also indicates a breakdown of social support systems among the refugee population.

Most refugees live in a vulnerable position. They often have to act illegally in order to survive and are subjected to arbitrary government control. There has been reported rise of prostitution. In addition, there are many thugs and agents who recruit refugee women to work as maids in the Middle East, where most end up working in extremely poor conditions. A woman stated that it was difficult to turn down the job offers because they are desperate for economic opportunities. Cases of refugees failing to receive compensation for work injuries and murders that police are reluctant to pursue also exist, suggesting that access to state protection is lacking among the refugee population.

**T**he Sri Lankan Tamil refugees continue to face problems from the Government of India and state government of Tamil Nadu in clear violation of international human rights law. Though most refugees are desirous of becoming self-supportive, they are hamstrung by the government's ill-conceived movement restriction policy. Consequently, the Sri Lankan Tamil refugees continue to endure needless hardships.

10. NGOs reported that in 1994 five people committed suicide in Taramangalam camp, due in part to a lack of food and government assistance.

# Survival dignity and democracy

CATHÉRINE MOLLER

SINCE September 1988, when the State Law and Order Restoration Council (SLORC) came to power, approximately one million Burmese nationals have fled to neighbouring states.<sup>1</sup> Approximately 55,000 Burmese nationals are currently in India. However, of that number, only about 467 are recognized and protected refugees of the United Nations High Commission for Refugees (UNHCR). This report focuses on the plight of Burmese refugees in India, in particular the predicament of those who remain unrecognized and unassisted in the north eastern frontier, and the situation of the refugee population in Delhi.

Most of the data for this report was gathered over a three month period from May to July 1997. About 60 in-depth interviews were conducted with UNHCR officials, NGO representatives, Burmese refugee leaders, and

Burmese refugees. In this report, the term 'Burmese refugee' includes all nationals (including ethnic minorities) living within the territory known as Burma or Myanmar.

After the Burmese military crackdown in September 1988, up to 1000 students and youth fled to India, arriving in the north eastern states of Manipur and Mizoram. A few weeks after the first students arrived in the country, the GOI announced that as long as their lives were in danger, it would not turn any of them back. Since issuing that statement, with only few exceptions, it has demonstrated a lack of concern for their plight.<sup>2</sup>

Of those Burmese who fled to India, most arrived in Moreh, a border town in Manipur. They spent several nights to several weeks in the police station until refugee camps were set up. Refugee camps were ini-

tially set up close to the border. However, after threats from Myanmar's army, refugees were shifted to Leiken camp in Chandel district.<sup>3</sup> At the Leiken camp, 'We felt like prisoners,' said Soe Myint, executive committee member of the Delhi-based All Burma Student's League (ABSL). Without receiving adequate food, water, or medical attention, they contracted malaria, dysentery, and diarrhoea. After the media exposed that money provided by the government to meet the basic needs of the refugees had been embezzled by local officials, reporters were forbidden from meeting with the refugees.<sup>4</sup>

**R**efugees caught sneaking out of the camp to contact their associates, conduct political activities, or to purchase medical and food supplies were beaten and sent to Manipur central jail. They were charged under the Foreigner's Act and received jail sentences of up to one and a half years.<sup>5</sup> Fortunately, a group of Indian lawyers secured their release and brought them to UNHCR in Delhi. After a few months, most were granted refugee status and financial support, becoming the first UNHCR-recognized Burmese refugees. At one time official registration at the Leiken camp reached several hundred refugees. Besides the 80 students who were forcibly deported by the Manipur authorities in March 1989, others secretly left the camp to continue their political struggle elsewhere, in Northern Burma, Bangladesh or Delhi. The camp was still open in 1997, however, with less than 30 people.

No one knows exactly how many Burmese nationals are in the Indo-Burma border areas, although there are over 40,000 displaced Burmese of Chin ethnicity in Mizoram alone. Accurate numbers do not exist because the region is isolated and remote and the

refugees do not identify themselves as such for fear of harassment, arrest or deportation.

Prior to 1990, most migrants were single males who were easily absorbed into the local economy. Employment opportunities in the North East since have shrunk dramatically. In Champhai, Mizoram the frustration and resentment of the local population has spilled over to the newcomers.

Starting in 1994, arrests and massive deportations of Burmese nationals began occurring in the border region. According to the Chin Refugee Committee (CRC), more than 10,000 Chin political refugees were taken in lorries by the Mizoram Police to Champhai, Saiha, and Cerhlun (small towns and villages situated on the border). Fortunately, many of the refugees were able to escape before being deported.

**I**n June 1995, tensions between the local Mizo population and Burmese Chins increased after Mizoram newspapers reported that the President of a village unit of the Young Mizo Association (YMA) had been shot and killed by three members of the Chin National Front (CNF). A reign of police terror and massive arrests followed. According to local newspapers, the home minister of Mizoram, Lalsangzuala, attended a youth rally in Aizawl and asked all Burmese nationals to leave Mizoram.

Tensions worsened after 9 August 1996, when a Mizo pastor was shot in Champhai district. Over the next few days, the CID<sup>6</sup> arrested at least 15 Chins from Aizawl without laying any formal charges. Many of those detained were tortured. Lian No Thang, a 20-year resident of Aizawl, was threatened by the Mizoram state CID on the 10 and 11 August and was told to leave Mizoram by 13 August

1996. Many observers are concerned that the 1998 Mizoram state elections are likely to create even more problems for Burmese nationals, particularly when people register to vote and when campaigns with anti-foreigner themes are launched.

**M**any refugee and humanitarian groups believe that the Indian government is more concerned about normalizing diplomatic relations and improving trade between the two countries than it is about the lives of tens of thousands of Burmese refugees living within its borders. With few exceptions, India's diplomatic and trade relationship with SLORC has been steadily improving. In August 1992, the first high-level meeting between India and Myanmar took place since 1987.<sup>7</sup> Again in 1995 and 1996, several sectoral and national level meetings were held to create mechanisms for 'curbing and containing insurgency' in the border region and to open up cross-border trade.<sup>8</sup> On 12 April 1995, a series of joint military campaigns, known as 'Operation Golden Bird', were launched to quell border insurgency. In August 1996, 12 Burmese refugees (including 6 UNHCR-protected refugees) were refouled.

UNHCR's mandate to protect and assist refugees extends only to those living in Delhi. Even so, many refugee and humanitarian groups believe that the UNHCR-recognized refugees are receiving inadequate assistance for fear that better treatment will result in a mass exodus of refugees from the North East to Delhi.<sup>9</sup> As stated in a letter of 4 December 1995 from D. McNamara, Director, Division of International Protection, UNHCR Geneva: 'UNHCR would be ready to assist the Chin refugees in the Mizoram state if allowed to do so by the authorities. However, we do not believe that individual assistance in

New Delhi would address the plight of the group. It might on the contrary aggravate the situation by drawing large numbers of refugees to New Delhi where we do not have the capacity or resources to meet their needs adequately.<sup>10</sup>

As of June 1997 there were 467 officially-recognized Burmese refugees in the country. Most of them are student activists who left Burma during the 1988 uprising. In Delhi, the refugees are concentrated in the western suburb, Janakpuri. Recognized Burmese refugees comprise a small minority in a total UNHCR caseload of about 25,000, the majority of whom are Afghans.

**U**nlike Tibetan refugees, the government does not permit Burmese refugees to acquire residential and other legal documents. In the North East, displaced Burmese nationals experience deportation, extortion, and harassment because they lack formal legal status. Even UNHCR-recognized refugees experience considerable hardship and problems. Without formal legal standing in India, they cannot assimilate and find secure employment.

In 1996, UNHCR sub-contracted the Public Interest Legal Support And Research Center (PILSARC), an Indian NGO, to provide legal services to the refugees. According to a UNHCR legal officer, refugees can approach their office with legal problems and will be referred, if necessary, to PILSARC. However, no refugee SAHRDC spoke with, including community leaders, had ever heard of the group or consulted with it. Many refugees are so disillusioned with the UNHCR that they are convinced that official refugee status is only arbitrarily awarded. Refugee groups and NGOs involved in Burmese affairs are unclear as to UNHCR's criteria and procedures to

bestow or deny refugee status. Most complained of unfair treatment during their UNHCR interview.

Many Burmese refugees who had fled to India in 1988 but who did not apply for UNHCR status until 1994 or after, told SAHRDC that they were either viewed suspiciously, rejected, or not awarded financial assistance.<sup>11</sup> Some did not immediately travel to Delhi to apply for official status because prior to then they had been relatively secure. Until the crackdowns began, most preferred to remain in Mizoram or Manipur where they could speak the local languages, blend in, work, and be closer to home.

According to UNHCR's global guidelines, any refugee claimant may appeal a negative decision concerning refugee status. UNHCR must also inform the claimant why his/her application has been rejected.<sup>12</sup> In at least three cases, the claimants were not given any reasons why their applications were refused. On condition of anonymity, a UNHCR staff member stated that in India the agency does not reveal the reason for rejection to applicants because 'it sparks debate.'

**O**ne of the claimants whose application was refused by UNHCR, Lia Lian Thang (R 3883), was forced to flee to India in 1992 because his brother was involved with the CNF. He arrived in Delhi in January 1993 and participated in a hunger strike when his UNHCR application was rejected. He was interviewed twice and rejected both times. He went to UNHCR 10 times before receiving the final decision in September 1995. He claimed that he was never informed why he was rejected and that his appeal interview lasted only five minutes. Today, he has no stable place to live and no means of support. He depends on the kindness of friends and colleagues for his survival.

UNHCR legal officers aver that asylum-seekers are granted an interview within a fortnight of making an application, with results to be expected in one month, if not sooner. The maximum amount of time an applicant may have to wait is two months. They complain that delays in awarding status are the fault of asylum seekers who have not responded to their appointment slips or who have not received them. Nonetheless, in a letter dated 3 March 1997, the CRC provided UNHCR with a list of 15 refugees who had been initially rejected. No response had been made to their appeal letters and some had been waiting for one-and-a-half years. Many asylum-seekers miss appointments through no fault of their own. The most common reason being that the letter does not reach them in time. Usually, only about one week prior notice is given for UNHCR appointments.

**O**ver the past few years, several hunger strikes have been staged in front of UNHCR's offices to protest the unfair treatment of Burmese asylum-seekers. The first such strike was launched on 14 November 1995 by seven families. In June 1995, UNHCR had asked them to come to Delhi. Four months later, their applications were rejected. Although the then Deputy Chief of Mission had promised to respond to their appeals by 24 November 1995, his response was delayed twice.<sup>13</sup> The refugees ultimately met with second and final rejections. At that time, some applicants acquiesced and returned to the North East.

By May 1996, after waiting for over one year and being joined in their protest, many in the group obtained official refugee status. However, in a sudden departure from previous practice, the UNHCR would only offer a one-time grant of Rs 4,300<sup>14</sup> for the round-trip travel expenses. Despite

receiving warnings by Chin refugees and some NGOs of increased border insurgency and unrest, UNHCR urged the hunger strikers to return to Mizoram and said they would be safe.<sup>15</sup>

For financial reasons, most hunger strikers had no choice but to give up their struggle. In July 1996, they returned to Mizoram hoping that their certificates would protect them. Unfortunately, many were caught up in the July and August 1996 crackdowns. Ro Thla Peng (BU 224), a refugee who had participated in the hunger strikes, was arrested in Aizawl by the CID on 10 August 1996. He was beaten by the police and threatened with deportation unless he left Mizoram.<sup>16</sup> Subsequently, he went into hiding and eventually made his way back to Delhi.

**A**ccording to UNHCR's Determination of Refugee Status, a recognized refugee has the right not to be sent back to the country of origin (refouled).<sup>17</sup> In December 1995, five SLORC soldiers defected to the CNF. Six more defected in July 1996. They were part of the LIG (Light Infantry Group) 268 and 269. After staying in the North East for several weeks, they travelled to Delhi to seek UNHCR protection. The first group of five defectors obtained UNHCR refugee status. The second group had been interviewed and their status decision pending when an Indian intelligence agent visited the New Delhi office of the National Coalition Government of the Union of Burma (NCGUB).<sup>18</sup> There he told the staff that the defectors had to leave the city because of India's policy on deserters and security threats. He suggested that they return to Mizoram where they could be protected in a camp. Ko Naing, President of the Democratic Students of Burma, offered to accompany the defectors back to the North East. After the army defectors and Ko

Naing left with the Indian intelligence agent, they went missing.

At the end of August 1996, it was learnt that the Indian government had handed them over to the Burmese Army at the North East Command.<sup>19</sup> Of the UNHCR-recognized refugees, some are believed to have been sentenced to death. Others have received sentences ranging from seven years to life in prison.<sup>20</sup> Ko Naing was seen several months later in Monywa jail in Upper Burma. He is reportedly kept in a dark cell with his hands and legs tied up. He is paralyzed from the waist down from severe torture. In a state of severe mental instability, he is unwilling to speak to anyone.

The UNHCR claims that it learnt of the refoulement only after it happened. Informed sources revealed, however, that UNHCR had received prior notification and told Burmese groups that if India (the host government) wanted to take action against any recognized refugee, their office 'could not do much.'

**U**nder a sub-contracting agreement with UNHCR, the Young Men's Christian Association (YMCA) has been responsible for all refugee education and training courses since early 1996. Before 1996, UNHCR had its own English language classes. Without exception, every Burmese refugee surveyed by SAHRDC wanted to improve his/her English language ability. However, most neither knew about the YMCA English language courses nor where they took place. Of the six people interviewed who had at one time registered for either UNHCR or YMCA classes, half dropped out because they felt the classes were not useful and of poor quality.

Although nearly 40% of the refugees interviewed indicated an interest in taking Hindi classes, neither refugees nor their leaders were

aware that the YMCA also offered them or that they were free. The majority of refugees stated that they could not take either language course because of child care responsibilities or because they could not afford the bus fare. Some also expressed doubt about the quality of the courses as also their ability to follow the instructions. According to the service providers, Burmese refugees do not participate in YMCA language training because they organise their own classes.<sup>21</sup> This is not so. Occasionally, an alternative for them has existed (for example, until January 1997, English classes were sponsored by the Other Media, the Open Society Institute (OSI) and the British High Commission). However, the only Hindi language courses available are those offered by the YMCA.

**I**n 1996, YMCA was sub-contracted by the UNHCR to provide vocational training. The objective was to further refugee self-reliance and assimilation through work and income-generating activities. Some of the vocational activities offered by the YMCA are: beauty culture, tailoring, motor mechanics, television technology, refrigerator repair, airticketing, baking and cooking, and computers. All courses are of a six month duration. Since the YMCA assumed responsibility for training, only a few refugees have completed vocational courses. As of June 1997, YMCA claimed that two refugees were enrolled in beauty culture, two in television repair and one in a photography class that had not yet started. However, when SAHRDC visited the beauty culture class, only one Burmese, Aye Win, was in attendance.

Guidelines on the Protection of Refugee Women cautions against targeting marginal economic activities for which there is no sustainable market.<sup>22</sup> However, the YMCA offers gender-biased courses such as beauty

culture, baking and cooking which have not led to economic self sufficiency. Child care and domestic duties also play a key role in preventing women from participating in training programmes. As per UNHCR global guidelines, provision of child care facilities is a good mechanism to boost refugee women's participation in rehabilitation programmes.<sup>23</sup> Although there is day-care at the YMCA Vikas-puri education center, Burmese refugees are not aware of it.

**I**n 1996, along with training and education, UNHCR sub-contracted the YMCA to handle the needs assessment arm of its rehabilitation programme, which includes home visits and the determination of special assistance (UNHCR financial assistance). According to UNHCR project officers, there are three circumstances under which Burmese refugees will not receive special assistance: when they are found not to be in residence; when they are lump sum recipients; and when they have been in India for six or seven years before applying for protection.

Although many YMCA and UNHCR officials complained that Burmese refugees were not at home when they visited, most of the refugees had legitimate excuses. One quarter of the 40 refugees interviewed in Janakpuri do not have a permanent address and frequently shift residence to decrease the burden of their support on any one household. Many also stay away from the home during the day (when the YMCA conducts its home visits), so as to lessen their imposition on the family they are staying with.

There are some refugees who reside in the North East but who come to Delhi only to pick up their special assistance. However, this occurs only in small numbers and for a combination of economic and political rea-

sons. Burmese refugees point out that their UNHCR certificates specify their 'stay in India', not their stay in Delhi. They claim that the special assistance policy is unclear and inconsistent. For example, some know of refugees who are receiving special assistance in Bangalore, while one individual had his special assistance cut because he lives in a town six hours from Delhi.

**A**s per current practice, a primary applicant refugee (head of household) receives Rs 1200 per month as subsistence allowance (SA) and collects Rs 500 per month for each of the first three dependents. The fourth, fifth, and sixth dependents are allotted Rs 400 each and the seventh and eighth dependents Rs 200 each. Those who receive SA must struggle to make this amount stretch to cover rent, utilities, and food. In one large family, a refugee confided that to make ends meet, a young female relative had resorted to prostitution.

As of the end of April 1997, of the total registered Burmese caseload, 249 persons (103 cases) did not receive any SA. Of these cases, a 'few' were well-employed or self-reliant and 89 persons (70 cases) were lump sum grant recipients.<sup>24</sup> There were 160 persons (33 cases) who had neither received SA nor taken the lump sum. UNHCR's figures indicate that 55% of the Burmese refugee community do not receive SA. Refugees claimed that they are repeatedly threatened with the termination of their SA.<sup>25</sup> Several months ago, for example, Benjamin Tang Neng (BU 232) had his SA cut arbitrarily. When he inquired, he was told that he was 'not eligible' and no other reason was offered. On a visit to the UNHCR office, he was told that his SA was cut because he is a Chin (which he is not). Only after about 10 visits to UNHCR offices his financial assistance was resumed.

On a visit to UNHCR sponsored medical facilities, a researcher saw a notice that was dated 17 April 1997.<sup>26</sup> It stated that that starting 1 May 1997 there would be a new schedule for picking up SA whereby the Burmese would have only one day to collect. Furthermore, 'SA and other assistance not collected within the (given) date will be canceled.' Most refugees never go to the medical facility where the policy notice was posted. Moreover, only two weeks time was given between the date of posting and the date the policy came into effect. Some refugees, unaware of this new policy, lost their family's two full month SA. This was financially catastrophic.

UNHCR/YMCA maintains that SA is not stopped when refugees earn extra income. They told us that refugees are permitted to earn small amounts, about Rs 700 per month, without having their SA cut. Even if they earned more, for example, Rs 1500 per month, SA would continue for some months. However, it was not made clear when and under what circumstances SA would be cut, that the decision would be made on a case-by-case basis. Interestingly, when refugees were told what the service providers claimed, they responded with disbelief and amusement. Many cited examples of people whose SA was cut, even though the money they earned was within the permitted amounts.

**A**bout one third of the entire Burmese caseload are lump sum grant recipients. Introduced in 1993, the lump sum programme aims to provide refugees with capital to establish a small business and attain financial self sufficiency. The lump sum amount, given in one capital transfer, is equivalent to one year's worth of SA. As of the end of April 1997, 89 persons (70 cases) had taken the lump sum and gone to the North East where it was cheaper

to live and launch a business.<sup>27</sup> Most used up the money quickly to repay debts or to help family members and others in the community. Without having any prior business experience, support services, or monitoring, the businesses failed. This ill-conceived programme had unfair and far reaching consequences for the refugees: once the lump sum grant was taken, a refugee is never again eligible to receive SA or any other financial assistance from UNHCR.

**F**emale primary applicants are generally allocated the same SA as a man. However, if she later marries, she is downgraded to a dependent and receives only Rs 500 per month. If a refugee man marries either a refugee or a non-refugee woman, he still receives his SA plus an additional Rs 500 per month for his wife. This policy contradicts UN principles and discriminates against both women and married couples. It unequally bestows benefits on men, thereby reinforcing sexist notions and creates a situation of dependency for wives. Moreover, it supports the traditional stereotype that women are domestic and dependent while men are the breadwinners active in the public sphere.

Under a sub-contracting agreement made with UNHCR in January 1996, the Voluntary Health Association of Delhi (VHAD) assumed responsibility to administer health services to all Delhi-based refugees. Due to confusion, misunderstanding and, in some cases, dislike for anything connected with the UNHCR, most refugees interviewed had never visited the clinic and instead preferred to visit either the health clinic managed by the Women's Relief and Welfare Association of Burma (WRWAB) in Janakpuri (popularly called the 'Burmese clinic') or seek assistance from other health professionals.

Some positive steps have been taken towards more effective outreach and participation regarding health. For example, when Leena Saxena, the medical social worker at the VHAD Vikaspuri noticed that few Burmese were coming to the clinic she accompanied social workers on home visits in Janakpuri. While there, she visited the Burmese clinic and consulted with the doctors. Another recent initiative taken by VHAD is the hiring of Burmese as health assistants to facilitate communication between the Vikaspuri center and the refugee community. As of July 1997, arrangements for the health assistants were not yet finalized.

**A**lthough the UNHCR's global mandate is to provide educational assistance only up to the 10th standard, under its special assistance programme, educational aid is offered to credible 11th and 12th standard students. However, the criteria to be deemed 'credible' is neither understood nor spelt out. Fortunately, other international groups contribute funds for refugees to pursue higher education, though not enough to meet demand. As part of its sub-contracting agreement with the UNHCR, YMCA implements the educational assistance programme.

As with the YMCA's vocational training programme, many refugee parents are not aware of the educational benefits available for their children. When asked, both YMCA and UNHCR that they were currently in the process of writing policies and guidelines and an information sheet on educational assistance.

Many children receiving assistance from the YMCA attend the Savior Convent school, which has the largest number of Burmese refugee children in Delhi (roughly 34 pupils). Through other funds the WRWAB man-

ages its own primary school with 22 students in the 1st through 4th standard. After completing primary school, children enter the Indian school system.<sup>28</sup> Despite this assistance, the refugees struggle to educate their children. The parents also stated that they are forced to meet significant costs for transportation and uniforms out of their own pockets.

**I**n addition, there are other barriers to education. Sometimes students are barred from admission because they missed several years of schooling when they fled SLORC's oppression. Teachers complain that language and cultural barriers demand more attention than they are able to give.

Further, according to UNHCR policy, if a child is more than four years behind in school, they are termed 'over-age'. Over-age children are ineligible for the general education reimbursement programme. Consequently, some refugee children are unable to access their full rights to development and equality as stated under the Convention of the Rights on the Child (CRC) to which India is a signatory. When asked what other educational options existed, the UNHCR project officer for education pointed to the 'open school system' which is recommended for 'over-age' students aged 15-20 years. Although UNHCR covers 90% of the costs, the refugees are unaware of the programme.

Under its global policy, UNHCR provides financial assistance to those who can prove they were eligible to be refugees when forced to flee. 65% of those who fled Burma and came to India were high school students at the time of the 1988 military coup. Others were at various stages in their undergraduate and graduate-level studies.<sup>29</sup> Unfortunately, most cannot prove their qualifications because they did not bring educational certifi-

cates with them. Even with generous grants from international sources, it is difficult for most of them to meet living costs while pursuing higher education.

Until 1995, Indian universities were closed to Burmese refugees. Although they are now permitted to take Indian placement tests, they must pay foreigner's fees. The other option, for Christian refugees such as the Chins, are the Bible and Seminary institutes which have relatively low tuition fees and offer work-study programmes.

**P** rinciples of respect and sensitivity in dealing with refugees are specified in UNHCR guidelines. However, research reveals that such principles are not being adequately observed by UNHCR in India.<sup>30</sup> Moreover, a lack of communication, outreach, and accessibility exists in the services provided by both UNHCR and its subcontractors.

That the vast majority of Burmese refugees see UNHCR as unresponsive, arbitrary, or inefficient. More than a quarter of the 40 survey respondents mentioned that they had been made to feel low or inferior. 'They treat us like criminals, like homeless people. We feel insulted by them,' spoke one refugee leader.<sup>31</sup> Conversely, only about a quarter of the respondents indicated that they had at least one experience with a UNHCR staff person that they would characterize as 'nice' or 'OK'.

The minority of refugees who are aware of, and who access, services are largely unsatisfied with them. UNHCR does not have an effective procedure for attaining self-reliance through its financial assistance and training interventions. Programmes and policies lack clarity, follow-up, monitoring, and evaluation. Sometimes refugees report a reluctance to

access medical, training, or legal services because of other negative experiences or overall frustration with UNHCR.

**A**s observed, international standards are frequently overlooked in the provision of education and health services. Moreover, in their provision of SA, UNHCR India's policy discriminates against women. Finally, in many areas, there is a disturbing gap between what the UNHCR claims that it carries out and provides for the refugees and ground level realities.

# People without a country

NATHAN A LIMPET

WHILE statelessness has long been recognized as an important problem in international law, the desire of states to exercise control over stateless persons in their jurisdictions has prevented effective action. The 1954 Convention Relating to the Status of Stateless Persons has attracted only 27 signatories, and a mere 15 states have ratified the 1961 Convention on the Reduction of Statelessness. The indifference of national governments and the inaction of the international community has affected a large number of persons who are particularly vulnerable to oppression because they lack the protection afforded by rights of citizenship. The stateless are 'denied the vehicle for access to fundamental rights, access to protection and access to expression as person(s) under the law.'

Nowhere is the problem of statelessness more acute than in South and South East Asia. Sri Lankan repa-

trates in India, Burmese refugees in Thailand, Vietnamese refugees in Cambodia, and many ethnic Chinese in all parts of South East Asia are currently stateless and thus especially vulnerable to the same types of human rights abuses as those suffered by the Chakmas and Hajongs of Arunachal Pradesh. Part I of this report traces the history of international law on stateless persons. Part II examines the particular circumstances of the Chakmas and Hajongs of Arunachal Pradesh and assesses their claims to Indian citizenship under both international and Indian law. Finally, Part III documents human rights abuses suffered by the Chakmas and Hajongs of Arunachal Pradesh as a result of their stateless condition.

## I

The state is not a private club which can induct or expel members arbi-

trarily. Rather, the development of customary international law has placed certain limitations upon states as regards the conferment of citizenship. The 1930 Hague Convention was one of the first documents to recognize these limitations. Article I of the convention states: 'It is for each state to determine under its own law who are its nationals. This law shall be recognized by other states *in so far as it is consistent with international conventions, international custom, and the principles of law generally recognized with regard to nationality*.'<sup>2</sup>

**T**herefore, decisions upon the acquisition or loss of nationality will be recognized only insofar as they are consistent with contemporary international legal norms. Currently, these norms are expressed in the 1954 Convention Relating to the Status of Stateless Persons (entered into force 1960) and the 1961 Convention on the Reduction of Statelessness (entered into force 1975). Prior to the 1954 Convention, statelessness was viewed merely as an indication of one's status as a refugee. The mandate of the 1946 Intergovernmental Committee on Refugees did not mention statelessness at all, and thus the committee 'regard(ed) *de jure* and *de facto* statelessness merely as one of the criteria of eligibility (for refugee status) in conjunction with others, e.g. flight into another state as a result of racial, political or religious persecution.'<sup>3</sup>

As the definition of 'refugee' was being continually narrowed during the 1940s, many stateless persons could no longer receive the protection afforded by the League of Nations High Commission for Refugees, the Intergovernmental Commission for Refugees, or the International Refugee Organization.<sup>4</sup> This led the Commission on Human Rights to request that 'early consideration be given by

the United Nations to the legal status of persons who do not enjoy the protection of any Government, in particular pending the acquisition of nationality, as regards their legal and social protection and their documentation.'<sup>5</sup>

Seven years were to pass, however, before the UN was to take action upon this recommendation. During the consideration of the 1951 Convention Relating to the Status of Refugees, the problem of statelessness was put aside for lack of time: 'In view of the urgency of the refugee problem and the responsibility of the United Nations in this field, the Committee decided to address itself first to the problem of refugees, whether stateless or not, and to leave to later stages of its deliberations the problems of stateless persons who are not refugees.'<sup>6</sup> This is a recurring theme in the development of statelessness rights in international law; the stateless have been neglected because their concerns have been viewed as ancillary to greater problems.

**T**he 1954 Convention was an early attempt to deal with the problem of statelessness in its own right. The convention requires states to grant stateless persons many of the same rights accorded to citizens under national law. It also protects stateless persons from expulsion in all but exceptional circumstances. However, through an apparent oversight,<sup>7</sup> no provision was made for a supervisory body similar to the UN High Commission for Refugees.

Additionally, the definition of a stateless person, 'a person who is not considered as a national by any state under the operation of its law',<sup>8</sup> excludes large numbers of persons who have no *effective* nationality. For example, among the massive numbers of 'boat people' from Vietnam were ethnic

Chinese who had never set foot in either mainland China (PRC) or Taiwan (ROC). The People's Republic does not recognize them at all, and the ROC grants them merely 'overseas nationality'. Those granted overseas nationality have no necessary right of entry or residence in Taiwan. Thus, while these ethnic Chinese are technically considered nationals under Taiwanese law, they receive none of the benefits of citizenship and are effectively stateless. Nonetheless, they are not considered stateless persons under the 1954 Convention.<sup>9</sup>

**T**he 1961 Convention on the Reduction of Statelessness defined stateless persons in the same manner as had the 1954 Convention. Additionally, unlike the 1951 Convention relating to the Status of Refugees, this convention was not convened for the purpose of providing assistance to a specific group of people. The authors of the convention tended to view their work as little more than codifying existing practice regarding the recognition of nationality judgements.<sup>10</sup> Further, a proposal to create an independent tribunal for stateless persons to press nationality claims was quickly squashed.<sup>11</sup>

A document drafted under such conditions was not likely to greatly improve the condition of stateless persons, nor has it. However, Article 11 of the convention did provide for a relief agency to deal with the problems of the stateless. UNHCR was charged with the responsibilities of Article 11, and thus the problem of statelessness was again connected to, and to some degree overshadowed by, the concerns of refugees.

For nearly 30 years following the 1961 Convention, the problem of statelessness was given little attention by the international community. The right of all persons to a nationality was reiterated in the International Conven-

tion on Civil and Political Rights and the Convention on the Rights of the Child, but again, no specific measures or procedures were mandated. And although the provisions of the 1985 Declaration on the Human Rights of Individuals who are not nationals of the country in which they live applied to stateless persons and established the fundamental rights of aliens, the declaration was addressed to aliens more generally (especially guest workers) and did not elaborate upon or even mention the fundamental right to a nationality established by Article 15 of the Universal Declaration of Human Rights.

The issue of citizenship has received greater attention recently in response to the nationality legislation of the newly created states of Central Asia and the former Yugoslavia. In response to the growing numbers of stateless persons, the executive committee of the High Commissioner's programme has recommended that UNHCR: 'strengthen its efforts in this domain, including promoting accession to the Convention on the Reduction of Statelessness and the Convention relating to the Status of Stateless Persons, training for UNHCR staff and government officials, and a systematic gathering of information on the dimension of the problem, and to keep the Executive Committee informed of these activities.'<sup>12</sup>

**F**urther, the executive committee has adopted a Conclusion on The Prevention of and Reduction of Statelessness and The Protection of Stateless Persons which reiterates the need for UNHCR to more actively promote the welfare of stateless persons.<sup>13</sup> The United Nations High Commissioner for Refugees has also noted that UNHCR has a 'special responsibility' for stateless persons and that his office '...has been designated as an interme-

diary between states and stateless persons under the 1961 Convention. Most recently, UNHCR has been requested by its executive committee to place the matter of statelessness on its agenda. We will explore promotional and preventive activities to which UNHCR can contribute in collaboration with concerned states. There is an obvious link between the loss or denial of national protection and the loss or denial of nationality. On the plane of rights, the prevention and reduction of statelessness is an important aspect of securing minority rights.'<sup>14</sup>

## II

The Chakmas of Arunachal Pradesh belong to a tribal group which has for centuries inhabited the Chittagong Hill Tracts of Bangladesh. Despite the fact that most of the inhabitants of the CHT are either Buddhist or Hindu, the region became a part of Pakistan with the partition of India in 1947. Since this time, the Chakmas and other non-Muslim tribal groups of the CHT have faced extensive and well-documented oppression at the hands of the various Islamic governments.<sup>15</sup> In 1964, communal violence and the construction of the Kaptai hydro-electric dam displaced nearly 100,000 Chakmas. A large number of these sought refuge in India.

Approximately 35,000<sup>16</sup> of them were given valid migration certificates and settled in what was then the North East Frontier Agency, today the Arunachal districts of Lohit, Changlang, and Papumpare.<sup>17</sup> These migration certificates indicated *legal entry* into India and the willingness of the government to accept the Chakmas as future citizens, much like migrants from Pakistan following Partition. Nearly 1,000 members of the Hajong tribe, a Hindu group from the Mymensingh district of Bangladesh, were also settled in these areas and granted migration certificates.

In the more than 30 years since their resettlement, the Chakmas and Hajongs have built villages, developed the land granted to them, and established strong ties to the region. Additionally, they have become integrated into the social fabric of the state of Arunachal Pradesh. They have voted in state elections and paid state taxes on their land. Many of them, now numbering about 65,000 persons, were born in India and know no other home. It is against this background that their claims for Indian citizenship are to be considered.

Section 5(1)(a) of the Indian Citizenship Act of 1955 as amended by Act No. 51 of 1986 states that: '(a) persons of Indian origin who are ordinarily resident in India and have been resident for five years immediately before making an application for registration shall be eligible to be registered as citizens of India.' Also, Sections 3(1) and 3(1)a state that: 'Except as provided in sub-section (2), every person born in India, (a) on or after the 26th day of January, 1950, but before the commencement of the Citizenship Amendment Act, 1986, shall be a citizen of India by birth.'<sup>18</sup>

**T**here can be no question that the Chakmas and Hajongs are of Indian origin and have been residing in Arunachal Pradesh for more than 30 years. Under the Indira-Mujib Agreement of 1972, it was determined that India and not Bangladesh would be responsible for all migrants who entered India before 25 March 1971. Furthermore, the central government has often asserted that the Chakmas and Hajongs have a legitimate claim to Indian citizenship. In a letter dated 23 September 1992, minister of state for home and parliamentary affairs, M.M. Jacob stated: 'Being "new migrants", viz., refugees from Bangladesh who came to India between 1964 and 1971,

they are eligible to the grant of citizenship according to the policy of the government on the subject and most of these migrants have already been granted citizenship.'

More recently, in 1994, minister of state P.M. Sayeed stated: 'Under the Indira-Mujib Agreement of 1972, it was decided that the Chakma/Hajong refugees who came to India from the erstwhile East Pakistan (now Bangladesh) before 25.3.71 will be considered for grant of Indian citizenship.'<sup>19</sup> Further, a very large proportion of these refugees would have been born in India and, therefore, would be automatically entitled to the grant of citizenship.<sup>20</sup>

But of even greater significance is the Supreme Court ruling in *National Human Rights Commission v. State of Arunachal Pradesh*,<sup>21</sup> a case which bears close scrutiny. The case arose in response to allegations of human rights abuses suffered by the Chakmas and Hajongs at the hands of the state government of Arunachal Pradesh in collaboration with private entities like the All Arunachal Pradesh Students Union.

In September and October of 1994 the Committee for Citizenship Rights of the Chakmas of Arunachal Pradesh (CCRCAP) made numerous appeals to the National Human Rights Commission (NHRC), alleging human rights abuses and imminent threats to their lives and property. Upon inquiry, the NHRC determined that the Arunachal state government was acting in concert with the All Arunachal Pradesh Students Union (AAPSU) to issue 'quit notices' with a view to intimidating the Chakmas and Hajongs and expelling them from the state. In view of the state government's dilatory statements and inadequate responses to the inquiries and directions of the NHRC, the matter was brought before the

Supreme Court. The Supreme Court in its interim order on 2 November 1995, directed the state government to 'ensure that the Chakmas and Hajongs situated in its territory are not ousted by any coercive action, not in accordance with law.'

In its final order, after concluding that there was indeed an imminent threat to the lives and property of the Chakmas and Hajongs (an issue which will be dealt with below), the Supreme Court distinguished the case at bar from that of *State of Arunachal Pradesh v. Khudiram Chakma*.<sup>22</sup> In *State of Arunachal Pradesh v. Khudiram Chakma*, the Supreme Court ruled in favour of the state government in a dispute over land rights between the state and 57 Chakma families.

The question of the Chakmas' citizenship was a salient feature of this dispute because only citizens were permitted to purchase land in protected areas under the Foreigners Order of 1948.<sup>23</sup> As Arunachal Pradesh was declared a protected area under the Government of India Act, 1935,<sup>24</sup> the Chakma families' acquisition of lands outside the Chakma Allotment Areas would be valid only if they were found to be citizens of India. Under the Assam Accord, codified at Section 6-A of the Citizenship Act, the Chakmas were found to be non-citizens as they were not ordinarily resident in Assam, but rather in Arunachal Pradesh.<sup>25</sup>

In the *NHRC v. State of Arunachal Pradesh*, the Supreme Court stated that the question of citizenship by registration under Section 5(1)a of the Act was based upon considerations which were 'entirely different' from those operative in *State of Arunachal Pradesh v. Khudiram Chakma*.<sup>26</sup> While the terms of the Assam Accord limited its application to a small number of persons, Section 5(1)a was

found to be a provision with general application. As the Chakmas and Hajongs clearly met the requirements of the Act, the court affirmed their right to apply for citizenship under Section 5(1)a and ordered the state government to take steps to facilitate their registration.<sup>27</sup>

The Citizenship Rules of 1956 define the process by which an individual may become a citizen of India under Section 5(1)a of the Act. The rules describe the form that any citizenship application must take as well as creating the office of the collector, who is responsible for collecting and transmitting citizenship applications to the central government. Rule 8 reads, in its entirety: 'The authority to register a person as a citizen of India under these rules shall be the central government.'<sup>28</sup> In *Shamin Bano v. Union of India*,<sup>29</sup> the Supreme Court indicated that questions of citizenship are the exclusive domain of the central government and that no other body, not even the court itself, could constitutionally interfere with the government's determinations in this area.<sup>30</sup>

Reiterating this position and clarifying the role of the collector in *NHRC v. State of Arunachal Pradesh*, the Supreme Court stated: 'On a conjoint reading of Rules 8 and 9 it becomes clear that the collector has merely to receive the application and forward it to the central government. It is the only authority constituted under Rule 8 which is empowered to register a person as a citizen of India. It follows that only that authority can refuse to entertain an application made under Section 5 of the Act.'<sup>31</sup>

This explanation was necessary because of the dilatory and dishonest behaviour of the Government of Arunachal Pradesh. The district collector (DC) refused to forward the citi-

zenship applications of the Chakmas and Hajongs to the central government for a judgement. According to the state government the DC had the power to make initial determinations as to the merits of a citizenship application. Further, these determinations had already been made: 'It is submitted that the applications, if any, made in this regard have already been disposed of after necessary enquiry. There is no application pending before the DC.'<sup>32</sup> The Supreme Court noted that this position was in direct contradiction to the stance taken by the state before the NHRC in 1995. The court then proceeded to instruct the state government and the DC to forward the citizenship applications of the Chakmas and Hajongs as was required by the Act.

**D**espite this clear and unambiguous ruling of the Supreme Court, the Chakmas and Hajongs could not apply their citizenship due to fear created by the Government of Arunachal Pradesh and the All Arunachal Pradesh Students Union. The Chakmas and Hajongs submitted their applications directly to the central government in February 1997. The Union home ministry forwarded the citizenship applications to the district collectors for necessary verification. At the time of publishing this report, no verification was conducted by the district collectors. The state government continues to defy the Supreme Court, the central government, and the rule of law. For this reason the Chakmas and Hajongs continue to be denied the citizenship rights and constitutional protections that they so desperately need and justly deserve. After more than 30 years of statelessness, the Chakmas and Hajongs of Arunachal Pradesh remain a people without a country.

The Committee on Petitions of

the Rajya Sabha, the upper house of Indian Parliament, after on the spot investigation, interviewing the victims and the state government of Arunachal Pradesh, recommended on 14 August 1997 that: '41. The committee feels that the spirit of the Indira-Mujib Accord as well as the judgement of the Supreme Court in the matter may be made applicable to all the affected states for the solution of the problem. As per the accord, all those Chakmas who came to India prior to 25.03.1971 are to be granted Indian citizenship.

'42. The Committee, therefore, recommends that the Chakmas of Arunachal Pradesh who came there prior to 25.03.1971 be granted Indian citizenship. The committee also recommends that those Chakmas who have been born in India should also be considered for Indian citizenship. The committee further recommends that the fate of those Chakmas who came to the state after 25.3.1971 be discussed and decided by the central government and state government jointly. The committee also recommends that all the old applications of Chakmas for citizenship which have either been rejected or withheld by deputy commissioners or the state government continue to block the forwarding of such applications to central government, the central government may consider to incorporate necessary provisions in the rules (or the act if so required) whereby it could directly receive, consider and decide the application for citizenship in the case of Chakmas of Arunachal Pradesh.

'The committee also recommends that Chakmas be also considered for granting them the status of Scheduled Tribes at the time of granting the citizenship. The committee would like to earnestly urge upon the central government and state government to ensure that until amicable solution is arrived at, the Chakmas are allowed to stay in Arunachal Pradesh

with full protection and safety, honour and dignity.'

### III

The failure of the Indian government to extend the protections of Indian citizenship to the Chakmas and Hajongs is not only a violation of Indian municipal law, but of international law as well. The Universal Declaration of Human Rights provides that 'everyone has the right to a nationality.'<sup>33</sup> India has acceded to two conventions which create an obligation to abide by the declaration in this area. The International Covenant on Civil and Political Rights declares that 'every child has the right to acquire a nationality.'<sup>34</sup>

**F**urther, the Convention on the Rights of the Child, Article 7(1) reads: 'The child shall be registered immediately after birth and shall have the right from birth to a name, the right to acquire a nationality, and as far as possible, the right to know and be cared for by his or her parents.'<sup>35</sup> Clearly, India has not fulfilled these obligations in the cases of the thousands of Chakma and Hajong children born in Arunachal Pradesh since 1964. Many further violations of international law have resulted from this initial failure, and it is to these issues that this report now turns.

The list of human rights abuses which follows is a direct result of the fact that the Chakmas and Hajongs of Arunachal Pradesh have been without the protection of the laws of any state for the past 30 years. The indifference of the Centre to the plight of these people and the inability of the Chakmas and Hajongs to receive redress flow directly from their stateless condition.

Additionally, their statelessness has made them more susceptible to oppression at the hands of the state government and the local populace.

Had the Chakmas and Hajongs been granted Indian citizenship nearly 30 years ago as promised, they would have been more fully integrated into the social fabric of the state of Arunachal Pradesh and, released from the obligation to remain in allotment areas, would not have been vulnerable to the blockades, state sponsored attacks, and mass evictions which are examined in detail below. It should also be noted that the statements of the NHRC and the Supreme Court which attest to the reality of these abuses have come only in the last three years. Without proper access to the court system, the Chakmas and Hajongs had to wait more than three decades to receive even the protections of Article 21, the right to life. The list of abuses which follows gives a graphic illustration of how statelessness can lead to oppression, indifference, and suffering.

India has acceded to several international human rights conventions including the International Covenant on Civil and Political Rights (ICCPR), the International Covenant on Economic, Social and Cultural Rights (ICESCR), and the Convention on the Rights of the Child (CRC). By so acceding, India has signalled her intention to abide by international norms regarding the health, security, education and property of all persons within her borders. By turning a blind eye to the actions of the Government of Arunachal Pradesh, the Centre has failed to live up to its obligations to protect the Chakmas and Hajongs under international humanitarian law in almost every particular.

**D**iscrimination: Under Article 26 of the ICCPR: 'All persons are equal before the law and are entitled without any discrimination to the equal protection of the law. In this respect, the law shall prohibit any discrimination and guarantee to all persons equal

and effective protection against discrimination on any ground such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status.'<sup>36</sup>

In March of 1996 the Arunachal Pradesh government issued a White Paper on the Chakma and Hajong migrants. Page four of the white paper states: 'The Chakmas worship evil spirits. They also believe in and perform witchcraft.'<sup>37</sup> The paper goes on to note the Chakmas' 'propensity towards crimes and other anti-social activities.'<sup>38</sup> This is the *official position* of the state government regarding the Chakma people within its borders. It was approved by the Cabinet after 'careful thought and deliberations.'<sup>39</sup> Clearly, the Chakmas and Hajongs cannot expect equitable treatment under such a regime, nor have they received it.

**I**n a circular dated September 1980, the government instructed its various organs that 'no appointment be given to Chakmas/Hajongs/Yobins and Tibetan refugees.... Those who are already in govt. services may continue, but should not be permanent.' In October of 1991 the government issued a circular directing its officers to discontinue the issuance of ration cards to all refugees. These ration cards are funded by the central government for distribution to all persons legally resident in India whose income is lower than a specified amount. Some Chakmas and Hajongs had been holding ration cards since the 1960s. Already living in extreme poverty, the illegal suspension of their ration cards has caused significant hardship.

This most egregious and harmful act of discrimination has gone unremedied for nearly six years. The government has also stopped issuing trade and has taken steps to close down their businesses and confine them to

settlement areas. The Chakmas and Hajongs are denied the equal protection of the laws not only because they are not recognized as citizens, but also because they are largely confined to allotment areas and thus unable to seek redress through the court system.

**F**urther, Article 20(2) of the ICCPR states that 'any advocacy of national, racial or religious hatred that constitutes incitement to discrimination, hostility or violence shall be prohibited by law.'<sup>40</sup> In 1994 nearly 2,000 Chakmas were forced to flee the town of Kokila in the wake of a 'Direct Action' rally openly supported by the chief minister of Arunachal Pradesh. Similar rallies have been held in the last several years, often precipitating intimidation and violence against the Chakmas and Hajongs. In 1995 the NHRC concluded that the state government had been engaged in various forms of intimidation against the Chakmas and Hajongs, including acting in concert with the AAPSU to issue 'quit notices'.

Additionally, by removing police forces from Chakma and Hajong inhabited areas, the state government has facilitated attacks upon them by the activists of the All Arunachal Pradesh Students Union. Despite this, the state government has continually stated that it has acted in good faith in providing for their protection. The central government, the NHRC, and the Supreme Court have treated this claim as the bald-faced lie that it is. In 1995, the central government deployed two battalions of the Central Reserve Police Force to ensure their safety. The conclusions of the NHRC have been recounted above. Additionally, when the NHRC brought the state government to trial, the Supreme Court held that the state had not taken adequate steps to protect the lives and liberty of the Chakmas and Hajongs.<sup>41</sup>

Security of person: Numerous allegations of illegal detention, torture, and state supported violence have been levelled against the state government of Arunachal Pradesh. In light of the government's prejudicial attitude and obvious dishonesty, these allegations appear quite believable. Under Article 9 of the ICESCR, India has declared that 'everyone has the right to liberty and security of person. No one shall be subjected to arbitrary arrest or detention. No one shall be deprived of his liberty except on such grounds and in accordance with such procedure as are established by law.'<sup>42</sup> Further, 'anyone who is arrested shall be informed, at the time of arrest, of the reasons for his arrest and shall be promptly informed of any charges against him.'<sup>43</sup> And under Article 7 of the ICCPR, 'No one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment.'<sup>44</sup>

**O**n 28 January 1996, Phularam Chakma was beaten to death at the Medo Bazaar in Lohit, allegedly by members of the All Arunachal Pradesh Students Union and the Arunachal Police. No investigation of this crime was ever undertaken by the state authorities. On 7 April 1996, according to the CCRCAP, several Chakma *gaonburas* (village elders) were kidnapped by Arunachal Police for the ostensible purpose of dialogue. This 'dialogue' was rather one-sided, consisting of rough treatment and threats not to apply for citizenship in the wake of the Supreme Court's ruling.

In November 1996, Chakma and Hajong representatives met with members of the Rajya Sabha Committee on Petitions in Calcutta. Upon returning from Calcutta, they were arrested at Mudhoimukh, Diyun by the Arunachal Police, according to the CCRCAP. No warrant for their arrest

was ever issued, and they were given no reason for their detention. They were questioned about their meeting with Rajya Sabha officials and physically abused. Allegedly, the leaders were beaten intermittently for nearly five hours and relieved of all their money and official documents. They have signed an affidavit to this effect.

**H**ealth: Article 12 of the ICESCR reads, in relevant part: '1. The states Parties to the present Covenant recognize the right of everyone to the enjoyment of the highest attainable standards of physical and mental health. 2: The steps to be taken by the states Parties to the present Covenant to achieve the full realization of this right shall include those necessary for: ... (c) The prevention, treatment and control of epidemic... diseases. (d) The creation of conditions which would assure to all medical service and medical attention in the event of sickness.'

In 1994 a malaria epidemic swept through the Chakma camps at Dharmapur and Vijoypur. During this time, the AAPSU effected an economic blockade of the Chakma refugee camps, preventing the delivery of medical supplies and rations. The epidemic claimed the lives of 144 people. Though the state government denied that the blockade ever existed, an inquiry by the NHRC provided copious evidence of the AAPSU's culpability in this matter as well as the state government's complicity. The Supreme Court has stated, 'The fact that the Chakmas were dying on account of the blockade for want of medicines is an established fact.'<sup>45</sup>

Education: Upon ratification of the ICESCR, India asserted that it recognized the right of everyone to education. Further, it bound itself to the proposition that 'with a view to achieving the full realization of this right: (a) Primary education shall be

compulsory and available free to all; (b) Secondary education in its different forms ... shall be made generally available and accessible to all by every appropriate means, and in particular by the progressive introduction of free education.... (e) The development of a system of schools at all levels shall be actively pursued....'

Under Article 28 of the Convention on the Rights of the Child: 'States Parties recognize the right of the child to education, and with a view to achieving this right progressively and on the basis of equal opportunity, they shall, in particular: (a) make primary education compulsory and available free to all.'<sup>46</sup>

India not only failed to ensure that the Government of Arunachal Pradesh take positive measures to fulfill these requirements, but sat idle while the state government systematically eliminated all educational opportunities available to the Chakmas and Hajongs. In September 1994 the government began a campaign of school closing, burning, and relocation which has effectively denied the Chakmas and Hajongs their right to education under international law.

**I**n its crusade against the Chakmas and Hajongs the state government has gone so far as to defy the central government. Under the pre-primary education and maturity development scheme, the Centre provides funding for pre-primary schools called *anganwadi* centres. In an action reminiscent of its handling of the Chakma ration cards, the state government has closed down all 35 of these centres in the Chakma areas of Arunachal Pradesh. Seventy teachers are now unemployed and 1,400 children are denied even pre-primary education. It is unclear what has become of the funds provided by the Centre for the operation of these schools.

Property: Article 17 of the UDHR declares that 'no one shall be arbitrarily deprived of his property.' Article 11 of the ICESCR elaborates upon the declaration by providing that 'the States Parties to the present Covenant recognize the right of everyone to an adequate standard of living for himself and his family, including adequate food, clothing and housing, and to the continuous improvement of living conditions.'<sup>47</sup> According to the Peoples' Rights Organization, the Chakmas have suffered forcible eviction and arson since the early 1970s.<sup>48</sup> Reports of Chakma houses burned or demolished at the behest of the state government have also appeared in the press and in the reports of other non-governmental organizations.<sup>49</sup> One village in the district of Changlang, Vijoypur, has reportedly been reduced to rubble on three occasions, in 1989, 1994 and 1995.

**B**ut the best documented and most flagrant violation of Indian and international law occurred in January 1997. On 8 January 1997, the Arunachal Pradesh Forest Corporation issued eviction notices to more than 150 Chakma families living in Mpen, a village in Changlang. These notices, back-dated to 31 December 1996, ordered the Chakmas to abandon their houses by 15 January 1997 at which time the state government would demolish their houses and sell their properties at a public auction. These notices were issued on the basis of 'illegal acts' alleged to have been committed by the Chakmas, as well as an October 1995 report of the Mpen Range Manager. Even if this report exists (it has never been made public), neither it nor the commission of 'illegal acts' provide a legal basis for the demolition of the Chakmas' property. The NHRC issued a directive no. 2/12/96 LD on 15 January. This directive

reminded the state government that under the Supreme Court ruling in *NHRC v. State of Arunachal Pradesh*, 'except in accordance with law, the Chakmas shall not be evicted from their homes and shall not be denied domestic life and comfort therein.'<sup>50</sup>

**I**n defiance of both the Supreme Court and the NHRC, on 16 and 17 January 1997, the Forest Corporation destroyed 16 Chakma houses under the supervision of the Range Manager and the Miao police chief. The properties contained in these 16 houses were sold at public auction at Miao on 21 January 1997. When three families attempted to rebuild their houses, the Forest Corporation again evicted them and demolished the structures on 21 January. On 2 February 1997, the Forest Corporation planted trees in the area formerly occupied by the Chakma houses and farms. The families thus evicted had been living on this land since the 1960s.

The Government of Arunachal Pradesh has lied to the central government, to the National Human Rights Commission, and before the Supreme Court. It has defied the orders of all three of these bodies, orders it was constitutionally bound to follow. It is also a government which displays clear ethnic and religious biases. It is to this government that the Centre, the NHRC, and the Supreme Court have abandoned the Chakmas and Hajongs of Arunachal Pradesh. As they are not citizens of any country, such abandonment has been politically costless. Lacking the protection of any country's law, the ability to participate in political processes, and the other rights and privileges conferred by citizenship, stateless peoples throughout Asia are vulnerable to the same types of abuses as those suffered by the Chakmas and Hajong of Arunachal Pradesh.

# Stateless in South Asia

SUMIT SEN

THE essay explores the application of the doctrine of stateless refugees in international law in the context of forced population displacement of Bihari refugees of Pakistan in Bangladesh. The Partition of India had displaced the Biharis in 1947. With the break-up of Pakistan and the formation of Bangladesh in 1971, the Biharis were displaced a second time, giving rise to their international status as refugees. However, this status has seldom been recognised in international law.

This paper employs the public international law framework of analyses. It will establish their refugee status by assessing established norms of well-founded fear and persecution for reasons of nationality and political opinion, which led the Biharis to flee from Bangladesh. The creation of Bangladesh began a process of denationalisation of Biharis by Pakistan. In this context, the international law relating to territorial change and the deprivation of nationality of Biharis raises issues of their status as *de facto* stateless refugees.

Finally, the Bihari refugees' right to return to the country of former habitual residence will be analysed, drawing on their right of option exer-

cised in 1971. This follows from Pakistan's obligation to protect the real and effective nationality of Bihari refugees. The genuine link of Biharis with Pakistan provides a legal solution to the protracted refugeehood, giving rise to issues of repatriation, family reunification and integration, in arguing for the role of the UNHCR.

**T**he communal violence after the partition of India in 1947, preceded by the so-called 'great Bihar killing' of 30,000 Muslims in October-November,<sup>1</sup> resulted in a large-scale movement of Muslims into the newly created province of East Pakistan. Consequently, a million refugees migrated into East Bengal in 1947.<sup>2</sup> It was estimated that 95.9 per cent of these refugees came from the eastern Indian states of Bihar, West Bengal, Assam, Orissa, Nagaland, Manipur, Tripura and Sikkim.<sup>3</sup> Although Pakistan was successful in gaining her independence as a theocratic state, it had a ethnically plural society. From the beginning, the crises of national integration and the assimilation of refugees from India created more complexities than solutions, an 'insider-versus-outsider' syndrome, and the existential problem of lack of acceptance and assimilation of the Bihari refugees in East Pakistan.

The culture of the Bihari refugees contributed to defining the ethnic boundary between them and the majority Bengali residents. Besides, when the West Pakistani feudal elite

began to capture economic and political power in East Pakistan, the Biharis, who shared the linguistic background of the elite, began to covertly identify with them. Their ethnic identity became important in various sectors of the East Pakistani economy, and the Bengali majority found the Biharis in a relatively privileged position in getting official patronage.<sup>4</sup> In fact, Biharis acquired the nationality of Pakistan as a precondition to resettlement, and priority was given to the *muhajirs*<sup>5</sup> by public policy measures, especially in the railways, post and telegraph, armed forces, private industries, trade and commerce.

**T**he arrival of the Biharis and the Pakistan government's efforts at refugee rehabilitation were not initially resented by the local Bengali population. In fact, in the general euphoria of the creation of Pakistan, positive discrimination for the Bihari refugees was welcomed. The Pakistani ruling elite portrayed the Bihari as the *muhajir* so as to make the Bengalis of East Pakistan feel duty-bound to help and accept them as their own people. Between 1947-51, a large number of Hindu landlords, businessmen, professionals and petty officials emigrated to India, and the Bengali Muslims and Biharis grabbed Hindu properties and acquired their positions at work. At this stage the Bengali Mus-

lims did not think of the Urdu speaking Biharis as minorities.<sup>6</sup>

**H**owever, it was a short honeymoon. As early as March 1948, Jinnah announced in Dhaka that 'Urdu and Urdu alone shall be the state language of Pakistan.' The gradual drift of East and West Pakistan between 1952 and 1971 can be traced to the 'collective megalomania of Pakistani elites, motivated by a colonial attitude of plunder and subjugation of East Pakistan' with a victimisation of the lower echelons of Bengali and Biharis. Despite their class and cultural differences, the Biharis in East Pakistan had accepted the West Pakistani ruling elite as their 'sole patrons, guides and protectors.'

In contradistinction, the Pakistani elite often regarded the Bengali Muslims as 'semi Hindus, pro-Indian and disloyal to Pakistan.' This dysfunctional feeling of the West Pakistani political bureaucracy became evident by the second half of the 1960s, when Pakistan began to loose its hold on the political fabric of East Pakistan. By the late 1960s, while some Biharis openly sided with the quasi-military regime of Pakistan, Bengali Muslims demanded independence for their province.

The process of disintegration of Pakistan in 1971 led to two simultaneous major refugee movements. The first was the escape of an estimated 10 million refugees into India in the aftermath of the brutal massacre of the Bengali populace. The second flight consisted of the minority Biharis into refugee camps as a result of the extermination during the liberation fervour.

4. Although it has been argued that the Urdu-speaking educated, well-to-do and businessman preferred West Pakistan to East Pakistan as they envisaged the existing socio-economic-political conditions congenial for their future prospects. See Khurshida Begum, *The Stranded Pakistanis in Bangladesh and International Implications*. Paper presented at the International Workshop on Internationalization of Ethnic Conflict, International Centre for Ethnic Studies, Kandy, Sri Lanka (2-4 August 1989), 9.

5. The term *muhajir* literally translates to mean a refugee. In this case, the *muhajir* is the Bihari refugee.

The existence of persecution in the country of origin forms the basis of the application of international refugee law for determining of status. This paper situates the Biharis within the 1951/67 definition of refugee by providing an analysis of well-founded fear and persecution due to reasons of race, political opinion, nationality and membership of a social group. Further, drawing on the denationalisation of Biharis by Pakistan in 1972, it constructs the status of Biharis as *de facto* stateless refugees.

The definition of the term refugee under the 1951/67 Convention applies to any person who: '...owing to well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group or political opinion, is outside the country of his nationality and is unable or, owing to such fear, is unwilling to avail himself of the protection of that country; or who, not having a nationality and being outside the country of his former habitual residence is unable or, owing to such fear, is unwilling to return to it.'

**W**hile the convention illustrates the reasons of fear of persecution, the element of well-foundedness of fear in the determination of status looks towards the future, rather than the past. While 'evidence of tangible harm' done to a potential refugee strengthens the case, 'well-founded fear' protects from further persecution. However, in the construction of the refugee status of Biharis, the evidence of the last 25 years needs to be assessed and involves objective and subjective factors of perceived fear, and the actual persecution suffered by the Biharis.

The parliamentary elections of December 1970 exacerbated Bengali nationalism which translated itself throughout East Pakistan as attacks on Bihari establishments, since it was

widely perceived that most Biharis supported the pro-Pakistan Muslim League. The Bengali mobs continued their terror in both Dhaka and Chittagong, as well as in the peripheral districts beyond the control of the Pakistan Army, until Pakistani control was re-established in March-April 1971.

**T**housands of Biharis were brutally killed with the Bengali petty bourgeoisie and working class active in ethnic cleansing. The massacre of Biharis was described by Mascarenhas: 'Thousands of families of unfortunate Muslims, many of them refugees from Bihar... were mercilessly wiped out. Women were raped or had their breasts torn out with specially fashioned knives. Children did not escape the horror: the lucky ones were killed with their parents; but many thousands of others must go through what life remains for them with their eyes gauged out and limbs roughly amputated. More than 20,000 bodies of the non-Bengalis have been found in the main towns as Chittagong, Khulna and Jessore. The real toll, I was told everywhere in East Bengal, may have been as high as 100,000; for thousands of non-Bengalis have vanished without a trace.'<sup>7</sup>

A government document estimated the death toll of the Biharis to be 15,000,<sup>8</sup> although some eyewitness accounts put the figure at 50,000. Other eyewitness<sup>9</sup> reported that violent mobs, led by gun-totting Awami League storm troopers, 'invaded' the Bihari settlements in Raufabad,

7. Anthony Mascarenhas, *The Rape of Bangladesh*. Delhi (1971). These figures are corroborated by another report, which stated 'the brutal massacre of thousands of non-Bengalis ... (where) 20,000 bodies have been found ... in Bengal's main towns but the final count could top 100,000,' *The Sunday Times*, London, 2 May 1971.

8. *East Pakistan Crisis*, White Paper, Government of Pakistan, August 1971.

Halishahar, Dotala, Kalurghat, Hamzabad and Pahartali. The East Bengal Regimental Centre served as the 'principal human abattoir.'

The prejudice of the state against the Bihari minority is further evidenced in the attitude of Bengali military officers. Major Zia-ur-Rahman is stated to have remarked in 1971 that, 'those who speak Urdu (i.e., Biharis) are also our enemies because they support the Pakistani army. We will crush them.'<sup>9</sup>

**S**ince Urdu was the *lingua franca*, the Biharis had tended to associate themselves with West Pakistan. When the West Pakistani landlords and Urdu-speaking capitalists captured economic and political power in East Pakistan, the Biharis shared their political gain. The governmental policy of favouritism and insulation of the Bihari community from the Bengali majority led the Biharis to cast their fate with the West Pakistani political elite. A majority of them had voted for the Muslim League and Jamati-Islami in the elections. Besides, when the Awami League began to grow as an influential political party of the bourgeoisie and middle class, they found their West Pakistan counterparts a hindrance to their prosperity because their limited approach failed to include Bihari class consciousness.

The Bengali political elite in East Pakistan focussed on Urdu as an issue to denounce the repressive attitude of West Pakistan. While it inspired the majority in East Pakistan, it aggravated the alienation of the Biharis which made them lean towards

9. The systematic massacre of the Biharis was complete when on 28 March 1971 Zia-ur-Rahman ordered his troops to shoot the male Bihari prisoners in Chittagong and allowed his troops to outrage the modesty of the female prisoners. See Anthony Mascarenhas, *Bangladesh: A Legacy of Blood*. London (1986), 118-9, 122.

the West Pakistanis. The Bengalis, initially sympathetic towards the oppressed Biharis, gradually became suspicious of their exclusive attitude and political activities.

It is understood that political opinion, within substantive limitations in human rights, is any opinion on any matter in which the machinery of state, government or policy may be engaged. The political opinion of the Bihari community led it to be pursued by the majority-led government and its entities, particularly where the former addressed the unity of the eastern and western wings of Pakistan. The political agenda of the Bihari community exposed it to the reality of persecution. Although political opinions may or may not be expressed, they might become the attributive features for the determination of refugee status. Since the Biharis had expressed their political will, and as a result suffered repressive measures, their well-founded fear can be clearly evidenced.

In exploring the cause-effect relationship factor, Goodwin-Gill suggests that 'cause and effect are even more indirect where the government of the country of origin cannot be implicated. Refugees, for example, have fled mob violence or the activities of so-called death squads.'<sup>10</sup> Although Goodwin-Gill has categorised the Biharis as refugees escaping organised violence, it needs to be clarified that the provincial government in East Pakistan too should be implicated for organised and orchestrated persecution, eventually leading to the refugeehood of the Biharis. Even after the independence of Bangladesh, the government of Mujibur Rahman failed to stop the violence against the minority community of Biharis.

The Indian Army, as long as it remained in Bangladesh, protected the Biharis in refugee camps.<sup>11</sup> But with its departure, along with the West Pakistani civilian and prisoners of war, the persecution of the Biharis turned into a generalised massacre. Instead of being a safe haven, these camps became the target of attack. Intermittently, water and power were cut, but the Bihari refugees were too terrified to move out in search of food or work.

The visits to some refugee camps in 1973 led to the following observation: 'Perhaps no other class of people in the world today (are) as ruined, economically and socially, as smitten and smashed up, as the community of the former Indian refugees in Bangladesh who are known here by the general term Bihari.... Today in Bangladesh, to be a Bihari is the worst crime.... Thousands have been discharged from service on the ground of "long absence without leave". But their salaries and funds have not yet been paid.... Many persons rejoined duty on the strength of "clearance chits" given by Awami League MPs. But they did not return; even their bodies remained untraced.'

The absence of state security in Bihari camps was evidenced in assaults, looting, rapes, evictions, kidnappings and killings. Most of the attacks were perpetrated by members of the *Mukti Bahini*, with a criminal intent of providing extra-judicial justice. Bearing the label of a 'collaborator' meant imprisonment without trial; it meant regular harassment at the hands of the police, often leading to widespread torture. With food rations reportedly inadequate, and instances of governmental denial to ICRC

to access Bihari camps, the fear of renewed persecution made Biharis desert their homes, which were then taken over by Bengalis. The organised persecution resulted in a near total loss of property of the Bihari refugees, and by the middle of 1972, they were completely domiciled in various camps.

The orchestrated persecution against the Biharis continued because of reasons of race, nationality and membership to a particular social group; because of their ethnic origin and an insistence on retaining their Pakistani nationality. However, persecution was aggravated due to their membership of a particular social group.

While the *travaux préparatoires* of the 1951 Convention did little to explain social group as a category, paragraph 78 of the UNHCR Handbook clarifies: 'Membership of a particular social group may be at the root of persecution because there is no confidence in the group's loyalty to the government or because the political outlook... is... an obstacle to the Government's policies.'

Having a shared group interest tied in with values, background, ethnic and linguistic origin, and 'political outlook', the Biharis were targeted by the governmental forces, by the confiscation of property. In order to make arrangements for the administration and management of such properties, Bangladesh Abandoned Property (Control, Management and Disposal) Order, 1972. The order provided for the acquisition and control of properties of certain persons who are either (a) not present in Bangladesh, or (b) who have ceased to occupy or manage their properties, or (c) who are *alien enemies*. It was concluded that such property would include any property owned by any person who is a citizen of a state which was at war

10. Guy Goodwin-Gill, *The Refugee in International Law* 2nd ed, Clarendon Press, Oxford (1996) 71.

11. Report, Friends of Bangladesh Conciliation Mission, London (27 April-23 May 1972), 7.

with or engaged in military operations against Bangladesh. Since Biharis were citizens of Pakistan, law allowed for the acquisition of the properties of Bihari refugees.

A perusal of the above order clarifies that Pakistani nationals cannot recover or release their properties, since there are no statutory provisions. In addition, the term *alien friends* was employed, where it was stated that Pakistanis are not allowed to recover properties by filing suits under s.83 of the Civil Procedure Code, although there is no bar on alien friends under s.83 to file suits. The procedural law disguised and took away provisions by employing confusing terminology. In essence, alien friends was technically treated as alien enemies, in spite of provisions in law where resident non-citizens were entitled to enjoy the protection of the law and be treated in accordance of the law.

**T**he principle of vested or acquired rights supports the principle that a change of sovereignty has no effect on the private rights of individuals.<sup>12</sup> It appears that the successor state faces restrictions on its powers in relation to private rights of aliens in addition to rules of international law governing the treatment of aliens in a case of succession. The acquired rights principle was qualified by O'Connell, who stated that 'the principle of respect for acquired rights in international law is no more than a principle that change of sovereignty should not touch the interests of individuals more than is necessary.' He further stated that 'the alteration and cancellation of acquired rights by successor states must comply with the minimum standards of international law.' It is now amply evident that Bangladeshi practice of

acquiring the rights of Biharis has fallen well short of accepted international legal norms and procedure.

Pakistan helped perpetrate the persecution of the Biharis under Bangladeshi rule by a denial of their effective nationality. In this context, the presumptions and policy rules against the arbitrary deprivation of nationality merit attention. It is well established in rules of international law that 'no one shall be arbitrarily deprived of his nationality,' and if necessary, the deprivation must be prescribed by law.

**H**owever, deprivation of nationality, in particular mass denationalisation, has been declared as inconsistent with the international obligation of states. Others have tried to prove that denationalisation for penal or political reasons is inconsistent with the notion of the human being as a person in law. It has been reinforced that deprivation on grounds of a policy of racial inequality or persecution is contrary to international law and elementary principles of humanity. The act of denationalisation may not *per se* have delictual consequences, but it is probable that it would be a breach of the provisions of the UN Charter concerning equality of peoples and human rights. Further, the deprivation is not entitled to recognition by other international actors, because it disregards the doctrine of effective link, and represents an attempt to avoid the responsibilities of territorial sovereignty and statehood.

The common standards of non-arbitrariness in deprivation of nationality have provided some generalisations, including (i) deprivation of nationality prescribed by law after full legal proceedings involving review and appeal, (ii) deprivation not leading to statelessness, (iii) depriva-

tion acceptable if nationality secured by fraud, or (iv) if the national engages in acts posing serious threats to national security.

Within international legal norms, while post-1971 Pakistan legislated categories of Biharis who would qualify for repatriation, a majority of the Biharis were excluded due to restrictive acceptance practices by Pakistan. When Bangladesh emerged as an independent nation in December 1971, there were more than a million Bihari refugees. Although governmental figures state that 600,000 accepted the citizenship of Bangladesh, there were 539,669 who registered with the ICRC in order to return to their country of nationality. While the ICRC estimated that 60 per cent wished to go to Pakistan, Biharis themselves stated that 95 per cent wanted to go to Pakistan and 5 per cent to India. Since a majority had suffered widespread persecution or still perceived considerable threat, they had all chosen to repatriate out of Bangladesh, and essentially to Pakistan.

**T**he first political step in formulating categories of non-Bengalis to be accepted in Pakistan began with the recognition of Bangladesh as an independent state. This was primarily because President Bhutto of Pakistan needed to negotiate the return of 93,000 POWs held captive in Bangladesh. However, he was equally anxious to see that the one million Biharis did not move to Pakistan. Although Bhutto spoke against the proposed Bangladeshi war crimes trial of Pakistanis, he was unwilling to admit any sizeable number of Biharis refugees into Pakistan.

Pakistan agreed by the New Delhi Agreement of 28 August 1973 to transfer a substantial number of 'non-Bengalis' in Bangladesh who had opted for repatriation to Pakistan,

12. See O'Connell, *International Law*, (2nd ed), (1970) 377-81, 388-9; *State Succession*, (2nd ed), ch. 6 and 10.

in exchange for Bengalis in Pakistan and the return of POWs. She engaged ICRC as the route for all applications for repatriation from Biharis to the Government of Pakistan. However, ICRC made it clear that 'registration with the ICRC does not give a right to repatriation. The final acceptance... lies with (the) Pakistan and Bangladesh governments.' Pakistan began issuing clearances in favour of those 'non-Bengalis' who were either (i) domiciled in former West Pakistan, (ii) were employees of the central government and their families or (iii) were members of divided families, irrespective of their original domicile.

**P**akistan reiterated that those covered under the first three categories would be received by her without any limit as to members. In respect of persons whose applications had been rejected, Pakistan agreed, upon request, to provide reasons why any particular case was rejected. Any aggrieved applicant could, at any time, seek a review of his application provided he was able to supply new facts to support his contention that he qualified in one of the three categories. The claims of such persons would not be time bound. In the event of a review, it was decided that Pakistan and Bangladesh would resolve it by mutual consultation.

However, in practice, denationalisation through non-adherence under the established categories was effected, since a majority remain to be repatriated. The process of review of rejected applicants and the definitions of the central government employees and divided families merit a fresh legal assessment. First, all railway employees should have been included within the first category, since the decision to provincialise the railways was essentially administrative. The

service tenure and conditions of these employees remained the same. To not accept railway employees within central government staff can be stated to be a violation of her own categorisation by Pakistan.

Second, it can be argued that the category of divided family applied by Pakistan was unilaterally determined and was more restrictive than that identified by ICRC in their letter requesting options regarding repatriation. It is estimated that 75 per cent of Bihari families stand divided because of the restrictive definition of divided families, since grandparents, parents, unmarried siblings were not considered part of the same family for the issuance of clearance documents. Bangladesh has asserted the need for the acceptance of a broader and Islamic definition of the family, since the present definition is narrow and restrictive, based on the western concept of the family. This argument upholds family reunification as one of the fundamental provisions of refugee law in any effective resolution procedure.

**T**hird, it had been agreed between Pakistan and Bangladesh that the antecedents of the person who returned to Pakistan as a hardship case would be examined. Were it to be established that s/he fell within the other two categories, then additional hardship cases would be included. At the outset, the definitional and numeric limits of the hardship cases have caused a legal anomaly, since it needs to be explained why Pakistan limited the number to 25,000. In reality, the hardship cases had essentially included Biharis who had been within the other two categories, and certainly not war victims, orphans or disabled persons. Over the years, Pakistan has failed to give a breakdown of the number of persons listed under the categories,

and the vacancies in the hardship category.

Therefore, the resort to denationalisation of Biharis by Pakistan is an abuse of human rights under international law, constituting an attempt to throw off the duty of admission and thereby casting an illegal burden on the state of residence.

**I**t needs to be firmly established that the Biharis renounced their homes in 1947 in order to make East Pakistan their country of nationality and residence. Bangladesh was not the country they had migrated to or opted for. Before the birth of Bangladesh, they stood for the integrity of Pakistan, were Pakistani nationals, and till date have not renounced their Pakistani nationality.

The leanings of political parties and mileage gained from inter-ethnic riots in Pakistan has stunted the repatriation process in the two-and-a-half decades. With every political upsurge and turmoil, there has been a perceptible change in state policy, leaving the Bihari refugees to orbit in statelessness and uncertainty. Sharif, who had so magnanimously offered to settle them in Punjab, is now the country's Prime Minister. Though he has recently held talks with Bangladesh MP Hasina relating to the return, a GOP policy paper on the issue is yet to emerge.

The repatriation figures over the last 25 years correspond to the law of diminishing returns. Till date, an estimated 178,069 Bihari refugees have returned to their country of former habitual residence. While practice has left a majority waiting to return home, Pakistan certainly needs much more to assure the Bihari refugees and the international community of the resolution of this protracted crisis. The foreign secretary is recently reported to have stated, 'both Bangladesh and

Pakistan have recognised this repatriation as a *humanitarian* issue and agreed to solve it expeditiously.... I don't want to set a time limit.'<sup>13</sup> It needs to be reaffirmed that by her illusive state practice, Pakistan is violating the norms of human dignity and acceptable international behaviour, in spite of her membership to the executive committee of the UNHCR.

The right to return of Bihari refugees needs assessment within the 'primary' rule of international law which forbids the abusive exercise of rights of control over movement of people, rights which would be violated if certain limits are exceeded in the course of the exercise, or if they are exercised with the intention of harming others. The practice of Pakistan has harmed the Bihari community where the inability of refugees to return home has been accentuated by the arbitrary deprivation of their nationality. In this regard, a 'view is widely held... that a State may not unilaterally shirk its duty of admission by depriving its national of his nationality... (and)... this duty remains in force, at least in so far as the individual concerned did not acquire another nationality.' The Bihari refugees have been denied nationality by the unilateral shirking of Pakistan in her duty to grant citizenship to her subjects who had been persecuted in her territory.

In summary, the right to return is guaranteed without restrictions to all nationals, including the *de facto* stateless refugees. After the independence of Bangladesh, since most Bihari refugees have not acquired another nationality, it may be concluded that Pakistan has deprived her *de jure* nationals their right to return in international law, a right which is regarded as *ex debito justitiae*.

# Providing refuge

ARUNDHATI GHOSE

RESPONSES to 'repatriation challenges' are neither easy to identify nor implement. However, permit me to offer some of our views with the hope that our comments could contribute to, at least, a better understanding of the issues involved.

Repatriation challenges, in our view, is a subject which should be examined in the context of the nature of movements which are currently taking place in the world. In general, it appears to us that there are mainly three different types of movements – mass exoduses due to civil war situations, which mostly occur in developing countries; individuals or groups seeking asylum, predominantly in developed countries; and the phenomenon of illegaleconomic migrants, common to both developing and developed countries. Since these movements differ from each other as to their cause and nature, the 'solutions' evolved should be tailored to meet the specific characteristics of each of these movements.

In developing countries, confronted with mass exoduses due to civil war like situations in their neighbourhood, the historical openness to the arrival of refugees appears to be waning and emphasis has necessarily moved to repatriation. Though more and more refugees are returning home, this movement is often taking place to countries of origin which are still volatile and unstable. The challenge in such situations is therefore to ensure that refugees are given safety and shelter, repatriation is truly voluntary and that return is to conditions of safety and dignity. However, since the receiving countries are usually

\* Based on a statement to the UN at the 48th Session of the UNHCR Excom, Geneva, 13 October 1997.

among the poorest in the world, such a solution would depend on the extent to which the international community can assist host developing countries through financial support and other forms of burden sharing and the degree to which the problems in countries of origin can be addressed.

**A**t present, neither the duty to receive refugees nor the real costs associated with their arrival are fairly apportioned across the world. Distribution of state responsibility towards refugees is based on accidents of geography and the relative ability of states to control their borders. Any assistance received from other countries or UNHCR is seen as a matter of charity and the entire system survives tenuously on vague promises of cooperation accompanied by undependable funding. A large number of developing countries engaged in a desperate struggle to provide their own citizens with the basic necessities of life today find themselves crippled and highly frustrated by the enormous burden that mass exoduses impose on them. It may be pointed out that the 1951 Convention to which I will refer later neither anticipates nor provides answers to the problems of frontline receiving states confronted with such mass exoduses.

Traditionally, developing countries have always been willing hosts. They have never adopted legalistic approaches or restrictive definitions of refugees. All persons who flee their homelands in distress have invariably been provided refuge, irrespective of the reasons for their flight. However, it is but natural that the continued neglect of the impact large refugee populations have on developing countries weakens their willingness to provide sanctuary. 'Genuine' solidarity and burden sharing is therefore the main response needed to meet the challenge

of ensuring effective protection to refugees and the voluntariness of repatriation in developing countries.

At the same time, concerted action is required to address the problems in the countries of origin to ensure that repatriation takes place under conditions of dignity and safety. This would entail a coordinated approach to dealing with the unsettled conditions in the country of origin through assistance to returnees and the country itself so as to enable it absorb the return. Keeping in mind the fact that humanitarian assistance can only provide temporary relief, these efforts should focus on strengthening national capacities. Programmes for the return and reintegration of refugees could attempt a seamless transition by dovetailing developmental approaches into the relief stage itself and providing for a relief-development continuum through eventual hand-over to national agencies and appropriate agencies like the UNDP.

**T**he second category of movements, in our view, could be said to relate to individuals or groups seeking political asylum from countries where they fear persecution for their beliefs, political persuasion, and so on. Such flows, if indeed they can be characterized as such, are usually to developed countries. Unfortunately, here we find that the very institution of asylum has come under threat as political refugees are treated as potential illegal economic migrants and received with some paranoia. In our view, it is to this category of refugees that the 1951 Convention applies.

It would appear that signatories to the Refugee Convention are derogating from its provisions, introducing new concepts such as 'temporary protection' and even questioning the fundamental principle of 'non refoulement'. The persons in this category are

miniscule compared to those of the first category where repatriation has been widely accepted as the best solution. Despite this, political refugees in the second category find themselves faced with restrictive practices such as border closures, interdiction at sea, expulsions and premature return to an insecure environment imposed by countries who have the economic ability and, indeed, the duty to give them both asylum and protection. We have no doubt that the social reaction to economic migrants, legal and illegal, has impacted adversely on the refugee regime in these countries.

**B**urden sharing does not mean that developed countries can meet their obligations only by assisting developing countries in hosting large refugee populations. It also implies that developed countries have to accept their responsibilities under international refugee and humanitarian law and should desist from unilateral restrictive practices. Refugee protection involves the human rights of the refugees concerned and discriminatory treatment and denial of asylum to these political refugees, in our view, constitutes a violation of human rights. There is a need for developed countries, which have not yet done so, to accept the concept of multi-culturalism and pluralism so that all persons living in their territories are guaranteed basic human rights.

Finally, we come to the category of economic migrants who sometimes seek illegal channels of entry. As mentioned earlier, this phenomenon has led to genuine political refugees being refused asylum in developed countries. However, it is a fact that such flows take place and may be a cause of concern; what is less well known is that such flows also take place, perhaps in greater numbers, to developing countries such as my own and others like South Africa. Neither the parameters

nor dimensions of this complex problem are known and till more detailed information is available, solutions may not be possible to identify.

We are therefore of the view that UNHCR as the principal UN agency responsible for refugees, and as an institution which has tremendous experience in handling composite flows, can be a catalyst in the process of studying these questions, identifying options and evolving solutions. We would like to see UNHCR take the lead and initiate comprehensive studies in this regard, bringing together agencies such as the International Organisation for Migration, ILO, and so on.

**W**e view UNHCR's main task as relating to the first category referred to above where, indeed, the office is primarily occupied. We are not in favour of the UNHCR being pushed into a 'good offices' or 'passive monitoring' role with regard to the return of rejected asylum seekers from developed countries. Any role assumed by UNHCR in such matters should be global in approach and in the nature of a 'think-tank'. Global problems require global solutions. Partial and regional solutions that serve the interests of a few will only erode the credibility of the entire system.

May I in this regard also refer to the recent decision of the European Union which through the Treaty of Amsterdam seeks to restrict access to asylum to its citizens on grounds that procedures are being misused by elements who pose a threat to the security of some of its member states. In our view, unilateral solutions such as these do not constitute the right way forward.

Problems like terrorism should be addressed in a collective manner taking into account the interests of all states equally and the international

character of the problem. It is in the interest of all countries that persons seeking refuge do not forment violence against their countries of origin and that the purpose of refugee law remains providing humanitarian refuge to those fleeing 'persecution', not protection to persons fleeing 'prosecution'.

**R**emedial measures must be universal. An open, transparent and multilateral process is the best means of ensuring the right balance between the minimum protection refugees must enjoy and the legitimate security concerns of states.

Turning to India's own approach to the issue of refugees, while we do not as yet have a comprehensive refugee law (existing regulations being related to resettlement and rehabilitation of refugees who came to India after Partition and in 1971 after the crisis in Bangladesh), certain markers have been laid down by various decisions of our courts, which are based on the principle of the right to life and liberty to all persons residing within our borders. The courts have also recognized in specific cases the role of the UNHCR as an independent neutral body when dealing with complex political issues relating to refugees.

As is known, we have not signed the 1951 Convention. Let me use this opportunity to explain why. The 1951 Convention was adopted in the specific context of conditions in Europe during the period immediately after the Second World War. International refugee law is currently in a state of flux and it is evident that many of the provisions of this convention, particularly those which provide for individualized status determination and social security, have little relevance to the circumstances of developing countries who today are mainly confronted with mass and mixed inflows.

Moreover, signing the convention is unlikely to improve in any practical manner the actual protection which has always been enjoyed and continues to be enjoyed by refugees in India.

We therefore believe that the time has come for a fundamental reformulation of international refugee law to take into account present-day realities. We stand ready and willing to join any international discussions in this regard. We are aware that fears have been expressed that any such move could lead to a downward spiral in protection for refugees and that the current mood in the more powerful countries of the world is not in favour of refugees. However, it has to be recognised that refugees and mass movements are first and foremost a 'developing country' problem and that the biggest 'donors' are in reality developing countries who put at risk their fragile environment, economy and society to provide refuge to millions. An international system which does not address their concerns adequately cannot be sustained in the long run.

**I** would like to conclude with a brief reference to the decision adopted by the Excom on expanding the role of NGOs in the activities of the standing committee. NGOs have a very important role to play on refugee issues and can bring to the meetings of the Excom the valuable experience they have acquired through operations at the grassroot level. We welcome this decision and believe it marks a major step forward. The value addition NGOs provide should be based on their grassroots experience and the secretariat should ensure that NGOs who participate are those who have actual experience of refugee issues. Meetings of the UNHCR Excom are at present conducted in a highly professional manner and they should continue to remain so.

# Books

**CHARRED LULLABIES: Chapters in an Anthropology of Violence** by E. Valentine Daniel.  
Princeton University Press, Princeton, 1996.

**LEVELING CROWDS: Ethnonationalist Conflicts and Collective Violence in South Asia** by Stanley J. Tambiah. Vistaar Publications, New Delhi, 1997.

SHOULD memories of violence be invoked or revived? There are apparently well-argued, rational, intellectual ostrich acts that decry time travel to a violent past. On the other hand, there are poignant, yet no less cerebral arguments trying to understand what violence, past and present, does to human beings. In this search for understanding, the past and the present merge. For instance, accounts of the arrest of Adolf Eichmann and his subsequent cross-examination for 275 hours by Captain Avner Less, himself a Jew, as a prelude to the former's trial held in Jerusalem in April 1961, seem to bring out the tormented revulsion, horror, and strangely, the need to go back to the past in order to reclaim the future for the next generation.

Captain Less had serious reservations about the trial, especially since it was to be held in Israel. For 'no Jew anywhere in the world could remain indifferent to this event. Was there a home anywhere in Israel that had no victims to mourn?' Though Less dreaded the prospect of opening wounds that had 'scarcely begun to heal,' his hesitation was marked by searing doubts: 'But then, did we have the right to forget? Wouldn't we be endangering our children's future if we turned our backs on the past?' This is the terrible responsibility of the present, and this deliberate choice of Less indicates the onus on the present to weld together the past and the future.

This is the responsibility that E. Valentine Daniel owns up. The deeply moving opening passage in *Charred Lullabies* is actually a lament: 'Many have died.... Tellipalai, Nilaveli, Manipay, Boosa... mere place-names of another time – have been transformed into names of places with blood and mortal residue.

Kelani Ganga and Kelu Ganga, Sri Lankan rivers of exquisite beauty, for a shudderingly brief period in 1989, were clogged with bodies and foamed with blood.... How to give an account of these events without giving in to a desire to shock? And ... what does it mean to give such an account?'

However, as a sensitive academic, he does not allow himself to slip into the prurience of violence; he acknowledges the danger of sliding into a pornography of violence. Running through the book is an awareness of his status as an expatriate half-Sinhalese, half-Tamil US citizen, who is an anthropologist to boot. Daniel's self-critical awareness of his own unique and privileged status as a recorder and observer – free to travel anywhere, distanced from Sri Lanka by thousands of miles when not investigating the Sri Lankan violence and living a life of prosperity supposedly free from any threat to his life – overlies his narrative and theoretical interpretations. This awareness underpins his conviction that a theoretical straitjacket cannot encompass the magnitude of human suffering; he positions his theoretical frame (derived mostly from Charles S. Peirce) against the personal narratives of people facing death, pain, suffering, loss, and the trauma of homelessness.

The informants Daniel uses entrust their memories to him, so that he can transform himself into their cumulative voice, in the hope that their pain will be understood in a world that can still presumably differentiate between the right and the wrong, and the good and the evil, where the values of the sanctity of life and human dignity are still recognised as values integral to human existence. The sense of individual moral responsibility that permeates the book holds the reader captive and infects him/her with the author's urgency. One should not forget, because it is one's moral duty not to forget, lest the madness of violence should suddenly seize a society, while the pursuit of the humdrum everyday paralyses the conscience.

The socio-political context of the Third World makes such an urgency doubly significant, for there is a certain imperviousness to such moral compulsions.

Daniel reminds us that remembrance, mourning, reaffirmation of universal principles, is a responsibility we have to bear. They are the ways to forgiveness, reconciliation and transcendence of pain and loss. When the responsibility for bearing the memories grows weaker, when whole communities are encouraged to bury the past, they stop listening as well.

By way of preparing the ground for his explorations of the raw world of ethnic violence, Daniel, at the beginning of his exposition, concedes that nothing in a cultural matrix is given, not even culture itself. Ethnic identities like gender, race, culture and nation are constructions, often invisible. The contours of these constructions have deep roots in history and are concealed well in the mind of communities, inaccessible to even careful deconstruction. Such constructions, calibrated with different levels of resilience, offer resistance to any questioning of deep-seated convictions. Thus, according to Daniel, a flat rendition of the inter-ethnic conflict in Sri Lanka on the differences in language, religion and race – Tamil and Sinhala, Hindu and Buddhist, Tamilian and Sinhalese – misses the nuanced problem of ethnicity. In such reductionist representation of ethnicity 'one senses the mighty hand of nineteenth-century Orientalist scholarship... of the classification of languages on the political and demographic landscape' (p. 15). The victory of the European historical consciousness over the traditional historical consciousness has tragic implications.

This disjunction between history as the 'way of being' in the world, fundamental to the traditional historical consciousness, and history as a 'way of seeing', a concept embedded in the European historical consciousness which claims to have transcended 'being', is the basis of a shift in perception of identities, 'one's own and the Other's'. The way of being in the world in the traditional historical sense combined a sense of the past and heritage. The cultural differences were simply other ways of being. The Sinhala Buddhists and their ancient *vamsa* literary tradition of chronicles as a heritage could be counterpoised against the epic and bardic traditions of the Tamils, but 'these groups did not form closed circles as they have today.' The prime agents responsible for the epistemic shift in historical perceptions from a 'way of being' to a 'way of seeing' were the introduction of modern history in the 19th century and the concept of the nation state, both imports from the West. Daniel's meditations on the nature of history sidesteps the temptation of enumerating causes of ethnic violence and probes the conditions that make such violence possible, thereby changing the frame-

work of conventional debates on the subject. Future studies in the area will have to contend with this shift in the parameters of analysis.

Daniel takes a kaleidoscopic view of the history of the estate Tamils and the Jaffna Tamils, their feelings of difference, even while sharing a common language, and the cataclysmic violence that broke out in 1983-84, and again in 1989, to bring about a sea-change in the attitudes of the younger generation. The differentiated responses of the well-settled, first generation expatriates in the United Kingdom, and to a lesser degree of the second generation towards the third generation Tamil refugees, mainly estate Tamils, reveals tensions among the Tamil Hindus themselves. Some of the well-settled first and second generation Tamils even went for raising funds for the LTTE, and believed that the estate Tamils should fight for their rights instead of becoming burdens on the international community.

In the face of such tepid support, often verging on indifference, strange links have been forged between the black community and the Tamil refugees internationally, links that sustain the refugees and politicise them. But international help was not easy to mobilise, for international opinion was weighted against terrorism and therefore against the LTTE, as exemplified by the Indian Army's action to support the Sri Lankan state against the Tigers. The violent acts of the Indian Army against the Tamil civilians added to the terror of the people, compelling many to take the decision of fleeing from violence.

And what of the refugees? Perhaps the best answer is given by Shoba, a ten-year old girl sent off on her own to Canada on a false passport by her parents. She had witnessed the murder of her best friend and an old woman by the Indian soldiers. Replying to a query as to what she would do in Canada, she says: 'Keep away from anyone who talks about Eelam or Sri Lanka or motherland' (p. 185). The little girl talks of a world that has collapsed into a state of terror; the only reference points for her are labels that come with identities and causes. And what strikes the reader is the perception of how utterly comprehensive is her rejection of precisely the labels which are acceptable in her world.

Stanley J. Tambiah, in his book *Leveling Crowds*, also eloquently addresses the issue of the construction of modern historiography and the modern nation state that configure different peoples into identities based on language, religion, geographical territory, race. A global context of ethnic violence, Tambiah states, 'is a major reality of our time.' He provides a

register of such conflicts – Jews and the Christians in the Christian world, Jews and the other minorities on the one hand and Great Russians on the other, Anglophones and Francophones in Canada, Catholics and Protestants in Northern Ireland, Walloons and Flemings in Belgium, Chinese and Malays in Malaysia, Greeks and Turks in Cyprus, Turks and Kurds in Eastern Turkey, the recent upheavals between the Sinhala and Tamil populations in Sri Lanka, the Sikhs and the Hindus as well as the Muslims and the Hindus in India, Chakmas and Muslims in Bangladesh, the PLO and Israel – and so on. Conflicts over race, religion, language, territory keep multiplying and they are never resolved. Only ominously for the world, new ones are added to the list.

Tambiah also addresses the problems of mass displacements, refugee camps and large-scale expulsions of people, especially in three countries of South Asia: Sri Lanka, India and Pakistan. In Sri Lanka, as early as 1915, the Sinhala Buddhist-Muslim tensions based on religious differences had erupted into violence; the different demands of language, territory, and the sharpening of the Tamilian and Sinhalese ethnic identities had resulted in confrontations between the two communities in 1956, and then again in the 1980s. In India, we saw the Hindu-Sikh riots in 1984, the tensions between the Muslims and the Hindus in Kashmir, and with the rise of Hindu nationalism, the riots in Bombay over the destruction of the Babri Masjid in 1992-3. In Pakistan, especially in Karachi since 1985, bloodshed over differences between the Mohajir on the one hand, and the Pathans and the Sindhis on the other have occurred frequently.

These confrontations are inseparably interwoven into the nation-building process in South Asia, sometimes helping it, more often impeding it by inducing greater distrust between the different communities. Tambiah locates the transformation of the democratic processes in South Asia, and the mutating manner in which the process fits into the exigencies of power politics of different parties searching for social bases, spheres of influence, and legitimacy. The careful orchestration of domestic violence by political parties constantly stoke and dampen passions according to the exigencies of politics.

Tambiah is quick to point out the crowd content of such orchestrated violence, a violence that is so ritualized and routinized that its effects on the self/individual is often invisible. Ritualisation and routinisation of violence explains how, once the madness of the riots pass, they can return to the normal everyday

co-existence without experiencing any moral quandary. But increasingly, such riots are affecting the victims as well as the aggressors, possibly because there is no clear demarcation between the two categories. A made-to-order history, using as its kernel points of confrontation in teleological historical time, has contributed to the sharpening of differences, in its turn the basis of different identities.

The history of the Partition of India and Pakistan in 1947 serves as an illustration of just such a process. An easy return to normalcy is therefore no longer that easy. Greater distrust, different demands of different communities, have taken its toll on the resilience and resistance of communities. Not even the 'most radical' have inspected the huge baggage-train of history: only occasionally and selectively, yet another skeleton in the closet is brought out into the open to serve the purpose of violence. When the violence subsides and the skeleton is thrust back into the dark cupboard, 'normalcy' is restored. Yet, Tambiah observes, this return to 'normalcy' and moral health of communities has not been given attention by either the state or non-governmental agencies. End of riots meant an end of the concern of the state and other non-state organisations – a shortsightedness for which the communities pay again and again.

Violence can be triggered by religious festivals, ironically the markers of mutual harmony in times of peaceful coexistence. Rumours, taking advantage of the communication networks, supply the needed justifications for violence and set supposedly retaliatory acts into motion. Occasionally even legitimate demands, backed by age-old traditions, can spark off violence and killing. Behind the butchery, rape and loot, are not just the lumpen criminals and the unscrupulous politicians as the middle-classes fondly imagine, but also the colluding classes of respectable people whose sympathies lie with the aspirations of different ethnic demands, formalised, for instance, in the ideology of the Hindu Rashtra in India or the Eelam in Sri Lanka. The separation of such elements from the overtly criminal action of the crowds is impossible, just as we cannot separate the partiality, inefficiency or silence of a state's law-enforcing institutions when small triggering incidents escalate into blood-baths.

At what point do legitimate demands shade into ethnic conflict, to what extent can the silent support of the majority be witness to unspeakable atrocities on the minorities, what limits are set upon the self-assertion of minorities by the majority communities? The concepts of secularism and of nation-building, appear like

masks to further this or that interest, group, party, community, nation. In an extreme case of the champion of national interests in recent times, Pol Pot, the founder of Cambodia's Khmer Rouge, responsible for the deaths of more than a million people, can insist that his conscience is clear as his timely political actions saved Cambodia from being taken over by the Vietnamese (*The Statesman*, 24.10.97). One comes back to individual moral responsibility and to memories that remind us of the universal principles that rebel in the face of senseless death and the desecration of human dignity. The numbing that takes place through a four-line newspaper report on death and disaster on gigantic scales dissuades one from connecting atrocities committed by human beings on other human beings. It hides the debris of dead bodies and ravaged lives behind the news lines.

Both the books, dealing with different aspects of collective violence, sensitise the reader to a range of issues, especially the one of acknowledging responsibility for the Other, without which social harmony and mutual understanding are lost. Daniel's personalised reading of the Sri Lankan violence during the 1980s can stand for any individual's bewilderment and horror when he/she has witnessed senseless violence, and is therefore worth quoting: 'These chapters may not march toward a single point, but they register movement... of time itself... from the relative confidence in the intellect's and this intellectual's capacity to make sense of the events before, during, and since the summer of 1983 to a far less gallant stance of hoping to leave behind a testament to the memory of the fallen, the unfallen, and the fall itself. One may never understand, but one must never forget' (p.7).

**Anindita Mukhopadhyay**

**THE OTHER SIDE OF SILENCE: Stories From the Partition of India** by Urvashi Butalia. Penguin, Delhi, (forthcoming) 1998.

A LITTLE over a decade ago, cultural critic Edward Said in collaboration with photographer Jean Mohr produced a memorable book. After *The Last Sky* is about Palestinian lives, in exile, in Palestine and outside. As refugees; they are exemplars, their existential situation best captured in these lines by poet Mahmoud Darwish: 'Where should we go after the last frontiers, where should the birds fly after the last sky?' There is another phrase in the book which is impossible to forget! 'We are the victims of a... by the victims of a holocaust.'

It is not that Palestinians and the Palestine question have not been written about. If anything, the reverse. The holy land and its people have, after all, been painful witness to one of the biggest and continuing tragedies of this century. Yet, the Said-Mohr book stands out. For once the images captured, in words and photographs, are not those of war, of guns and terror, bombs and bodies. It is how Palestinians, homeless and without a homeland, reconstruct themselves in their everyday lives—in small acts of living and loving, joy, celebration and pain, in loss and remembering. The mood is not one of anger or recrimination. No resignation. A quiet determination to continue. A far cry from the image of a Leila Khaled or an Arafat with gun.

For us, closer home, is the Partition. For some the rupturing of a homeland, for others the discovery of one: Millions moved across imaginary and real borders. Exiled from home and hearth, many died. It set into motion a process of memory—anger at what had been done to them, tinged with a wistful regret for what had been left behind—*watan*. The official documents and statistics, at best, partially capture the trauma of those fateful years, a trauma which still continues.

While some of this 'drama' was captured in the literature of the period, for years a pall of silence hung over the 'event'. 'What had to happen, happened. The deed was done, Partition was an accomplished fact. Why rake up old ghosts, painful memories? The horrors of the past must be put behind us. We must look ahead.' True. But, surely not by forgetting.

The last decade has witnessed an unusual resurgence of interest in those years. And this time around we have not just anthologies of poems and short stories, old and new. Or films from Tamas and Mammo to *Train to Pakistan*. We have a new kind of history. Archival material and political commentary combine with new oral testimony—this time not from those who orchestrated the event, the leaders, but those who suffered, the hitherto invisible.

From the Alok Bhalla three volume anthology of *Writings on Partition* to the recent book by Ritu Menon and Kamla Bhasin, 'Borders and Boundaries'; from the historical excavations by Gyanendra Pandey to the ongoing Oxfam project under the directorship of Dilip Simeon—the new literature draws upon a variety of methods and sources. What marks out this new literature is the shift in focus from macro analysis, the preoccupation with who was responsible for Partition, to the subjectivity of individual actors.

The focus on women is marked. Not just because they, more than others, lived the horror—of abduction,

rape, torture, forced marriage, killing—but also because it was on their bodies that the newly constituted nation states reinscribed their ideologies, their understanding of culture and morality. It is they who live this even today. And the children. Or the scheduled castes—neither Hindu, Sikh, or Muslim. What happened to them?

Urvashi Butalia is no unfamiliar name, not just to those who follow feminist debates or read *Kali for Women* books, but also those interested in the underbelly of the Partition. Her story of Rana Mama, an uncle who converted and stayed behind in the ancestral house in Lahore has been widely reproduced. Not so the account by mother, Subhadra, who not only had to look after younger siblings, but grieve for the loss of an ailing mother, 'forced' to live out her final years with a son who had converted, in a land that was no longer hers. Or the poignant reunion with a younger brother after 40 years, one whom she had blamed for staying back to grab the property, who notwithstanding conversion, marriage and family, laments that he is a stranger in his own house, accused by his son of being a Hindu spy.

One can add to the wealth of stories. Of Sikhs who killed their own womenfolk so that they would not be polluted. Of women, abducted, forcibly married, then reconciled and even happy, only to be torn away from their new families because abducted women had to be returned. National honour, after all, was at stake. Or the children. Forced to witness depredations and horror, at times inflicting the same on others. Or the ones born out of these strange alliances. Who were they—Hindu or Muslim? Who were they to live with once their mother's were repatriated? Were they to be wards of the state?

The material on the scheduled castes highlights an interesting facet of conflict situations. Being neither Hindu nor Muslim, they felt safe from both. Not just from attack but also to quietly loot, to participate in mayhem from both sides. Unlike the Sikhs who briefly floated the idea of Khalistan, the untouchables in Pakistan rapidly converted to Christianity, burying finally their Hindu past.

There is much that the reader learns from *The Other Side of Partition*. Not just the heart-rending tales that form the staple fare of such cataclysmic happenings. The stories of bestiality and courage, of human weakness and strength—none of which are unique to any one group or community. Or the fact that victim and oppressor seem to merge in varying shades of grey. What really comes across is the conspiracy of silence.

Things happened, were done. Let us not talk about them.

It is not that there are no arguments for silence. Memories, when politically activated, can play havoc. Here at home, with our record of engaging in communal mayhem, maybe these events are best left buried so that shattered lives can be rebuilt. But, do we ever, can we ever forget? Do not these events live on, constantly reworked in the lives and recountings of those who suffered? In the *paths* organised in various gurdwaras, in the *shraadh* ceremonies to the departed. And is not to forget to repeat?

Such exercises, whatever their motive, demand a high order of methodological skill and ethics from those who take on the task of recording and recounting. It is much too easy to slip into maudlin sentimentality, of passing easy judgements, categorising past events and personalities within constructs of the present. That is bad history.

Urvashi Butalia's explorations of the methodological quandries may not satisfy the professional theorist. Oral history, testimony, memory has necessarily to be painstakingly cross-checked with more tangible evidence—documents, letters, diaries, police records—some of which she too draws upon. But, as she reminds us, she is no professional historian providing a new reading of those years. What we essentially have is a rendering that merges the personal with the political.

Not having experienced the Partition through either family or self and claiming no expertise on either the period or about the intricacies of historical methods, this reviewer can only testify to being moved, to being forced to rethink presuppositions, to being struck by candour and honesty. If that is what Urvashi Butalia set out to achieve, she has succeeded.

#### **DIVIDE AND FALL? Bosnia in the Annals of Partition** by Radha Kumar. Verso, London, 1997.

I could make no intuitive sense of Yugoslav 'ethnic cleansing'. Impulsive cruelty I can understand, but not cruelty that is calculated and systematic. I could not imagine what those people had in mind.

F.G. Bailey

*The Civility of Indifference*, 1996.

IT is not just Fred Bailey who was perplexed by the quality of horror epitomised by Bosnia. All of us remember being sickened by the image

brought into our homes by satellite TV. Even the subcontinent, freshly sensitised to the horrors of Partition in the golden jubilee year of Independence, found it difficult to stomach the depredations that our species can perpetrate on fellow humans. Bosnia, Rwanda, Palestine and Ireland match our own dark record as low points of the final years of the millennium.

Why different ethnicities find it difficult to co-exist peacefully remains an unsolved (some say insoluble) question. Ever so often territorial division has been floated as, at least, a partial resolution to the problem of living together, notwithstanding difference. Radha Kumar's elegant monograph, arguably the first-ever by an Indian on Bosnia, attempts to unravel the complexities of partition as a solution to ethnic conflict.

'Originally a colonial formula, partition assumed two distinct forms after the Second World War: ethnic partition, which was accepted as a compromise formula for de-colonization, and ideological partition, which was primarily a means of distinguishing Cold War spheres of influence. Though ideological partition grew in importance during the Cold War and ethnic partition suffered a loss of legitimacy, it has gained a new lease of life chiefly in the wake of the 1995 Dayton Agreement for Bosnia-Herzegovina. Its reappearance in a post-colonial and post-Cold War era is especially curious, given that the disintegration of the Cold War has delegitimised ideological partitions (such as Germany and Korea). Indeed, in the present times the formula is essentially anachronistic.'

Territorial ethnic separations were earlier rooted in colonial policies of divide and rule, the understanding being that 'primordial differences' work against the secular tendencies of integration. In any case 'ruling' becomes easier if subject populations distrust each other and accept the overlordship of the colonial power as the legitimate mediator. However, as maintaining colonial structures became more difficult, the policy shifted to one of divide and quit, partly as a way of avoiding future civil wars, but possibly as much as a way of retaining post-colonial influence.

In our subcontinent this policy was partly successful. Notwithstanding the eventual breaking away of East Pakistan (now Bangladesh), or the votaries of an Akhand Bharat, few seriously question the 'right to exist' of the newly created nation states. Nevertheless, distanced policy-makers have rarely appreciated the different projects of the divide and quitters from the divide and rulers. In the case of erstwhile Yugoslavia, which existed in an uneasy tension during the long

years of communist rule, the divide and rulers (Radovan Karadzic, Ratko Mladic, Slobodan Milosevic and Franjo Tudjman) demonstrated preoccupations quite different from the divide and quitters (NATO or the UN).

Such situations get even more complicated when territory and ethnos do not sit easily with each other, i.e., partitions leave behind ethnically mixed populations. This, particularly in situations of enraged ethnicities, is likely to either contribute to situations of ethnic cleansing or beleaguered and terrified minorities. Be it the Serbs, Croats or Muslims in Bosnia, the Tutsis and Hutus in Rwanda, to a smaller degree Muslims in India or the Pandits in Kashmir – history is replete with examples of failed partitions.

What then are we to do? Should outsiders, be they erstwhile colonial rulers or current hegemony, just wipe their hands off the mess that they are partly responsible for creating. Just appealing to historical processes and blunders do little to help us practically engage with these explosive situations. Equally, stationing armed forces as a deterrent to violence is hardly a stable solution. Nor can the world, or the affected populace, wait endlessly for secular forces (the market, the costs of violence, social interaction) to instill reasonableness.

Radha Kumar goes beyond historical analysis of apportioning blame to examine various approaches to brokering peace – in particular the new development-centred approach of 'renewable peace'. Instead of seeking an overall political settlement determined by conditions of war, the current thrust seems to be on identifying windows of opportunity for peace within an ongoing conflict; instead of waiting for the end of war before investing in peace, using each window of opportunity to initiate programmes that might widen the terrain for peace; and realising that a wider regional responsibility for nurturing the transition to peace is crucial.

It is important to note how different this response is from Gandhi's advice to the British – quit. He was convinced that left to themselves Indians could forge new understandings between divided communities that would enable them to live in peace. The idea of partition, of overlordship, of even continuing intervention by outsiders was to him anathema. Evidently, such confidence is shared by few today. All divided societies remain united in their search for external mediators, the preference being for multilateral intervention. One suspects this permits the local leaders to play off the outsiders against each other – a situation often encoun-

tered in Bosnia wherein the Russians routinely vetoed the US-led initiatives and conditionalities.

The merit of Radha Kumar's book lies in its examinations of the details – both of the presupposition and of the intervention packages. Expectedly, this does not make for an easy read, more so for people unfamiliar with local geography, actors and history. Nevertheless we do learn that tangled ethnicities can live in peace only by overcoming their constructed primordialities, i.e., if they are ever given a chance. Also, that interventions, even when well meaning, can contribute to an enhancing, not muting of conflict. What is clear is that the new excitement with ethnicity (following the Samuel Huntington thesis of the clash of civilizations), particularly religion based ethnicity, and the accompanying project of partition, is unlikely to work. Cyprus, Palestine, Ireland, or Bosnia amply prove this.

**STATES, CITIZENS AND OUTSIDERS: The Uprooted Peoples of South Asia** edited by Tapan K. Bose and Rita Manchanda. South Asia Forum for Human Rights, Kathmandu, (distributed by Manohar Delhi), 1997.

EDITED collections, particularly those based on presentations made at conferences, rarely make for a good book. The contributions are invariably uneven in quality and the editorial introduction faces an unenviable task of providing coherence. Within these limitations, *States, Refugees and Outsiders* serves a useful function.

The lead papers by Barun De, Tapan Bose, Ranabir Samaddar and Ravi Nair provide a useful overview to the refugee situation in the region. And expectedly, while the primary focus remains on the legal regimen governing refugees and their rights, all the contributors emphasize both the human dimension of the problem as also the need to go beyond nation-state fetishism. As Barun De points out, much of this problem has been created by the artificial drawing up of borders and boundaries. Equally, everyone stresses the unsustainability of drawing distinctions between economic and socio-political flows, between migratory and refugee status.

It is crucial to appreciate the history of migratory flows – permanent and seasonal – which have never respected state boundaries. We must remember that it is the drawing up of borders which converted 'natu-

ral' movements into illegal ones, broke up communities, disrupted family and social life, and engendered conflicts and war. Our North East remains a stellar example of this 'blind' and unthinking process of enforcing artificial boundaries. This also, as various commentators point out, created the categories of the 'native' and 'alien', investing in these fluid characterizations the notion of the eternal. Our continuing controversy over the status of Aryans as outsiders, or that of the Muslims as non-Indians, stands testimony to the durability of these notions.

Just because we in India focus primarily on the Bangladeshi Muslim refugee issue, we should not lose sight of the others – Tibetans, Sri Lankan Tamils, Nepalese, Bhutanese, Burmese – as also a host of other smaller groups such as the Afghans and the Chakmas. This is equally true of our neighbours.

While focusing on the palpable lack of 'human rights' in our legal regimen and its implementation – these papers do not totally forget the apprehensions of the 'natives' when confronted with the outsider. Anyone who has been to Karachi cannot escape the impact of the Afghan refugees on the city, its environs and politics. But, as is repeatedly pointed out, erecting fences, or designating people as stateless, expelling them, and denying them legal rights – is no solution.

For once a regional collection on the refugee question deals not only with 'foreigners' in an alien land, but also the 'national' refugees created by economic and social interventions. True, we in India talk most about the Bangladeshi refugees swamping various parts of the country. Rarely do we realise that the internally displaced are far more in number and face the same kind of hostility as the formal outsiders.

A major merit of this collection is the formulation of a draft model national law on refugees under the chairpersonship of Justice Bhagwati. This should go a long way in sensitizing our policy-makers towards modifying their actions and helping humanize the situation. At the least, if these worthies can be made to understand that there are no 'national solutions', we may finally begin to develop a regional consciousness and perspective.

This is a useful collection. One wishes that it was less exorbitantly priced. Rs 600 for a paperback, even in these inflationary times, does put the book out of the reach of individual buyers, particularly activists. Or is that not the constituency that the Forum wished to reach?

Seminarist

**THE STATE OF THE WORLD'S REFUGEES: A Humanitarian Agenda.** A UNHCR Report. Oxford University Press, Delhi, 1998.

THE State of The World's Refugees: A Humanitarian Agenda of the United Nations High Commissioner for Refugees (UNHCR) profiles the plight of approximately 22 million people who have been uprooted from their homes across the world. It covers a wide spectrum of issues – refugees, internally displaced persons and stateless peoples. It not only brings out the dilemma of the agency regarding the protection of refugees, but also illustrates why the notion of humanitarian assistance today has precedence over protection of refugees.

Since the end of the Cold War, the space for refugees has been consistently shrinking. UNHCR faces a dilemma between the restrictive approach of the 1951 Convention Relating to the Status of Refugees vis-a-vis what it calls the 'inclusive' approach of the refugee definition formalized in the Organization of African Unity's (OAU) Refugee Convention of 1969.

Since UNHCR derives its mandate from the 1951 Convention, it suffers from a systemic incapacity to address problems pertaining to refugee influxes in Asia and Africa. The individual determination process under the 1951 Convention suited the 'individual political refugees' from the former communist bloc. But it fails to address the mass influx of refugees in former Yugoslavia, the Horn of Africa, Asia, Haiti and Sudan, to give only a few instances.

UNHCR's apparent helplessness in tackling the multiplicity of refugee problems and provide protection to the refugees, whether in Africa or Asia, together with the unwillingness of the North to share refugee burdens proportionately, leads it to invoking humanitarian appeals. The sheer plight of 22 million people, where its humanitarian assistance may be the only lifeline, does evoke sympathy and support. But unlike the OAU Convention on Refugees which is 'inclusive', UNHCR fails to admit that the 1951 Convention is flawed and hence, the fundamental challenge for refugee protection is to address its shortcomings. UNHCR evades this fundamental question and is at sea trying to explain why it distributes blankets, milk, medicines, along with providing 'protection' to the refugees.

The mandate of the agency on internally displaced persons (IDPs), the subject of its concern in Afghanistan, Angola, Azerbaijan, Georgia, Liberia, Mozambique, Somalia, Chechnya and Sri Lanka, is

not clear. The International Committee of the Red Cross (ICRC) as a neutral humanitarian agency is mandated to provide humanitarian assistance and monitor the Additional Protocols to the Geneva Conventions of 12 August 1949, and the Protection of Victims of Non-International Armed Conflicts (Protocol II). UNHCR has clearly spread itself too thin on the ground without doing justice to its primary constituency.

The agency's increasing involvement with IDPs appears to take the form of setting up an increasing number of 'safe zones', in both international and non-international conflicts. The creation of safe zones, which have acquired a notorious reputation of being most 'unsafe' is a part of the North's strategy to reduce refugee flows into Europe and North America. The US Navy can, therefore, interdict the Haitian refugees at sea and involuntarily send them to 'regional safe havens' with the concurrence of the government of the country of origin.

While UNHCR did try to respond to the problem of statelessness arising out of political turmoil in the 1990s, it failed to address statelessness in many parts of Asia. Only half out of the over 500,000 peoples of the hill tribes in Northern Thailand possess official documentation that enlists them as citizens, or places them on record as being eligible for future citizenship. They are as stateless as the 65,000 Chakmas and Hajongs in the north eastern Indian state of Arunachal Pradesh.

In this publication, UNHCR provides information on what it perceives as its success stories. The status of the urban refugees in New Delhi is touted as an example. Its vocational training programme, as an effort to reduce refugees' dependence on subsistence allowance, is highlighted. UNHCR claims that out of 20,000 urban refugees who received subsistence allowance till 1995, only 2500 presently require it. The other 17,500 refugees who are alien to New Delhi have within two years ostensibly learnt the art of survival. An amazing success story! At least two refugees have committed suicide due to economic deprivation in the recent past. Numerous others have taken to doing odd jobs at a pittance, while some have joined the fringes of the Delhi underworld.

To end with a quote from Human Rights Watch: UNHCR 'has worked in conjunction with states to fashion questionable protection measures that come dangerously close to accommodating rather than challenging the global deterioration of refugee protection.'

**Suhas Chakma**

**THE MARGINAL MEN** by Prafulla K. Chakrabarti.  
Lumiere Books, Calcutta, 1990.

**REFLECTIONS ON PARTITION IN THE EAST**  
edited by Ranabir Samaddar. Vikas Publishing  
House, New Delhi, 1997.

THE TWO books under review took me to my childhood in Calcutta—the Great Calcutta Killing, Partition, Independence, and shortly afterwards, my first awareness of ‘them’. They were boys of roughly our age who arrived with their families and lived in the abandoned hutments of a World War II military hospital near the Dhakuria Lakes. They were referred to as colony boys or *colonir chheley* in Bengali because the hutments they had come to occupy without any sanction came to be known as a refugee colony. They were sometimes derogatorily referred to as *phugees* short for refugees; the latter is spelt with a pha—making it *rephugee* instead of refugee in Bengali whose alphabet has no *fa*.

I had read about the refugees from East Pakistan in newspapers since the exodus started and heard about them from my parents who, as political activists, had arranged relief for the arriving groups. The colony boys constituted the first tangible manifestation of their presence. They kept to themselves; we, children of the original inhabitants of the neighbourhood, to ourselves. We never interacted. They watched silently from a distance when we played cricket and football on the fields near the lakes. We never asked them to join; they never came forward on their own.

We had heard of the massacres and the relentless persecution which forced them to leave their homes in what was then East Pakistan, of the brutalities and hardships they had to suffer on the way, and the utterly degrading and inhuman conditions in which they lived on arrival. Yet, despite the sympathy all this bred in us, and the proximity of the hutments to our homes, the distance and the silence remained. They were different not only in their ways but also in their social class; we had our own lives and friends and did not feel the urge to reach out, particularly since the word went around that they were very rough and violent and we had to be careful about their running away with our cricket bats, balls, wickets and footballs.

Rickety bamboo stalls selling tea and snacks gradually came up on Southern Avenue, which went by the hutments, and by the lakes. These were run by them and, we were told, also sold the hooch which they illegally brewed. One evening, returning from an evening stroll by the lakes, we saw a young girl stand-

ing in the darkness under a tree. Gradually there were more of them and every day men came in cars, talked to them and whisked them away. The camp existed for years before the colony boys and their families moved away. The area is now covered by the upper and upper middle class residential area around Vivekananda Park, Southern Avenue and Keyatala Road.

Events similar to those in our neighbourhood were being enacted in a large area of about 100 square miles around Calcutta. Refugees from East Pakistan were arriving in thousands, occupying whatever land they found vacant, setting up what came to be known as squatters’ colonies, doing whatever they could to support themselves. The entire process has been most vividly described in all its pathos by Prafulla K. Chakrabarti in his book, which details the gross inadequacy of governmental efforts to assist the refugees. He shows, with extensive documentation, how the centre responded with cold indifference to West Bengal’s repeated plea for funds for rehabilitation while doing everything possible for West Pakistan refugees. A revealing letter dated 1 December 1949 by Dr. B.C. Roy, then chief minister of West Bengal to Pandit Jawaharlal Nehru, reads:

‘You are under the impression that your government gave us a large grant for the purpose of ‘relief and rehabilitation’. Do you realize that the total grant received for this purpose from your government in two years—1948-49 and 1949-50, is a little over three crore and the rest about five crore was given in the form of a loan. Do you realize that this grant is ‘insignificant’ compared to what has been spent on refugees from West Pakistan? ... I do say that the grant so far given is insignificant for 26 lakh displaced people because it works out at about Rs 20 per capita spread over two years.

— The letter, and several of its kind, notwithstanding, the situation remained the same and West Bengal had to depend on its own inadequate resources. As a result of this and the apathy, if not hostility, of the people of West Bengal who tended to regard them as intruders, the refugees could not be rehabilitated and integrated into West Bengal’s society. They remained a huge mass of people, isolated in their colonies, displaying—in the author’s words—the ‘lineaments of an external proletariat.’ Dehumanized by their brutalizing experience, they were intensely angry and spawned a teeming population of youth, profoundly frustrated and prone to nihilistic violence. The existence of such a mass of humanity could not have been without explosive social, economic and political consequences.

In this book, Chakrabarti deals with the most seminal of these—the rise of the Communist and Marxist left parties to power in West Bengal. Isolated because of its support of the British war effort following Germany's invasion of the Soviet Union in June 1941, and their designation of the erstwhile 'imperialist war' as 'people's war', the Communist Party of India saw a potential power base in the refugees; so did the Marxist left parties like the Revolutionary Socialist Party (RSP) and the Forward Bloc, many of whose leaders had come away just before Partition leaving their political bases behind. The United Central Rehabilitation Council (UCRC), which spearheaded the establishment and defence of the squatters' colonies against eviction drives, developed a highly efficient organization and mobilizing capacity, which became the basic infrastructure for all left political agitation in West Bengal.

The CPI made a sizeable number of members from the UCRC and deployed them on the trade union and other fronts where they immediately made their presence felt. It was the beginning of what Chakrabarti calls the refugeeization of the party. When the CPI split in 1964, the refugee support shifted to the Communist Party of India (Marxist). The refugees formed the backbone of the three important left movements—the Tramfare Enhancement Resistance Movement of 1953 and the food movements of 1959 and 1966. Communists and the Marxist left parties in West Bengal had only partial control over the industrial working class; there was no powerful peasant movement in the state. Their rise to power in West Bengal after the elections of 1967 was primarily due to the support of the refugee population.

Chakrabarti's is a significant original work. He has carried out exhaustive basic research and integrated a vast mass of information in a cohesive schematic pattern. He has not only argued his thesis credibly but brought to bear on it substantive scholarship and an impressive application of the Marxian tools of historical analysis and understanding of the nature and characteristics of the various classes. The book, however, could have done with better editing. There are too many loose sentences. Besides, his own experience of the Partition has deeply embittered him towards Muslims which is reflected in his writing. He feels that all Hindus will eventually be squeezed out of Bangladesh.

Referring to the continuing Muslim migration from Bangladesh, he argues that this has the dangerous potential of generating secessionist movements in areas which may come to have a Muslim majority. This is particularly so because Bangladesh may not remain true to its Bengali cultural consciousness. It may come

to be controlled by Islamic fundamentalists and lose its Bengali identity. This is a possibility, albeit remote. Another possibility is the rise of Hindu fundamentalism in West Bengal, especially if the kind of industrialization that is under way – and on which the author dwells dismayingly – weakens the secular Marxist values which, according to his own admission, have not struck deep roots. Unfortunately, there is no mention of this danger despite indications of the growing strength of Hindu fundamentalism in some of the border districts of West Bengal.

If Chakrabarti regards continued Muslim migration from Bangladesh with alarm, in the chapter – 'Still they come: migrants in the post-partition Bengal' – in the book he has edited, Ranabir Samaddar holds that Bengal has a long history of internal migration, a chronologically deep ecological process. It is now attracting transborder flows by 'creating a vacuum to be filled up by labour across the border and/or demonstrating new avenues in the labour market to be utilized with the help of "transplanted networks"'. He concludes, 'Populations of Hindustan live in a world where partition and migration live in permanent bond, each the vindication of other.'

In the larger framework developed in the introduction, such migration is seen as part of the processes which might mitigate the harsh features of the history Partition has created. That history largely turns on the fact that Partition marked the disappearance of old Hindustan and the creation of South Asia – a decolonized region arranged into a states system. There is a growing feeling, however, of the need for unity and the creation of a South Asian identity for the region to return to 'its history and geography, like one who is returning home.'

Unfortunately, there has never been a common economic space to which the region can return and the question of cultural space raises issues of identity which, when defined in terms of the other, can become problematic. Besides, the regionalization of South Asia has led to a rediscovery of old faultlines and has created conditions which justify the call by a new right to support traditional values and cultural homogeneity, and enables it to harness the politics of identity to conservative goals. Also, Partition has given a boost to a territorial consciousness which has meant classification of areas to be 'guarded, watched, suspected, dominated, released, gazed at.'

All this make a return to unity impossible – a fact which Subir Bhowmik's chapter on the North East underlines while giving a grim idea of the ground realities in the region. Greater hope may lie in what

Samaddar calls 'cultural reflexivities'. One encounters these in literary writings which transcend history and territory, play on memory and dwell on the multiplicity of selves and recall 'Eternal Bengal' – Kazi Abdul Wadud's *Saswata Bangla*. Qais Ahmed's piece translated from Bengali and the translations of the poems by some of Bengal's leading poets, indicate what eternity and reflexivity mean in this context. Sandip Bandyopadhyay's chapter, 'Riddles of partition: memories of the Bengali Hindus'; Pradip Kumar Bose's, 'Partition: memory begins where history ends'; and Subharanjan Dasgupta's, 'Life: our only refuge', supplement them in the discourse mode.

But then culture, despite its transcendental character, is still located in history. And hence the importance of Partha Chatterjee's 'Second partition of Bengal'. Dwelling on the partition's of 1905 and 1947, he states: 'Perhaps, nationalist ideologies lodge themselves most effectively in the body of the modern state when they are able to relegate religion to the secret history of its birth, when they can transform the gross facts of religious majoritarianism into the benign cultural commonsense of everyday life. That perhaps is the condition in which the nation state can make its most magnanimous gesture toward religious minorities by

offering them the promise of universal bourgeois citizenship. To create that condition, a selective erasure from public memory of a certain kind of narratives appears to be a major task of nationalist historiographies.'

While sharing his distaste for narratives fomenting communal sentiments, I would agree that instead of erasing them from public memory, historiographies promote a consciousness that ensures their rejection. Otherwise religious polemicists would perpetuate them. In the end, a few questions for Samaddar. Why use the term contra history in the context of cultural reflexivities? Is contra history outside history? If not, why not call it parallel history since the intimacy he speaks of in the context of multiple selves, is a stream flowing alongside territorial consciousness separated by a strip of historical time which is frequently submerged by overflows of both?

I hope Samaddar will ponder over the matter. Meanwhile, both volumes under review are essential reading for all who seek a better understanding of an event which has defined the locus of the history of the eastern part of the sub-continent for the past five decades and may continue to do so in the foreseeable future.

#### ERRATA

In the article 'Judge and be judged' by Rajeev Dhavan (461, January 1998), on p. 84, col. 3 para 1, the sentence 'For the British and Nehru, it was simply another important constitutional institution of governance', should instead read, '... constitutional institution of state or government'. The error is deeply regretted.

## COLONIALISM, PROPERTY AND THE STATE

Dharma Kumar

The author examines diverse issues that have been important in history writing in India, such as the nature of the colonial state, changes in land distribution, the invisible sector, and the extent of taxation in Mughal and British India. These essays are grouped under discrete but not unrelated heads — the Madras Presidency, land, comparative studies of India, Indonesia and China, and the evolution of the colonial state.

A RECENT dialogue in *Seminar* (461) between two academics, Javed Alam and Suresh Sharma, raises a number of questions about the new kinds of explorations of Partition that are taking place today. Why, the discussants ask, is there a sudden interest in exploring Partition, and why does this privilege memory over history with a capital 'H'? Is it simply a dissatisfaction with the history of Partition as we have known it and its preoccupation with nationalism and the state, or is it that scholars and others looking at Partition in this way are actually making a valuable contribution in creating a new knowledge system, a new way of looking at this important event.

A second set of concerns relates to the ethics of such enquiry: is it morally defensible to excavate memories which have been put away, in some ways resolved? Is it right, to quote one of the discussants, that 'the interviewer chases the *victim* (my emphasis) and draws him by pushing him back into a forgotten memory?' Instead, it is suggested that in order to live in peace and harmony, communities need to leave behind traumatic memories as '*something unfortunate that ought never to have happened*' (my emphasis). While these are the substantial points, a number of others too are raised to which I shall come back shortly. As one of the people implicated in this discussion, I thought I would try to respond to some of the questions the discussants raise, particularly as these come up time and again when one looks at the 'new' work on Partition.

I have been working on Partition for some 13 years now. My main approach to the subject has been through people's narratives of the time, narratives which point to the many issues that conventional histories of Partition have not been able to unearth. These include the histories of women (and no one will argue that the history of Partition so far has not even considered that gender could have played not only a part, but an important, an essential part), of children (a history to which no attention has been paid at all), marginalised people such as untouchables (a history that has lain in the pages of historical sources that contribute to a history with a capital H, but which has been ignored) and various others. These narratives have enabled me to 'see' Partition as more than just a history of political negotiation and manoeuvring; as

more than just the history of the Congress and Muslim League. Rather, they have revealed Partition to be a history also of people, and within that broad category, of different kinds of people – men, women, the poor, the rich, the marginalised.... Why have I, as an individual, become interested in these histories at this time? Is this interest new? Did such explorations exist earlier? Am I merely following a fashion?

Suresh Sharma points out, quite rightly, that it is not as if memoirs and accounts of Partition did not exist in the fifties and sixties. The earliest memoirs date from the fifties: these include Anis Kidwai's *Azadi ki Chaon Mein*, Ebadet Brelvi's *Azadi ke Sain Mein*, Jamil Husain Rizvi's *Pakistan Story*, and somewhat later, Kamlaben Patel's *Mool Suta Ukhde*. To these I would add other accounts, such as Penderel Moon's *Divide and Quit*, and various others. These are only a few among a fairly rich, if not numerous, corpus. While both discussants acknowledge that some material may have been around, they do not see it as part of a self-conscious exploration, of training a historical lens on such materials. This may well be true. But it is worth asking why then has such self-conscious exploration come about now.

To my mind there are several reasons. First, for historians and others like me who are exploring this history, the increasing polarization of Indian society on the basis of religion, has more or less forced our attention towards Partition. In virtually every communal riot that has taken place between Hindus and Muslims in India in recent years, Partition, and particularly selective memories of Partition, have formed a reference. In the anti-Sikh riots in 1984, Partition memories surfaced in an unprecedented way: many of the victims recalled how they had to leave their homes again, how they did not expect to face this in 'their own country.'

It was this that made me, personally, realize how little attention we had paid to those stories that we have listened to time and again in our families. I have no doubt other researchers have followed a somewhat similar, and a somewhat different trajectory. In Surat, Bombay, Ahmedabad in 1992-93, the Hindu right used stories of the abduction and rape of Hindu women by Muslims during Partition to target Muslims, and particularly Muslim women and

children. Could such rape and abduction have been only one-sided? In Bhagalpur in 1989, Partition formed the reference for much targeting of the Muslims. And these are the more collective manifestations.

Take any case in court where a question of Muslim law is involved, and immediately theories of those who subscribed to the two nation theory are pulled out. There is no way we can pretend that Partition is a closed chapter in our history. Instead, what each such conflict brings home to us are questions that have been around, and have remained largely unresolved, since Partition: whose nation is it that we are talking about? How do we understand the geographies of citizenship in this nation? How do we understand notions of home, of country, of family and community?

A second reason is that for historians, who might earlier have been reluctant to approach an event in which they could not easily bring the much cherished (but largely mythical) 'objectivity' to bear on the subject, a study of the trauma and pain of Partition has so far been difficult. But a half century, no matter that it is an arbitrary figure, does and can have some meaning. In this case I think it has served the purpose of providing some distance, so that people can now approach this history with a sensitivity and a responsibility that is essential to any exploration of an event so marked by violence and grief.

There is also the fact that many Partition survivors are now ageing, and while earlier they may have been unwilling to speak publicly about their memories and experiences, that is less so now. I have found that people often want to tell their stories. To my mind, it is all these things that have come together to create a new interest in Partition, and it is this that we are looking at today. The interest is rooted in the political realities of our time, and needs to be understood in that context.

Why, however, the focus on memory? Both discussants worry about this: memory is expedient, shifting, unreliable. How can it replace history? Not only that, but because memory is individual, it can only therefore approximate the discrete experience. Ergo, people like me are 'less concerned with the relation between the discrete and the general.' Rather than making a valid historical exploration – 'which can lead to a knowledge system the way earlier history writing did' – our work is based more on a rejection of history written with a capital 'H'.

I would suggest that this is an almost total, and perhaps willful, misunderstanding of the work of

many people who are studying Partition today. First of all, not all of this work focuses on memory in the way the discussants suggest; both of them are sensitive enough to see that the work that exists cannot easily be swept under one undifferentiated umbrella, yet I do not see them even acknowledge its difference and variety. Second, I think we need to question the 'knowledge system' that earlier history provided us. Without invalidating this system, is there anything wrong in questioning its adequacy, in attempting to expand and stretch its base, in widening its ambit? If there is some way in which history as we know it can actually incorporate the human dimension, can actually build in a way of studying the sociology of pain and emotion, ought we to summarily reject that?

Lest this sound too ephemeral – for after all we are dealing here with nebulous things such as emotions and feelings – there are other, more material reasons why memory is so important. One of the important things about Partition, and to my mind this is why there is so much reluctance to remember it, is because in some way, we are all implicated in the violence. Virtually every family has a history of victimhood, or of aggression. Unlike the Holocaust, there are no clear 'goodies' and 'baddies' here. Yet, the way people choose to remember this event is by 'constructing' (the discussants object to this word, and I have to admit that I agree with them) themselves as victims.

Through the telling and retelling of stories within families, this selective remembering helps strengthen stereotypes and further prejudices. Why is it, for example, that so many second and third generation children who have no reference at all to Partition have internalized stereotypes about Muslims and Hindus in the way they have? Where do these come from? They come, as I see it, from the selective remembering of Partition stories to families, memories that allow you to feel wronged, and to pass on that sense of wrong, memories that allow you to block out your role as aggressor, your own complicity in violence.

It is my belief that unless such memories are confronted openly, unless they are put against other memories, memories of sharing, of friendship, and equally of the violence of one's self, as opposed to only the violence of the other, there is no way we will resolve the troublesome issue of Partition. This is not something that was merely an 'unfortunate happening' that can now be put away. If it was merely that, why does it happen again and again? Krishna Sobti

has said that Partition is difficult to forget, but dangerous to remember. I would add to her statement that it is dangerous, but essential to remember, not only so that we can come to terms with it, but also so that we can actually begin the process of forgetting for, as the two discussants point out, remembering and forgetting are two sides of the same coin.

Why is it that there is no institutional memory of Partition in this country? Because, for the state, Partition was clearly the 'dark side' of Independence. Nothing is served by remembering it. But for us, as historians, individuals, those concerned about how our society is getting polarized, I believe it is incumbent on us to not only remember, but to talk, discuss, to be open about this part of our history and not to pretend that it did not exist. It is in this context that I take strong objection to casting (that word again!) Partition survivors as 'victims', as Javed Alam does.

To represent people who have lived through and survived such violence and trauma as victims, who are merely being manipulated by the unscrupulous interviewer, is to do both sides an injustice. Very few of the people who are working on Partition currently have been irresponsible enough to force others to speak; very few have not been alert, all the time, to the dilemma of how to approach an interview, how much to make public—in short, very few have been irresponsible in the way that is suggested by the discussants. Rather than being fearful that memories of Partition could feed into a reinforcement of a communal consciousness and give strength to communal feelings, it may be more constructive to think of how such memories could be used precisely to counter a communal consciousness.

Another question that arises from the dialogue is: why are the discussants less concerned about the representation of violence in memoirs and fiction. Why is it, for example, that the revival of so much Partition fiction does not give rise to the same concern? Why did the searing despair of Manto's fiction not give rise to this concern about how dangerous it was to expose the violence of Partition? Is it that fiction is seen as somehow being less 'serious' because it is 'imaginary' and not 'based on fact?' Yet anyone who is familiar with the history of Partition knows that virtually all Partition fiction comes out of the direct experience of many of the authors: Krishna Sobti, Ismat Chughtai, Rajinder Singh Bedi, Sadat Hasan Manto, Krishna Baldev Vaid, Quratulain Hyder... the list is long and too well-known to need repeating here. Equally, why should the memoir, the

documentary account, the diary, be less worrying in terms of its exposure of violence than 'memory'? To me, history is the work of many hands: it is equally the work of the image maker, as it is of the writer, the recordist, the fiction writer or of the writer of memoirs... to worry that it is being taken out of the hands of historians and that the knowledge this wide-ranging, interdisciplinary exploration produces is in some way less valuable than the knowledge produced by history with a capital 'H' smacks of a kind of conservatism which I would not have associated with the two discussants.

Finally, for there must be an end and there are too many things that I wish to respond to, I'd like to take up Javed Alam's point where he differentiates this mode of 'doing history' from oral history which, to him, has been part of a larger historical project which 'helped fill up the paucity of data or to enrich it, but it never positioned itself as an alternative to conventional history.' Does the kind of history people like me are 'doing' position itself as an alternative to conventional history? I think not. To say so is to misunderstand what we are attempting to do.

What, I think, we are doing is to raise questions about the way history has been written, who has written such history, about whom, and why. Such questions have been raised by feminist historians for many years now—thus this should not come as a surprise. What we are also asking is: is there any way in which history as we know it, history with a capital 'H', can make room for the small, the individual voice, the bit part players rather than only the major ones? And if so, how? How, in other words, do we reconcile the general with the particular? Is there any way in which the kind of material being uncovered about Partition now can help us to better understand this event, and if so, how does that change, add to, augment the history of this event? After all, all history is about selective remembering—and therefore about selective forgetting. All new explorations, therefore, go back into memory, and explore or attempt to uncover things that may have hitherto remained hidden.

More, to look at oral history merely as something that enhances data and information is to do oral history an injustice. Oral history is about people. People are not data, they are human beings, not, as many historians would have it, informants without names and identities. I see the work I am doing as fitting very squarely within the frame of oral history: it is work that attempts to look at history, to use a

cliché, as if people mattered, to put the narratives of people and their histories at the centre.

To me, people who lived through Partition are the history of the event. How they choose to remember and recount this history is as important as what we have hitherto seen as the 'facts' of this history. How these memories are handed down to us, how we receive them, how we understand them and through them the perceptions of people who have lived through Partition, is crucial to how we respond to the world around us today. If we forget this history because we are afraid of it, or because it may be dangerous to remember, we are, I'm afraid, bankrupting any further understanding of our history for the same argument can be applied to anything. Why look at any history afresh? Instead, what we should be talking about is how we can look at this history, collectively, not individually, and how we can do so with the kind of responsibility and sensitivity it merits.

IN 'Remembering Partition' (*Seminar* 461), Javed Alam and Suresh Sharma voice their anxiety over the revival of scholarly interest in Partition in recent times and the attempts to reconstruct the 'history' of our nation state through oral and literary narratives. But is digging into the traumatic memories of Partition a sadistic-masochistic exercise, as they suggest? No, there is a certain context to the recent scholarly attention to Partition. The context, as I see it, is the recent rise of the forces of Hindutva for whom the nation-community is a natural, homogenized and eternal verity. In such a context it is important to look back at a critical event like the Partition to show how religious communities then were radically redefined and reconstructed, what was at stake, and who were the victims of the homogenizing act of nation formation.

The act of retrieving memories of Partition is not to 'complete' the history of the event, as Alam and Sharma seem to think, but to question our understanding of Partition. For instance, the act of retrieving the experiences of women during Partition is not so much to make visible women or to valorize their victimhood, as to show how the violence accompanying Partition that marked women's bodies was an expression of the intimidation and triumph of one community over another. At a time when women, among other marginalized groups, are being wooed to reaffirm

their religious identities by the Hindu right, Partition narratives point to the danger of women getting co-opted into the patriarchal discourse of communalism.

Alam and Sharma suggest that Partition was marked by a blurring of boundaries between communities, between victimizer and victim, victimizer and saviour. Recent research, on the contrary, suggests that Partition and the events leading up to it were marked by an accentuation and redefinition of boundaries between religious communities. For instance, we learn that the Meos of Mewat were targeted as Muslims and subjected to violence, thus forcing them to give up their earlier ambiguous identity as half-Hindu and half-Muslim. Again, if victimizer and victim were rolled into one, it only goes to show that no community at that point in history was impervious to the discourse of communalism; ambivalent acts of victimizers turning saviours can be explained as residues of more ambiguous times and identities.

Their argument that recalling the trauma of Partition is neither ethical nor healthy, for either the individual or the community, because such traumas are best forgotten is erroneous. To see Partition in clinical terms as trauma, or more graphically as amputation of Mother India, is to refuse to acknowledge Partition as a resolution (as is done in Pakistan), albeit a bloody one, of the 'Hindu-Muslim problem' in pre-independent India. Not only that, it is evocative of the Hindu rights' discourse which laments Partition as an act of marauding Muslims making away with the Hindu *punjab-hoomi*.

In the dialogue between Alam and Sharma, a point often re-iterated is that the (post-colonial) state was not the perpetrator of Partition violence; rather it was the handiwork of common people belonging to different communities in the grip of religious frenzy. They argue that institutionalization of the memory of Partition is neither possible nor desirable because there is no 'distant' agency like the state to apportion blame to (unlike in the Holocaust). This clearly is an uninformed argument. Recent research, especially by Gyanendra Pandey and Shail Mayaram, reveals the post-colonial state's tacit as well as active connivance in the making of Partition violence.

Not only this, recent 'revisionist' historical scholarship emphasizes that the Congress leadership, to ensure a strong centre, itself readily conceded Partition instead of agreeing to a more federated structure that would have involved significant concessions to Muslim majority provinces. Thus to

# In memoriam

## S. Guhan 1933-98

WHEN the collective loss to society due to tobacco smoking is computed, the untimely death of S. Guhan will be the among the biggest losses. Guhan, as civil servant, and then as a scholar and policy analyst, contributed more than most other gifted individuals to the welfare of ordinary people in numerous walks of life. He deserves the gratitude of the nation at large. He will also be gratefully remembered by countless individuals who had the good fortune of working with him. And whenever they think of him, they will undoubtedly smile, recollecting his wit and humour, dry as the drink he liked. Still, his death will be a large item on the tobacco industry's ledger of liabilities because he had so much more to give.

Even after the illness had been diagnosed, and it was clear that his time was running out, he did not give up any of his 'other-regarding' preoccupations and become self-absorbed. He set his keen, analytical mind to devising and refining schemes and finding solutions for some of the most stubborn problems facing the country. He had the ability to intellectually visualise – steadily and as a whole – the big picture into which individual pieces would fit. He knew that research and scholarship is never adequate and potentially limitless. But unlike most academics, he felt that it is policy that lags behind in translating sound ideas already available into practical schemes that are entirely feasible.

Guhan was a rare individual who could translate ideas into action, fully conscious of the origins of those ideas and realities on the ground. He has done more to dispel pessimism about creating entitlements to social protection during a period when fiscal restraint has become the watchword of the state. And he proposed very sensible schemes that would inherently minimise the scope for corruption and help the infirm and the aged, those for whom survival would be impossible without state assistance.

Guhan loved life in a very contagious way. His passion for music, his happiness that hundreds of people could enjoy the best of song and dance during the Chennai season, his services to Kalakshetra, revealed his ability to connect the aesthetic and cultural dimensions of life to compensate for the largely dismal aspects of the ordinary business of living in this country.

Guhan contributed in substantial measure to the Report of the Brandt Commission, the forerunner of several such commissions which have attempted to articulate a global vision. He collaborated with John Lewis in the writing of a history of The World Bank. He was enthusiastic about resurveying villages that had been surveyed in the early part of this century to learn about social processes and change. And during the last five years, Guhan worked with a group of social scientists and the late T.N. Krishnan on a project which, among other things, yielded several good ideas for reforming social security institutions in India.

He brought a light touch to all his work and immensely enjoyed putting down bureaucrats by wearing his academic hat in arguments with them. Equally, he would discomfit academics by bringing them down to earth and cutting off flights of theoretical fancy. Guhan was the first to celebrate the achievements of others, an increasingly rare attribute. It is well that the rest of us should celebrate his personality and achievements.

A smile. A teardrop. A raised eyebrow.  
A flare of the nostrils. A frown. These are  
just a few manifestations of a language  
that transcends the spoken word.

Spontaneously communicating

absolve the state of its role/responsibility in Partition violence and to see it merely as a fire-fighting unit is to refuse to see how the Indian nation state, since its inception, has embraced and institutionalized an ideology that legitimizes violence against minorities.

Finally, this process of reconstruction of memories in recent times is not an arbitrary, unmediated enterprise as suggested by Alam and Sharma. Rather, it is being carried out by researchers self-conscious of and transparent about their politics and location. It seeks to question and puncture the statist perspective on Partition, even as it attempts to analyze Partition violence contextually, without abstracting from its socio-political moorings.

### **Nikhila Haritsa**

Research Scholar  
Bangalore University

I HAVE a fundamental difficulty with what Swami Agnivesh calls the Hindu view of a multi-religious society (*Seminar* 460, December 1997). It seems to me that what he calls a Hindu view of a multi-religious society, in effect constitutes not so much a Hindu as a *secular* view of a multi-religious society.

I will like to press this point home in two ways: (i) by demonstrating that the key elements in his so-called Hindu view are really secular in nature and (ii) by indicating what might constitute the content of a Hindu solution to the problems of a multi-religious society.

A fundamental thrust in Swami Agnivesh's argument seems to be that the problems of a multi-religious society possess two dimensions: (a) how one religion treats other religions and (b) how one religious treats its own followers. In relation to the first—the inter-religious dimension—he identifies *exclusivism* and allied fundamentalism as the main culprits. In relation to the second—the intra-religious dimension—he identifies *exploitation* as the main problem.

He then goes on to examine the first dimension in a way such as to indicate that it *primarily* concerns Islam and Christianity, whose followers are proselytizingly antagonistic to those who do not accept their faith (even if the antagonism is not always active). By contrast, 'generally speaking... a Hindu has no problem living next to someone who believes in an altogether different God' (p. 71). Although he calls upon 'Christianity and Islam to liquidate their missionary apparatus' (p. 72) he calls upon the state to

ensure that such exclusivism not interfere with the freedom of religion and conscience of others. He does not call upon Hindus to do anything in this regard. In other words, he is seeking a secular solution to a religious problem. Strikingly, in neighbouring Nepal, which is a Hindu state, such an outcome has been secured by a blanket ban on religious conversion.

As for the issue of intra-religious exploitation, which Swami Agnivesh identifies as a problem common to almost all religions in India in the form of gender inequality, child slavery, casteism, communalism, consumerism and so on (p. 74), the solution he offers is in terms of the assertion of their rights by the afflicted groups. These rights are human rights. He states: 'There cannot be a Muslim or a Hindu declaration of human rights. Human rights are universal and they have to be constitutionally backed by a secular legislative body' (p. 75). Thus, although Swami Agnivesh claims to take a Hindu view of these issues he ultimately adopts a secular position in relation to them.

What then, one might ask, would constitute a Hindu response to inter-religious and intra-religious issues in a multi-religious society like that of India? As a pluralistic tradition Hinduism may provide several suggestions in these matters (not excluding the secular options!). But permit me to suggest two with a distinctly Hindu flavour.

One Hindu approach to the problem of religious exclusivism, fanaticism and fundamentalism would lie along the lines of introducing a sympathetic study of all the religions of the world in the educational curriculum—an approach promoted by Mahatma Gandhi, Maulana Azad and S. Radhakrishnan.

Similarly, another Hindu approach to the problem of intra-religious exploitation could consist of a Universal Declaration of Hindu Rights by the world's religions. After all, if the secular liberal tradition is one source of value formation, the religions of the world are no less in this regard. At the very least a Hindu initiative to proclaim its own vision of human rights and monitor its implementation would seem to follow naturally from Hindu premises.

I therefore feel that while the Swami has identified the problems like a Hindu, his solutions have not stretched beyond the procrustean bed of secularism.

WE are now ready to move into a new stage of politics. The hurly burly of elections, the great Indian *tamasha* is now behind us. Jaded by the overkill of election hype – defections, unprincipled alliances, grandiose and empty promises, the marketing of caste, community and dynasty, apologies and appeals to loyalty – the citizen as voter can now safely move from being participant to bystander. Now starts the stage of the buying and selling of our chosen representatives.

Rhetorical flourishes of *samajik samrasta*, *swadeshi*, stability, *suraksha* and *shuchita* have not quite managed to hide the glaring absence of issues which govern the life chances of our citizens. Few in the fray thought it worthwhile to talk about the politics of resources – land, water, forests. No one cautioned about the increasing fragility of food security – the dangerous shift away from food crops or the degradation of arable land. Or for that matter talked about basic education and health. Evidently our abysmally low HDI does not concern the political class.

Years of sustained grassroots work for increasing transparency and accountability may well influence local contests, but come the elections to the Lok Sabha, across party spectrum, corruption and criminality don't quite become handicaps in selection of candidates. Winnability is all.

The Congress did deny tickets to some heavyweights accused of involvement in the 1984 Sikh carnage, or to its ex-prime minister for 'sleeping' when the Babri Masjid was pulled down. But it had no qualms about depending upon the same worthies in its campaign. Worse, no shame about touting as its achievements the performance of its government under a leader now jettisoned.

The main player in the hustings for the 12th Lok Sabha, the BJP, comes across as no better. Attack Laloo Yadav for the fodder scam, but ally with Jayalalitha. And worse, support alleged don D.P. Yadav, only the other day accused as master criminal, just so that Mulayam Singh Yadav may be tied down. One is entitled to be sceptical about its claim of providing stable and clean governance when each one of its new-found allies stands opposed to its basic principles – Ram Mandir, Article 370, Uniform Civil Code.

As for the UF, it would be best to re-christen it as the Left and Federal Front. For, whatever else the

results might foretell, its only constituent with claims to a national status, the Janata Dal, is ready to vanish. Nothing epitomises the fading away of a party which led three governments (not including 1977) than its prime minister having to depend on the Akali Dal-BJP for victory.

With most credible opinion polls now forecasting a hung Parliament, it is Sonia Gandhi more than 'the man India awaits' who has been pitch-forked onto centre-stage. No one had quite expected the silent sphinx from 10 Janpath to convert a lack-lustre contest into a keen one. No charges – her Italian origins, the fear of Rome Raj, Bofors, apprehensions of dynastic rule, even the fact that she is a mere primary member, no elected leader, of the party – stopped her from galvanising crowds. Votes and seats are another matter. Clearly the Congress, whom everybody had written off, is still in the reckoning.

Whatever the final complexion of the post-poll arrangements, whichever party wins the coveted top spot will be constrained in following up its agenda. The BJP is already hamstrung by regional allies and efforts to widen its social base. If forced to woo other formations, necessary if it wants to cross the magic half-way mark, its core – the RSS and VHP – is unlikely to be pleased. The lure of power is what may save our secular fabric.

And perchance we get a Congress-led regime (no one gives much of a chance to another UF led coalition), the search for an acceptable leader and the jockeying for ministerial berths should be enough to ensure that effective policy shifts are not on the agenda. All we can be sure of is that extra-constitutional diktats will be difficult to resist.

What then should we do, other than remain periodically bemused and often pained bystanders. Cynical or tired withdrawal is no answer. Nor does electoral politics exhaust the political space. A variety of citizen groups attempted to intervene in the process of candidate selection and electioneering. Let us continue this engagement with promoting policy agendas on issues that matter. Given the state of our polity, we may soon get another chance. It is, after all, no one's claim that politicians are knowledge proof.

Harsh Sethi

# The problem

AT the beginning of this century (1906), liberal social reformer Gopal Krishna Gokhale pleaded for making elementary education compulsory. Today, 50 years into our existence as an independent nation, we are nowhere near ensuring that a majority of our children are in schools. And this notwithstanding constitutional commitment (of course, only in the Directive Principles of State Policy) to provide free and compulsory education for all children up to the age of 14 years by 1960, a target date which is routinely pushed back every decade.

It is not just India, but South Asia (with the exception of Sri Lanka) that has emerged as the most illiterate region in the world, with 400 million illiterate adults (nearly one-half of the world total) and 50 million out-of-school children (about one-third of the world total). South Asia has by now the lowest adult literacy rate (49 per cent) in the world, behind even sub-Saharan Africa (57 per cent). This when in 1970, South Asia was ahead with a literacy rate of 32 per cent compared to 27 per cent in sub-Saharan Africa.

These macro figures hide glaring regional, caste, class and gender disparities. India's Hindi belt accounts for the bulk of its illiteracy cake. And perchance someone argues that the region is poor, it is worth asserting that Kerala or Himachal Pradesh or Mizoram have a far better educational record than Punjab or Maharashtra. More likely, the problem has to be located in the lack of will of our political masters, in insufficient application on the part of those who run the various schemes and programmes. Politics, howsoever understood, seems to have little space for such concerns.

Even those who blanch at the equation of literacy or schooling with education (the reference here is to

the immense innate wisdom of our illiterate masses – incidentally the only time our political masters and policy-makers make any laudatory reference to the common citizen) rarely argue against the social costs of illiteracy. We have clear evidence that education leads to many social benefits – improvement in standards of hygiene, reduction in infant and child mortality rates, decline in population growth rates, increase in labour productivity, greater political empowerment and democratization, and an improved sense of national unity. Any economist will tell you that the rate of return on education, particularly primary education, even more on the girl child, is high. And yet....

Is it that we do not know what to do? This, one suspects, is a claim which is difficult to sustain, given dozens of commission reports and innumerable innovative experiments across the country. From the Radhakrishnan and Kothari Commission Reports to the National Education Policy; from the Gargoti experiment to Kishore Bharti; from Mahila Samakhyas to Lok Jumbish – we have a full list of what needs to be done, properly prioritised.

First, the quantitative challenge. If the goal of education for all (EFA) is to be achieved by the year 2000 A.D., we need to get 65 million children in South Asia in to school. This requires massive investments in schools, teachers and basic educational materials. It is estimated that the region needs 410,000 new teachers every year, three-fourths of them women.

Second, we need to attend to the quality aspects. As important as ensuring enrolment is to ensure retention, given that nearly 40 per cent of all children who do enter school drop out in the primary stage itself. Again the solutions are known – schools within easy

distance, flexible timings to suit eco-cultural cycles, having at least one female teacher per school, textbooks in local language/dialect – one can go on. Above all, there is a need to invest in the teacher, not just in pay and perks, but in making it possible for her to teach, and well.

At the experimental level, the innovations are spectacular. In Rajasthan, the Shiksha Karmi project hired young middle-school pass youth to teach working children in accessible night schools by involving the community and local NGOs. Evaluations showed that both quantitative and qualitative retention was high. Even in the 'socially backward' regions, the hunger for learning is undeniable. Parents are keen to send children to school, including girls, and pay if needed. What we must ensure is a stable and engaging environment.

It is often pointed out that poorer children cannot afford to attend school. That they need to work not just to supplement meagre family incomes, but also to feed themselves. In addition to the usual affirmative action policies, some states initiated a mid-day meal programme. In Kerala, families keep aside cereals, coconuts and bananas as their contribution to the school. Where the community is interested, they actively participate in making the schools work. Surely, it is not our contention that other regions and states are uninterested in their children?

For years now it has been suggested that teachers be hired locally, be made accountable to the local authority, and their jobs be made non-transferable. All easy, it seems. And yet, politicians, bureaucrats and teacher unions resist this 'obvious' move. Transferring teachers is lucrative for many. As for teachers,

they feel this would negatively affect their bargaining strength.

Is it that this would require resources beyond the reach of our poor societies? Is this why, in the decade of the nineties, we have finally started relying on externally funded projects, mainly The World Bank's District Primary Education Project? Is basic education not the duty of the state, a commitment that it is reneging from? After all, what does it cost? The Human Development in South Asia report for 1998 estimates that it would take \$1 billion a year or a mere 0.3 per cent of the combined GNP of South Asia to do the trick. Can we honestly claim that this is beyond us?

The argument is not the currently fashionable one, of World Bank bashing, that 'glamorous' foreign-aided projects distort national priorities. It is just that, rhetorics apart, most projects suffer from conceptual, managerial and administrative weakness which impair their effectivity. Even the much talked about National Literary Mission, after initial success, seems to have whimpered out. Concurrent evaluation and course correction forms no part of our implementation strategies.

Finally, should basic education be made compulsory, a fundamental right? Opinions vary, but it is indisputable that unless state and society is compelled to live up to the constitutional commitment, our elites will find some excuse or the other for non-performance. For them the social costs of illiteracy may not matter. They and their children already access this good. But for the poor it does.

Basic education is a necessity, not just instrumentally, but in itself. It can also be fun, a joy. We cannot afford to let time slip by, or let decision-makers off the hook. This issue of *Seminār* debates what is involved.

# Squaring the circle

JEAN DREZE

AROUND this time last year, someone suggested that India might celebrate 50 years of independence by making elementary education a fundamental right. The proposal was widely applauded, then fell into oblivion as the Parliament preferred to celebrate the event with interminable speeches. The situation reminded me of a label I once saw on a second-hand television set in a shop window: Sound Only.

The fact that the proposed constitutional amendment on the fundamental right to education has been gathering dust for so long speaks volumes about the priorities of political leaders. Nevertheless, there is a good chance of the amendment being passed relatively soon, given the mounting public pressure behind it. The real challenge, however, is to put this amendment into practice. One aspect of this challenge (probably not the most demanding) is to deal with its financial implications. This is where the government seems to be

painting itself into a corner, made up of three conflicting priorities: selective fiscal discipline, liberal teacher salaries, and the fundamental right to education.

The first priority is selective fiscal discipline. The adjective 'selective' is important because comprehensive fiscal discipline would call for fairly obvious measures that are beyond the currently acceptable bounds, such as drastic cuts in subsidies for the privileged, reduction in military expenditure, and a sharp increase in income taxes. These options would come up against powerful lobbies and are therefore quietly ignored most of the time. Instead, the fiscal disciplinarians train their guns on soft targets.

How imperative fiscal discipline really is in the first place is an arguable matter. For the followers of the IMF school of economics (where IMF seems to stand for 'Ignore Market Failures'), fiscal discipline has become a sacred cow. This prescription, in turn, is usually justified in terms of concern for

inflation. Why inflation is such a dreadful monster is rarely explained and, disconcertingly enough, economics textbooks have remarkably little to say on this subject. As Frank Hahn put it in his distinguished treatise on *Money and Inflation* fifteen years ago, the belief that inflation is an evil in itself 'is a belief for the anthropologist and psychologist to unravel — economists cannot help.'

**T**o avoid misunderstanding, I must clarify that what economists mean by inflation is a situation where prices and wages are rising over time. This differs from a situation where prices are rising but wages are not. The latter is certainly undesirable and people are right to protest when it arises. But inflation as defined here is not necessarily bad, at least when the rate of increase of prices and wages is relatively low. For instance, in India during the 1980s, prices were rising at about 10 per cent per year and wages a little faster, and it could be argued that the economy was none the worse for it. China's economy, with even higher inflation, was among the most successful in the world. In general, there is no evidence that moderate levels of inflation reduce economic growth, or have other major economic or social costs.

Why then, has a sophisticated institution such as the IMF fallen into the trap of absurd recommendations such as balanced budgets and zero inflation? I believe that the answer has to be sought not from anthropologists or psychologists, but from political scientists: it has something to do with the aversion of corporate financial institutions to inflation, and with the political influence of these institutions. As Jagdish Bhagwati candidly said in a recent interview, 'Wall Street views are very dominant in terms of the kind of world you want to see.'

All this may seem to be at a tangent, but I mention the point because there is some danger of India falling into a similar trap of inverted priorities, where the control of inflation is given overriding importance at the expense of real social issues (such as education). In European countries, this inversion of priorities has taken astonishing proportions, with finance ministers showing far more zeal in bringing inflation down from (say) two to one per cent per year than in fighting mass unemployment. Similar attitudes seem to be slowly taking root in India. Finance Minister P. Chidambaram, for instance, concluded a recent assessment of the state of India's economy with the words: 'Above all, we are justifiably proud of our success in keeping inflation as low as 4 per cent in the past six months!' I am not sure that this 'success' is really worth more than passing mention in a review of India's economic performance.

Having said this, there is a strong case for fiscal discipline in India. More responsible and equitable patterns of taxation and expenditure could indeed be of great benefit for the masses. For this to happen, however, fiscal discipline has to take a more comprehensive form, going beyond the selective focus on soft targets.

**O**ne aspect of the current policy of selective fiscal discipline has been to combine austerity in some fields with largesse in others. Public sector salaries have been one object of this largesse, culminating with the Fifth Pay Commission report and its repercussions. The fact that this massive giveaway to the middle class came from parties that are seen as left on the political spectrum gives much food for thought. Also interesting is how the government almost instantly found the financial resources required to back these massive salary bills (nota-

bly by raising various taxes, and cutting expenditure across the board), at a time when there is supposed to be no extra money for social spending.

School teachers are by no means the main beneficiaries of the revised pay scales. Nevertheless their salaries, already increasing at about 9 per cent per year in real terms in the 1980s, are making another great leap forward. Is this a good thing? It could be argued that higher teacher salaries help to improve teaching standards. But since the higher salaries are paid *irrespective* of a teacher's effort, this incentive effect is likely to be weak.

**S**ome recent studies confirm that teacher performance in government schools bears no relation to their salaries. It is also worth remembering that in rural India, school teachers already belong to the top decile of the income scale, making it hard to justify further material privileges. Teachers certainly need better work conditions, but this should take the form of an improved school infrastructure, better training, less crowded classrooms, more respect from the education bureaucracy and greater support from the parental community. These steps would do a great deal more than salary increases to improve the teaching standards and job satisfaction of teachers.

Let us now put two and two together. Selective fiscal discipline has effectively put a cap on the growth of public expenditure on education (as a share of GDP, the latter has in fact *declined* year after year since 1991-2). On the other side, the rapid growth of teachers' salaries continues unabated. Given that these salaries account for over 95 per cent of total expenditure on elementary education, the Education Ministry has only one way to make ends meet: slow down on new teacher appointments. This is exactly

what has happened in recent years, leading to a steady decline in the number of teachers per child.

**T**he current slowdown in teacher appointments is in conflict with the professed commitment to elementary education as a fundamental right. Indeed, one aspect of this right is that all citizens are entitled to minimal schooling facilities at a reasonable distance from their homes. This requires a major upgrading of the schooling infrastructure, including a large increase in the number of teachers. As things stand, schools are so under-staffed that many of them provide little more than basic child-minding services. Single-teacher schools are an extreme manifestation of this phenomenon, but the problem is not confined to these schools.

There are various estimates of the financial implications of the right to education, which are largely driven by teacher requirements and teacher salaries. According to the Saikia Committee, the fundamental right to education calls for an additional expenditure of Rs 40,000 crore over the Ninth Plan. This estimate, which precedes the Fifth Pay Commission report, and makes no allowance for salary increases, is probably on the low side. But even this modest figure is way above what the Education Department can hope to get for elementary education as things stand. In short, there is no sign of any official willingness to face up to the financial implications of the fundamental right to education as estimated by various expert groups and committees.

What is the way out of this impasse? One prediction is that the proposed constitutional amendment will be quietly dropped. This, in my view, is unlikely, if only because the amendment has overwhelming public support. Also, the fundamental right

to elementary education has already been recognized by the Supreme Court in the Unnikrishnan case (1993), giving Parliament little choice but to recognize it too.

A more optimistic prediction is that the fundamental right to education will prevail, and that public pressure (perhaps in the form of a Public Interest Litigation) will bulldoze the financial obstacles. This would be an interesting denouement, especially if it constrains the fiscal disciplinarians to explore new means of achieving their goal. Much as I would like to believe in this outcome, it is however a hard wicket, because the government has another way of wriggling out of this situation. This is to give formal recognition to the fundamental right to education, while giving it a diluted interpretation which minimizes the responsibilities of the state.

**T**he door is already open to this course of action. The proposed constitutional amendment, in itself, does not specify exactly how the fundamental right to education is to be implemented. It leaves it to individual states to formulate relevant legislation for this purpose. And while some guidelines about the content of such legislation are contained in the Saikia Committee report, these guidelines are unlikely to have much force in practice.

Some states will probably confine themselves to compulsory education laws that focus on the responsibility of *parents* to send children to school. Others may specify that all children are entitled to minimal schooling facilities, but without going very far in specifying what these facilities are (e.g., in terms of convenience of access, physical infrastructure, teacher-pupil ratios and teacher qualifications). This will make it possible for the state government to get

away with providing the missing facilities in the form of cheap arrangements such as 'non-formal education centres' and low-paid *shiksha karmis*.

**A**s a matter of fact, several states are already making quiet but persistent moves towards reliance on low-cost schooling as a means to universalize elementary education. In Himachal Pradesh, for instance, 'voluntary teachers' employed at about half the salary of a regular teacher have already been recruited on a large scale in government schools. In Rajasthan, *shiksha karmis* are widely used as substitute teachers in remote villages. Low-cost schooling is probably most developed in Madhya Pradesh, which now has at least four different types of alternative schooling arrangements: non-formal education centres sponsored by the central government, *shiksha karmis* posted in formal schools, 'alternative schools', and informal schools created under the state's innovative 'education guarantee scheme' (EGS). These different facilities are not necessarily *aimed* at providing low-cost alternatives to formal schools (some of them have a completely different inspiration), but there is a strong pressure to *use* them in that way.

How effective are these low-cost schooling facilities? The first generation of such facilities, consisting of non-formal education centres sponsored by the central government, were a fiasco. Several studies indicate that a large majority of these NFE centres are non-functional. To cite only one, the recent PROBE survey of schooling facilities in the Hindi speaking states found fewer than ten functional NFE centres in 188 survey villages (on paper, India has more than 2.4 lakh NFE centres, i.e. one for every other village or so). Even in the 'functional' centres, the level of teach-

ing activity was minimal. So much so that, in many cases, local residents and even school teachers were unaware of their existence.

In 1,221 sample households, the survey found only two children who were actually enrolled in a NFE centre. And the survey did not uncover a single case of a child who had 'graduated' from a non-formal education centre to a formal school, even though one of the main goals of NFE centres is precisely to make this possible. Notwithstanding these and other clear indications of the failure of the programme, the creation of scores of additional NFE centres continues unabated – the current target is 3.5 lakhs. As a top-level bureaucrat from the Department of Education candidly put it at a recent seminar in Delhi, 'non-formal education survives because it is a profitable industry.'

The second generation of low-cost schooling facilities, which encompasses the state-specific initiatives mentioned earlier, is somewhat better planned and more promising. Voluntary teachers in Himachal Pradesh, for instance, seem to play a useful role. The same applies to informal schools set up in Madhya Pradesh under the 'education guarantee scheme', though it is too early to assess this initiative with any confidence.

A distinction needs to be made, however, between the role of these facilities as a *temporary supplement* to the mainstream schools, and as a *permanent substitute* for the latter. Providing alternative learning facilities for drop-out children, for instance, is certainly a useful thing. So is posting a shiksha karmi in an under-staffed school, as a provisional arrangement. But it is quite another matter to argue that non-formal schooling facilities provide an adequate *substitute* for formal schools.

Until recently the last argument would have had few takers, but its political acceptability is rapidly gaining ground as the imperatives of fiscal discipline put pressure on the state to fall back on low-cost schooling arrangements. The obvious danger of 'universalizing' elementary education in this way (bearing in mind that the low-cost facilities are almost invariably aimed at underprivileged children) is that it is inequitable, unless the low-cost schooling facilities are of the same quality as the mainstream schools. Failing that, the two-track formula may *institutionalize* the disparities of educational opportunities which universal elementary education seeks to *eliminate*.

Whether low-cost schooling facilities can deliver education of the same quality as the mainstream schools is an open question. It is not impossible in principle: the lower costs of these facilities are usually due to lower salaries, and, as argued earlier, salaries need not bear much relation to teaching standards. But the *sustainability* of these salary differentials is doubtful (the lower-paid teachers being quick to organize and demand higher salaries, as is already happening in each of the three states mentioned earlier), not to speak of their equity. The sustainability issue also applies to the institutional arrangements that support these alternative facilities.

The onus of proof that low-cost schooling can deliver quality education in an equitable and sustainable manner lies with the advocates of this strategy. Meanwhile, public pressure should focus on an undiluted version of the fundamental right to education, based on the inclusion of *all* children in a common schooling system. And if this formula is costly, so be it.

# Where are we at?

RATNA M. SUDARSHAN

It is usually accepted that 4-5 years of schooling is needed for durable literacy. On the assumption that 'basic education' has a simple objective, i.e. a literate population (as opposed to an educated one), this paper presents some of the patterns observed in our achievements in moving towards this objective. The data presented here is drawn from an NCAER survey conducted in 1993-94 for rural India.

Taking the country as a whole, in rural India 65.6% of males and 40% of females over the age of 7 are found to be literate, or a little over half (53.5%) of the population. Not surprisingly the highest levels of literacy are found in Kerala, at 93% of males and 86.5% of females, considerably above any other state. Himachal Pradesh and the North East follow, with 79.4% (M) and 57% (F) in Himachal Pradesh, and 77% (M) and

60.9% (F) in the North East. At the other extreme are Bihar, with 56.6% for males and 28.8% for females; and Rajasthan with 60.4% for males and 19% for females. The states with low levels of male literacy are also the ones with the highest gender gap. This relationship is shown in the diagram using data at state level and the ratio of female to male literacy as a measure of the gender gap in literacy.

These regional disparities are well known. The data shows that literacy levels increase steadily as income increases. At a household income level of under Rs 20,000, 57% of males and 32.5% of females are literate; at levels over Rs 86,000 the corresponding figures are 86.4 and 62.2. The increase in literacy is more pronounced for females, since the levels for males are always higher than for females. Thus, in Rajasthan, the level for females from households with average per capita income per annum of under Rs 1500 is 13% and this goes up to 36% for households with income over Rs 6000. In contrast, the difference between land owners and landless is not very sharp; it is 68% (M) and 41.3% (F) for land owners and 60.4% and 37.6% for landless. However, landless wage earners are less fortunate.

The lowest level of literacy among different occupation groups is among daily wage earners at 48.7%

\* This paper presents data from the NCAER Human Development Profile of India: inter-state and inter-group differentials (November 1996). I would like to thank Dr. Abusaleh Shariff for his suggestions. Any opinions expressed here are entirely personal.

(M) and 27.2 (F) and the highest among the salaried/professional at 85% (M) and 58.2 (F). The compounding of vulnerabilities due to occupation, gender and region is reflected in the literacy rates of female wage earners in the states of Bihar, U.P. and Rajasthan. Thus, the levels for male wage earners in Bihar is 29.3%, in U.P. 39.4% and in Rajasthan 44.9%. In the case of females, the rates are 10.3 in Bihar, 9.7 in U.P. and only 6% in Rajasthan.

Caste groups show the lowest levels for STs (51.3 M and 26 F) with the levels being much higher for non SC/ST Hindus (72.3 M and 45 F). Likewise, taking religious groups, for all Hindus the level is 65.9 (M) and 39.2 (F), for Muslims 59.5 (M) and 38 (F) and for Christians 85 (M) and 76.5 (F).

More immediate environments make an impact. In households where both parents are educated, the literacy levels are 89.5 (M) and 74.7 (F) while for households where both are illiterate the levels are 15.4 (M) and 8.7 (F). As between parents, a literate mother has greater impact on child literacy. In villages with a low level of development, the levels are 56.1 (M) and 26.5 (F) and in those with a high level the figures are 74.4 and 52.7.

**C**learly, the average achievement levels hide wide variations. Any concern with strengthening the educational system calls for some understanding of diverse performances. It is relatively easy to postulate that if education levels can be raised, appropriate employment opportunities made available, and higher levels of income generated, then we have the potential here for a dynamic virtuous circle of ever increasing levels of education, productivity and income. But for those who are not part of this growth dynamic, the incentives for education may be low.

From the evidence of village surveys, it does not appear that there is a lack of motivation, in that people are well aware of the potential benefits from education. These are perceived as being of different kinds. The most widespread is the demand for functional literacy, especially among women: the ability to read numbers, communicate with officials, write letters, use ration cards, all of the diverse ways in which literacy and numeracy are almost essential in a monetized and increasingly urbanized economy. Literacy or education is also seen as a safety net, again especially for women: it may not be seen as an essential attribute to play the role of mother, wife and partner in work, but in case of misfortune, some level of literacy will afford better chances of earning an independent income.

**T**he perception of education as a means of getting a better job and hence provide upward mobility in the society is perhaps the most problematic, because even while it offers an effective tool to encourage greater participation in school, it can simultaneously lead to the unforeseen impact of unfulfilled expectations. Finally, education may be seen as a means of empowerment: control over one's life in more than just an economic sense.

Restricting ourselves to functional literacy, a demand for which is enough to ensure that children are enrolled in school, it is difficult to explain why we are still well short of universal enrolment. If the problem is not demand, is it that there are no schools? Or do they exist only on paper? Or is schooling too expensive?

As with literacy, there is considerable variation in enrolment rates. Among the poorer performing states, we find the greatest gender disparity in Rajasthan, with the ever enrolment rate being 78% of males and 41.9%

of females. Corresponding figures for U.P. are 73.2% (M) and 53.4% (F) and for Bihar 64.7% (M) and 51.2% (F). Enrolment of course, is only half the picture: it is well known that irregular attendance and discontinuation or dropout are persistent problems. Discontinuation rates<sup>1</sup> are highest among landless wage earners—7.5 for males and 13.7 for females, as against 4.2 for males and 6.7 for females among land owners. Among the states, the highest rates are found in Andhra Pradesh, for landless wage earners at 14% for males and 20.9% for females. Regional differences may be due to opportunities for employment of children, but one striking fact about discontinuation needs to be noted. These rates are found to be low for children in the age group 6-11, and significantly higher in the 12-14 age group, a pattern observed in all states. For rural India as a whole, the differences are shown in Table 1.

TABLE 1		
Discontinuation Rates (6-14 years)		
	Rural India	
	M	F
6-9 years	0.71	1.01
6-11 years	1.68	2.70
12-14 years	10.84	17.07

The implication is that if children can be enrolled in school at a young age, there is a good possibility of imparting 4-5 years of teaching before the social and economic pressures that result in dropout mount high.

**T**his data can be supplemented with data from another survey carried out by the NCAER (MIMAP-India 1995)

1. The more commonly used expression, 'drop out rate' is not used here, and the term 'discontinuation rate' is used instead, because drop out rates are generally calculated per annum; the figures given here however are an average of all those who discontinued schooling at any time in the ages between 6 and 14 years.

which shows that participation in both paid and unpaid work is not significant for children under the age of 10. The argument that child labour is behind the low rates of enrolment and high drop-out is therefore a shaky one, at least for very young children. The argument that compulsory schooling would reduce child labour, or that it is the only way of doing this, may well be correct for children over 10 or 12; but the data seems to suggest that even without a reduction in the incidence of child labour, there is no good reason why children under ten should not be in school. The only exception might be in the few areas of very high incidence of child labour, e.g. matches, fireworks; but these do not explain low enrolment all over the country.

The data suggests that (a) for children below 10, it is difficult to explain non-enrolment in schools by

recourse either to excessive work burdens within the household (care of siblings, household chores) or paid work outside the home (see Chaudhry 1996). The connection between work participation rate and levels of enrolment is therefore low. (b) Taking all children between 6-14, it seems that the correlation between work participation rates and discontinuation is positive. This is illustrated in the tables below, using data at state level.

This brings us back to a concern with incentives. If motivation is high, as suggested earlier, why do enrolment rates remain lower than can be explained by children's work or household chores? The quality of schooling is clearly one possible factor. Another is the cost incurred in sending children to school. This has been estimated at an average of Rs 378 per pupil per household per year, and

is mainly on books, stationery and school dresses, followed by coaching and fees. Although government schools do not charge fees, other expenses remain. The average expenditure in government schools is Rs 317, in government aided schools Rs 391, and in private schools Rs 742. The significance of these amounts can be better seen in comparison with the average levels of income: among wage earning households for instance, average earning per day was found to be Rs 24.

Overall, most children are in government schools (67.9%); another 22% are in government aided schools and only 9.8% are in private schools. But the relative importance of government schools is decreasing. A comparison of NCERT data for 1986 with NCAER data for 1994 suggests that in a few states there has been very significant change in relative importance

TABLE 2

Work Participation Rate, Enrolment and Discontinuation: Rural India (Male)				Rural India (Female)			
States	WPR	Enrolment	(6-14 Years) Discontinuation	States	WPR	Enrolment	(6-14 Years) Discontinuation
Rajasthan	1.0	78.0	3.1	Kerala	0.5	98.0	2.0
Himachal Pradesh	1.2	95.5	1.8	Himachal Pradesh	0.6	90.0	2.2
Kerala	1.3	99.2	1.5	Uttar Pradesh	0.8	53.4	5.6

Source: NCAER/HDI Survey, 1994.

Definitions: 1. Ever Enrolment Rate (EER)

Ever Enrolment Rate is the proportion of children who ever got enrolled in school, at any level, who were aged 6-14 years at the time of survey. This rate will be higher than the Enrolment Ratio estimated by the All India Educational Survey.

2. Average Discontinuation Rates

- 20 Average Discontinuation Rate is estimated as the percentage of ever enrolled children who discontinued studies at any time in the age bracket 6-14 years. Since these rates are the average for a 9 year period and the rate of discontinuation is higher in early years, they are bound to be low. The Average Discontinuation Rate multiplied by 9 can be compared with one minus the retention rate given by other sources. WPR is calculated using usual status definition.

over this period. In U.P., government schools have fallen to 56% from 83.7% with an increase in aided and even more in private schools. In West Bengal the decline is from 71.5% to 20.5%, the increase being mainly in aided schools. The percentage of private schools has also considerably increased in Punjab, Haryana, Bihar, Andhra and Kerala. The implication, that (some) people are willing to spend more on schooling, might also mean that inequities are increasing.

**M**ost of the variations noticed above are not surprising and represent essentially the combined impact of various factors. At the individual level, expectations from education depend very much on life experiences of the parents and anticipation of a child's future roles. It is not surprising to find a higher value being placed on education in households with educated parents, in more developed and higher income states, among the salaried and professional classes, and among boys. The last reflects a persisting belief that the primary ambition for a girl is that she should manage her marriage well; if education contributes to this, as it will if levels of education among males goes up, then its value will increase. But, for boys the demand for education is not as derivative as it appears to be for girls and is more closely linked to its influence on future employment and earnings.

Literacy or basic education is a first essential step in developing human capital and capability. The impact is cumulative and apparent over time. Thus some studies have reported the positive influence literate grandparents have on the children's schooling. The ability to articulate, define and express in language is essential to human capability as we understand it. From a social standpoint there is considerable incentive

to increase allocations to education. The financial outlays needed to provide schooling at existing quality to all children currently not in school is estimated at roughly Rs 74.5 billion. Using these estimates an outlay of 3.2% of the GDP is needed for universal primary education (NCAER/1994; p. 192-3).

**B**ut if education is left to individual choice alone, only the more successful (people, groups, regions) have a real stake in its expansion. It is in the public good aspect of education that any hope of achieving universal literacy lies. It is only community norms that could draw into school the children who at present are described as 'nowhere children' – not in school, not at work (Chaudhry 1996). These norms compel a certain kind of behaviour: they require action without any definite return to the individual, but social disapproval if violated.

Why does our society not clearly and actively support universal schooling? In a society where caste and occupational status are definitions of identity, virtually impossible to shake off, the one available route to all to improve and change life chances is through education. So we are now caught in an apparent dilemma. Universal schooling, if it could be implemented overnight, would leave us all in the same place: only we would be literate and numerate. Some other attribute would then determine if we could get a better job and increase our income.

In a sense, this brings us back to the question of incentives or motivation. Although it was argued earlier that motivation levels are high, it is apparent that this is not independent of expectations. Improving the quality of schools, expanding coverage, and introducing incentives may attract more children into school. At a policy level, the claims made for the social

and economic outcomes of higher levels of education/literacy are not small. They include expectations that fertility levels will fall, productivity will go up, and that the rate of economic growth will increase. 'One Indian study (Loh 1995) even found that the impact of a single additional year of workforce education was a 15% increase in economic output' (World Bank 1997, p. xvi). Such statistical correlations are presented as though no change is needed in the curriculum or the methods of teaching, although both expert assessments and practical experience suggest that these are fundamental to expectations that are premised on changing attitudes and behaviour.

**I**n aiming for universal basic education, as one essential step in expanding capabilities, the challenge before policy-makers is therefore twofold; first, to put together the resources needed; and second, to recognize the danger in projecting unrealistic expectations before the people. Basic education may, or may not, lead to better jobs, higher income, a different way of life. What is needed is the motivation to be literate or educated for its own sake, or at most for the functional needs of daily living. In this sense, expectations need to be toned down, not further raised.

# Constitutional commitments

NALINI JUNEJA

IN 1997, with the spotlight suddenly on the 83rd Constitutional Amendment Bill, which seeks to add a fundamental right (for the first time since Independence) to the Constitution of India, the attention of the nation has been drawn to the constitutional and legal basis of education in India.

The Constitution provides a large number of rights and freedoms to the Indian people. Certain civil, political and cultural rights and freedoms are secured as fundamental rights enforceable against the state through constitutionally guaranteed remedies, i.e., they are justiciable. On the other hand, certain other rights perceived to be largely social and economic in nature, have been listed as Directive Principles of State Policy and are not justiciable through courts of law. These rights, in other words, if denied or neglected, cannot be procured by the citizen her through the courts. Thus the classification of the rights of the citizen into these two categories, could be interpreted as placing hierarchical values on these rights relative to each other.

Education for the masses is referred to in the Directive Principles of State Policy, wherein in Article 45, the Constitution directs the state to endeavour to provide, within a period of 10 years from the commencement of the Constitution, free and compulsory education for all children up to the age of 14 years.

It is our view that if due attention is to be given to education, it must be made a fundamental right. Addressing some common questions and misperceptions regarding laws for compulsory education, this paper tries to point out that political will determines the manner in which laws are enforced. In fact, the very act of placing education in either category of rights can well be perceived to be the primary expression of such a political will.

This political will was evidently not in favour of education for the masses when the Constitution was being framed and the right to education was deleted from the list of fundamental rights proposed by the sub-committee on fundamental rights of the Constituent Assembly in 1947. It may be worthwhile to replay the scene which occurred 50 years ago and judge in hindsight if our dismal record in mass education should not be traced to this fateful day.

In April 1947, the sub-committee on fundamental rights of the Constituent Assembly had, after due consideration of its importance and justiciability, placed the Right to Education among the list of justiciable fundamental rights as Clause 23 of its final report.

The scene which one will flashback to is a meeting of the advisory committee of the Constituent Assembly (21-22 April 1947) chaired by

Sardar Vallabhbhai Patel in the Hall of the Parliament House.

The Scene: Making education a fundamental right (Take 1).

The Date: 21-22 April 1947.

The Occasion: Meeting of the advisory committee on fundamental rights.

The House is meeting to consider clause by clause, the report of the fundamental rights committee. The 'right to education' has been recommended as a fundamental right. In his brief introductory remarks, the Chairman, Sardar Vallabhbhai Patel directed the advisory committee: 'The committee has recommended a very elaborate set of rights and clauses for adoption or for your consideration. But I feel it would be better if we confine ourselves or restrict ourselves to the rights which are actually considered necessary, more or less according to law, and not go into detailed description of theoretical rights which are not enforceable at all.'

**I**t is now the turn of Clause 23 to be taken up for consideration.

'Secretary: 23. Every citizen is entitled as of right to free primary education and it shall be the duty of the State to provide within a period of 10 years from the commencement of this Constitution for free and compulsory primary education for all children until they complete the age of 14 years. M. Ruthnaswamy: Is this a justiciable right? Suppose the government has no money?

Alladi Krishnaswami Ayyar: I want the deletion of this clause.

Govind Ballabh Pant: I suggest that this clause be transferred to Part II. It cannot be justiciable. No court can possibly adjudicate.'

There is both irony and pathos in this little scene. Pathos, for with this scene the curtain falls on half a century of effort spent towards the accep-

tance of compulsory education for the masses. The best known was Gokhale's attempt in 1906 to push the first Compulsory Education Bill through the Imperial Legislative Assembly, the subsequent passing of the act in 1917, and the eventual placing of a law for compulsory education on the statute books of every province in British India.

Irony, for what could be more ironical than for such a right to be denied to the people by our own people after winning the war for compulsory education against the British government.

**W**hat is more, as evident from the 'scene', this right would have been altogether deleted from the Constitution had it not been for the timely suggestion of Govind Ballabh Pant that it be transferred to the list of non justiciable fundamental rights (later to be termed as Directive Principles of State Policy). Pathos and irony intertwine here with the realization that in this scene one witnesses the genesis of Article 45 of the Constitution. Also, to the stage being set as to how 'seriously' this non-justiciable right to free an compulsory education would be viewed in the future.

In fact, K.T. Shah, a member of the fundamental rights sub committee, in 1947 wrote a note of dissent to the formation of two categories of rights, and had expressed an apprehension that, 'The non-justiciable rights,' to which education was now relegated, 'would remain as no more than so many pious wishes.' He had further pointed out: 'Given this differentiation, the Union and Union governments will be encouraged to stress or invent excuses why any one of these non justiciable rights should not be given effect to. By keeping them on the Statute Book without making them imperative obligations of the

State towards the citizen, we would be perpetrating a needless fraud, since it would provide an excellent window dressing without any stock behind that dressing.'

Very strong words indeed. One wonders what he might have said about the way in which some of the other non justiciable fundamental rights have been implemented.

In the same note of dissent, Shah (1947) had gone on to emphasize the importance of a right being a justiciable one if it is to be considered a right at all: 'Once an unambiguous declaration of such a (justiciable) right is made, those responsible for it would have to find ways and means to give effect to it. If they had no such responsibility placed upon them, they might be inclined to avail themselves of every excuse to justify their own inactivity in the matter, indifference, or worse.'

**I**n attempting to trace how the directive to provide 'compulsory education' was translated into practice, one finds that only about half the states and union territories have even passed laws making education compulsory (Table 1). Today's generation is barely aware of the existence of these laws. A recent study carried out just prior to the introduction of the 83rd Constitutional Amendment Bill, found that over 90 per cent of the officers dealing with the administration of education were unaware that their state had a compulsory education law (Juneja, 1997).

If the officers presiding over education today are not even aware of the law and due process for ensuring free and compulsory education, can the state of mass education in the country be expected to be any better than it is?

The compulsory education laws stipulate that surveys be regularly

conducted to identify children who should be in school; that notices be issued to parents informing them that a seat has been allotted to their child in a school. This is to be followed up by enquiries to ascertain whether the child is going to school, and if not, the reason for non-compliance. Had such a procedure been regularly followed; had there been a sufficient number of officers checking on attendance, carrying out surveys, showing concern, finding solutions to problems; had there been enough schools and teachers, enough concern for learning, suf-

ficient money allocated to education, perhaps the universalization of education would not have been a concern for us today.

While it is certainly true that legislation alone cannot bring children to school, history shows us all too starkly that a firm foundation of constitutional commitment is a primary necessity for bringing the school to the child. This alone will create the conditions to ensure that free and compulsory education is actually provided to all children.

We are again at the same juncture of

trying to make education a fundamental right (except that more water has flowed under the bridge since then). People are again asking some basic questions: 'A majority bench of the Supreme Court (in the case of *Unnikrishnan J.P. v. Andhra Pradesh*, 1993) declared education up to the age of 14 to be a fundamental right, so why introduce the 83rd Constitutional Amendment Bill now?' 'The child must have the right to education — no one disputes that, but surely we should remove "compulsory" — otherwise wouldn't we just be punishing the parents who are already so poor?' 'Do we really need to make it a fundamental right? Don't so many of the states have compulsory education laws? If the government is really serious, why doesn't it just enforce these laws?'

The very fact that people are asking such questions is a good sign and signifies, thanks to the media, a greater public awareness of some of the issues — and a need to clarify others.

There is, understandably, a debate on the need for amending the Constitution. But the right to education has not only already been declared justiciable by a verdict of the Supreme Court, the government is also being sued for it (*Satyaj Pal Anand v. Union of India and others* (w.p.(c) No. 81/94). While there is much to be said on both sides, the soundest argument was articulated by former Chief Justice Rajinder Sachar, at a seminar held at the National Institute of Educational Planning and Administration, in October 1997. According to Justice Sachar, a judgement of a court, like all judgements, can be reviewed by a larger bench in some other case. Given this situation, if the right to education is not to remain vulnerable to review, it may be better to place it in the Con-

TABLE 1

Compulsory Education Acts in Force in States and UTs of India

S/UT	Name of Act
1. Andhra Pradesh	Andhra Pradesh Education Act 1982 (Act No. 1 of 1982).
2. Assam	The Assam Elementary Education (Provincialisation) Act, 1974. (Assam Act No. 6 of 1975).
3. Bihar	Bihar Primary Education (Amendment) Act 1959 (Bihar and Orissa Education Act (I of 1919) as amended by Bihar Act XVI of 1939 and Bihar Act XVII of 1946 and Bihar Act IV of 1959).
4. Goa	The Goa Compulsory Elementary Education Act, 1995 (Goa Act No. 4 of 1996).
5. Gujarat	Gujarat Compulsory Primary Education Act 1961 (Gujarat Act No. XLI of 1961).
6. Haryana	Punjab Primary Education Act 1960.
7. Himachal Pradesh	The Himachal Pradesh Compulsory Primary Education Act 1953 (Act No. 7 of 1954).
8. Jammu and Kashmir	The Jammu and Kashmir Education Act 1984 (Act No. XI of 1984).
9. Karnataka	The Karnataka Education Act 1983 (Karnataka Act No. 1 of 1995) (First published in the Karnataka Gazette Extraordinary on the 20th day of January, 1995).
10. Kerala	The Kerala Education Act 1958 (Act No. 6 of 1959) (As amended by Acts 35 of 1960, 31 of 1969 and 9 of 1985).
11. Madhya Pradesh	The Madhya Pradesh Primary Education Act 1961 (Madhya Pradesh Act No. 33 of 1961).
12. Maharashtra	The Bombay Primary Education Act 1947 (Bombay Act No. LXI of 1947) (As modified up to 30th April 1986).
13. Orissa	Orissa Primary Education Act 1969 No. 15.
14. Punjab	Punjab Primary Education Act 1960 No. 39.
15. Rajasthan	The Rajasthan Primary Education Act 1964 (Act No. 31 of 1964).
16. Tamil Nadu	The Tamil Nadu Compulsory Elementary Education Act 1994 (Act No. 33 of 1995).
17. Uttar Pradesh	United Provinces Primary Education Act 1919* (U.P. Act No. 7 of 1919). United Provinces (Dist. Boards) Primary Education Act 1926* (U.P. Act No. 1 of 1926).
18. West Bengal	*Adapted and modified by the Adaptation of Laws Order 1950. West Bengal Primary Education Act 1973 (West Bengal No. 43 of 1973).
19. Delhi	The Delhi Primary Education Act 1960. Act No. 39 of 1960

(as per information available till November 1996)

stitution, from where it cannot be removed without the consent of a two-third majority of the House and much public debate.

**C**oming to the second question, people often do not make a connection between the right to education and compulsory education. Compulsory elementary education for children is related to, but distinguishable from, a mere right to education, which could also be applicable to adults. Hence, while systems exist in several countries to enforce elementary education for children, adult education is not, as a rule, compulsory since adults can choose whether or not they want to take advantage of the educational facilities provided for them. In the case of children, the right to education is protected by compulsory education because children have no way of asserting that right for themselves, when employers, or parents or even governments, through neglect, ignorance or greed pay no attention to this need.

The concept of compulsory education necessarily implies a responsibility on the part of the authorities to ensure compliance with the law and a responsibility on the part of the parent to cooperate. Laws for compulsory education generally make four things mandatory. One, the government must provide the required facilities for education; two, the child is not to be employed in a way so as to hamper the child's education; three, parents must allow the child to receive education; and finally the government is to ensure this right of the child to education by securing these three conditions till he/she is 14 years of age and better able to make a choice. This is what is compulsory about compulsory education. And as for parents who are confined in jail, none of the state laws in India for making education free and com-

pulsory have any such provision. If anything, the laws are too lax. After an elaborate procedure of enquiry to establish whether the parent can but will not send the child to school, only a paltry fine can be charged.

Many people wonder why the government does not enforce the compulsory education laws that it already has, instead of trying to amend the Constitution. Actually, rather than saying 'the government' one should really be saying the 'state governments', because 33 governments of states and UTs are involved and as many state laws for enabling education are to be made compulsory.

When the Constitution of India came into being, education was a state subject. It was only in 1976 that it was transferred to the Concurrent List, which also implied that in case state

laws differed from the central legislation, the laws of the Centre would prevail. Therefore, before 1976, only state laws existed for the provision and governance of mass education and even today, in the absence of any central legislation, it remains for each state to perceive the need for and to decide whether it will enforce its compulsory education act. As things stand, almost half the states and UTs have not even passed any such laws.

As for the question: Why didn't the states which had compulsory education acts, enforce them? Though people believe that the states never enforced their compulsory education acts, data presented in Table 2 shows that many of these states not only enforced these acts but also sent notices, conducted enquiries, issued attendance orders and penalized some of

**TABLE 2**

those who did not send their children to school.

Perhaps the implementation of these acts may have been 'low key'. Nevertheless, data such as in Table I exists at least for the states of Assam, Bihar, Kerala, Tamil Nadu, Karnataka, Orissa, West Bengal, Bombay (Maharashtra) and Gujarat. It should, however, be clarified that compulsory education was never enforced throughout a state at any one time. Compulsory education acts can be enforced over specific areas through notification by local authorities. For this reason, it cannot be stated that education is compulsory in India, or for that matter, even in a state. Compulsion can only be enforced, at least according to the present acts, in a local area through a due process of notification. As the data shows, compulsory education acts were enforced in at least some parts of all the major states up to 1971-72.

**T**he question that one should be asking, therefore, is not, 'Why didn't we enforce...' but, 'Why did we stop enforcing these acts?' That is another story (Juneja, 1997). Suffice to say that at one point of time there appeared to be no other option for policy-makers but to discourage the enforcement of compulsory primary education in the states.

What is pertinent to this discussion on the constitutional and legal basis of education in India, however, is that the enforcement of compulsory education, even though mandated by the Constitution (but non-justiciably), *could* be stopped. On the other hand, had the right to education been justiciable, not only would every administrator have known the law, but as K.T. Shah had so pithily pointed out 50 years ago, 'those responsible for it would have (had) to bestir themselves to find ways and means to give effect to it.'

Therefore, by inserting the right to education on the list of fundamental rights guaranteed by the government to citizens of India even now, it is not merely justiciability that would be ensured (it is already justiciable since 1993, vide the Supreme Court judgement in the Unnikrishnan case), but it would also indicate a 'political will' in favour of mass education. A Parliament that amends the Constitution by a two thirds majority to make it a fundamental right, will also be bound to allocate funds and the means to ensure that such a right is translated into achievement.

**A**s pointed out, while the importance of the law is obvious, what is equally important is that it have the firm commitment of the nation behind it.

The fate of the 83rd Constitution Amendment Bill still hangs in the balance. But there is no doubt that there can be no better evidence of a political will in favour of elementary education for the masses than for education to be guaranteed as a fundamental right of every child – to start with.

# Rethinking revolution in Bihar

BELA BHATIA

BIHAR has the lowest literacy rates in the country. In the post-independence period, Bihar's relative performance has registered a decline. After 1961, educational levels in the state slid even lower than states known to be poor performers like Uttar Pradesh and Madhya Pradesh. Widespread illiteracy, combined with the highest poverty levels in the country, acute social and economic inequalities and inefficient governance, earned for Bihar the reputation of being an 'area of darkness.'

However, many political movements were born in the abyss of these dark depths—the Naxalite movement was one of them. Kindled by the Naxalbari uprising in neighbouring West Bengal, the first seeds of the movement were sown in 1967. It has been active in Bihar ever since. Guided by the Marxist-Leninist-Maoist ideology, this revolutionary movement has considerable support among the poor, especially agricul-

tural labourers, and has earned itself the reputation of being a *garibo ki party* (party of the poor).

In this note, I wish to understand the situation of primary education in central Bihar, the extent to which a revolutionary movement such as the Naxalite movement has engaged itself with the issue of basic education, and its impact—positive or negative—on the status of primary education. My observations are based on field work in 33 villages of two districts, Bhojpur and Jehanabad, in 1995-96. These districts have been traditional strongholds of the movement. I will refer to the Naxalite groups which have considerable influence in these two districts, CPI(ML) Liberation and CPI(ML) Party Unity.

In most of the study villages I found that for most caste groups government schools were located within a reasonable distance. In some villages primary schools (standards 1-5) were separate, in many others they

were part of the middle school (standards 6-8). School buildings and classrooms were often unfit for human use: filthy premises, dilapidated furniture, assorted clutter, broken windows, leaking roofs, uneven floors and inadequate lighting were common. In only a few schools were classes held regularly. While the phenomenon of absentee teachers was less frequent than expected, few teachers seemed to be motivated and interested in what they were doing.

**M**oreover, in many villages obvious education-related irregularities had largely gone unchecked. This is amply demonstrated in the following case study. Significantly, both CPI(ML) Liberation and CPI(ML) Party Unity have a presence in this village.

Patariya, a village in the Sahar block of Bhojpur district, has private as well as government schools. The private schools function well. The teachers are highly motivated, and work long hours for a salary as low as Rs 175 a month in the hope that after a few years their school would be 'recognized' by the government. This would entitle them to government salaries.

Consequently, it was quite paradoxical to find a 'ghost' government school in the village. The three-room school building constructed the previous year had been left incomplete without a roof and in the following monsoon was completely ruined. The iron doors and windows had rusted, weeds grew in the classrooms and the school had become a shelter for stray goats who had settled among the weeds and the debris. A large open space in front of the school lay waste.

The teachers of this ghost school continued to draw salaries. The local activists bemoaned this state of affairs, but did not seem to think that the

situation called for any remedial action by them.

**P**riate schools, which charge a small fee, have proliferated in most of these villages and run parallel to the government schooling system. By and large they are considered to be qualitatively better. Neither new nor unique to the central Bihar villages, this phenomenon is a response to the near total collapse of the state educational facilities. Educated unemployed youth have tried to fill the gap. What is new about this phenomenon in the Naxalite areas is that as a result of the class struggle greater caste polarisation has taken place. The tension in these villages is often palpable. An atmosphere of mutual suspicion and fear exists. And it is this fear which is at the base of the creation of private schools on caste lines, often one or more in each *tola* (hamlet), depending on its caste configuration. The emergence of private schools on caste lines, however, cannot be greeted with much enthusiasm, as it reinforces caste distinctions and prejudices.

Even a cursory look at the enrolment and attendance register at many schools revealed that an overwhelming majority of the children of the poor do not go to school. While this observation applies to most communities listed under the categories of 'lower backward castes' and 'scheduled castes', it was especially true of particular social groups like the Musahars (also known as Bhuiyas).

As their name suggests, the Musahars (rat-eaters) live on the margins of subsistence. They are landless and survive as agricultural labourers; literacy in this community is less than one per cent. In many villages of central Bihar a separate school has been constructed in or near the Musahar tola, but the building is used for purposes other than schooling. This was

the case in the 'Bhutoli' (as the tola of the Bhuiyas is known) in village Chatiana of Jehanabad district and village Baruhi of Bhojpur district.

When I visited the school in Chatiana, I saw only three boys standing in one corner of the classroom (their posture suggested punishment), while the teacher, who sat cross-legged on the floor with a stick clutched in one hand, dozed. The classroom was empty, there was no furniture except for the teacher's cycle. Many children of school-going age were roaming about in the vicinity of the tola. The parents, most of whom were members of the Mazdoor Kisan Sangrami Parishad (MKSP), a mass front of CPI(ML) Party Unity, showed no interest whatsoever in schooling.

The scene at Baruhi was somewhat similar. The primary school, a small neat building, was located in the middle of the tola near some plum trees. When I visited the school in the morning, it was deserted except for the teacher, a middle-aged man who sat idly on the verandah. The only other presence was that of a little monkey, who was munching plums.

**A**ccording to the teachers, while the number of girls attending school had increased there was no significant improvement in the enrolment of children from the lower castes and classes. As one teacher remarked, 'Only the upwardly mobile classes take interest in education and send their boys and girls to school; they see a link between progress and education. Among the scheduled castes, those who do send their children to school, stop after the 7th or 8th standard.' Indeed, during my field work, the absence of educated youth among the scheduled castes was striking. Within this category, education levels were considerably higher among the Chamars than the Musahars.

I spoke to many parents, especially those who did not send their children to school. Often, parents were unaware of the number of schools in their village. An attitude of disinterest, hopelessness or apathy was apparent.

In the Naxalite areas, therefore, the state of the schools and the extent of people's utilization of the system is the same or even worse than in other areas. An overwhelming majority of the children of the poor, who constitute the mass base of the Naxalite movement, do not go to school. With few exceptions, the attitude of parents who are members of a revolutionary movement is no different from those of poor parents elsewhere.

**A**side from the usual reasons why schooling is not widespread (e.g., absence of school in the village, non-functional building, absconding teachers), the ongoing political strife in central Bihar often makes schools inaccessible on a temporary or permanent basis. The following reasons contribute to this inaccessibility.

1. Police camps: Police camps dot the villages where the Naxalite movement is strong. Some of them are temporary pickets, others more permanent. Since government schools are public property, and because the police need a *pucca* structure, a part or the entire building of the village school is occupied by them. The impact on education is predictably disastrous. The mere presence of the police force impedes the learning process and has a serious psychological effect on children. It is particularly damaging to the education of girls, who easily drop out as a result (especially at the middle and high school stages). In villages where schools are totally occupied and no alternative arrangements are made, education for all children comes to a halt. While the upper

classes are able to make alternative arrangements, especially for the boys, children of the lower classes do not have that opportunity.

2. Desertion of schools: In villages where political struggle is rife and the atmosphere heavy with tension, the school is often the first institution that is affected. Under the circumstances, the location of the school determines who continues to attend and who drops out. More often than not, government schools are located in or close to the upper caste hamlets. In such a situation, the parents of the opposing castes prefer that their children go to another school. These arrangements often start as temporary ones, but in course of time become permanent.

For example, in Gorpa village (Bhojpur district), the children of the Yadav tola do not attend the primary school located in the Bhumihar locality of the same village, but go to the government school in neighbouring Diliya village. This has been the case since the early 1970s, when acute tension between the Bhumihars and the Yadavs resulted in a string of murders and incarcerations.

3. Schools as refuge for the displaced: Political strife has other consequences. A recent example is the situation of more than 100 dalit families displaced from three tolas of Belaur village in 1995 following an armed attack by the Ranbeer Sena, a private army of the upper caste Bhumihar landlords. The families, most of whom were members or supporters of the CPI(M) Liberation, were forced to take refuge in Chakardah, a dalit tola of the same village. Turned homeless overnight, these families found support in the Chakardah families who allowed the use of the primary school building located in their tola. The displaced people built their own shelters soon enough, but the school was an immense help during the monsoon and winter months of 1995 and 1996,

especially for little infants, children and the old. Even though classes continued during this period, some disruption of education could not be avoided.

4. Targeting of Teachers: Teachers, because of their own caste and class, often get embroiled in local politics or become victims in the course of the ongoing battle between two classes. During my field work, there were many instances where teachers were targeted. The following story told by Nandji Yadav and corroborated by Shivji Singh, both teachers in the middle school at Diliya, illustrates the point. The events took place in Charpokhri block (Bhojpur district); the first one seems to have occurred around 3 February 1996.

I reached Charpokhri on a Saturday. There was a big crowd in the bazaar, and at the police *thana*. Curious, I inquired from a shopkeeper. 'Don't you know?' he exclaimed, 'a master (teacher) was found in a ditch. An attempt was made to strangle him with a rope, but it is his good fate that he survived.' The victim was of Bhumihar caste and taught in Bagar village.

On the night of 7 February, a group of 15 armed men (it is said that they were from the same village and members of the Ranbeer Sena) attacked and shot dead a group of *halwahas* (agricultural labourers hired on an yearly contractual basis) of Chandi village as they sat around a fire in the *khaliyan* (threshing floor), guarding the harvest. All four victims were dalits.

There was great tension in the area. People stopped using that road. On 10 February, a group of villagers accosted, kidnapped and murdered a Bhumihar teacher from Bagar village who was on his way to Betadi where he taught at the primary school. He was last seen some distance from the

school on his cycle. While this incident was still being discussed, we heard of another incident in Katrahi village, where a teacher, also a Bhumihar, was kidnapped. The dead bodies of the two teachers were recovered by the police after a couple of days. It was clear that they were murdered by the IPF (Indian People's Front, a former front organization of the CPI-ML Liberation).

Both incidents, in quick succession, are part of an ongoing conflict between the CPI(ML) Liberation and the Ranbeer Sena. The 3 February incident could have been in retaliation to the murder of one Ram Lal Ram, father of a CPI(ML) cadre, on 24 January in Ekwari village (Sahar block). According to eyewitness sources, this murder was the work of members of the Ranbeer Sena.

**F**or several weeks after these incidents, an atmosphere of acute tension and fear prevailed in the region. Since the teachers targeted were of Bhumihar caste, it was assumed that the CPI(ML) Liberation was behind the killings. Consequently, fearing reprisals, the dalit children stopped going to school. Even the teachers, especially of Bhumihar and scheduled castes, stopped attending school. I was informed that all schools, which had teachers who were either Bhumihar or from a scheduled caste, were closed. Similarly, schools in villages known to be under the dominant influence of one of these two castes also shut down as teachers from other castes did not dare to enter these villages. According to the teachers interviewed on 28 February 1996, schools in the villages of: Chandi, Betadi, Bhaluana, Bajjain, Sohri, Machiav, Mathurapur and Bagar (all within a radius of 4 km of Chandi) were closed at the time as teachers – many of them Bhumihars – were too scared to attend school.

Besides targeting teachers, schools too have come under direct attack. In the early 1970s when the movement was at its peak, part of the high school at Ekwari village was burnt down by CPI(ML) Liberation cadres, which included Jagdish Mahato, one of the founders of the Naxalite movement in Bhojpur, and himself a teacher.<sup>1</sup>

**A**s mentioned earlier, the Naxalite movement has waged a class struggle in the plains of central Bihar for nearly three decades. The movement has succeeded in restoring confidence among the dalits of the region, drawing attention to their plight, demanding that they be treated with basic human dignity. Among the principal achievements of the movement are an increase in agricultural wages, the end to extreme forms of social oppression – such as the sexual exploitation of dalit women – and, in many villages, the confiscation and distribution of ceiling surplus land as well as of *gairmajurwa* (village common) land under the illegal occupation of the upper classes.

But have the Naxalites made any intervention in the field of education, especially basic education? I found negligible evidence of direct intervention in the study villages, whether in the form of improving the government schooling system, struggling for its equitable access, or ensuring better

1. This was reported to me by Satya master, a retired teacher of Bhumihar caste (of Gulzarpur village) who had taught Jagdish Mahato. According to him, Jagdish was angry because his application for a job as Science teacher in the school had been rejected. What Satya master did not mention to me is another rumour, that Jagdish (a very bright student) was not selected by the Bhumihar lobby which dominated the school because he was a Kurmi. This rumour is itself quite plausible. Education of the lower castes was, and to an extent still is, disliked and often discouraged by the upper castes who think of education as their prerogative.

utilization. There was some interest in creating a parallel schooling system, but the problems in this approach were apparent.

In Jehanabad I visited a school run by the MKSP, and heard about similar efforts by the Maoist Communist Centre (MCC) in Gaya district. (While there was no evidence of a similar effort on the part of CPI(ML) Liberation in the study villages, it is possible that they have taken similar initiatives elsewhere.) As an activist of Party Unity mentioned, however, such efforts were limited for lack of human and material resources. Moreover, the nature of the movement imposed important restrictions. For example, MCC reportedly closed the school even before it was properly opened because of the massive police force which descended on the school in the hope of catching some 'wanted extremists'.

**D**espite these difficulties, one is left with the feeling that Naxalite organizations could have been more creative and achieved far more than they have in their nearly thirty years of activity in the area. While the movement's resilience is impressive, some questions still remain. Not only is there widespread illiteracy among the masses, but it persists even in families whose children would be third generation Naxalites. A movement which aims to struggle against the roots of poverty and inequality must face the fact that literacy plays a crucial role in the emancipation of the masses, and in building their individual capabilities and collective strength.

What is significant is that in Bihar, primary education has not ranked high on the agenda of either the mainstream or left parliamentary parties, or of the revolutionary parties. As a result, the dominance of the privi-

leged castes and classes over educational institutions has gone unchallenged. The political and social advancement of the backward castes that has taken place in the state in recent years is also reflected in a changed attitude of these castes towards the education of both boys and girls. It is only the lower backward castes as well as the dalits who are deprived of this fundamental human and democratic right.

The neglect of education by the Naxalite movement in central Bihar contrasts with the emphasis on education by the communist movements in many other countries or even in other states of the country such as Kerala. Literacy campaigns, for instance, have played a key role in popular mobilization in Latin America. The promotion of mass literacy is also among the important achievements of communist countries such as China and Cuba. In this respect, the teachings and personal example of Bhim Rao Ambedkar also stand out. His message to the dalits should not be forgotten: *shikshit bano, sangathit raho, aur sangharsh karo* (study, organize and resist).

It would seem that while the Naxalites have achieved some success in politically educating the masses and raising their political 'consciousness', they have not recognized the worth of formal education as an important tool and component of class struggle. Nor do they recognize that educated masses could lead to a more informed struggle, help the participation of masses as equals and make them more capable to lead the struggle. Instead, education is regarded as reform rather than revolution. This calls for rethinking about what constitutes a revolution. Does revolution involve only changing the equations of power at the state level, or does it also involve the need to empower people as persons?

## Teachers' associations

P. G. VIJAYA SHERRY CHAND

RECENT political trends in India have endorsed economic liberalization and globalization. The implications of this endorsement for education have been discussed at length in the media. As far as basic education is concerned, the argument is that public investment in this sector needs to be augmented since it yields high social returns and that a certain mass threshold of basic education (human capital) is a prerequisite for sustaining economic development.

In other words, even the non-socialist perspectives underlying these arguments call for a strengthening of state-financed and managed mass basic schooling. In recent times, a major form that such a strengthening has taken is direct and targeted central assistance (drawing on local or external finances) to districts which are educationally backward – areas with low enrolments, high enrolment disparities between boys and girls, and poor performance of the educational system as reflected in high levels of elimination from the schooling system.

These directions in the reform of mass schooling have been accompanied by debate and discussion among various stakeholders (administrators, academics, donor institutions, independent citizens) on what needs to be done and how. The debate has touched not just on educational performance but on broader issues like community control over basic education, child labour and the rights of disabled

children. One stakeholder group which seems to be muted in these academic discussions, however, is the organized voice of teachers.

One of course witnesses sporadic expression of teacher strength, for instance, during the opposition to panchayat control over basic education. But the contribution of a collective expression of teachers to academic debate has been negligible. Whatever little is being done – for instance, the setting up of networks of women primary school teachers through the efforts of the All India Primary Teachers' Federation (AIPTF), the role of teachers' associations in the implementation of the Joyful Learning programme in Uttar Pradesh, or the efforts of the innovative teachers of the Gujarat State Primary Teachers' Federation (GSPTF) – is not well known, and had little influence on the policy reform debate.

**T**he inability of teachers to engage constructively in the ongoing policy and academic debate is surprising, considering that teachers constitute the most important input into the educational system – we have a huge teaching force of about 3 million elementary school teachers in the country, whose salaries account for a substantial part (about 95 per cent) of the recurring budgets. Two broad explanations are possible. Either other stakeholders do not have confidence in the collective ability or capacity of teachers to contribute meaningfully to the debate; or teachers themselves do not have the confidence to visualize or to organize themselves as a significant partner in the debate. Perhaps both explanations are valid.

Teachers are often held responsible for our poor performance on the basic education front. For instance, a recent World Bank report, *Primary Education in India (1997)*, categori-

cally states that 'improving teachers' performance is the most important challenge for primary education in India' (p. 142). The report identifies poor subject mastery (lack of knowledge), poor teaching skills, poor motivation (reflected, for instance, in high absenteeism), poor working conditions and limited career opportunities, and very importantly, low perceived status, as the principal weaknesses of the teaching force. Results of surveys and tests which have been administered to teachers are presented as evidence to support charges of lack of subject mastery and poor teaching skills among a large number of teachers.

**W**hile one may argue that the factors contributing to poor educational performance are much more complex and that there is a lot of diversity within the teaching community, analyses like the above must be taken note of, given that teachers have been the most important input provided by the state, and that in many villages the teacher is indeed the school. The analysis may well lead one to ask whether our teachers are competent to teach, and whether they are motivated enough to take their teaching seriously. Observations similar to those made in the report are often heard during discussions with educational administrators who, on the basis of their 'experience', can cite many examples of teachers being unable to add up fractions or being confused about the decimal system.

There is no doubt that these observations may hold true for a sizeable number of teachers. The problem arises when these perceptions are extended to the entire teacher population: the possibility that just as with any other population, teachers could also include some positive 'outliers' (outstanding people who can serve as

exemplars) tends to be underplayed; second, the entire teacher population is conceptualized as a class with certain deficits (deficiencies which are no doubt valid for the majority) and thus in need of external training inputs.

The consequence of such characterization is our inability to build on the strengths that do exist within the teacher community, even if only in a small part of it. An extension of this consequence is what was mentioned earlier: a lack of confidence in the ability of teachers to contribute meaningfully to policy reform debate. The implication of this situation is that the synergy that should be possible as a result of the involvement of all the major stakeholders is lost. The problems facing the basic education sector are too enormous for us to ignore the value of a significant role for teachers in the design and implementation of partnerships.

**W**e now turn to the question of whether or not teachers visualize themselves as a significant stakeholder group, competent enough as a collective, to contribute to the discussion on academic and policy debate. Historically, the state has been responsible for public basic education, and teachers have been considered employees of the state. Even in states where *zilla panchayats*, *nagar panchayats* or municipal corporations appoint primary school teachers, the state finances teacher salaries, either fully or almost fully. In addition, the linkages with the Directorate or Department of Primary Education – for instance, in matters of approval of teacher transfers, educational inspection – are quite strong. In effect, *de facto*, most teachers would consider themselves state employees, or in more general terms, 'workers' at the bottom rung of the educational bureaucracy.

The low status of the primary teacher in this hierarchy – which as a result of the large numbers of teachers has a broad base and a very narrow ‘management’ at the top – is best illustrated by the conceptualization of the teacher as a ‘meek dictator’ (Kumar, 1990), all-powerful within the classroom among his students, but powerless outside it. This, however, does not prevent them from having to accept almost all the blame for overall poor educational performance. As some teachers point out, ‘unlike the case of companies, it is almost impossible to hear about the top management like the Education Directors taking the blame for poor educational performance.’

**A**s workers, teachers may thus be expected to organize themselves into associations for purposes of protecting their rights and benefits. At the same time, the nature of the work performed, education, is still seen as a moral activity. This is best illustrated by the descriptions of the profession as a ‘noble’ one, or of teaching as a ‘sacred’ activity aimed at character and nation building. In addition, teachers work in widely dispersed locations, one teacher or a small group of teachers being responsible for the school. This aspect of the teacher’s work is related more to issues of professional development. Teachers’ associations have been trying to address both aspects, teaching as labour and teaching as mission, of teachers’ work, but perhaps have not had much success in achieving a reasonable balance.

The Gujarat State Primary Teachers’ Federation (GSPTF)<sup>1</sup> is an illustration of this dilemma. The GSPTF has been the sole recognized representative of Gujarat’s teachers since

1975, though it had been in existence as an informal body since January 1936. Its early history (pre-independence and up to the reorganization of the erstwhile Bombay state) is not so well recorded, except that there is some evidence of participation in the freedom struggle and that leaders like Lilavati Munshi and Lady Vidyagouri Nilkanth played organizing roles as presidents of the general body in the early 1940s.

**T**he GSPTF was approved by the state’s education and labour departments as a body which could affiliate district-level associations of teachers to itself, and thus in practice represent the teachers of the state. Over the last two decades or so, it has made a string of successful interventions on behalf of teachers regarding their rights and service conditions. Instances include fixation of pay, transfer norms, scales of pay in accordance with completion of specified blocks of years. It has also intervened on behalf of individual teachers when cases of discrimination or injustice have been brought before it.

Thus, as a state-recognized federation of teachers’ groups, the GSPTF has limited its major activities to service-related issues. It has not played a significant political role – unlike perhaps in the very different pre-independence scenario – though its leaders have been identified with different political parties over the years; nor has it been able to undertake significant and sustained initiatives for the professional development of teachers. Despite its large size, it has not had the visibility and influence that associations of teachers at higher levels in education, for instance, college teachers, have had.

possibilities, of teacher collectives. This federation is an association of 19 district-level groups, which together account for more than 1,75,000 teachers.

Teachers in higher education, as an organized collective, may have contributed positively to the improvement of higher education, but one comes across more examples of how teachers’ groups may have acted as impediments to educational reform – whether it is on issues of institutional autonomy, standards applicable to teachers themselves, or examination reform. Comparable examples where teachers in basic education have successfully opposed reform are difficult to come by. The most publicised instance of nation-wide organized opposition is the agitation launched in various states and at the national level through the AIPTEF, against certain aspects of the 73rd and 74th constitutional amendments which sought to introduce the control of local panchayats (village or nagar) over teachers. A brief discussion of this issue will highlight some of the contentious perspectives that characterize how teachers conceptualize themselves in relation to attempts to reform basic education.

**T**he National Programme of Action for Education revised by the Government of India in 1992 focused on decentralization as an important policy thrust. This fitted in with the renewed interest in the panchayat system as a decentralized structure for integrating development initiatives, especially given the 73rd and 74th amendments to the Constitution. Section 243G (11th Schedule) of the Constitution of India (73rd Amendment) Act 1992 includes, among other items, primary education. To facilitate educational administration in the light of these amendments, a Central Advisory Board on Education (CABE) committee provided a blueprint for the states’ consideration when they evolved their own panchayat acts. This included an organizational

1. This article will use the case of the Gujarat State Primary Teachers’ Federation to illustrate various aspects of the functioning, or the

structure composed of various committees, funding mechanisms, and organizational support and training requirements for the committees.

**A**t the village level, an education committee was considered a crucial management body. The composition of the committee was specified: the number of members had to be not less than seven and not more than 15; apart from the chairman or panchayat member and the headmaster of the primary school, a representative of the scheduled castes and tribes, a parent and an *anganwadi* worker were to be included. The committee was expected to have the power to check attendance registers and report on, among other things, regularity of students, teachers' attendance, and school functioning. It could also undertake any construction and repair work entrusted to it.

The logic of this approach was based on an understanding of the role that village communities could play in controlling factors affecting their immediate lives, like basic education. The assumption was that the closer the monitoring agency to the point of delivery of a service, the greater the effectiveness of that service. However, from the perspective of the teachers, the issue became one of supervision by, and accountability to, a heterogeneous body which might not have the standing or competence to supervise teachers.<sup>2</sup>

Most states have adopted a cautious approach to this issue, notwithstanding the village level committees set up in various states under the

2. The teachers' resistance to village level education committees (VEC) may be linked to their fears that the committees may become a part of the political machinations of the village community, thereby hampering the effective functioning of the school, the chances of teachers becoming pawns in such games and a belief that their own inputs to a VEC will be limited, considering the marginal status accorded to school teachers. See Vasavi et al. (1997).

District Primary Education Programme whose mandate stresses more the monitoring of the educational performance of the village than the supervision of teachers.

In summary, though their immediate reactions have been negative to community control over basic education at the grassroots, teachers' associations still have to come to terms with this issue and related concerns like accountability and sharing responsibility with local communities for improving educational performance. In more general terms, there are educational issues like these on which teachers' associations need to articulate constructive and sound positions. Such a development is possible only if teachers' associations themselves move towards expanding their research and academic capabilities and capacities.

**B**ecoming stronger professionally and academically is easier said than done. Most associations in the country depend on meagre financial contributions from their members and are in no position to independently chart out programmes which would require heavy financial commitments. But it is not that our associations have not attempted to increase their professional competence. Ironically, however, it is the international associations of teachers who have attempted to contribute to the academic development of our associations. The Study Circle Project is one instance, though a limited one, through which teachers themselves have tried to prepare their own materials and have set up decentralized discussion platforms.

This project, implemented in some states through the state associations affiliated to the AIPTE, may be traced to the latter's linkages with international teachers' associations. The AIPTE is one of the four Indian

national associations affiliated to Education International (EI), which represents about 2.3 crore teachers of 148 countries and territories. EI itself is the result of an amalgamation, in 1993, of the International Federation of Free Teacher Unions and the World Confederation of Organizations of the Teaching Profession, which had supported local initiatives in India. It is through such connections, and with specific financial support from the Swedish Teachers' Association, that the Study Circle Project was initiated by the GSPTF through the AIPTE.

**T**he impact of this project, though limited, is perceived to be positive by the teacher leaders and participating teachers. But the issue of concern is that similar partnerships and projects have not resulted through collaboration with local academic and other support institutions. If our various schools of education and related research organizations were to treat the activity of enabling teachers' organizations to build up their capabilities as an important intervention, the effectiveness of the community-state-teacher triangle, which ultimately should work coherently for improving educational performance, can be ensured.

Where do teachers' associations begin? From the competence and proven expertise that exists within. As noted earlier, it is no doubt true that there are any number of teachers who 'often have little understanding of the material they teach, possess few teaching skills, and are poorly motivated...' (World Bank 1997: 142), but the training of teachers by those who may not have excelled in education and the exhortation of teachers by those who often do not understand the spirit in which many outstanding teachers try to achieve their goals, will not solve the problem. This is where teachers' associations can play a role

by enabling leadership from within, which is based on professional competence, to guide the process of teacher development.

**T**he argument for a greater role for the outstanding teachers in building up the capabilities of the wider teaching community rests on two assumptions: many individual teachers, on their own, have evolved answers to problems posed by their specific socio-economic and classroom situations; second, these answers are relevant to other teachers, since they take into account the actual contextual constraints most teachers face.

In an attempt initiated about four years ago, the GSPTF and the Indian Institute of Management, Ahmedabad, identified about 200 teachers who, through a variety of pedagogical, social and resource-mobilization innovations initiated on their own many years ago, had achieved their goals of universal basic education, long before Education For All became a national concern. Many of them had not publicised their work, the most prominent aspect of which was a focus on enrolment and retaining children in school. Many of their experiments may appear simple and unsophisticated, but they were effective in the teachers' contexts. A few examples follow.

Thakarshi Kunbar in the late 1960s tracked children from the time they completed one year of age to the time when they were ready for school through birthday greetings sent to the parents. The cards had a simple message: the number of years left before the child entered school. Thus pressure was built up for enrolment. Bhanumati Upadhyaya, in the mid-1970s, used the *rakshabandhan* festival to achieve a breakthrough in the enrolment of girls. After tying *rakhis* to the males of the community, the gift she requested in return was their girls

—a culturally symbolic request which could not be refused. Ajitsingh Solanki has a portfolio of methods for raising funds for his village school: this includes, among other things, a donor database, religious *katha* programmes, youth clubs for *shramdhan*. Raman Soni uses a system of calling out two-digit Gujarati numbers which follows the English system of tens followed by units; he found that many of his class 1 and 2 children reversed the digits while writing out the numbers because the spoken form put the unit digit first. Such experiments, or at least the heuristics that underpin the teachers' thinking processes, may perhaps be of interest even today to teachers working in difficult geographical pockets.

**A** second important aspect of the work of such teachers is a focus on building support for schooling in the community and improving the infrastructure facilities in their schools. This assumes relevance in the context of what has been said above about decentralized management of primary education through village-level participation. In summary, the outstanding teachers combined within themselves, at various points of time, different roles — such as social worker or community organizer, entrepreneur, classroom researcher, parent. Such teachers have the potential to provide an ability-based leadership that peer-driven approaches to teacher development need.

Facilitating the involvement of outstanding teachers in teacher-driven or peer networks of development is by itself not sufficient. Teachers' associations have to take a hard and professional look at the issue of standards that would apply to their own members. Most states have moved towards the central guidelines of 12 years of schooling prior to a two-year teacher

pre-service training programme. To an extent, this by itself will improve academic standards of the teaching community.

**B**ut associations can be more proactive by first accepting that the standard of the majority leaves much to be desired and then instituting creative mechanisms that would give teachers the opportunity to test themselves every four or five years. This can then be linked to remedial action for those who need it. This kind of voluntary self-imposition of certain minimum standards would convey far more effectively, and in a manner acceptable to teachers, the intention of the associations to abide by certain professional and academic standards.

A third major area of strategic importance is to develop positions on crucial educational issues — academic, professional or managerial — through empirical research. Developing research capabilities for this purpose, on their own or through partnerships with sympathetic academic institutions, should be an important and urgent task for teachers' associations. The issues of decentralization, community control and teacher accountability were mentioned earlier. Some examples of other issues that are becoming important include reform of poorly performing schools, policies on private management of schools, the language policy of the state (especially given the recent demand for English medium instruction in many areas and the consequent mushrooming of unaided schools), textbook policies, the policy of recruiting 'barefoot' teachers adopted by some states, incentives to motivate children to enrol and remain in school.

Another set of issues has to do with boundary maintenance, like the role of teachers' associations vis-à-vis political organizations. This kind of

preparation would make the limited participation of teachers' association leaders on state initiated platforms (for instance, the role of the GSPTF's president in the Minimum Levels of Learning Committee and the Text-book Board in Gujarat) more effective and open up new avenues of participation, like evaluation of recent innovative programmes and collaborating in large-scale teacher development efforts.

We have attempted an answer as to why the collective voice of teachers is unable to make itself heard constructively in recent debates on policy matters relating to basic education. Teachers have been seen as incapable of contributing meaningfully to these debates and at the same time teacher collectives have not had the confidence to act as a significant partner in the debates. Teachers' associations have not been able to reconcile their protective role in relation to rights and welfare of teachers on the one hand, and the professional mission of teaching seen as sacred, on the other. An almost exclusive emphasis on the former has not permitted them to develop a professional aura of capability which compels public recognition. This is best achieved by building on the capabilities of outstanding teachers, by generating processes of self-regulation to maintain internal standards and, by developing research capabilities in order to take a clear stands on major policy issues.

## A fundamental right

JANDHYALA B. G. TILAK

IN a historic judgement the Supreme Court of India in July 1992, declared that education is a fundamental right and that 'the state is under a constitutional mandate to provide educational institutions at all levels for the benefit of citizens.' Immediate reactions to the judgement focused on higher professional education, as that was the scope of the original petition.<sup>1</sup>

\* This article partly draws from the author's presentation made in the Convention on Education as a Fundamental Right, organized by the University of Delhi, as a part of the golden jubilee celebrations of the Central Institute of Education (18 December 1997). The views expressed here are those of the author and should not necessarily be attributed to the organization that he is associated with.

1. For example, the University Grants Commission and the Association of Indian Universities have jointly sponsored a colloquium and several private professional colleges organized debates on this issue. See among many, AIU (1992) and UGC (1992).

The uproar against the judgement declaring education, including higher professional education, as a fundamental right, later required the Supreme Court to modify its judgement (1993) so as to confine the scope to elementary education: 'The citizens of the country have a fundamental right to education... every child/citizen of this country has a right to free education until he completes the age of 14 years...'

**S**ince Article 45 of the Constitution of India (which states that 'the State shall endeavour to provide, within a period of ten years from the commencement of this Constitution, for free and compulsory education for all children until they complete the age of fourteen years'), and other provisions in the Constitution could not compel the government to provide for universal elementary education even after 50 years of independence, the judgements of the Supreme Court assume utmost significance.

The judgements also assume importance, as we have not been sincere to the UN/UNESCO/ILO declarations on human rights and the rights of children, which India has ratified. The judgement of the Supreme Court is the culmination of a process in which the efforts of the Union government, particularly in constituting the Muhi Ram Saikia (1997) Committee to consider the implications of making elementary education a fundamental right and the subsequent bill, have to be seen.

The Saikia Committee recommended an amendment to the Constitution making the right to free elementary education up to 14 years of age, a fundamental right. The provision of free elementary education, according to the committee, includes exemption from tuition fee, provision of free textbooks for all primary

school children and girls up to upper primary level, and provision of essential stationery to all children in primary classes. While the committee recommended that the mid-day meal programme be continued, provision of other incentives such as free school uniforms, cash incentives, scholarships and so on, could be left to the discretion of the states

subject to 'economic capacities and priorities' of the respective state governments.

The committee has recommended the provision of minimum infrastructure and teachers to all schools as envisaged under the Operation Blackboard Programme. It has obliquely referred to quality by mentioning teacher training, quality textbooks and minimum levels of learning.

**H**owever, the committee did not suggest central legislation making elementary education 'compulsory'; on the other hand, states could either amend existing laws or enact fresh legislation in this regard. But the committee did suggest what state legislation should provide for. *Inter alia*, it should include making education compulsory—governments should be required to provide accessible schooling facilities to all, and parents should treat it as their fundamental duty to send their children to schools.

The proposed amendment to the Constitution has to be seen in this background. Fortunately, as the bill for the constitutional amendment was introduced in the Rajya Sabha and not in the Lok Sabha, it did not elapse with the dissolution of the 11th Lok Sabha. But some important questions remain. Why is the amendment necessary?

Total	161	23	9

Source: *World Education Report, 1995* (Paris: Unesco).

There are those who feel that the existing provisions of the Constitution (e.g., Articles 39, 41, 45, 46) take care of what is intended in the amendment. But the amendment needs to be welcomed for a variety of reasons: First, even if it does not substantially add to the existing provisions, the amendment is a reiteration by the state of its commitment to universal elementary education. Hopefully, it will induce the state and the people to make a special effort towards reaching this goal. Even symbolically, it is important in a socio-political system of our kind.

**S**Second, compulsory school education has been a part and parcel of the civilized world. In as many as 161 out of 193 countries on which information is available, there is some degree of compulsion in school education (Table 1). There are few exceptions. Only 23 countries have no legislation making education compulsory, among which nine are in Africa<sup>2</sup> and nine in Asia.<sup>3</sup>

Third, the amendment for making education compulsory is also

2. Botswana, Gambia, Kenya, Mauritania, Mauritius, Sierra Leone, Sudan, Swaziland and Uganda.

3. Bahrain, Bhutan, Lebanon, Maldives, Oman, Pakistan, Qatar, Saudi Arabia and Singapore.

important as existing provisions of the Constitution do not ensure either free, compulsory or universal elementary education. In fact, the constitutional provisions are vague and ambiguous regarding the concept of education. As Article 45 refers to education, and not formal schooling, all sorts of education including non-formal, informal, and literacy programmes were sanctified as though equivalent to formal education.

**A**rticle 45 does not refer either to the duration of education or the lower limit of the age-group of the child to be covered. Thus, there has been a tendency to restrict universal education to four or five years (if not a few months of literacy activities) or 2-3

years of non-formal education and to interpret the age-group as the state finds convenient.

**T**hough some state legislatures have compulsory education acts on the statute books, it is not clear how many states enforce them. While there are at least 19 states in which acts making education compulsory exist (including Goa where an act was passed in 1995-96),<sup>4</sup> according to the Department of Education, Ministry of Human Resource Development, in as many as 18 states and union territories of the Indian union 'compulsion is not in force' (Table 2). Further, many of the acts are known as education or primary education acts; only a few are known as elementary education or compulsory education acts. Some refer to the age-group 6-11; others to 6-14.

Fourth, the existing legislations only indicate that the state government has the power to make education compulsory in any designated area of the state; they do not indicate exactly whether any area or the whole state has been designated and whether compulsion is actually enforced. In practice, education of children in India has neither been viewed as a right nor as a duty. Many existing acts have been found to be of no use. Hence the need for a central legislation in the form of a comprehensive amendment to the Constitution.

Fifth, in the absence of any meaningful legislation, it is also the experience that voluntarism did not work during the last 50

years – either on the part of the government or on the part of the people. A proper national legislation may make it truly compulsory in spirit and effect.

Sixth, a national comprehensive legislation is also important to make education a fundamental right, as the Supreme Court judgment might be reinterpreted or reviewed in not necessarily a desirable way.

**T**here are some who strongly argue against the need for such a legislation. They claim that (a) free compulsory education is expensive, and government does not have resources to provide for it; (b) it is difficult to enforce; (c) compulsion causes hardships to the poor; and (d) there is no justification to send children to poor quality schools. These are not new arguments. They are exactly the same as the ones made in the Imperial Legislative Assembly in India, when Gopal Krishna Gokhale proposed a resolution in favour of free compulsory education about a hundred years ago. As these arguments are being vigorously articulated, we may briefly examine them.

Education is, no doubt, expensive; but the alternative is more expensive to the society in the long run. The loss in terms of social welfare (including economic growth, income distribution and physical quality of life) due to under-investment in education would be much higher than the expenditure that the society has to incur to provide good quality (elementary) education to all.<sup>5</sup> Further, substantial

savings could have been effected in public expenditure on health, sanitation, family welfare, population programmes, community awareness programmes, to mention a few, had we spent adequately on elementary education.

The losses are high, both to the individuals and to society as a whole. Hence there is no option for the government but to find sufficient resources for free compulsory education. Societies that had enacted such legislation in the past (e.g., Japan or the princely provinces of Travancore and Baroda in the 19th and early 20th century) were aware of the cost involved, but realized that it was a better choice than any other measure for the welfare of the people.

**C**ompulsion is difficult to enforce, as the colonial government argued. But there is no choice for the independent government. It could have been difficult for a foreign government which had no mandate from the people; but it should pose little problem for a democratically elected government of the people if it has the will. Proper mechanisms have to be developed for enforcing compulsion. Further, the argument is based on the assumption that there is insufficient demand for elementary education. This is untrue as shown in survey after survey. There is a huge demand for education; the government must respond to it meaningfully, by providing a good learning environment and a conducive atmosphere.

It is also argued that there is no ethical justification to compel the parents to send their children to poor quality schools. The solution lies in

per capita income due to under-investment in primary education during the last three decades. If similar estimates are made for India, one would realize the huge loss society has incurred due to inadequate investments in education.

delivering good quality education, as we define later, not in avoiding legislation providing for compulsory education.

Similarly, compulsions could cause hardship to the poor in the short run as children are withdrawn from the labour market. In the long run though, one expects the poor to be better off with increased levels of schooling. In the interim, the government has to develop a package of financial and other incentives for the poor, so as to reduce not only the students' direct costs of schooling, but also opportunity costs. Such incentives could be selective and targeted. After all, as the abolition of child labour is also an explicitly stated goal of the government, such a financial package would serve a twin purpose. It is necessary to view the financial incentives as important to induce demand for education from poor households, as education improves their well-being, and also because there are immense externalities associated with education that accrue to society.

**T**hus the arguments against free compulsory education are not valid. There are a multitude of individual and social benefits from free and compulsory education, and we must recognize the 'public good' and 'merit good' nature of elementary education.

What should be the desired scope of the new amendment? The new amendment must include at least the following:

a) There should be no ambiguity about what 'free' education means. The Saikia Committee refers to exemption from, not abolition of, tuition fee wherever charged. It does not, however, refer to fees other than tuition.

The definition and scope of free education must be widened. It should include provision of essential teaching learning material – textbooks, sta-

tionary, an integral part of the instruction process – and other incentives such as uniforms, noon meals, and transport, free to all the students in primary and upper primary classes. Leaving the provision of these items to the discretion of the state governments will result in a dilution of the definition leading to inter-state variations in the extent of their provision.<sup>6</sup>

b) The new amendment should clearly define 'education' to include formal schooling, as no other method of learning is believed to be as effective. It should also include a meaningful definition of quality of education, to ensure a reasonable level of quality education for children. Its scope should be well defined as to include provision of necessary physical and human resources, including teachers, infrastructure, and other material.<sup>7</sup>

c) The proposed amendment must define the duration of the cycle of compulsory education and the lower and upper age limits of children to be covered by the acts. To start with, it should be eight years of full time formal schooling. Given the experience of other countries (Table 3), it is

6. Presently, because provision of these incentives is left to the discretion of various state governments, one finds wide variations in the proportion of children benefiting from these incentives. On the whole, they are also received by a small fraction. See, for example, Tilak (1996) for details.

7. Compulsory education laws are found to be effective when good schooling facilities are made accessible to all children. See Colclough with Lewin (1993, p. 262).

desirable to gradually extend the duration of the cycle to the entire schooling span, i.e., 12 years of schooling for the children of the age-group 6-18.

d) The amendment should necessarily make education compulsory. Compulsion should include (i) compulsion on the part of the government to provide accessible adequate schooling facilities of reasonable quality to all children; and (ii) obligation on the part of the parents to send their children to schools. Though exceptions to either category could be worked out, they should be at a minimum.

**T**he Saikia Committee has estimated that an additional Rs 40,000 crore are required to make elementary education available to everyone during the next five year period. This appears to be an underestimate, as the committee took the average recurring expenditure per pupil at Rs 948 (in 1995-96) and the number of children who are outside the school system at 6.6 crore. While the recurring expenditure partially factor in additional expenditure required for improvement in quality, it does not take into account many other necessary inputs currently not provided at all, or provided only to a section of the student population.

In addition, the estimate is exclusive of requirements in terms of capital expenditure, such as additional school buildings/classrooms, furniture and equipment. An expert committee was constituted, as recommended by the Saikia Committee, to examine the financial estimates in detail. According to the expert committee, the additional financial resources required would be of the order of about Rs 95,000 crore for a 10 year period,<sup>8</sup> or about Rs 9.5-10 thousand crore per year.

Compared to the present (1996-97) level of expenditure (plan and non-plan) of about Rs 32,000 crore on education, 50% of which is on elementary education,<sup>9</sup> the additional requirement is indeed sizable. However, it is not beyond reach. If we have to spend on average an additional Rs 10,000 crore every year, it would only be 0.7% of GDP in 1997-98 and would come down to 0.5% by the end of the 10 year period, on the assumption that GDP would increase at a real rate of growth of 5% per annum.

In other words, the additional requirement for the 10 year period is only 0.56% of the 10 year cumulative GDP (in real prices). If GDP increases at a faster rate, i.e., higher than 5% per annum, the proportion additionally required for free compulsory education would be less. If the government sticks to its promise of allocating at least 6% of GDP for education by the end of the Ninth Five Year Plan, the task of additionally allocating Rs 10,000 crore every year for elementary education does not seem to be difficult at all. All this requires, however, a systematic plan for mobilizing additional resource.

**T**he need for mobilization of additional resources is obvious, but the choices available are limited. The governments—union and states—have to finance elementary education out of their own budgetary resources, rather than depending on non-governmental sources such as the students, parents or the community to share the responsibility for financing elementary education. This would be in the true spirit of the constitutional directive of free compulsory education. The Saikia Committee required the central government to meet the additional require-

ments of the states. This would indeed be better and effective. The economically weak state governments should be aided in providing a basic human need—elementary education. In our federal system, however, it would be in the interests of the state governments if they came forward on their own with proposals to invest sizable additional resources on elementary education.

**A**n important and widely prevalent way of financing elementary education is through general taxation. Central and state governments may formulate norms regarding the proportion of their respective budgets to be allocated to education as a whole and to elementary education in particular.<sup>10</sup> The norms should be reasonably high so as to ensure adequate allocation of resources every year. The Saikia Committee recommends that the central and state governments should allocate 50% of budgetary allocations for education to elementary education and to see that they are not diverted to any other sector. A provision of 50% of resources to elementary education (and the remaining 50% to post-elementary education—secondary and higher levels) would also ensure a balanced development of the education system.

The government (central and state) may have to examine and explore the scope for reallocation of resources from unproductive sectors to elementary education. For instance, the union government has stated that resources saved from public sector disinvestment (and the resources generated through such schemes as the voluntary disclosure of income scheme) would be invested in sectors like education and other social infra-

10. Countries like Brazil and Taiwan have norms of this kind.

8. *Indian Express*, 8 November 1997.

structure. A clear weightage may be given to elementary education in this process of reallocation.

From the point of view of public finance, earmarked taxes are not highly favoured. Many argue that as they yield resources for specific and short term needs, measures like an education cess may have to be reintroduced in order to mobilize additional resources for elementary education. This was proposed by the Saikia Committee. Such a cess, if introduced, should be high enough to yield sizable resources for elementary education. The cess is not to be confined to the parents of children going to school. In fact, it should be a general cess levied as a part of another direct/indirect tax, the revenues from which are earmarked for elementary education; and it should not be related to participation of the cess payees' children in schooling.

**A**nother suggestion worth exploring is the creation of a national elementary education fund.<sup>11</sup> Donations and contributions to such a fund could be provided with liberal tax incentives, such as those given to higher/higher professional education and literacy campaigns (saksharata samithis). Contributions may be generated on a voluntary basis through innovative approaches. It may be made obligatory on the part of all manufacturing firms (excluding household and small scale units) to necessarily make provision for elementary education of the children of their employees, either directly or through financial contributions to the fund.

At the same time, it may be reiterated that, given (a) the spirit of the Constitution and the UN/UNESCO dec-

larations and conventions on the rights of children, (b) our own experience and, (c) international experience with reference to financing basic education, non-governmental contributions will be peripheral in quantum, the government—union and state—has no choice but to shoulder the total responsibility of financing elementary education in India.

**I**n a few years we will celebrate the centenary year of Gopal Krishna Gokhale's introduction of a resolution for free compulsory education in the Imperial Assembly. Whether his dream materializes into a reality we can be proud of is for us to decide.

# External funds, internal conflicts

VINOD RAINA

THAT nearly half India's adult population is still non-literate is perhaps the most significant composite indicator of the maldevelopment afflicting the country 50 years after Independence. Above all, it is a strong indictment of the country's school education efforts; all the 15+ adults who are the 'targets' of the ongoing literacy campaigns were, at some point of time, either never enrolled or dropped out from the school system. Since the stretched TLC target is 15-45 years, it is clear that every individual from this non-literate target group was born in independent India. Instead of harping on what the colonial rule did to us, we need to honestly admit that the failure is of the state and civil society of free India.

Suddenly, however, in the past few years, there has been a great deal of flurry about elementary education. Government documents and posturing would suggest that a great leap for-

ward, in the form of externally funded programmes, in particular the District Primary Education Programme (DPEP), is the magic that has eluded the country. With its discovery, consultants, state project staff and appraisal missions are scurrying to all parts of the country, giving an impression of frenetic activity.

Both for the apparent substitution of the term elementary by primary in the acronym DPEP, implying an amendment of the constitutionally directed upper age of 14 to 10 or 11 for free and compulsory education, and for a variety of other significant reasons, it is important to examine the implications of external funds to a sector like school education. Here the political and policy battles have always been for increased internal government funding.

In a nutshell then, what are the problems of elementary education? There are some obvious shortcomings

like a lack of schools, shortage of adequate number of teachers and so on, which are fairly well understood. But the magnitude of even these well-known issues is usually underplayed. The Government of India figures would tend to reduce the problem of universalisation of elementary education (UEE) to finding avenues to give some form of education to about 25 million children, age 6-14, which it contends are out of school. But let us try some back of the envelope calculations.

**T**he 1991 census population of about 170 million of 6-14 year olds would easily project to over 200 million by 1997, so let us choose the lower bound of 200 million. With the exception of smaller states like Kerala and Himachal Pradesh, the national average dropout rate by class eight (around age 14) is well over 50%. If we also take into account the never enrolled – read non-sustained enrolment, since on paper most of the children are enrolled – it would still be safe to conclude that about half the population, i.e. 100 million children, are out of schools as dropouts or never enrolled. Of these perhaps about 45 million are working children. One aspect of UEE would therefore necessitate finding ways and means to expand the school system to nearly double of what it is now, in terms of teachers and physical infrastructure, so as to cover all the children by formal schooling.

But that is not all there is to UEE. The 46th round of the NSS confirms what field groups in education have already known for long, that one of the major causes for dropouts is a lack of interest in the schools. Combine that with the recent confirmation of another well known fact through NCERT research, that the achievement levels of a majority of school going children, even in Kerala, particularly in language and numeracy, are at the

level of non-literates. The conclusion is inescapable. There is no comfort in the thought that about 100 million children are in schools – attending school does not guarantee that a majority of children come out even with sustained literacy, being educated is a far cry.

If the objective of school education is to have universal coverage with sustained enrolment and adequate achievement, the task then is: (a) to create schooling facilities for another 100 million children; (b) to ensure interest, relevance and quality for the entire 200 million population so that adequate achievements are attained.

Article 45 of the Constitution of India directs that the state shall endeavour to provide within a period of 10 years from the commencement of the Constitution (1950), free and compulsory education for all children until they complete the age of 14 years. That should have happened by 1960, but it has not. The government is now proposing to bring in legislation, nearly 50 years later, to translate this directive into a fundamental right of every child between 6 to 14 years of age. Will that help? The so called political will, reflected mostly through necessary and adequate financial allocations, to fulfil either the constitutional directive or the proposed legislation, has been conspicuously lacking till now.

**W**hat would be needed to fulfil the twin objectives outlined above? A linear extrapolation of financial requirements suggests that the current total plan expenditure of the centre and states of about Rs 19500 crore rupees – about 3.9 % of the GDP – would need to be nearly double, say about Rs 40,000 crore, to maintain school infrastructure, teaching-learning processes and teachers at the present woefully inadequate quality.

The financial implications of the two together, universal coverage and quality, would necessitate a substantial increase, to around Rs 55,000 crore. The Kothari Commission, in 1968, had recommended that at least 6% of GDP be earmarked for education, a figure committed by the government through policy pronouncements since the nine-country 'Education for All' summit in 1994. The Saikia Committee, which examined the financial implications of bringing in legislation that would make education a fundamental right, has recommended a sum of Rs 40,000 crore for the Ninth Plan.

**T**his brings us to the rather complicated issue of financing elementary education in India. Education being a concurrent subject under India's Constitution, its financing is the shared responsibility of the central and state governments. About 90% of such funding comes from the states and only about 10% from the centre. Even though the Constitution talks of free elementary education, households have a major share in expenditure. Thus, state governments, households and the central government, in that order, are the main contributors to school education. In terms of the share of total recurrent budgetary resources of the government, it is significant to note that the share of 13.4% in 1994-95 is below the average of 17.5% for all low-income countries, excluding India and China. Most of the governments in developing countries like Sri Lanka, Malaysia and Thailand have invested much more in elementary education than India.

State expenditures as a share of GDP vary considerably. In 1992-93, state education spending ranged from 3.0 to 7.5% of domestic product in the major states – Assam (6.0), Bihar (5.0), Haryana (3.0), Karnataka (4.3),

Kerala (7.5); Maharashtra (3.3), Tamil Nadu (4.5), and U.P. (4.0). The composition of such relatively low expenditures is noticeably unbalanced. Salaries account for roughly 97% of education department expenditures in primary schools and 96% in middle schools, while libraries, consumables, equipment, and furniture account for only 0.18%. In many states, incentives like free textbooks, uniforms, and scholarships are given from programmes and budgets outside that of the education department. If these programmes are included, salaries account for 93%, incentives 5%, and all other inputs just 2%.

**T**he central government allocates 2.5% of its total expenditure to education, funding about 11% of all education expenditure. Though this share is comparatively small, it is of strategic significance. Since most of the state expenditure goes to teacher salaries, the small central share is used to fund new programmes, for improving the teaching-learning process and to expand existing programmes. Schemes like Operation Blackboard, Improvement of Science Education, Innovative and Experimental Education are examples of where central funds are used. Consequently, the central government has a greater influence over the future evolution of the education system than its overall expenditure share might suggest, a fact that is of considerable significance as we examine the DPEP.

Rather than fulfil policy obligations to provide increased funds for education from its own sources, the Government of India has embarked on a questionable borrowing of massive amount of funds for elementary education from a variety of external sources in the past few years. Though most of these funds are soft loans that the country has to repay, they are

transferred as grants to the state governments under the DPEP.

Modest externally funded projects have existed even prior to DPEP. The Mahila Samakhyā Programme, Shikshā Karmi Project in Rajasthan, Andhra Pradesh Education Programme (APEP) are some examples. The era of big budget external programmes was ushered in by the Bihar Education Project (BEP) in 1991. The total budget outlay for BEP was around Rs 360 crore shared in the ratio of 3:2:1 between UNICEF, central and the state governments. This was rapidly followed by the U.P. Basic Education Programme in 1993, which saw the entry of The World Bank through its soft loan window, the International Development Agency (IDA) for a total outlay of around Rs 730 crore. The Swedish International Development Agency (SIDA), which funds the Shiksha Karmi Project, was persuaded in 1992 to fund another school education project in Rajasthan, the Lok Jumbish Project, for a total outlay up to phase three of about Rs 500 crore. The European Union entered to fund the Madhya Pradesh programme that has now been expanded to cover 34 of the 45 districts of the state.

**W**ith The World Bank willing to provide large scale soft loans and other funding agencies prepared to chip in, the central government along the line consolidated all the funds into a single programme, the District Primary Education Programme, to be implemented according to a blueprint that was prepared by The World Bank. Significantly, Lok Jumbish, Shiksha Karmi and some other programmes retained their independence and remain outside the DPEP. The Government of India has created a separate DPEP bureau, in its Department of Education, that now functions in par-

allel with an already existing elementary education bureau.

Recently, a joint UN initiative, comprising of UNICEF, UNDP, ILO, UNESCO, UNFPA, on community based education has been launched. It has a comparatively modest budget, and will be serviced by the EE rather than the DPEP bureau. Now two bureaus will look after elementary education in the ministry at the centre — one controlling mostly internal and the other external funds. Given the differing clouts they have in terms of the money they control, as also the differing nature of their functioning, what the impact will be on the ground remains to be seen.

**T**he major shift that DPEP promises is to make educational planning less haphazard and centralised. Schools are normally opened on the whims of political or other influential persons, as a 'gift' to a village or community — without a proper survey of needs, suitability of location, and so on. The DPEP approach, as the name implies, requires a proper district level planning, done mostly by the staff of the education department of the district, to systematically identify the various needs and approaches. Every district prepares its own plan and funds are released after due appraisal.

The major emphasis is on capacity building, quality improvement and decentralised planning. No recurrent expenditures like teacher salaries are allowed since it is a seven year programme. Construction costs are restricted to 24% of the total district project cost. Capacity building includes strengthening of the District Institutes for Education Training (DIET) and, at the state level, of the SCERT's and starting a new State Institute for Educational Management and Training (SIEMT). A series of appraisals from central teams and a great deal of

report writing and form filling constitute the mandatory monitoring and evaluation procedures that all states must adhere to.

**M**uch of what is there in the DPEP blueprint at a planning and management level, is so obvious that one wonders whether it requires external funds to initiate such procedures. Expenditure of internal funds and programmes too should be similarly planned and managed. Perhaps internal funds are so influenced by political and bureaucratic control that proper planning, whenever envisaged, remains mostly on paper. Is DPEP immune from such influences, and does it really operate in the decentralised manner that it espouses? A few instances are enough to show that this is not the case.

Take district level planning for instance. No two districts in India are the same, in terms of size or educational needs. That is why district level planning sounds sensible. The first drafts of the district level plans for Madhya Pradesh, though deficient in methodological and technical aspects, did take into account many district specific parameters. In the process a large district with 29 blocks produced a seven year project for Rs 95 crore, and a smaller district with only six blocks worked out a plan for Rs 17 crore. Then came an oral directive: all district plans must be roughly of the same amount, around Rs 40 crore, a guideline that still operates. This made a complete mockery of the much touted district planning.

With such a guideline, one could make district plans sitting in New Delhi or Washington using district data from a source like Nicnet. The plight of the district functionaries of these two M.P. districts was lamentable, particularly in the smaller district. Their attempt to raise the amount from Rs 17 to Rs 40 crore, with imag-

ined costs, was hilarious. What is the meaning of district planning under a politically motivated guideline which demands uniform district project expenditure?

As mentioned earlier, central expenditure on education, with DPEP now being the major component of such expenditure, has strategic significance since it covers vital areas of teaching-learning and quality that the state funds virtually ignore. Given that the quality of education, revealed through achievement level surveys, is abysmal countrywide (even in a state like Kerala which has more or less achieved universal access and retention), there is a massive wastage of even the current low expenditure since schooling fails to create literacy among children. More funds in such a scenario would simply mean higher wastage of money.

**T**he claim of DPEP is that this is precisely the area it would focus on. A laudable objective but how is it different from what exists? A few years back, NCERT produced an answer in the Minimum Levels of Learning or MLL—a document which prescribes a detailed list of concepts for each subject at the primary school level (not worked out for the upper primary). It is the contention of many NCERT related educationists that if books are evolved around each concept listed in the MLL document, achievement levels and quality of education will improve.

This document and its contentions were debated even prior to DPEP and it was pointed out that quality improvement at the primary level though achievable is a complex objective. It needs to account for the varying cultural, socio-economic, environmental and experience base and child development factors in the country; it cannot be 'prescribed' through a binding

and norm-setting national list of competencies, which is essentially the MLL approach. Ignoring most of these field based objections, the MLL approach sets the agenda for evolving new books in the DPEP states. There is therefore, nothing of substance in the area of quality improvement that DPEP adds.

DPEP further avoids a major question. Focusing on quality improvement is fine, but what kind of a person will emerge through the improved teaching-learning process? The predominant rationale for UEE nowadays is couched in developmental language — that better educated populations have lower fertility or infant mortality rates and are able to participate better in the increasingly globalised world. These are ideological statements, capable of a variety of interpretations. Must education have only an instrumental value like reducing fertility, assuming of course that the correlation is universally valid? To participate better in the globalised world could mean anything, including just being literate and skilled enough to be a disciplined worker and consumer in the prevailing market economy, without in any way being a threat to it.

**I**n this country, many fine minds have debated the purpose of education and the relationship between education and society. We talk of Gandhian education, we are aware of Tagore's view on education, and we know the consequences of colonial education. Extending beyond, we have the Friarian notion of education for empowerment and critical consciousness that many groups have worked with in our country. We could improve the quality of these approaches, singly and together. But what are we focusing on? Replacing such seminal questions by concentrating on bringing in some-

thing like MLL based books is trivialising the very basis we wish to improve.

**A** major weakness of DPEP is that it has not consciously tried to promote alternative institutional mechanisms and decentralised processes for quality improvement. It relies on the same old NCERT/SCERT structure without attempting to transform its functioning – from norm setting to resource support for local capacity building. The approach promotes a centralised functioning whereby educational expertise is sought to be concentrated in these institutions from where it can then trickle down into the field. Participatory functioning becomes a mere token under this overarching attitude.

Worse, DPEP relies on an institution few people in the country know about. This is the Educational Consultants India Limited, EdCil for short. As the name implies, this institution hosts consultants at high salaries who cannot otherwise be accommodated in usual government institutions, given their financial norms. These consultants, many of them without even a nodding acquaintance of rural based school education or pedagogy and child development, criss-cross the country to provide resource support to state education departments. Given their high salaries and perks, they often bring with them a style of functioning that produces a great deal of discontent in the field among education staff used to a culture of thrift and modest expenditures.

This raises aspirations among the local staff that they too could perhaps find a foothold in a much more remunerative DPEP posting, training programme or workshop. Since DPEP covers only a few districts in every state and the rest remain as they were, at the ground level DPEP and non-DPEP

expenditures and cultures produce undesirable human conflicts, given the disparity between DPEP consultants and expenditures of EdCil and other institutions at the central level. Many of the DPEP districts have already gone through or are in the midst of an intense literacy campaign, which is based on voluntary participation of thousands of district level persons. In many of these districts, the DPEP culture is completely alien and negates the spirit of volunteerism, or modest use of resources.

**I**t is easy to be critical but difficult to suggest proactive alternative agendas. It is incumbent for a practitioner, however, to indicate and work for such alternatives. It also needs to be remembered that no matter how a project blueprint may be written, it is always possible to strategise its implementation, for good or bad. The DPEP programme produced an awkward situation for a long serving voluntary group, Eklavya, in Madhya Pradesh. Having developed innovative packages in collaboration with the state education department after many years of intensive field work, particularly in areas like curriculum development, pedagogy, teacher training and examinations, DPEP on paper seemed to provide an opportunity to extend and deepen these approaches. But its policy framework and external funding were somewhat questionable.

Instead of boycotting the programme, Eklavya intervened vigorously to ensure that the process of change would not remain confined only to DPEP areas, but extend to the entire state. While doing so, however, it refrained from securing any funds from the DPEP budget to meet its own financial needs. But this remarkable and fragile experiment is currently under a cloud since the same political and bureaucratic influence that DPEP

was supposed to be immune from, has reversed some path-breaking policy and implementation aspects that had attracted many other states. This case study vividly brings to life many of the above concerns regarding the implementational aspects of a programme like DPEP. To get a proper flavour of the high and low of this process, the story needs to be told in some detail.

In July 1996, the Government of Madhya Pradesh introduced a new teaching-learning package, called Seekhna-Sikhana in class one in all the schools of 16 districts of the state. This was the first phase for overhauling its approach to elementary education under its DPEP initiative. In July 1997, the package was extended to classes one, two and three for the entire state. What is not apparent from this bland statement is a process that can be traced back 25 years.

**S**ome time in 1971, two voluntary groups, Friend's Rural Centre and Kishore Bharati, working in the district of Hoshangabad in M.P. approached the state education department to allow them to work in a few government rural schools of the district with a view to improve science teaching. Legend has it that the then Director of Public Instruction called a meeting of his educational experts to seek their views on the matter. They strongly opposed the proposal, citing dangers of allowing intervention by non-governmental agencies in formal education, as also the lack of degrees (B.Ed., M.Ed.) of the persons involved (even though many of them had Ph.D's from reputed institutions), and so on.

The DPI reportedly over-ruled the learned advice, remarking: 'The state of primary education in M.P. is so bad that these organisations are unlikely to make it any worse – who knows something good may come out

of their attempt, so let us allow them.' Prophetic words indeed, since the process leading up to the Seekhna-Sikhana package may be traced to such a feudal sounding decree of a concerned, sensitive and decisive officer. This was the first, and continues to be the only, example of a government allowing NGOs access to its schools for quality improvement in an integrated manner. It involved the development of innovative teaching-learning material, teacher training, examination methodology and a facilitating administrative and management structure.

**T**his gave birth to the rather well-known Hoshangabad Science Teaching Programme (HSTP) in 1972, which began as an experimental programme in 16 rural government middle schools in the district. The implementation of the programme required another important institutional mechanism in terms of replication and expansion of the process. The need to involve motivated professionals to help catalyse and evolve teaching-learning materials and conduct teacher orientations led to the creation of a resource group drawn from institutions like the Delhi University, Tata Institute for Fundamental Research, IIT's, and later from the Centre for Cellular and Molecular Biology, National Institute for Immunology, and most important, from the colleges within Madhya Pradesh.

The involvement of college and university professionals was facilitated through a formal intervention by the University Grants Commission. Consequently, scores of science professionals could be seen at *shivirs* and in schools in remote areas of the district, rubbing shoulders with village teachers to participatively create an activity, discovery and environment based methodology for science

teaching that stressed on critical consciousness.

From a 16 school experiment, HSTP was expanded to cover all the middle schools of Hoshangabad district in 1978. This expansion saw the direct involvement of the NCERT with the programme through its Regional Institute for Education located at Bhopal. Such geographical expansion was accompanied by a great deal of unease regarding the choice of the entry point for intervention. It had become increasingly evident that the foundations for under-achievement of children were laid at the primary stage, so that a majority of children at the middle stage could hardly read a paragraph or do simplest of arithmetic. Doing better science at the middle stage, though desirable, seemed hampered by the absence of a similar intervention at the primary stage, beginning from class one.

The abysmal achievement levels of children encountered have now been confirmed by the nationwide surveys done for DPEP by the NCERT, but few education professionals then believed that they could be so low. This underscores the point that merely providing access for schooling is insufficient unless quality improvement takes place in parallel and not subsequently, if achievements are to increase and, most importantly, if non-enrolment and dropouts due to lack of relevance and interest in elementary education have to be rectified.

**B**etween 1980 and 1982, important events were to shape the course for future action. Friend's Rural Centre opted out of the programme in 1980 and Kishore Bharati's priorities too started to undergo a change. It was increasingly felt that the future expansion of HSTP would have to go hand in hand with expansion into other subjects like social sciences, and defi-

nately, at the primary stage. To undertake these responsibilities some resource persons of HSTP decided to give up their professional careers and work full time in Madhya Pradesh. They founded a new group, Eklavya. The NGO part of HSTP was transferred to Eklavya in 1982 and it has carried forward the work in subsequent years. The founding principle of Eklavya, summarised in a document presented to the Planning Commission in 1981, was 'to evolve mechanisms for implementing micro level innovations at a macro level.' The need to go beyond small intensive efforts was clearly enunciated in the document.

**B**y 1986, Eklavya, with the concurrence of the state education department, expanded the HSTP to school complexes in 13 more districts of M.P. Significantly, it was able to locate and attract full-timers and resource persons to undertake the development of social science for middle schools and primary school teaching-learning processes. Choosing about 40 experimental schools in both tribal and non-tribal regions during a period of eight years up to 1994, Eklavya, in partnership with the SCERT completed the development, through intense field interaction, of an integrated primary school package called Khushi-Khushi.

The package included teaching-learning materials, teacher training methodology, non invasive student evaluation methods and a facilitating administrative and management structure – all within the state education department, just as in HSTP. The basic approach continued to be activity, discovery and environment based, along with many child development criteria, keeping in view the younger age of children compared to that in the HSTP.

By 1994, the state education department had its own agenda for

improving primary education, in the form of DPEP, for 19 districts of the state. Without utilising DPEP funds for its own organisational work, Eklavya decided to participate, both at the policy and implementation level in partnership with the state government. Quite apart from what Eklavya may or may not have done, the critical factor is that during these 25 years nearly 5000 school teachers, principals, head masters, DIET faculty, administrators from the ground level to the state capital have interacted in some way or the other with the HSTP, social science, or primary school programmes of Eklavya, and they are available to the state education department for further work.

Such a large human force, exposed in varying degrees to new and innovative ideas, also acts as a strong but silent motivating factor in shaping policy and implementation strategies. Their influence can be discerned from what happened in M.P. One of the major policy decisions taken by the M.P. government was to set up a state level Technical Resource Support Group (TRSG). It became the apex policy-making body for academic decisions, not only for DPEP, and this is significant, but for the entire elementary education in the state. Eminent practitioners and educationists from all over the country were made members of TRSG, which resulted in some radical policy initiatives.

**P**erhaps the most significant of such initiatives was the decision to open the development of teaching-learning materials to any group, governmental or non-governmental, university or institute. It was to be undertaken through field work in experimental schools and with the active participation of the teachers of such schools, utilising at least one year for the development of material for

each class. In this process the SCERT, which had the responsibility and monopoly for such a task earlier, was envisaged as only one of the trial agencies. Now it too would have to develop material in the field rather than sitting in the state capital. The trial agencies would have continuous peer interaction throughout the year. The materials and methodologies would be consolidated by them together to form the material for each class for the entire state. It was later envisaged that region specific materials could also be created and used, rather than depending on a single set of materials for the entire state.

**I**t was such a process that helped in evolving the Seekhna-Sikhana package for class one to three. The approach, methodology and contents of Seekhna-Sikhana closely resemble that of Eklavya's Khushi-Khushi. What is significant is that the new package was no longer the experimental effort of a particular group, but had been mainstreamed for the state.

The understanding that the focus of interventions must be on the entire educational system, and not the DPEP areas only, resulted in another significant policy decision of the TRSG, accepted by the state government, that all new efforts would be implemented throughout the entire state. This meant not only that the state government would invest more on elementary education, but necessitated a major change in the administrative structure to ensure, for example, that each teacher goes through a content based in-service training for each class and so on. A cluster level model, going beyond the block, was evolved to handle such academic requirements.

The Madhya Pradesh experience clearly suggests that despite many problems and pitfalls, community, NGO and government partner-

ships are feasible and perhaps the only way to achieve UEE with quality improvements. But that will not happen by mere rhetoric. The government needs to decide as a policy to open to formal school education for intervention by community and non government groups.

A couple of things need to be highlighted from this experience. DPEP could be transformed in this manner in M.P. because adequate capacity to deal with both academic and management aspects existed within the state, both in the governmental and non-governmental sector. An accommodating political climate enabled a few persons to put into place a policy framework that facilitated subsequent fieldwork. In a sense, rather than using the term participation rhetorically, it was given an institutional shape. In the process, the state was able to work without any dependence on the centralised DPEP support system of its consultants and EdCil. But elsewhere, where adequate local capacity is either weak or not properly harnessed, the dependence on consultancy help from Delhi is heavy, and can have disastrous consequences.

**J**ust how fragile these arrangements can be was demonstrated in the past few months in M.P. With the state assembly elections approaching, the interests of party MLA's and ministers became paramount and the facilitating political climate vanished. The first step to protect these interests was to change officials who were not sufficiently accommodating. It was also decided to give up the participatory manner of creating teaching-learning materials, and follow the MLL approach instead. New initiatives, like the Education Guarantee Scheme of the state government, are now being actively promoted in the media. As a local initiative, it offers a better

political potential in the election year than a central scheme. That the EGS promises a novice teacher at a low salary, diluting the state's responsibility to provide quality education is completely ignored in the process.

No better evidence can be provided to underscore the point that DPEP, with all its techno-managerial paraphernalia is as prone to be affected by political and bureaucratic whims as any other education programme. The objectives it promotes, even when desirable, have been and can be undone in the same manner as in any other programme.

If a reason to promote external funds is that they can be made immune from such interference, then this is simply not true. The setting up of a separate bureau in the Ministry at Delhi, linking the National Elementary Education Mission (NEEM) to just DPEP and not the entire elementary education of the country (which is currently under review), or relying on a consultancy agency for nationwide resource back up, are institutional arrangements which cannot guarantee immunity. Such arrangements have led to a fracturing of school education into two power blocks, one handling internal and the other external funds. School education will be the ultimate loser in the subsequent haranguing.

Finally, external soft loans of a seven year duration not only have to be paid back with interest, but need to be replaced by internal funds to sustain the process. There is therefore no escape from providing the necessary funds for education internally. Is it not curious that while 6% of the GDP cannot be found for education, about 17% of the GDP is deployed as subsidies benefiting not the poor, but the middle and upper classes? Political will implies the doing away such subsidies and making provision for an even higher allocation than 6% of the GDP for education.

## The rural scene

A. VAIDYANATHAN

THE New Economic Policy launched in 1991 – variously described as structural adjustment, liberalisation and globalisation – has attracted criticism on diverse grounds. The likely adverse social consequences of reform figure prominently among the concerns of critics. It was feared that increased competition by dismantling controls and 'opening' the economy though desirable, would also lead to increased unemployment, at any rate in the transitional phase, especially in the informal sector.

---

\* This article is based on the findings of a national research project on Strategies and Financing of Human Development sponsored by the Government of India and funded by UNDP and IDRC. Under this project – coordinated by Professor T.N. Krishnan – detailed studies of elementary education in nine major states, spanning the entire spectrum of educational achievement, were carried out. The author, who had the privilege of coordinating this part of the project, would like to record his thanks and appreciation to all participant researchers.

The emphasis on reduced public spending (as against increasing revenues by more effective enforcement of tax laws) as the principal instrument of trimming the fiscal deficit will, under existing power configurations, result in pruning of government outlays on elementary education, basic health care and such other 'basic minimum needs'. Social welfare and other programmes meant to raise incomes and well-being of the poor and disadvantaged would be affected as well. These concerns were strongly voiced at a national seminar held soon after the reforms were announced.

The critics of the NEP were effective to the extent that the proponents of reform conceded the state's responsibility to protect the poor against its possible adverse consequences through appropriate social safety nets and by ensuring that basic minimum need and poverty alleviation programmes do not suffer for lack of funds.

In the event, with the fiscal crunch showing no signs of easing (if anything it is getting worse by the year), financial allocations for these programmes have not increased in real terms. Nor is there any sign of serious efforts to make the programmes more effective. Concern over the impact of reforms therefore remain very much alive.

Following the national seminar referred to above, the Government of India launched a national research project to study various aspects of human development. A series of studies relating to education, health and health care, fertility trends, the public distribution system, employment and social security were commissioned. A large number of researchers from all parts of the country contributed to this project. The agenda of research was formulated after discussion with groups of recognised scholars in each

field; a conscious effort was made to get participating researchers to decide on the principal issues to be studied and agree on a minimum common framework of concepts and methodology. The groups met to review progress in the course of research and to discuss findings at the conclusion of the research. Bringing together researchers with an active interest in the selected areas into an interactive network was an important fallout of the project.

In the sphere of education, the focus of research was primarily on literacy and elementary education in rural areas. The crucial role of elementary education in socio-economic development is now universally accepted: A literate and well educated population contributes to growth by enabling people to acquire knowledge and skills. Education is among the most effective means for advancement available to the poor and disadvantaged. It not only equips them to take advantage of the growing and diverse opportunities opened by growth, but also helps empower them. Education increases social awareness, the capacity to articulate interests and concerns in the political arena and to exert organised pressure to protect and promote these interests.

The Indian Constitution specifies the attainment of universal elementary education among the Directive Principles of State Policy. That this objective has not yet been achieved and that nearly half of the India's population remains illiterate 50 years after Independence is rightly counted among the major failures of Indian planning. Even more disconcerting is the fact that literacy rates and education levels among the disadvantaged groups (women, scheduled caste and tribes) remain much below that of the rest of the population.

The preparatory workshop therefore decided that the studies sponsored under the national project should focus on elementary education in rural India and more particularly the vast and persistent differences in literacy and schooling of children between and within regions, as well as social groups. It was decided to assess the nature and extent of these variations and the underlying factors on the basis of data available from sources such as the decennial population censuses and the National Sample Survey.

This was followed by a survey of some 90 villages spread over seven states to get a more detailed picture of the current position in terms of schooling of children, parental and teacher attitudes, and the condition of schools. The villages were selected by a three step process: In each state one district with relatively superior educational performance (judged by level and the rate of improvement in literacy) and one poorly performing district were first selected. Within each of these districts, generally two tehsils/blocks, and then villages within them, were again selected on the basis of relative educational performance.

The findings of the individual state studies – available in a series of discussion papers and currently in the process of being finalised for publication – cannot be adequately summarised in the space of a brief article. We can only hope to highlight some of the major conclusions and their implications for policy.

Literacy rates of various groups in rural areas (male and female, scheduled castes/tribes and the rest, rural and urban areas), though differing systematically, are highly correlated. Moreover, the inter-group disparities decline (though they don't disappear) as the general level of literacy rises.

This means, for example, that female literacy tends to be high (low), and difference between male and female literacy is narrow (wide), wherever male literacy is high (low). Much the same is true of scheduled castes and tribes, except that their literacy levels are much below those of rest of the population. There are many districts in central India where overall literacy rates do not exceed 10%; and female literacy rates are less than 5%.

**L**iteracy rates have risen in most districts and in all groups; areas with low literacy have, in general, experienced a faster spread in education, thus narrowing the spatial disparities in this respect. However, there are pockets of persistent backwardness: of areas with a low rate of literacy experiencing a relatively slow pace of improvement. This feature comes out more sharply when we look at performance at the level of *taluks* and villages. There are even cases where the literacy rate seems to have actually declined. This phenomenon is noticed in several states including Maharashtra and Madhya Pradesh.

Universal school enrolment of 5-14 year old children has not been achieved by any state, except Kerala. Those not currently attending school include those who have never been enrolled as well as those who have discontinued. The incidence of both, though varying across villages, is in general higher among females than males, among SC/ST than among the rest of the population, and among the poorer segments of the people. High non-enrolment rates seem to be associated with low continuance rates: that is, educationally backward areas/groups send fewer children to school and prematurely withdraw those enrolled. The surveys confirm that age at entry into school is considerably higher than 5 years. Enrolment rate in

the early ages is low, but builds up later. Discontinuance rates are higher in the 10-14 age group.

That enrolment rates, and the duration of completed education, increase with economic status (measured by per capita consumption) is not news. But it is significant that gender disparities in both respects are much lower among the more prosperous households than the poor ones; the difference being more pronounced in discontinuance rate and years of completed education as we move up the income scale. On the other hand, the persistence of disparities even in prosperous households suggests that differences in social attitudes to education are an important factor to be reckoned with.

**E**nrolment and discontinuance are affected by the characteristics of children and the household to which they belong, village characteristics, and access to schools. Except Kerala and parts of Tamil Nadu, which have achieved universal or near universal enrolment, children of upper castes and economically better-off households, and whose parents are better educated are, in general, more likely to be enrolled and attending school. In some cases the educational level of both parents seem to have a significant influence; while in others, mother's or the father's education seems more important. The influence of parental education on boys and girls schooling does not seem to follow the same pattern in all areas. Female children and children who are lower in the birth order are less likely to be in school.

In some areas the number of infants and old people relative to the number of adult females, the number of animals to be tended, and the distance to fuel and water sources affect enrolment as well as continuance. Their influence is more marked on the

girl children, and in some areas (notably Orissa, Uttarakhand) than others. Distance to school, pupil teacher ratio, teachers' qualification – all of which reflect the supply of educational facilities – are seen to have a significant bearing in several areas, especially on enrolment of girls. While there are strong commonalities in the relation between educational performance and likely 'explanatory' variables, the studies also highlight the great diversity of situations in different regions.

Economic well-being, educational capability and better social status are among the reasons most frequently cited by parents for schooling their children. These motivations are stronger in the case of boys. In the case of girls, education (or rather prolonged education), is not seen as desirable because it makes marriage, and ensuring observance of prevailing norms regarding gender roles, more difficult.

**M**ost villages now have a primary school within a kilometre. Most children in primary classes are in government (including local body) schools and private schools aided by government. In general, private aided school play a more important role in the middle school stage. Their share in enrolment of 5-14 years old, however, varies a great deal across study villages. Private unaided schools (run by religious organisations, charitable institutions and poorer private enterprises) play a relatively minor role in elementary education in most selected villages, but they seem to be a significant presence in some areas. The survey villages in Ballia district of U.P. have as many as a fourth of the children in such schools, the proportion rising to nearly 45% in Rampur.

School facilities are grossly inadequate and of poor quality; some

do not have any buildings, most do not have enough class rooms, single teacher schools are quite common in villages surveyed, and many have fewer teachers than classes. While teachers have the requisite qualifications, absenteeism is common, classes are not held regularly, and teaching aides are unavailable. Teachers, on their part, complain of inadequate facilities, excessive burden of non-teaching tasks, difficulties of getting pay regularly and lack of interest on the part of parents and children. There is little interaction between teachers and parents. Children of lower castes complain of prejudice and discrimination. The system of inspection and supervision does not work. Teachers are effectively not accountable for their performance.

**G**overnment and aided schools provide tuition free education; and there are numerous schemes (of uneven coverage) for providing books, uniforms, mid-day meals and other assistance. Nevertheless, partly because of partial coverage and poor delivery, parents have to incur substantial expenditure to educate their children. The average cost per student in elementary class varies from Rs 120 per annum in villages of Rampur (U.P.) to Rs 550 in Kerala. People in rural areas tend to spend more on educating their boys than girls. Most expenditure is on account of books, uniforms and special fees (e.g., examinations). Travel and private tuition are the other main items, but these are relatively minor in comparison. The overall average cost in aided private schools is much higher than in government schools, the difference being as much as five times in some cases.

Poorer people spend less on the average than the better-off, partly because they send their children to government schools. Even so, relative

to their total resources, the poor spend more than the well-to-do. For instance, NSS data show that on the average a rural household in Maharashtra spends around 2.5% of its total consumption outlays on primary education. The comparable proportion for the poorest quintile of the population is actually somewhat higher, despite the fact that fewer of their children are at school for a shorter duration and that they rely much more on public schools.

Non governmental organisations play an important role both in generating mass awareness of the importance of education and in actual conduct of schools. Historically, social reform movements played an important role in spearheading the spread of education in Kerala and Tamil Nadu; so have Christian missionaries, especially in Kerala, parts of Tamil Nadu and the tribal areas of Bihar. The Lok Jumbish is currently playing a similar role in Rajasthan. The Total Literacy Campaign has also helped to create widespread interest in education. But the experience of Kerala makes it clear that while NGOs can create the demand, significant and sustained progress in raising literacy requires a strong state commitment backed by adequate funding. The inadequacy of public funding is certainly an important factor impeding the spread of elementary education.

**R**eligious and caste organisations and a variety of charitable organisations play an important role in setting up and managing schools, most of which receive government aid. The number of private unaided schools, though still marginal in most places, is growing even in villages. Private schools seem to be – and there is corroborating evidence from our study – better run in terms of regular-

ity of classes and quality of teaching. They spend more per student, and so do parents of children studying in such schools. Such schools are beyond the reach of the poor and the disadvantaged groups in villages. Altogether, there is considerable differentiation within the elementary school system, and this is likely to increase as private schools grow in importance. The social consequences of this phenomenon should be a matter of far greater concern than at present.

**A** lack of interest in education is no longer the main constraint on reducing universal enrolment of children in schools. Mass awareness of the importance of education is spreading among all sections due to a variety of factors, including the spread of education among parents, the realisation that education is essential to avail of expanding non-agricultural job opportunities and that education is a means to empowerment. Indeed, there are regions, religious communities and castes where social attitudes impede spread of education. But the situation is rapidly changing even in these segments.

The spread of education itself is a major solvent of these constraints: the more education spreads, the stronger becomes the demand for education from backward castes, scheduled castes, scheduled tribes and women. This suggests that vigorous efforts to spread elementary education across the board, by providing more easily accessible, better equipped schools of good quality, must be the central thrust of policy. This should be supplemented by active encouragement and support to NGOs and reform movements to overcome prejudices and raise mass interest in education among the laggard regions and social groups. These efforts must, however, recognise and adapt to the specific situa-

tions, which are marked by great diversity.

Economic factors – like inadequate means, the pre-emption of children's time for household work and for supplementing family income – continue to be an important impediment to enrolment and continuance in school. Raising incomes of the poor, reducing (the presently considerable) private costs of elementary education, and measures which help reduce claims on women's (and girls) time for activities like collecting fuel, fetching water, tending animals, taking care of siblings and the old, will therefore have a significant stimulating effect on demand for education. A rapid rise in employment opportunities and income of the poor (through faster growth, supplemented by more effectively targeted poverty alleviation programmes), basic social security against contingencies like disease, disability and death will clearly help.

**E**nsuring free and timely supply of books and uniforms to all school going children, wider coverage of school feeding programmes, reducing the distance from houses to school, and measures which increase supply of fuel and water closer to homes will substantially reduce private costs. Expanding the coverage of these programmes and, more important, ensuring that they are effectively implemented, can thus make a significant contribution to speedier progress toward universal elementary education.

These measures, however, need to be accompanied by improvements in the functioning of schools. Part of the problem is to ensure minimum physical facilities necessary for holding claims and effective teaching. Single teacher schools, and multi-grade teaching are inimical to both the

spread of education, and its quality. But equally important is an improvement in regularity of classes and quality of teaching. Effective mechanisms to make schools and teachers accountable for their performance are urgently needed.

**A**t present the entire responsibility for deciding all key functions – namely where, what type of schools are to be set up, construction of school buildings, appointments, promotions, transfers and disciplining of teachers, for financing expenditure – are in the hands of the state government. Private aided schools, though subject to government control and regulation, have somewhat greater latitude. But the village communities who are to be served by the schools have no say in the matter. Their interaction with schools and teachers is minimal. They have no means of ensuring that schools function, leave alone function well. The public school system is in pretty bad shape.

Corrective action will, of course, require massive increase in public outlays to expand and improve school facilities, appoint adequate teachers and strengthen incentives for enrolment and continuance. Much of this has necessarily to be the responsibility of the state. However, greater involvement of the local community in setting up and managing the school system is imperative.

First, local communities must be free to decide the location, type and scale of buildings to be constructed from funds provided by the state government; they must be free to supplement this from developmental resources devolved by the state to local bodies under the new panchaytiraj (PR) system, and such additional resources as they may mobilise on their own for this purpose. Second, local communities and teachers must have flexibility –

subject to broad guidelines – to adapt building designs, teaching and vacation schedules and school timings in the light of local circumstances.

Third, while the government should pay greater attention to curriculum design, supervision and inspection, and prescription of standards, local communities must be given a significant role in monitoring teacher performance, with mechanisms for fair review of complaints and ensuring speedy remedial action. Fourth, if an adequate complement of teaching staff is not available in a school, and the government is unable or unwilling to make good the deficiency, the community should have the freedom to appoint, if it so chooses, additional teachers at their cost and on terms which they can afford. In all these respects, there is need to recognise diversities and provide room – indeed, actively encourage – for local initiative and experimentation.

**O**ver the long run, the proper course would be for elected PR bodies to run the schools, appoint teachers and ensure that they perform their duties to the community's satisfaction. This cannot be accomplished without a drastic change in the uncompromising and total opposition of teachers' unions to decentralisation of educational administration to beneficiary communities subject of course, to well defined norms and regulatory apparatus to enforce them. If this is not done the quality of public education will deteriorate beyond repair. The better-off will not suffer: They have the means to intensify their efforts – already manifest and gathering momentum to privatize even elementary education. The result will be an accentuation of dualism in the educational system and the one's to suffer will be the disadvantaged groups.

# Promises, promises

VIMALA RAMACHANDRAN

INDIA is a country of paradoxes. For almost a century political leaders, social reformers, administrators, social activists and a wide range of opinion leaders have talked about the importance of women and girl's education. Official documents recognise the relationship between women and girl's education and other social development indicators. They express concern over women's low status, declining sex ratios, increasing violence against women, poor health and educational achievements, high mortality and morbidity rates and so on. Almost all political parties talk about the need to enhance women's status.

Every new government appoints committees and commissions to inquire into the situation of women and every few years a new set of recommendations are formulated and released. In the last ten years alone we have seen a National Perspective Plan for Women, the Shram Shakti report of the National Commission on Self-employed Women and Women in the Informal Sector, National Policy on Education and Programme of Action (1986 and 1992), strategy papers on

women's policy and women's representation and panchayati raj legislation guaranteeing reservation for women in local self-government institutions. Yet, India is one of several countries where universal elementary education is still a dream. The gap between men and women continues to be wide and all indications are that the situation is not likely to improve for many decades to come.

Scanning through policy documents and official statements reveals an interesting picture. Every document starts by pointing out the dismal situation in the country and proceeds to reiterate government commitment towards initiating 'strong' measures for change. There is little discomfort over the fact that we have been 'talking' about the plight of women, scheduled castes and tribes, people living in backward regions, nomadic communities and urban poor for almost five decades. We have repeatedly emphasised our commitment towards ameliorating the condition of those who live in abject poverty — and yet, in reality, we have become insensitive to their plight.

There is a common belief that we do not have the financial resources to make universal elementary education a reality. The development assistance debate tells another story. For almost four decades the Government of India and dominant nationalist public opinion was not in favour of accepting external assistance for primary education. They consistently argued that resources were not a problem, though higher and technical educational institutions were established with foreign aid and technical support.

**T**here was a change with the 1986 National Policy on Education. By early 1987 official support for harnessing external resources for special education projects gained legitimacy. In the early '80s the Andhra Pradesh Primary Education Project – Phase I was launched with external assistance. After 1987 a number of programmes and special projects were initiated: Rajasthan Shiksha Karmi Project (1987), Mahila Samakhya – Education for Women's Equality (1989) in Karnataka, Uttar Pradesh and Gujarat, Bihar Education Project (1991), Rajasthan Lok Jumbish (1992), U.P. Basic Education Project (1992), and the District Primary Education Programme (1993) in many districts across the country.<sup>1</sup>

Globally, the 1990 Jomtien Conference was a landmark as it reflected a change in international and national thinking about elementary education. Donors recognised that

investment in human resources paid rich economic dividends and it was an effective strategy to address population growth, maternal and child health, mortality and morbidity related issues and labour productivity. Government policy also underwent a radical transformation. Policy-makers and administrators who argued for greater allocations to elementary education realised they could mobilise additional resources through foreign aid. As mentioned above, a wide range of education programmes and projects were introduced with bilateral assistance and by 1992 The World Bank emerged as a major player in the education scene. Soft loans for basic education became politically acceptable.

**F**or almost four and a half decades, educational planning in India was essentially gender blind – despite the introduction of special incentives and schemes to promote girls education. It was rooted in a welfare approach and was indifferent towards gender issues, centuries of caste and community based discrimination, and the special problems of first generation learners. As the women's movement gained strength world-wide, donors lobbied to bridge the gender gap. With external assistance pouring into special basic education initiatives, administrators were more willing to accommodate the gender agenda. Special women's development programmes and special women's components were introduced in innumerable social sector programmes in the '80s and

ing the tenure of Anil Bordia, when foreign aid for elementary education became acceptable across a wide spectrum of political opinion. It was felt that government expenditure on education was so enormous that small doses of foreign aid would not be able to exert too much influence. On the other hand, it was argued, availability of aid would enable the government to harness additional resources to encourage innovations which require small amounts of untied funds.

'90s. The rhetoric and the language of official documents clearly kept pace with global development thinking and trends.

**O**fficial policy recognised the existence of wide gender disparities dating back to the pre-independence period. From the time of the Woods dispatch to the present, the problem of access and delivery systems has attracted wide attention. In the early period, debate on women's education centred around content, the kind of education women should be provided to facilitate participation in educational programmes. However, within a short period, social reformers established the principle of equality by asserting that there should be no differentiation at the primary stage, though the debate continued with regard to higher education.

It is interesting that in the immediate post-independence period the argument centred around the 'universal good' of education for men and women. However, as we reached the '70s, women's education was linked to national demographic goals, maternal and child health, and nutrition related issues. The notion of 'functional literacy' as an instrument or tool to access developmental resources, keep accounts, read information on contraceptives, child care, safe motherhood, nutrition and so on, became a peg on which to hang women's education. This is not to say that the 'universal good' argument was thrown out for a more instrumentalist one; the moot point is that official policy and documents positioned women's literacy as the critical variable positively impacting social and demographic indicators.

It is well-known that the 'economic' benefits of education was not really an issue in the '40s, '50s and even in the '60s. The founding fathers

1. It may be of historical interest to note that the Minister for Human Resource Development, P.V. Narasimha Rao, was also instrumental in ushering in economic reforms when he became the Prime Minister. The process of rethinking was initiated when Anand Sarup was the Secretary. The ground work was done during his tenure. The nation-wide debate on the 'Challenge of Education' set in motion a process of introspection, leading to the formulation of the Nation Policy of Education of 1986. This process was carried forward dur-

of the Indian Constitution did not feel the need to justify compulsory elementary education. It was considered an important investment in national development, in enhancing the quality of life and giving people the wherewithal to survive with dignity in a rapidly changing world. Similarly, way back in the 1940s, the Bhor Committee recommended universal access to primary health care as a legitimate entitlement, something the state was morally bound to provide its citizens. However, as time passed, investment in basic primary health care gave way to disease control programmes on the one hand and population control strategies on the other. As a result, today we have a wide range of parallel special programmes to eradicate something or the other, accelerate fertility decline, improve child survival, promote safe motherhood and control HIV/AIDS pandemic.

It is not that all was well in the 'good old days.' A glaring omission was the inability to address persistent gender, caste and community based disparities in education. There was a general feeling that expanding infrastructure and increasing supply would automatically enhance access. This was true up to a point and female enrolment increased substantially in the first three decades. Even today the rate of increase in female enrolment is higher than that of men. Yet, some socio-economic groups, especially in backward regions, remain where they were a hundred years ago.

While a proportion of people from the disadvantaged groups accessed education, it continued to elude the majority, especially those living in the more backward regions of the country. Successive governments introduced caste based reservations, but enhancing people's ability through good quality education to access these

'reserved' jobs became a major issue, leading to the now infamous, creamy layer debate.<sup>2</sup> The more wealthy, educated and better positioned among the deprived communities cornered the benefits. The situation reached alarming proportions in a few states where some sub-groups captured political and administrative power, leaving the mass of the people, especially women, where they were.

Another major 'planning flaw' (for lack of an alternative terminology) was the spread of meagre resources thinly across the country in primary schools with a ramshackle room and a teacher. Most villages had a single teacher school. When non-formal and adult education programmes were initiated in the late 1970s, a small pitance was paid to part-time 'voluntary' animators (popularly known as instructors) because the government could not afford a decent remuneration across the country. These part-time NFE workers were initially paid Rs 135 per month (increased to Rs 300 in 1996) and were expected to reach out to out-of-school children. With this scheme most areas were 'officially' covered. General disillusionment with the National Adult Education Programme launched in 1979 and its negligible impact made the government withdraw the programme in 1989 and substitute it by the National Literacy Mission. Similar experiences

2. Government of India introduced reservations based on caste as an important part of affirmative action in favour of disadvantaged communities. In the late 1980s a report was tabled in Parliament increasing quotas. This led to nation-wide protest by certain castes and communities who were left out of the list. This also generated a debate on effectiveness of such reservation. Many political commentators argued that a small section of disadvantaged groups benefited from such reservation, leaving the vast majority out of it. This debate is popularly referred to as the 'creamy layer debate'.

in the primary health care system, the ICDS programme and the public distribution system have been noted by researchers and political analysts.

Reviewing the situation, a senior administrator commented: 'Looking at the plans for non-formal education, one finds that it is assumed that, with a band of "committed and selfless", informally trained part-time "teachers" and practically no infrastructure except non-official motivators, millions of pupils can be educated at a fraction of the cost of school education. These assumptions need to be examined with utmost care through randomised sample studies as well as documented records of performance. If the much more difficult task of educating out-of-school children can be performed so cheaply, should we not review the entire system of school education?' (Anand Sarup, 1996)

In the '50s, per capita investment in primary education was at its highest. Thereafter, inflation, increased enrolment, and an increase in the proportion of resources spent on teachers salaries alone ensured that it was a down slide all the way.<sup>3</sup> Too little resources, spread thin generated its own problems. Poor quality schools, unmotivated teachers, an over-stretched administration, shortages of

3. 'As compared to a rate of growth of 13 per cent in current prices (1950-1990), the total expenditure on education at constant price increased at a rate of 5.6 per cent only, the real rate of growth of per capita expenditure was about one-third of that at current prices, and per pupil expenditure in real terms was less than one-fourth.... The relative importance given to education in the five year plans declined gradually from 7.9 per cent in the first plan, to 2.7 per cent in the sixth plan. It is only during the seventh plan (and now in the eighth plan), that this declining trend has been reversed. The eighth five year plan allocations of 4.9 per cent is equal to the fourth plan allocation in percentage terms, but is still much less than the proportion allocated in the first five year plan.' J. Tilak (1995) quoted in UNDP (1996).

manpower and materials were factors that contributed to the dismal situation. It was left to the state governments to remedy the situation. In states where there was political commitment (like Kerala, Maharashtra, Tamil Nadu) schools functioned. Where education was not on the political agenda (like Bihar and Uttar Pradesh), it deteriorated rapidly. Notwithstanding a declining resource allocation for education, the government appointed numerous commissions and committees to inquire into persistent illiteracy and wide male-female gaps. As a result, innumerable reports have been tabled in Parliament and discussed in the Planning Commission.

**I**t is evident (see box) that almost every conceivable strategy and approach has been covered in government policy. Policy documents recognise that the first stumbling block is poverty and that women from poor communities, especially in rural areas need special attention. In addition to the above, the Seventh and Eighth Five Year Plan documents recognised that national developmental and demographic goals cannot be achieved unless women's education is given priority. Strategies, starting from flexible school timings to decentralised planning and administration, have been recommended over and over again.

An administrator who had the opportunity to work in the education sector for almost two decades remarked that serious efforts were really never made to implement recurring recommendations pertaining to flexible school timings and appointing local people as teachers in primary schools. Some of these ideas were tried out in pockets, especially in Rajasthan through the Shiksha Karmi

4. J.P. Naik, *Education Commission and After*. Allied, New Delhi, 1982.

Project. Flexible timings were also experimented with in Madhya Pradesh and later in Lok Jumbish, Rajasthan. They have, however, remained essentially micro-level initiatives which were never integrated into the mainstream.

Though planning is national, effective implementation demands genuine decentralisation. Agricultural cycles, festivals and the monsoon vary across the country and even within each state. Decentralisation per se was never popular either among the politicians or the administrators. As a result, any policy contingent on decentralisation was never implemented and thus could not work. The grand old man of Indian education

J.P. Naik lamented, 'The political reasons to distrust schools, colleges and teachers ceased to exist (after Independence); but the educational elite that came to power replaced them by academic reasons... they had such poor opinion of the teachers and schools that they felt it necessary to continue the earlier policies of distrust on educational grounds and for maintaining standards. This was obviously a rationalisation to cover the innate love of power of the administrators and their inclination to continue status quo...' <sup>4</sup>

It is quite interesting that policy documents from the '80s onwards have not only accommodated the 'demands' of the women's move-

#### Recurring policy recommendations to promote girls education

- \* Schools within walking distance, closer to the place of dwelling, if necessary satellite schools for remote hamlets.
- \* Provide child-care facilities/crèche within school premises.
- \* Escort for girls, if school is away from the village or hamlet.
- \* Introduce flexible school timings and region-specific school calendar.
- \* Provide alternative modes/forms, combine formal with non-formal, condensed courses for dropouts, residential schools (ashram shalas) for special focus groups like nomadic tribes and others.
- \* Residential condensed education programme for adolescent girls and young women who dropped out of school or never enrolled (Mahila Shikshan Kendra).
- \* More women teachers in rural areas, with residential accommodation.
- \* Expand pool of women teachers by lowering qualifications, intensive training (near the place of dwelling), provide regular educational support, organise special condensed courses for dropouts who can be trained to work as teachers, provide secure accommodation for out-station teachers, and so on.
- \* Make curriculum relevant to the lives of poor women who are engaged in battle for survival.
- \* Recognise the problem of working children, provide special facilities.
- \* Introduce facilities for 'bridge programmes' to enable dropouts to re-enter the school system.
- \* Provide incentives such as uniforms, textbooks, exercise books, attendance scholarship and free bus passes.
- \* Involve the community in managing the school through advocacy, mobilisation and formation of village education committees with at least 50% women members.
- \* Improve quality of education, motivate teachers to make learning a joyful exercise.
- \* Decentralise educational planning and administration, bring it closer to people so that it reflects the special needs and aspirations of the community.
- \* Address management issues that inhibit the implementation of government policy, like grievance redressal, administrators and teachers union's resistance to flexible timings and school calendar, make teachers feel wanted and appreciated.
- \* Recruit women with lesser qualifications from rural areas, recruit local youth in remote areas where teacher absenteeism is rampant, appoint teachers to a specific school and so on.
- \* Mobilise public opinion for primary education and universal literacy in general and women's education in particular. Advocate for greater political will and administrative commitment. Make it a national mission with time-bound 'targets' — *a la* National Literacy Mission (NLM), National Elementary Education Mission (NEEM).

ment, but has simultaneously retained the early welfare orientation, the mother-wife-reproducer rhetoric and the women's empowerment approach. The National Adult Education Programme (NAEP) launched in 1977 drew upon Paulo Freire and Ivan Illich. The revised Programme of Action of 1992 talked about reproductive health even before it attracted wide attention during and after the Cairo conference of September 1994. Chapter I, paragraph 5.1 on Empowerment of Women proclaims GOI's commitment to 'enable women to make informed choices in areas like education, employment and health (especially reproductive health).'

Education policy documents clearly have kept pace with radical terminology from Freire and Illich in the '70s to the vocabulary of radical feminists in the '90s. Looking at the lucidity of education policy documents one cannot but note that as the situation got more grim on the ground, our policies became more radical.

**T**he 1986 National Policy on Education was hailed as a major breakthrough in addressing gender issues in government policy. The chapter titled Education for Women's Equality state: 'Education will be used as an agent of basic change in the status of women. In order to neutralise the accumulated distortions of the past, there will be a well-conceived edge in favour of women. The national education system will play a positive, interventionist role in the empowerment of women. It will foster the development of new values through redesigned curricula, textbooks, the training and orientation of teachers, decision-makers and administrators, and the active involvement of educational institutions. This will be an act of faith and social engineering.... The removal of women's illiteracy and ob-

stacles inhibiting their access to, and retention in, elementary education will receive overriding priority, through provision of special support services, setting of time targets, and effective monitoring...' (NPE, 1986)

**L**ike Indian political parties, policy documents dealing with women are a merry mixture of different approaches, views and ideologies, accommodating divergent (often contradictory) views within the same document.<sup>5</sup> They are essentially consensus documents. What is implemented, ignored or relegated to the status of a show-case is a political and administrative decision. It has little to do with what is sanctioned by policy. Policies are a set of guidelines, akin to the Directive Principles of State Policy in the Constitution. People in positions of administrative or political authority are not mandated to implement them. They are, like international documents, formulated and publicised for a wide range of domestic and international reasons. Real decisions are taken at the time of preparation of action plans, projects or during budget allocations. This is a primary reason for the persistent gap between policy and action.

Take the 1986 National Policy on Education. Except for a paragraph or two in the section on vocational education, technical education and

5. During discussions on the first draft of this paper a few commentators pointed out that since the state is not a monolith and its policies are vague, flexible and self-contradictory, it provides space for innumerable small and big innovations in different parts of the country. India is a country of mind-boggling diversity and uneven development. The survival of democratic institutions has been possible because of the politics of accommodation of divergent view points. This is often cited as a positive feature that provided space for the coexistence of different approaches and strategies. On the other hand, ensuring visibility of gender issues in policy documents does not guarantee implementation.

early childhood care, the policy was silent on the gender dimension of educational access. The revised policy of 1992 states that the section on women's education is applicable to all aspects of educational planning and administration. After it was accepted by government, the section of women's education was implemented through a pilot project called Mahila Samakhya - Education for Women's Equality. This unique programme was nurtured and over a period of eight years it yielded interesting results. Soon, it became an accepted 'component' in some basic education projects. It was seen as an effective means to meet the gender check-list requirements of donors.

**H**owever, the lessons of the programme did not take root in the mainstream. While the importance of a special pilot project was appreciated, most advocates for women's education were disappointed that mainstream elementary education, technical education, schools and adult literacy remained unaffected. They carried on in a gender-blind way and special allocations were made for women beneficiaries. In effect, the policy was not implemented in spirit. In India, the irony is that innumerable pilot and micro-projects are initiated with a view to learn and apply generic principles on a wider scale. But despite the good intentions, pilot programmes remain isolated, as show pieces.

The response of civil society and agents of development has not been encouraging either. Barring traditional social reformers and missionaries,<sup>6</sup> universal elementary education has not been on the agenda of political movements of any shade, the women's movement, struggles of

6. Social reformers in the 19th and 20th century spearheaded efforts to establish educational institutions for women across the

dalit and tribal groups, communist inspired agrarian movements, or the trade unions. They have highlighted the plight of the poor, and the marginalised, argued for greater employment opportunities, supported affirmative action to reserve a certain percentage of jobs and seats in educational institutions. But universal elementary education has never been high on their political agenda.

Similarly, the non-government sector has a strange relationship with education. Non-formal and adult education centres have either been used as an 'entry point' for people's mobilisation or as a visible and continuous activity that generates goodwill. Advocacy and mobilisation for universal elementary education has rarely been on the agenda of most voluntary groups. There are exceptions of course, but by and large the alternative stream has paid as little attention to education as the mainstream.

Political parties in most parts of the country (with the possible exception of Kerala) have never pushed for education, not in the active way in which they mobilised and fought for reservations based on caste, community, tribe and so on. The media (both print and electronic) too has been remarkably silent about the outreach, quality and content of education, barring occasional, sporadic writing. The state of primary education, glaring inequalities in access to education and the prevalence of a wide gender gap has not grabbed media attention. So we have a situation where for almost five decades universal elementary education has not been a priority for

country. Their efforts have made a significant impact in various pockets across the country. Existence of islands of high female literacy in areas like Baroda in Gujarat or Jhunjhunu in Rajasthan was primarily due to the efforts of social reformers, philanthropy of enlightened business people and erstwhile royal families.

anyone. While everyone pays lip service to it, it has not captured the imagination of the nation. In an environment of apathy, is it surprising that women and girls education is the way it is. Promises, promises is all we ever get.

# Select documents on girls and women's education

Pre-Independent India<sup>1</sup>

1854 Woods Dispatch: Recognised existence of male-female gap and called for encouragement of girls education.

1882 Indian Education Commission: Deplored backward condition of girls education, stressed the need to invest public funds to support education of girls and train more women as teachers.

1904 Government of India Education Resolution: Expressed anxiety over male-female disparity and called to spend more funds on girls education.

1919 Resolution of GOI: Reiterated need for more finances; to make education free for girls, in addition to scholarships and freeships.

1929 Hartog Committee: Pointed out the schism between boys and girls, emphasised the need for provision of secondary education for girls in order to increase the number of female teachers.

1944 The Post War Education Development Committee: Need not treat education of women as a special problem, as 'whatever is needed for boys and men, not less will be required for girls education.'

## Post-Independent India<sup>2</sup>

- 1950 The Constitution of India: Equal opportunities to all citizens irrespective of class, caste, religion, race and sex – free and compulsory education for all children up to the age of 14.
- 1951 First Five Year Plan: Neglect of women's education noted with concern. All co-education institutions were thrown open to girls. Emphasis on expansion of educational facilities.
- 1956 Second Five Year Plan 1956-61: Emphasis on need to provide greater opportunities to girls – efforts needed to educate parents on the importance of girls education. Shortage of women teachers recognised as a major bottleneck. Recommended centrally sponsored schemes which included:
- \* free accommodation for women teachers
  - \* appointment of school mothers
  - \* condensed course for adult women
  - \* stipend for women for teachers training
  - \* refresher courses
  - \* stipends for high-school students to take up teaching
  - \* attendance scholarships
  - \* exemption from tuition fee
  - \* construction of hostels for secondary school for girls.
- 1959 National Committee on Women's Education – under Chairpersonship of Durgabai Deshmukh:
- \* Education for women must be given special attention for at least some years to come and a special machinery should be created for it. Establish National Council for Women's Education;
  - \* special funds must be allotted in the various plan periods for furthering and developing this programme...provision of Rs 10 crore in addition to regular allocation;
  - \* this fund should be used for development of middle and secondary schools for girls, towards training institutions for women, for construction of hostels and staff quarters and for organising special educational facilities for adult women;
  - \* liberal grants should be given for education of women in rural areas.
- 1961 Third Five Year Plan 1961-66
- \* Women's education and training a major welfare strategy – primary objective: expand facilities for girls at various stages;
  - \* create conditions for encouraging parents to send their daughters to school – educating public opinion;
  - \* increase number of women teachers from rural areas, encourage urban women to go and teach in rural areas;
  - \* strategy to overcome shortage of science and women teachers – select promising students and assist them with scholarships and stipends;
  - \* community efforts to organise enrolment drives;
  - \* scheme of condensed courses through Central Social Welfare Board.
- 1962 Hansa Mehta Committee appointed by the NCWE 1962-64
- \* co-education adopted as a general pattern at the elementary stage.
  - \* need to induct women teachers in boys schools (especially at the secondary level) to encourage girls to join;
  - \* common curricula for boys and girls, with home science as a common core subject for both boys and girls at the middle stage.
- 1963 M. Bhaktavatsalam Committee to investigate the cause for lack of public support for girls education, particularly in rural areas.
- 'In our opinion the strategy for development of education of girls and women will have to take two forms, the first to emphasise the special programmes recommended by the National Committee on Women's Education. The second is to give attention to the education of girls at all stages and in all sectors as an integral part of the general programme for the expansion and improvement of education.'
- 1964 Indian Education Commission under chairmanship of Dr. D.S. Kothari 1964-66: Commission took note of earlier recommendations and endorsed them. The main thrust of the report was on reducing inequalities and disparities – with the general observation that gender gap will close with overall expansion and improvement in educational facilities.<sup>3</sup> The commission *did not* have a separate chapter or section on girls and women's education, while it paid special attention to the education of scheduled castes and tribes.
- 1968 National Policy on Education
- Equality of educational opportunities was the main slogan of this policy. Education of girls should receive emphasis, not only on the grounds of social justice but also because it accelerates social transformation.<sup>4</sup>
- The concept of 'non-formal education' was introduced as a mechanism to enable out-of-school children to avail of educational opportunities. This

policy document, for the first time, addressed education of girls alongside that of scheduled castes and tribes.

1969 Fourth Five Year Plan 1969-74: Role of education to enable women to become better mothers and house managers received attention. Decreasing infant and maternal mortality, improving nutritional status of children and regulating family size were seen as the major benefits of women's education. For the first time such an instrumentalist approach to women's education was articulated in policy documents.

1974 13th Meeting of National Council for Women's Education

- \* Support to voluntary organisations and institutions for special projects for the improvement of women and girl's education;
- \* facilities and incentives to increase girls enrolment;
- \* condensed course for teachers training;
- \* encourage local girls to work as teachers in rural areas, after going through condensed teacher training course;
- \* part-time non-formal education for girls who drop out of school, prepare suitable curriculum for the same;
- \* establish women's polytechnics and ITI's;
- \* teachers quarters for women, with suitable security – twin quarters for women teachers and other women functionaries;
- \* involve Nehru Yuvak Kendra to cater to needs of women and girls through their network;

1974 Committee on the Status of Women in India

- \* Co-education adopted as a general policy at the primary level, it was noted that the quality of provisions in girls schools are inferior both in terms of physical infrastructure and teachers;
- \* free education for all girls up to the secondary stage;
- \* provision of primary schools within walking distance, establishment of ashram schools to serve clusters of villages; or peripatetic schools for girls who cannot attend formal schools, mobile schools for children of nomadic tribe;
- \* develop graded curriculum for the above;
- \* sustained mobilisation of public opinion and community support for creating a favourable environment for girls education;
- \* special incentives in low female enrolment areas;
- \* at least 50% teachers at the elementary level be

women;

- \* common core curriculum for boys and girls;
- \* provision of three years of pre-school education and special efforts to increase the number of balwadis;
- \* non-formal education for out-of-school girls and for women – literacy skills and familiarisation with democratic processes;
- \* equality of the sexes as a major value to be inculcated through the educational process. To this end, review of textbooks to scan them for content and presentation.

1975 Fifth Five Year Plan 1975-79

- \* The constitutional directive received prominence after two and a half decades;
- \* public recognition that UEE cannot become a reality unless gender gap is closed;
- \* national Adult Education Programme and Integrated Child Development Services launched.

1980 Sixth Five Year Plan 1980-85

Separate chapter on women and development, noted with alarm the decline in sex ratio and it stressed on women's role in development. Emphasis on economic upliftment through income generation and employment opportunities.

Focus shifted from provision of more schools (supply side) to socio-economic reasons for women's lack of access to education.

UEE would be specially directed towards higher enrolment and retention of girls in schools; (especially in nine educationally backward states) through the following interventions:

- \* Provision of balwadis attached to schools for sibling care;
- \* income generating programme for girls after school hours to supplement family income;
- \* expansion of incentive scheme like free uniforms, text-books and mid-day meals;
- \* appointment of women teachers in rural areas; and
- \* strengthening science teaching in girls schools and colleges to enable their participation.

1985 Seventh Five Year Plan 1985-90

Influence of International Decade of Women, removed the Department of Women and Child Development from the Ministry of Welfare and placed it in the newly created Ministry of Human Resource Development – along with education, culture and youth and sports.

Moved away from viewing family as the basic unit of development and addressed intra-household distribution of resources; making rural women

visible by highlighting their economic contribution in agriculture, animal husbandry, etc.

In education, no major departure from the past.

- 1986 National Policy on Education and Programme of Action: Added a new dimension to the education debate by calling for education to become an instrument for fostering equality between men and women. Introduced separate chapter in the policy. 'Education will be used as an agent of basic change in the status of women. In order to neutralise the accumulated distortions of the past, there will be a well conceived edge in favour of women. The National Education System will play a positive interventionist role in the empowerment of women....'

'The removal of women's illiteracy and obstacles inhibiting their access to, and retention in, elementary education will receive overriding priority, through provision of special support services, setting of time-targets, and effective monitoring....'

- 1988 Shram Shakti – Report of the National Commission on Self Employed Women and Women in the Informal Sector. Recommendations:

- \* It is necessary that there should be shifts for girls at suitable times so that they can assist their mothers in work and go to school.'

- \* A woman helper is provided... for accompanying the children from the house and back to ensure their enrolment and safety;

- \* the helper's services should be utilised for looking after the siblings below school going age of the girls... in the school premises itself;

- \* regular crèches attached to primary schools;

- \* incentives... cash per month and free uniforms, text books and exercise books to all girls at least up to the primary school level;

- \* syllabi need to be made more relevant for children of rural areas. Practical subjects like animal husbandry, cattle care, soil conservation, agriculture and social forestry may be added and such options offered along with subjects like history, modern science and physics;

- \* condensed courses... for adolescent girls and above... to appear in same examinations for which children from public schools from metropolitan cities also appear;

- \* possible to have more women teachers only if they are posted in their home villages or nearby villages;

- \* to enhance pool of women teachers in rural areas, provide '...intensive training for a period

of one year or nine months... their training and boarding and lodging should be free';

- \* revision of textbooks and primers needs to be carried out keeping the objectives of bringing women into greater focus;

- \* combine general and vocational education to cater to the vast majority of labouring women in poverty. '...these alternatives of education need to be developed in a decentralised manner... need for revolving fund from which they (girls/women) may be given scholarships.'

- \* Mobilisation of the community to convince parents of poor girls regarding the relevance of education.

- \* Recognition that 'literacy in itself is not a solution to the basic problem of poor women, viz. exploitation and hunger, and therefore literacy has to be understood in the wider context of the social structure.'

- 1992 Revised National Policy on Education and Programme of Action: The chapter on Education for Women's Equality was brought forward from being IV in the 1986 POA to Chapter I in the 1992 POA – with the following rider – 'Education for Women's Equality is too important to be left to the individual proclivities of persons in charge of implementing programmes. It should be incumbent on all actors, agencies and institutions in the field of education at all levels to be gender sensitive and ensure that women have their rightful share in all educational programmes and activities.'

2. Sources: Nayar (1993), Naik (1982), GOI (1974), GOI (1986), GOI (1988) and GOI (1992).

3. It is noteworthy that the first major commission set up by GOI did not feel the need to sharply focus on girls education and inherent gender inequalities in educational access. This is symptomatic of that era when it was believed that unequal access to education of certain castes, communities and of women will be bridged if there is a general expansion of educational opportunities. J.P. Naik, who was the architect of the 1968 Policy observed, 'On the social side, the education of girls has continued to progress at a faster rate than that of boys throughout the post-Independence period. The gap between the education of boys and girls at all stages had therefore decreased considerably between 1947 and 1977...' J.P. Naik, *The Education Commission and After*, Allied Publishers, New Delhi, 1982.

## Human Development in South Asia 1998

We are born weak, we need strength; helpless, we need aid; foolish, we need reason. All that we lack at birth, all that we need when we come to man's estate, is the gift of education.

Jean-Jacques Rousseau  
(1712-1778)

THE challenge for the South Asia region today is to travel the vast distance between its performance and its promise. On the one hand, it has emerged as the poorest, the most illiterate, the most malnourished, and the least gender-sensitive region in the world – as documented in the 1997 Report on Human Development in South Asia. On the other, it has all the potential to become the most dynamic region in the twenty-first century if there is massive investment in human development. The most critical components in any such investment plan are: (a) basic education for all, and (b) relevant technical skills. This is the main theme of this second Report.

South Asia can learn a great deal from the development strategies followed in recent decades by Japan, the East Asian industrializing tigers, and China. A firm basis for equitable growth was laid by massive investment in basic education for all, combined with great emphasis on technical education. The education strategy pursued by these countries was the key not only to accelerating economic growth but to distributing resources more equitably and to empowering people. It is well to remember this lesson in the midst

of the present temporary financial problems of East Asia, since the basic foundations of East Asia's economic prosperity – particularly human and social capital – are still intact, and these will prove vital in rescuing the region from the current liquidity crisis.

It was through human development strategies that a major breakthrough was made by Japan in the 1940s and 1950s; by the East Asian industrializing tigers (the Republic of Korea, former Hong Kong, Singapore, Taiwan, Malaysia, and Thailand) in the 1960s and 1970s; and by China in the 1980s and 1990s. As low wages were raised through greater economic prosperity, and as the early increases in labour productivity slowed down, it was but natural that development leadership passed on gradually from Japan to East Asia to China. The earlier development leaders had to restructure their economies to adapt to high-tech, high-wage development models.

In this gradual shift of economic frontiers, South Asia is well-positioned to assume leadership in the next phase for a development model based on low wages, high labour productivity, and massive export of low-tech consumer goods. But it must engineer a major investment in human development, particularly in basic education and relevant technical skills.

The educational challenge in South Asia has become formidable because of earlier neglect: 395 million illiterate adults, out of which 60 per cent are women; 50 million out-of-school children; only 1.5 per cent enrolment in vocational and technical schools at the secondary level, compared to fifteen times that per-

\* The Overview is reproduced courtesy the Human Development Centre, Islamabad. The Report will be released in New Delhi on 4 April 1998.

centage in Latin America; and only one scientist for every 10,000 people, compared to four times that number in East Asia. South Asia has by now the lowest adult literacy rate (49 per cent) in the world. It has fallen behind Sub-Saharan Africa (57 per cent literacy rate), even though in 1970 South Asia was ahead with a literacy rate of 32 per cent, compared to 27 per cent in Sub-Saharan Africa.

The economic and social costs of such neglect of education in South Asia are simply enormous. Whenever and wherever basic education was spread, the social and economic benefits were quite dramatic and visible. There is considerable evidence of these benefits cited in the Report (see chapter 2). For instance:

- \* In urban India, when mothers were uneducated, the child mortality rate was as high as 82 per thousand, but it dropped sharply to 34 per thousand when mothers were educated.

- \* In Bangladesh, contraceptive use was only 27 per cent for women with no education but increased to 66 per cent for women with more than secondary education.

- \* In Pakistan, a recent study has estimated that its per capita GDP in 1985 would have been 25 per cent higher if, in 1960, it had Indonesia's primary school enrolment rates.

- \* In Nepal, increasing the average education of a farmer by one year expanded agricultural output by 5.2 per cent in the Terai region and by 5.9 per cent in the Hill region.

- \* In India, increasing average primary schooling of the work force by one year increased output by 23 per cent.

- \* In Sri Lanka, high female literacy (87 per cent) has contributed to a decline in the rate of population growth to only 1.3 per cent a year.

Thus, there is clear evidence from South Asia's own experience, backed up by the experiences of other regions, that education leads to many social benefits, including improvements in standards of hygiene, reduction in infant and child mortality rates, decline in population growth rates, increase in labour productivity, rise in civic consciousness, greater political empowerment and democratization, and an improved sense of national unity. The benefits of education are comparatively easy to document: the losses suffered by South Asia from a continuing neglect of education can only be inferred and are difficult to quantify. It is quite certain, however, that South Asian economies cannot hope to engineer a decisive breakthrough in development or to become industrializing tigers of the future without a generous investment in basic education and technical skills.

The recent experience of South Asia, however, offers some hope and encouragement. The net enrolment rate in primary schools has already reached nearly 80 per cent. Even if over-age children (between 13 to 18 years) are included, only one-third of the children are out of school at present. Adult literacy has increased by almost 50 per cent since 1970, from 32 per cent to 49 per cent. Female literacy and school enrolment have increased much faster than male literacy between 1970 and 1995, thereby reducing the prevailing gender disparities. The South Asian countries are now beginning to allocate more resources for education: education expenditure has increased from 2.0 per cent of GNP in 1960 to 3.5 per cent in 1994.

The experience in some parts of South Asia has been extremely encouraging. Sri Lanka and the Maldives have already achieved over 90 per cent adult literacy rate and near universal primary school enrolment. Bangladesh is beginning to make rapid strides in school enrolment, particularly through the vigorous efforts of its civil organizations. Some states in India, such as Kerala, have already attained a very high rate of adult literacy and primary school enrolment.

Moreover, these experiences have demonstrated that poverty of national income is no barrier to the spread of basic education. For instance, several poorer states within India have managed to achieve higher levels of education than their richer counterparts: Kerala, with a per capita income of \$1017 (in 1993 PPP dollars), has literacy rate of 90 per cent, compared to 58 per cent in Punjab which has more than double the per capita income of Kerala. International comparisons also bear this out. For example, Vietnam, with a per capita income of \$1208 (in 1994 PPP dollars), has attained an adult literacy rate of 94 per cent, while India (per capita income of \$1348) had 52 per cent literacy and Pakistan (per capita income of \$2154) is even further behind, with 38 per cent literacy. Indeed, while income is important, it is not decisive. What is decisive is the political commitment behind the many education campaigns within South Asia—a commitment that has remained both faint and fragile so far.

It is within this context that we need to review the educational challenge that lies ahead of South Asia in the coming decades. South Asia's policy planners must reduce the educational challenge in front of them to certain manageable tasks. When too much needs to be done, a sharper focus on priority issues is absolutely essential. These issues can be crystallized into six major tasks.

First, the quantitative challenge is clear (see chapters 3 and 4). There are at least 50 million children who

have not seen the inside of a school. To this backlog of primary school age and over-age children, another 2.2 million children in the school-going age group are being added each year because of population growth. If universal primary enrolment is to be attained within the next five years, school facilities must be created for an additional 65 million children. If the target is to be attained over a longer period, the annual challenge can be reduced even further but the economic and social costs of lack of education will keep accumulating. Each South Asian nation will have to decide for itself, in the light of its own circumstances, how it goes about the task of achieving universal primary enrolment in the shortest possible time. Let us remember at the same time that the internationally-agreed goal at the Jomtien Conference in 1990 was to achieve basic education for all (EFA) by the year 2000. Over 100 countries have already set up their specific EFA goals and plans and are steadfastly moving towards them (see box 3.6). South Asian nations cannot afford to lose this race for education for all.

In addition to the challenge of providing schooling for out-of-school children and new entrants, South Asia faces a huge backlog of 395 million illiterate adults. Some South Asian countries have launched ambitious adult literacy programmes. In terms of national priorities, however, the most urgent task is to educate the new generation of children, rather than trying to rescue the past. If financial resources and administrative energies are limited—as indeed they are—they are best spent on providing universal primary education to all those children who are ultimately going to shape the future of these nations.

Second, the quality and relevance of basic education needs to be improved dramatically (see chapter 5). The levels of student learning achievement in South Asia are startlingly low. Several surveys have documented the poor quality of schooling in South Asia—including an irrelevant curriculum, the limited availability of textbooks and other learning materials, and the poor quality of teaching. Some recent studies have analysed the huge gap between the learning achievements of South and East Asian students. A fundamental reason is that it is not enough to get all the children into schools: they need an effective system of education as well.

Other negative results of the poor quality of primary education are high rates of drop-out and repetition in South Asia. Only 59 per cent of primary level students complete their studies. This means that over 40 per cent of the investment in primary school educa-

tion is wasted. Achieving universal primary completion is as important as universal primary enrolment.

Third, teachers are the most important resource for ensuring high quality primary education. Unfortunately, South Asia has only 66 per cent of the total number of teachers that are actually needed (see chapter 8). This leads to very high pupil-teacher ratios: for example, 64:1 in India, 71:1 in Bangladesh. This implies that, even if teachers were always present and actively teaching during school hours, they could give, on average, less than one hour to each child every month.

The problem is further aggravated since one-sixth of the teachers are untrained. The limited teacher training offered is fairly rudimentary, giving teachers little understanding of the material they have to teach. Most have completed less than 10 years of schooling themselves. They have often not studied core subjects, such as mathematics and the language of instruction, beyond grade 8 or 10. To make matters worse, many teachers turn up in schools—particularly government-run schools—only to pick up their monthly pay cheques: for instance, teacher absenteeism is as high as 42 per cent in the Indian state of Assam.

At the primary level there are few female teachers in most countries: 25 per cent in Pakistan, 27 per cent in Bangladesh, 31 per cent in India. Sri Lanka is a notable exception, with 82 per cent female teachers. There is considerable evidence that primary school enrolment and completion rates and achievement levels—particularly for girls—are higher when teachers are females.

There is poor motivation for most teachers because of an inadequate salary structure, poor working conditions, and a lack of advancement opportunities. Teacher salaries in many countries are lower than those paid to cooks or chauffeurs. Many schools have no electricity, no proper class-rooms, nor even a chair for the teacher.

Fundamental reforms are needed to provide more and better teachers in the schools of South Asia, and to create proper facilities and motivation for them to teach the next generation.

Fourth, gender gaps are large and persistent at every level of education in South Asia (see chapter 6). At the primary level, net enrolment of girls is only 69 per cent, compared to 88 per cent for boys. At the secondary level, generally half as many girls are being enrolled as boys. South Asia's female literacy rate of 36 per cent is the lowest among all regions of the world: it is much lower than the average for the developing world (62 per cent) and compares poorly with 48 per

cent in Sub-Saharan Africa and 95 per cent in East Asia (excluding China). South Asia has 243 million illiterate women today – two-thirds of the region's adult female population and 45 per cent of the world's total illiterate women.

The challenge for South Asian planners is to remove all gender disparities, particularly in new enrolment, since it has been amply documented that investment in girls' education is by far the best investment (see box 6.2). In order to address this issue effectively, policy-makers must understand the basic reasons why gender gaps persist. Two reasons, of course, are widespread poverty and cultural biases, so that many families give preference to the education of sons rather than daughters, whenever there is limited family income. This means that scholarship programmes are more urgently needed for girls, as is borne out by the experience of the Female Education Scholarship Programme in Bangladesh (see Box 6.5). There are many other factors inhibiting girls' enrolment which are more amenable to thoughtful policy action, such as lack of conveniently located schools, inflexible hours, non-availability of female teachers, absence of single-sex schools, irrelevant curricula, and inadequate school facilities (particularly the absence of toilet facilities). There are several experiences which show a dramatic expansion in girls' enrolment once these supply-side constraints are overcome.

Fifth, vocational and technical education programmes in South Asia are often inadequate, irrelevant, and qualitatively poor (see chapter 7). Less than 2 per cent of children in the relevant age group at the secondary school level are enrolling for technical education in South Asia, compared to over 10 per cent in East Asia. Not only is enrolment low, about half of the students drop-out before completing their studies. Moreover, the skills taught in many technical schools are often inappropriate for the job market.

Many graduates of polytechnics and vocational schools fail to land any worthwhile jobs. For instance, approximately one hundred thousand technical school graduates in India are either unemployed or underemployed at present. The placement rate for the formal training programmes in Bangladesh is as low as 30 per cent. South Asia faces a perplexing dilemma. It is producing so few technically trained people and yet about half of them remain unemployed.

The prominent features of vocational and technical education in South Asia are: low student enrolment, high drop-out, inadequate budgetary allocation, low quality of teachers, inequitable access for women

and those in rural areas, limited role for the private sector and NGOs, and very limited facilities for training in modern technologies. The improvements needed are obvious. They revolve around three main issues: (i) enhancing the social and economic acceptability of technical education and increasing the demand for such education (e.g., elevating technical diplomas to the status of general education degrees); (ii) better manpower planning, especially guidance to students concerning job market requirements; and (iii) refocusing vocational and technical education on more appropriate technologies of the future, with a special focus on skills needed for expanding domestic and global markets.

\* Sixth, South Asia needs to allocate sufficient resources for education and to spend them on the right education priorities. Overall, South Asia is spending 3.5 per cent of its GNP on education, compared to 4.3 per cent in East Asia, 5.5 per cent in Sub-Saharan Africa, and 5.5 per cent in the Arab States. The negative impact of these low financial commitments is made worse by the persistent neglect of some priority areas of education, such as basic education, girls' education, and vocational and technical training. In South Asia, education budgets are generally distorted in favour of higher general education, which, normally the private sector should provide. The bias in the South Asian region in favour of colleges and universities greatly squeezes the financial budgets for basic education. In 1994, primary education received only 47 per cent of the total budgetary allocation in South Asia, compared to 70 per cent in East Asia during their initial phase of development.

Not only are the financial allocations low and for the wrong priorities, the efficiency of educational spending is also very low. The high drop-out and repetition rates imply that over 40 per cent of the investment in education is wasted. And when nearly half of those educated do not find jobs, and when thousands of highly-trained persons migrate to foreign lands every year (see box 3.4), it is evident that South Asia is getting a poor return from its education spending.

There has been some increase in the education budgets of South Asia in recent years. This has been supported by a major increase in external assistance in the post-Jomtien period, particularly for primary education. For instance, the World Bank's total lending for education has increased from \$78 million in 1984-88 to \$424 million by 1995, with the share of primary education increasing from 5 per cent in 1970-74 to 30 per cent in 1990-95.

If South Asia is to provide universal primary education within a reasonable period of time, say the next five years, it must fund more adequate education budgets, finance the right education priorities, improve its low efficiency of education spending, as well as mobilize sufficient external assistance. This theme is discussed in the next section.

Considerable time has already been lost by South Asian leaders for fulfilling the commitment made at the Jomtien Conference in 1990 to extend basic education for all by the year 2000. This now seems a virtual impossibility – particularly in the more populous countries of India, Pakistan, and Bangladesh, which together contain 98 per cent of the out-of-school children in the region.

The Report presents a concrete and realistic five year plan (1999-2003) which can ensure basic education for all the children of South Asia by the year 2003 (see chapter 10). This plan is inspired by the actual experience of several developing countries – including Zimbabwe (see box 10.4) and Cambodia – which have attained such a target within a 3 to 5 years period by ensuring a firm political commitment, a heroic national effort, and a clear financial strategy. A seven-point strategy is proposed in the Report to achieve universal primary education within a period of five years and to produce sufficient technical skills for job markets:

1. *Preparing a concrete five year plan for enrolling all children:* The first step is to prepare a concrete five year plan (1999-2003) to extend universal basic education. The Report presents an illustrative plan for all South Asian countries. The main features of this plan are:

- \* Schooling facilities will need to be extended to about 65 million additional children during the next five years, to provide for both existing out-of-school children and for the new entrants in the primary school-age group.

- \* About 2 million additional teachers will need to be trained rapidly. For this purpose, these countries can draw upon several options – including the considerable reservoir of educated unemployed; drafting of university students for one or two years into a national literacy corps; use of educated people in the army and voluntary services of retired educated people, particularly in villages.

- \* The total recurrent cost for this emergency campaign for primary education is estimated at \$5.75 billion, or around \$1.15 billion a year over the next five years. This cost works out at the rate of \$30 per child per year, which conforms to international experience. This additional cost is no more than 0.3 per cent of the com-

bined GNP of South Asia during the next five years, and – even when capital costs are included – is less than one per cent of GNP.

- \* While these magnitudes refer to the overall situation in South Asia, the challenge is naturally different in different countries depending on their existing performance. There is hardly any additional effort required in Sri Lanka and the Maldives, which have already achieved near-universality in primary education. On the other hand, the challenge is quite formidable in India, Pakistan, and Bangladesh.

## 2. *Establishing an effective education system:*

The key need in South Asia is not just to bring all children to school but to improve the ability of these schools to teach children effectively. This is a challenge that all countries in the region have yet to meet. The report suggests several straightforward actions that would go a long way in improving school quality and enhancing learning achievement (chapter 5):

- \* simplify the curriculum structure, and reduce the number of subjects taught in primary classes;

- \* combine textbook provision with appropriate teacher guides and training;

- \* develop a better infrastructure for distributing textbooks effectively;

- \* introduce locally-determined and flexible school hours in formal schools to reduce student absenteeism;

- \* devise incentive mechanisms – such as local housing for teachers and free school meals for children – to encourage higher teacher and student attendance.

Teachers must be at the centre of any plan for raising school quality. The Report proposes nine strategies that could have high pay-offs in improving teacher performance (chapter 8):

- \* reduce class sizes in crowded urban areas to ensure that the teachers spend more time on their tasks – an additional 2.05 million teachers will be required in the next five years to reduce class size to a pedagogically acceptable level of 40;

- \* raise the minimum level of pre-service general education for all new primary school teachers;

- \* improve teacher training standards by hiring qualified trainers with primary school teaching experience;

- \* emphasize relevant teaching skills in pre-service and in-service teacher education, and make more training school-based;

- \* raise the status of primary teaching by improving working conditions and creating a performance-based career structure for teachers within the primary school level;

- \* increase the share of female teachers to at least 50 per cent so as to raise girls' enrolment rates and reduce

drop-out. This will require approximately three-fourths of the additional teachers to be female in the next five years;

- \* hire more teachers from the local community;
- \* introduce mechanisms for effective community monitoring of teaching standards;
- \* learn from the innovative teacher training and empowerment methods used by NGOs in South Asia and around the world.

3. *Mobilizing political support*: Preparation of a sound, realistic, technocratic plan is only the beginning of the exercise. What is far more important is to mobilize full political support behind it. The goal of basic education for all should be presented to the nation as a firm political commitment, as a target worthy of the whole-hearted support of the entire nation, and as a priority objective for which adequate finances will be provided. Political leaders can express their commitment to the goal of universal primary education in many ways, including making it an integral part of their party manifestos, adopting it as a bipartisan goal through a resolution of the parliament, advocating it aggressively through the media, and by mobilizing the full support of influential opinion-makers in the community. From experience, it appears that the following steps may be of particular help:

- \* a compulsory primary education law must be enacted and strictly enforced. Such laws already exist in most South Asian countries but their enforcement leaves much to be desired (see box 5.2);
- \* the organizational structure of managing primary education must be decentralized, with considerable autonomy delegated to local bodies and grassroot organizations. At the centre, full political support should be provided to this nation-wide effort, with the heads of government giving their whole-hearted and constant support to the education goals that have been set. It is useful to pass bipartisan resolutions in the parliament to endorse the national education objectives and goals and to make it clear that their achievement is a national obligation, over and above any narrow political considerations;
- \* another powerful measure is to make a constitutional provision that funds for attaining the goal of universal primary education will be treated as the 'first claim' on budgetary resources. Ideally, the parliament should pass a bill that at least 5 per cent of GNP will be earmarked for education and then it should ensure each year that such a provision is protected from erosion, despite the inevitable budget crises from time to time.

These steps can help reaffirm the political commitment to the goal of basic education for all. But let it be stated clearly that political commitment is not a matter of a few concrete steps: it is a matter of deep convictions. When such convictions are missing, brilliant technocratic blueprints may not produce any tangible results.

4. *Promoting non-formal education*: In order to make the financial targets more feasible and to ensure successful implementation of education programmes at the grassroot level, it is essential to involve local communities in the design, implementation, and monitoring of these programmes. Without community ownership, basic education for all will always remain an elusive goal. That is why the Report argues that any plan to extend universal primary education by the year 2003 will not succeed unless major emphasis is placed on non-formal education (see chapter 9).

The real essence of non-formal education is community mobilization and participation. Successful programmes meet the demands of the local community rather than of central planners. They are designed not by top policy-makers but by the people themselves. They are planned not from above but from below.

There are several distinguishing features of non-formal education; for example, flexible hours, location of schools nearer to children, selection of teachers from within the local community, a participatory and life-related curriculum, focus on girls and under-privileged groups, and community participation (particularly parental interest) in all phases of education.

As a consequence, non-formal schools are cost-effective. For example, in Pakistan, a non-formal school costs less than 2 per cent of the capital costs of a formal school and it takes only one month to start in a make-shift building or a room in the house of the local teacher, compared to an average 2 year start-up time for a formal school in a new building. The unit cost per student of running a non-formal school is generally one-third to one-half that of a formal school. Greater efficiency in education spending is ensured by greatly reducing drop-out and repetition rates. The quality of education in these non-formal schools is normally as good, or even better, than in formal schools. Non-formal education is not the second-best option: often it is the only option for resource-strapped economies and it generally produces high-quality graduates. The Report mentions many successful experiments in South Asian countries (see boxes 9.3 to 9.12) where NGOs and civil society initiatives are making a difference. However, the scale of these initiatives is still quite

small and there is a major need for designing new partnerships between the governments and the community-based organizations.

It is also necessary to mobilize the energies and resources of the business community for the goal of basic education for all. Any donations or endowments for education can be declared tax-free. Liberal concessions given to industrialists can be linked with their contribution to educating their workers and others in the neighbouring community. For those industrial firms which employ children, a framework can be designed wherein children work for only a limited number of hours and it becomes the duty of the employers to provide them with education facilities for the remaining time.

In order to achieve basic education for all within the next five years, there is an urgent need to forge innovative partnerships between the government, NGOs, local communities, and business organizations. Governments should adopt many of the distinguishing features of non-formal education within their own education programmes. They should, at the same time, rely on the devotion and commitment of local NGOs and grassroot organizations while allocating their education budgets. A successful model is for the government to finance, set standards, and monitor education programmes, while leaving actual implementation to NGOs and local communities.

*5. Removing all gender disparities:* One of the most important features of any plan to provide basic education for all has to be its firm resolve to remove all gender disparities. The Jomtien Declaration (1990) was quite specific on this point: *'the most urgent policy is to ensure access to, and improve the quality of, education for girls and women.'*

The Report presents a seven-point agenda for accelerating girls' education and for eliminating gender disparities (see chapter 6). The agenda suggests that:

- \* compulsory primary education laws must be enacted and penalties for non-enrolment of girls should be as severe as for non-enrolment of boys;
- \* grants given for education by the central government to provincial/state governments or by various governments to NGOs should contain a provision that the amount of the grant be reduced by the extent of disparity that prevails in the enrolment of girls and boys.
- \* supply-side constraints should be overcome: for example, by locating schools within easy reach of the community; by maintaining flexible hours; by establishing single-sex schools if so desired by the community; and by offering scholarships to girls students to

compensate their families for loss of their economic work at home;

\* the provision of more female teachers is a critical factor. The proportion of female teachers should be raised from the present 31 per cent to at least 50 per cent in the next five years.

\* community participation in planning and managing schools should be increased;

\* concrete steps must be taken to enhance the overall status of women in society.

*6. Building relevant technical skills:* As mentioned earlier, less than 2 per cent of secondary school children in South Asia opt for technical education. They are often badly trained, by poorly qualified teachers, in technologies which are not well-suited for the job market. The Report presents a bold plan for fundamental reform (see chapter 7). It stresses that firm political commitment and the universalization of primary education are the two essential pillars for any major revamping of vocational and technical education. Given these foundations, the key elements in a comprehensive programme of reform are:

- \* ensure equivalency of degrees from technical institutes and general education universities;
- \* make technical education part and parcel of secondary education;
- \* undertake comprehensive surveys and tracer studies to link technical training to the requirements of the job market;
- \* change the skill composition of technical training to reflect the demand for newer, more modern technologies;
- \* extend the coverage of vocational and technical education to hitherto neglected groups and regions – particularly, women and rural areas;
- \* persuade the private sector, especially the business community, through special tax incentives to provide relevant technical skills; and
- \* mobilize adequate budgetary support, including foreign assistance, for building up the technological capability of the nation.

*7. Mobilising adequate financial resources:* In order to formulate a realistic financial strategy, the main focus should be on the reallocation of existing budgets. Mobilization of additional resources, while necessary, is more difficult. But there is considerable scope for restructuring existing budgetary allocations in South Asia including the following measures:

- \* current military spending levels are quite high, particularly in India and Pakistan, who together spend over \$12 billion a year on defence. This expenditure can be

considerably reduced if current negotiations towards a constructive détente succeed, and if there is a peaceful settlement of all outstanding disputes. If military spending levels are cut by 5 per cent a year over the next five years, it could release about \$22 billion in a peace dividend – over four times what is required for the goal of universal primary education within the next five years. Even just a freeze on military spending levels in current prices will release more than enough resources to attain the universal primary education target;

- \* South Asian countries can free themselves from the burden of expensive domestic debts by privatizing their public assets. These domestic debts consume 5 to 6 per cent of their GNP, which can be spent instead on balancing budgets and on greater provision for social services, including education. The current pace of privatization in South Asia is among the slowest in the world. The longer the privatization process takes, the more opportunities these countries will lose in balancing their budgets and in implementing their social agendas;

- \* there must be a major restructuring of existing allocation priorities in the education budgets of South Asia, with the bulk of finances devoted to basic education, girls' education, and vocational and technical training. The current bias in favour of higher education must be reversed: private initiatives should be encouraged to provide high-quality university education, with liberal state scholarships and loans for deserving students who cannot afford the fees of private institutions. At least 70 per cent of education budget allocations should be earmarked for primary education;

- \* foreign donors should be requested to allocate a higher percentage of their existing aid funds to education, particularly basic education and technical training. At present, only 9 per cent of external assistance to South Asia is allocated for human priority needs (basic education, primary health care, nutrition, safe drinking water, and family planning services), which is less than half of what needs to be done in the spirit of the 20:20 compact endorsed at the World Summit for Social Development held in Copenhagen in 1995. If South Asian economies are willing to devote more of their own resources and efforts to the goal of basic education for all, it would be quite realistic to expect the international community to support these efforts;

- \* a number of innovative methods can also be used to provide adequate funding for the goal of universal primary education. Some countries have resorted to special levies earmarked for education spending. The Republic of Korea, for instance, imposed a special five-

year tax on alcohol, tobacco, interest payments, and the financial sector in its 1982 national budget. Within five years, this tax accounted for 15 per cent of the education budget and its duration was later extended by a further five year period. Brazil has imposed a 2.5 per cent salary tax on the wages of employees in the private sector and specifically channels these resources towards primary education. Nepal, Philippines, China, and Botswana also have special levies for education. Pakistan levied a special *Iqra* surcharge on all imports to raise substantial revenues for education but, unfortunately, the revenue proceeds were not separated from the general budget and therefore never earmarked specifically for education. As such, an imaginative initiative did not lead to the promised results;

- \* another innovative mechanism for addressing the twin concerns of high external debt servicing and low education spending is 'debt for social development' swaps. Debt swaps have retired so far over \$750 million of foreign debt owed by developing countries. Unfortunately, South Asia has not been a beneficiary of such swaps even though the region's external debt exceeds \$150 billion. If South Asian governments improve their fiscal management and overall economic governance, they will be in a position to negotiate such 'debt for social development swaps.'

The goal of universal basic education can and must be achieved over the next five years. Similarly, imparting relevant technical skills should become a top priority objective on government agendas. As the foregoing discussion shows, a realistic technocratic plan can always be prepared and a concrete financial strategy always designed. The missing ingredient in South Asian countries has been the political will. The real question is: is it possible to confront the political leaders of South Asia with the tragic consequences on continued neglect of education and excite them at the same time about the promise and the potential of a major breakthrough in the next five years?

South Asia is challenging its policy-makers today to unleash the creative potential of one quarter of humanity. Extending basic education for all and creating relevant technical skills are the keys to meeting this challenge. South Asia is fast approaching an historic watershed. It can realize the promise of a new dawn in the twenty-first century. Or it can disintegrate into anarchy and confusion. 'Human history,' as H.G. Wells remarked a few decades ago, 'becomes more and more a race between education and catastrophe.' The Report analyses this choice in the context of South Asia as objectively and as honestly as possible.

# A dialogue

THE significance of education in the development of human potential needs no elaboration. Neither does India's poor performance in the area of basic education. To understand the problems and to generate effective remedies, the Centre for Civil Society organized a Dialogue on Education on 22 February 1998. Professor Arun Kumar of JNU spoke on higher education, Dr. Parth J. Shah of the Centre dealt with primary education, and Dr. Surjit Bhalla of Oxus Research and Investments offered his views on education in general. Professors Jandhyala B.G. Tilak and N.V. Varghese of the National Institute for Education Planning and Administration (NIEPA) commented on the presentations.

**Arun Kumar:** I'll speak primarily about higher education, based largely on the report prepared by the JNU Teachers' Association, 'Teachers' Perspective on Reforming Higher Education in India.' The Rastogi Committee Report has proposed certain structural changes in higher education. It is the duty of the people involved in higher education to outline what they think is important to improve higher education. If they don't do it, somebody else will. I feel that the debate among academics has declined, both within and across institutions. Even within departments, there is little interaction. But we need to engage each other and society.

Given the demands generated by globalization, we need to introduce substantial changes in higher education; incremental changes will not do. Higher education is all about teaching and research, which requires a higher order of creativity compared to almost any other profession. Creativity of a high order cannot be achieved by diktats either from vice-chancellors or department heads, neither can it be achieved by external inducements like higher salaries. A high degree of internal motivation and autonomy is needed. Role of incentives is rather limited in enhancing performance of academics. Relative salaries are nonetheless important, not for those already in academia, but for those who are deciding to enter the teaching profession. The current skewed salary structure leads to enormous waste. Half of the MA students, for example, leave for

an MBA, or bank or IAS exams, or studies abroad. So do PhD students. This demoralizes students as well as faculty and leads to a brain drain – to the private sector and abroad.

Education is a merit good. Government must subsidize it. We need more, not less, higher education. We still do not know how knowledge is produced; it is a shotgun approach. The more we do, the higher the chances that something good will come out. It is true that if the state provides subsidies, it will try to control education. So autonomy of universities is important, and autonomy could be preserved only if long-term, and not short-term, performance evaluations are undertaken. Higher education's critical role is opposition of vested interests in society – it should critique society and the state. And that role can be assessed only in the long run.

With autonomy comes accountability. If society is going to subsidize, then higher education must be accountable to it. But only autonomous universities, departments, and individuals can provide accountability in the long run. A strong peer group within the country is necessary to build accountability. The notion of discipline in higher education is different from that in other areas. The essence of higher education is dissent, but in most other institutional structures dissent is disobedience. Think of a typical bureaucracy – the army. So we must first remove bureaucratic hierarchy from within higher education. Who needs the distinctions of assistant, associate, and full professor? It doesn't improve internal motivation, and besides, people engage in all kinds of manipulations to get to the higher level. Peer group of autonomous individuals must perform the function of maintaining discipline in higher education.

In India, there are three types of academics: one, the so-called 'good' academic; two, the bureaucrat academic; and three, the independent academic. Western standards are used to judge 'good' academics – number of conferences attended abroad, number of papers published, where they received their PhDs. Their peer group is abroad and not in India. Their research priorities are dictated not by the needs of the country but by

the allure of visiting professorships. The bureaucrat type sits on committees and commissions and wields enormous power. The independent academic is squeezed between the two. Often the bureaucrat academic points to the 'good' academic and discriminates against the independent academic. So what we need is a high degree of autonomy and individuality to meet the challenge of higher education.

**Parth J. Shah:** Let's move from higher education to primary education. I'll first develop a model that provides good primary education by comparing two states in India. I'll then extend the model and outline three criteria that any reform proposal must meet.

Table 1 gives some data about education in two states. (All data is from the NSSO 1991, 1993 and NCAER 1994; see also Tilak, *Economic and Political Weekly*, February 1996. The data is for the years 1986-87 and 1991-92.) State B is one of the few states in the country where elementary education is not made compulsory by law. Both governments spend an equal fraction of the total budget on education (about 25%). In state A, 84% of rural children do not pay any fee for primary education but that number is only 48% in state B. 60% of rural primary school children get free textbooks and supplies in state A, only 2% in state B. Households with less than Rs 3000 in annual per capita income spend 25% of the income on elementary education in State A but in state B it is 36%. The poor in state B spend the highest fraction of their income on their children's basic education compared to the poor in any other state in the country.

Given these facts – more children get free education and supplies in state A and the poor are asked to spend more of their own money in state B – what would be the expected performance of the education system in the two states? State B, however, has 91% literacy rate while state A only 57%. Moreover, in state A 46% of children (age 6-14) have never enrolled in school,

TABLE 1

State Commitment to Education		
Characteristics	State A	State B
Elementary education compulsory	Yes	No
Fee-free primary education	84%	48%
Free textbooks and stationary	60%	2%
Proportion of income spent on primary education by households in the lowest income quintile	25%	36%
Proportion of state universities' budget given by the government	91%	54%
Share of education in the state budget	26%	25%

TABLE 2

State Performance in Education		
Characteristics	State A	State B
Literacy rate	57%	91%
Children (age 6-14) Never enrolled	46%	2%

only two per cent in state B suffer from that fate. Well, state A is West Bengal and state B is Kerala. What explains this vast difference in performance?

I would like to argue that the difference in performance can be explained not by how much the state's spend but by how they allocate their resources on education. Table 3 describes the distribution of education expenditures.

In a Marxist state like Kerala, 60% of the rural primary schools are private, as compared to only 11% in West Bengal. The proportion of private primary schools in Kerala is the highest in the country; the second highest is Meghalaya at 21%, while the national average is only 5%. The government of Kerala also pays expenses of almost half the students enrolled in private primary schools. The number for West Bengal is 15%, which is the third highest in the country (Tamil Nadu is at 20%); the national average is again about 5%.

TABLE 3

Distribution of State Education Spending		
Characteristics	State A	State B
Free primary education in government schools	84%	48%
Free primary education in private schools	15%	48%
Grant of scholarship Transport subsidy	2.3%	5.4%
Proportion of private (aided) primary schools	11%	60%

Kerala has the highest proportion of private primary schools and it also subsidizes the highest proportion of students in private schools. This gives the citizens of Kerala wider effective choice in selecting primary schools for their children. The choices available to parents must increase attendance as well as retention rate in the state.

Kerala also encourages competition among schools. By subsidizing transportation costs, Kerala helps parents send children to the school they consider best, irrespective of the distance. This in turn increases competition among schools. Provision of direct scholarships to students in Kerala too leads to the same result. With the scholarship money, students can attend a school of their choice. Among all the states in the country, the highest proportion of children in Kerala receives transportation subsidy and direct scholarships (Table 3).

The Kerala model of education – of choice and competition – is unique in the country and so is Kerala's educational performance. The Marxist state seems to employ the principles of the market system!

In Kerala, not only has the government spent more on education but so have the people. The poor in the state spend about 36% of their annual per capita income on elementary education – the highest proportion in the country (Table 1). Contrary to conventional wisdom, government spending is not a substitute for private spending. Both seem to grow together; they are complementary. It does no good to design schemes for free education. Parents' financial commitment to their children's education is a crucial component of quality education.

With the use of the Kerala model of education, I will outline three criteria that any good education policy or reform proposal must meet.

1. Increase choice and competition: It is more readily accepted that increased choice and competition is good for higher education. But primary education, it is maintained, cannot survive without government involvement. It is argued that people are poor and often lack understanding of the significance of literacy, such that if government did not take the full financial responsibility and did not make elementary education compulsory, our literacy rates would never improve. Many maintain that for achieving basic education in a poor country like ours, government must run and fund schools.

In reality, the poor, especially the rural poor, spend a substantial portion of their income on their children's basic education. For the year 1986-87, the total household expenditure on primary education was Rs 7388.5 million. And primary education is supposed to be free in the country! This private spending on primary education is not just by the rich in urban areas. Out of the Rs 7388.5 million, Rs 4202.5 million were spent by rural areas, more than half of the total private expenditure. In that year, the total government expenditure on primary education was Rs 17,000 million. So private expenditure is by no means an insignificant amount; it was more than 40% of what the government spent on primary education. The poor are already spending on education; they will be better off by having a variety of schools to choose from where they can exercise their spending power to get the kind of education they want. The license-permit raj must end in education as it has in the economy. This would have the same effect on education as it had on the economy.

2. Make schools student – and not teacher – centered:

The education system is designed more for the convenience of teachers than students. Since teachers have to be at school from 8 to 2 or 10 to 5, so students too must get educated at the designated place and time. What if one has to help on the farm during 8 to 2 or attend to younger siblings? That is seen as a clear indication that the person is not really serious about education. Why should all schools run on the same schedule? Why can't the convenience of students be a factor in determining school timings?

All government businesses work for the benefit of those who are employed and not for the welfare and convenience of customers. Businesses that face competition are more responsive to customers' needs. Only increased competition would make schools student-centered.

3. Link school revenues with school performance: Currently, government grants to schools are automatic. A school's budget does not depend on its performance. Linking government grants with performance would help realign self-interest and incentives of the school with the needs of its customers. A direct way to gauge performance is to consider the number of students who pass the standardized board examinations. A school's revenues could be linked with that number. Schools must earn their revenues by fulfilling their responsibilities.

**Surjit Bhalla:** The first issue is: Does education affect economic growth? In the 1980s, the works of Roemer, Lucas, and Barro gave the answer in affirmative. They claimed that there are significant externalities to education in relation to growth. Education is the reason why some countries grow faster than others. This thesis made a lot of sense. But new research, some of which is done by me, suggests otherwise: There are no growth externalities to education. Many countries with high levels of education (Sri Lanka, Jamaica, Costa Rica) did not grow very fast at all. It turns out that the openness of the economy has a great deal more to do with economic growth than the level of education. Despite high levels of education, the above mentioned countries did not grow at above-average level because they had numerous controls on economic activity.

The second issue is whether increased government expenditure increases levels of education. This is a supply and demand issue. It is generally assumed that if government supplies more education, the demand will increase to match it. But state level data does not support the proposition. Many states that spent above average on education during 1970-90 did

not achieve any higher level of education. A more likely and sustainable scenario is that high economic growth increases private demand for education, which in turn induces higher supply of education. So high growth leads to higher education and not vice versa.

The third issue is whether the government should be involved in education. The moral justification for government involvement is the promise of equality of opportunity to all. But that does not mean that the government should be involved in the financing and provision of education. The government subsidizes fertilizer but it does not have to produce it. The traditional argument, made recently by Amartya Sen, is that in all developed western countries, governments provide education; we shouldn't try to invent a new wheel or be experimental. It is the first time I've heard Sen use western countries as a model for India. Importantly, the argument evades the distinction between financing and provision of education. The government should finance but should not necessarily produce educational facilities.

I have proposed a scheme that simultaneously tackles the problem of poverty, literacy and discrimination against the girl child in education. The government should give each girl child below the poverty line a sum of, say, Rs 3,500 a year as long as she is enrolled in school. Parents will be able to afford to send their girls to school and they will be completely free to choose their own school. Anyone will be able to provide education as long as they meet the demands of the customers. This is the best income transfer programme.

**Jandhyala B.G. Tilak:** Let me first comment on Professor Shah's presentation. Even though the data used is from my work, the observations and conclusions are entirely his own. He offers a different interpretation of the same numbers and facts. A comparison of any two states at a point in time is problematic and needs to be attempted with much caution. Historical investments of monetary and non-monetary resources in education in Kerala have been very high. Recently, Himachal Pradesh rapidly increased its level of education by, well, spending a lot of money. Government involvement and expenditures matter a great deal in education, especially in primary education.

Kerala has the highest proportion of private aided primary schools. But there is absolutely no difference between these and government schools. There is really no choice for parents. All the schools abide by the same regulations and laws and have the same curriculum and quality of teachers. If the Kerala model is described as

a market model because it has large number of private aided schools, then we must say that the whole of higher education in India is a market model. More than 57% of students are in private colleges. And the performance of higher education is not much better than that of our primary education.

In fact, the private aided sector has generally contributed to distortions in the allocation of public resources. A small private sector devours a substantially larger part of government funds. This can be explained by political economy arguments. If government schools are bad then it is at least partly due to the existence of the private sector.

As for expenditures by households on education, I propose the following hypothesis. When government services are good, the households are also willing to spend more; public and private spending are complementary. But when government services are not efficient, expenditures by households and the government are substitutes. Households are compelled to spend more because the government does not spend enough. Households are certainly not happy about the extra expense; they are forced by circumstance.

I do not agree that government can withdraw from primary education. This applies to higher education too. If you think that the private market will fulfil the need, then it is not based on our experience in India. The motives and incentives of private markets in India are different from those in developed countries. That explains why our private firms do not invest in R&D. I'm not at all hopeful about private sector providing primary or higher education in any meaningful way.

There is a lot of talk about subsidies to higher education. What really is the amount of subsidy? Kaushik Basu writes that in many Indian universities and colleges students pay about Rs 25 a year in fees. This is not true. On average, almost 15% of the cost of higher education comes from students. This ratio is comparable to any other developed country. Empirically one cannot claim that subsidies to higher education in India are too high. Despite poor quality, colleges have succeeded in democratizing education. Almost 40% of students now come from economically challenged backgrounds, unlike in the 1950s when education was highly elitist.

We cannot have a uniform policy for higher education; we need to differentiate between undergraduate, graduate, and post-graduate studies. Also, difference between general, professional, and technical education must be kept in mind. Even in profes-

sional and technical areas, things cannot be left to the market, as Surjit Bhalla seems to suggest. Left to market forces, not only humanities and social sciences, including economics and political science, but also natural and physical sciences will disappear. If you want only engineering and management training, then the market can be relied upon. But that is not higher education.

**N.V. Varghese:** Many of the indicators of educational development, such as literacy rate, enrolment ratios, and retention rate put Kerala on the top of the education map of India. However, my own recent empirical study shows that the levels of learning among primary school children in Kerala are almost at par with that of students from educationally backward states of India like Assam and Orissa. The Kerala model has succeeded in universalizing access to education. However, it has not yet succeeded in universalizing higher levels for learning among primary school children. Therefore, it is important to keep this aspect in mind while advocating a Kerala model of education for other states.

Shah's presentation argued that the education model in Kerala is based on market principles and not Marxist principles. I disagree with such analysis. What Kerala shows is the benefits of a progressive state adopting a progressive education policy. The state public policy has played an important role in promoting education in Kerala. The major advantage that Kerala had compared to almost all other states is that the colonial powers did not destroy the state's school system. The schools were actually transformed by the grants given by the government under the policy of the 1860s. The private sector has since been dominant in Kerala's education field. Kerala is comprised of many communities, and they have healthy competition among them. When a particular community started a school, it did not restrict admission to its own children. In Kerala, there is neither a Marxist nor a market model. It is, if at all, a community model.

The Indian education scenario is faced with the dilemma of how to educate people on the one hand and what to do with the educated on the other. While the former question relates to issues pertaining to improved access to education for the poor, the latter question relates to issues pertaining to the unemployment of the educated who are mostly from middle class and upper middle class families.

The public initiatives over the years have increased the base of primary education and hence

competition for admissions at higher levels of education has increased. This increased competition pushes out many of the aspirants from obtaining higher education qualifications. The competition is largely for getting degrees in selected disciplines from prestigious institutions. This is partly due to the fact that there is less unemployment among graduates of institutions like IITs and IIMs. The middle and upper-middle class feel the distress of increased competition. It is this distress that is articulated by people from the same class at seminars and conferences.

Admission to professional and technical courses is based on selection tests, not on the marks achieved in degree exams. Students who have graduated from English medium schools have an advantage over others in getting admission in selection-test based courses. Those who can afford it, invest in English medium schools, generally private schools. The poor do not have a choice in this case. The poor in urban areas cannot afford private primary education and the private primary schools are rare in rural areas. The poor depend mostly on government schools. The choice is only for urban people, affluent people, and English speaking people.

In education, what are we subsidizing? Only direct expenditure on education is subsidized, not indirect expenses. And indirect expenses are much larger. Unless we address indirect expenses, we cannot expand education opportunity in any meaningful way. Involvement of the state is certainly necessary. Whether the state should subsidize and disappear, or whether it should also be involved in production is another issue. In higher education, the state only subsidizes, most of the management is private. But higher education has lot of problems, just like in primary education. My theory then is that private sector is good when it is small; when it expands, it faces the same problems as the public sector. Only 2.5% of the children are in private schools; 97.5% are in government schools. If we were to switch these numbers, I do not know what it would do to the quality of education in private schools.

Consider the people who are in decision-making positions in India. Earlier, they came from government schools, now most of them are from private schools. It is not that the quality of education is good in private schools, it is largely because they use English as a medium of instruction. We define criteria for quality education on the basis of middle class notions, and then declare that public schools do not perform. Public schools can never win.

## A report

WHILE the country was in the final stages of campaigning for the 12th Lok Sabha elections, the Second Asia Regional Literacy Forum met in New Delhi between 9-13 February 1998, to discuss issues on the broad theme of Innovation and Professionalization of Adult Literacy - A Focus on Diversity. India has the dubious distinction of being the country with the largest number of adult illiterates and the collective literacy rate of the South Asian Region is lowest in the world. While it is true that India has a large adult literacy programme spearheaded by the National Literacy Mission (NLM), illiteracy continues to be a daunting problem. Being the venue for the Asia Regional Literacy Forum provided a welcome opportunity to a large number of

Indian participants, as well as those from other South Asian countries, to share their experiences and interact with experts and practitioners from Asia and elsewhere.

This meeting, jointly organized by the International Literacy Institute (ILI) Philadelphia, set up by UNESCO, and the NLM, Government of India, followed close on the heels of the First Asia Regional Literacy Forum in Manila in May 1997 and the Fifth International Conference on Adult Education in Hamburg in July 1997. It would appear that there is growing concern at the unacceptably high rates of illiteracy in many parts of the world. The prevailing low rates of 'functional' literacy in several industrialized countries is another. With the decade of

the '90s nearing its end and the goal of Education for All by 2000 AD still a distant cry, the need to press for greater financial support to adult literacy programmes (including non-formal education) to reach those unreached by primary schooling has become urgent. International gatherings, no doubt, succeed in getting some media attention and bring issues to the forefront, enabling planners, policy-makers and programme managers to convert the renewed interest into greater allocation of resources and improvements in the formulation and execution of programmes.

The gathering at the Second Asia Regional Literacy Forum was a diverse one, with varied interests within the broad domain of literacy work. Dedicated field practitioners with a rich experience of working with rural communities; academics and researchers pleading for deeper and inter-disciplinary understanding of adult learning and the multiple practices of literacy; international donor agencies and NGO partners highlighting their work and negotiating for greater 'space' with government officials; and, of course, the organizers steering the agenda towards the predetermined outcome. Everybody rushed about to catch as many of the parallel sessions as possible, making new acquaintances during the informal breaks, picking up an idea or two here and there, wondering what the whole thing was about!

At the end of it all, a few discernible ideas and trends emerged as key issues. Adult illiteracy is and will remain a problem for some time to come, not only in countries like India but even in countries which have achieved a significantly higher rate of literacy. Traditional assumptions about illiteracy have changed with evidence of multiple definitions and practices of literacy. The large-scale state sponsored literacy programmes, as part of the modernization process or development agenda, have failed to 'eradicate illiteracy'. While individuals and communities are interested in acquiring literacy skills, the dominant and standardised modes of literacy instruction continue to be alienating. NGO experiences that are participatory and culturally specific have proven more successful. While there is no dearth of innovation and experimentation, professional development and quality research is less in evidence. There continues to be a gap between the promise of decentralised and participatory planning and curriculum development, gender sensitivity, mother tongue literacy, and the realities on the

ground. Within the domain of basic education, adult literacy remains neglected.

While there was a consensus on the need for diversity – the catchphrase at the Forum was that the 'one size fits all' model does not work – there was no unanimity even in the approach to the solutions. There appeared to be two contrary pulls (and that is true about most 'development' agenda). There were the proponents of micro-level, decentralised, participatory programming with the local groups/communities (functioning democratically!) deciding along with friendly 'facilitators' or literacy activists what kind of literacy, for whom, when and how, taking things at people's own pace. On the other side were the macro-planners and ideologues of modernization who plan on a big scale, talk of replicability and measurable impacts. Everyone seemed overwhelmed by the mind-boggling numbers, worried that time was running out and that the quality of life for the poor and disadvantaged was not improving fast enough, thereby marginalising even more people (women, tribals and street children to mention a few disempowered and marginalised groups). Handling the conflict and challenges this dichotomy brings to the domain of adult education remains the primary area of work for the researcher, activist and programme managers alike, provided we do not get carried away with our own sense of self-importance.

In the final analysis it was the words of Mahashweta Devi, who delivered the keynote address, that linger in the mind. Having spent a lifetime working among the tribal people in the Purulia district of West Bengal, she felt that she was still learning from them. It is their stories and folklore which she has used as texts to teach them reading and writing and it is their desire to learn and understand the changes taking place which has given her the confidence and courage to initiate various development programmes in the area. Mahashweta Devi appealed to the Forum: 'Don't go to teach them. Learn from the people first.' This message was echoed by Paulo Freire in a brief film excerpt screened at the Forum. Recorded a few weeks before his death, Freire urged everybody to respect the plurality of viewpoints. 'It is our political duty, ethical duty to be tolerant.' This attitude of humility must be the foundation for those engaged in adult education.

# Books

**PRIMARY EDUCATION IN INDIA.** A World Bank Publication. Allied Publishers, Delhi, 1997.

'....once it was understood an educated populace is the first requirement for economic progress. That essential fact was forgotten: impressive steel mills, great hydro-electric dams, were too often cited amid ignorant people. I have previously made the point that in this world there is no literate population that is poor, no illiterate population that is other than poor' (Professor John Kenneth Galbraith, 1992, New Delhi).

The World Bank report reviews India's recent efforts to remedy past problems in educational attainment at the primary school level, the current state of education in India, and the challenges that remain. In the present scenario of fiscal adjustment and increasing administrative and political decentralisation, it stresses that the overall challenge for India is to sustain and deepen the ongoing reforms in primary education. Although India has made progress towards universalizing primary education and is envisaged to achieve nearly universal enrolment rates at the primary level by 2005, it will still be two decades behind Indonesia and Malaysia and three decades behind the Republic of Korea.

The book addresses pertinent questions such as why investments in primary education are important, what is required and what it will take to expand and

improve primary education, and how India can afford what is needed. Justification for investments in primary education are made on the ground that primary schooling offers the greatest economic and social returns and society also gains through the externalities it generates in the form of benefits which extend beyond the individuals who receive schooling.

A compelling case is made for having governments share the cost of schooling. Millions of children in India never get enrolled in school and millions more are withdrawn before they complete the primary cycle. Thus, even with 'free' schooling, the demand factor seems to be weak, as parents seem to view the cost of schooling higher than the benefit it generates. Therefore a strong case is made for public provisioning of primary education, specially to enable poor children avail of its benefits. Only when the proportion of children who complete a basic educational level increases significantly, will the population benefit fully from the economic changes occurring in the country. Given the considerable variation in educational achievements across states, districts and schools, packages of interventions identified locally to meet the specific needs of schools, the pivotal role of the District Primary Education Programme (DPEP) is emphasized as a means to support the local development of the primary schools.

The challenges of educational development in India need to be studied against the large diversities in

educational and socio-economic development among the states. Six states (A.P., Bihar, M.P., Rajasthan, U.P. and West Bengal) account for three quarters of children who are out of school. It can be expected that these children belong to districts that have low female literacy. Many of these out of school children live in remote areas, belong to hard-to-reach groups or have special educational needs. The need of the hour is to bridge what have quite aptly been flagged as the three important gaps in education in India: the gender gap, the poverty gap, and the caste and tribal gap.

Poverty is found to be the main cause of gender, caste and tribal gaps in enrolment and retention. It may also contribute to gaps in learning achievement. The strategies adopted for improving educational outcomes and for bridging these gaps vary across states and among groups. Although various state programmes have tried to target the group of disadvantaged children for providing incentives for school participation, it is pointed out that these have been insufficient and poorly targeted. At the school level, they may have led to the over-reporting of enrolment of girls and children belonging to the scheduled castes and scheduled tribes. It has been correctly stated that some of the constraints contributing to gaps in education are more cultural than economic and appropriate strategies are needed to address them. The chapter on the gaps in enrolment, retention and achievement, discusses in detail the various factors responsible for the existence and persistence of such gaps and the possible strategies for reducing them.

Improving teachers' performance is identified as the most important challenge for primary education in India. It is pointed out that although teachers' salaries constitute the largest share of the education budget, teachers' performance falls short of what is needed for all children to complete primary school with adequate learning. Primary school teachers, it is pointed out, comprise the largest, most steadily growing profession in India, with nearly 2.8 million primary and upper primary teachers in place in 1993. Even then, within the profession, a gender bias exists, with men outnumbering women by more than two to one in primary teaching. This is worth noting for policy purposes, given that participation in schooling, specially for the female child, depends to a large extent on the presence of female teachers.

Despite the fact that teachers' salaries are comparable to those of other government workers with similar qualifications, teacher motivation towards teaching seems to be quite low. The problems seem to

lie in poor working conditions, low perceived status, and limited opportunities for career advancement and promotion (Lockheed and Verspoor, 1991). The main challenge, therefore, is to improve the incentives for good performance by the teaching staff at the primary level in India.

In trying to address the need for improving the access to schooling and efficiency in the functioning of schools, the focus in the book is more on enrolment rates as compared to attendance rates at the primary level. It is a well known fact that enrolment figures for the primary school cycle are quite unreliable in the Indian context. School attendance rates are more reliable when one is trying to analyze the demand and supply side factors that constrain participation. Given that district level data is available from the census publications, an in-depth analysis of the factors that underlie the dismal school attendance rates would have been more appropriate.

Another issue that has not been addressed is the large proportion of working children in the primary school-going age group. Any study of factors governing participation in schooling in general and primary education in particular stands incomplete without a discussion of the issue of workforce participation by children. Child labour is an important factor that constraints children from going to school. Finally, there is the issue of 'nowhere children' (Chaudhuri, 1996) which also needs to be brought out, specially in the Indian context and is not dealt with explicitly in the book. There is a large child population in the 5-14 age group, which is neither at work nor at school. This pool of children forms a large proportion of the child population and needs to be tapped by any policy that endeavours to bring every child into the primary education net. Any education policy that aims at universalizing or even making primary education compulsory, needs to have on its agenda measures that address these 'nowhere children.'

The final issue the book addresses is one of how India is going to finance more and better primary education for its children. The financial capacity, according to the report, does exist in India. What is needed to provide better, universal primary education, is a substantial increase in state spending on primary schooling, an increase in central government transfers, and a strengthening of institutional capacity. Approximate estimations suggest that to achieve universal primary education by the year 2007, India will have to raise its current spending on education from 3.7% of GDP to 6% by the end of the Ninth Plan.

With the implementation of the 73rd and 74th amendments to the Constitution and the devolution of power, the responsibility of education can be seen to shift towards the district level personnel, school headmasters and village education committees. Institutions of *panchayati raj* can now be envisaged to play a greater and more positive role in monitoring the functioning of local schools, teacher absenteeism, school maintenance, enrolment and attendance and mobilization of resources for the schools under their purview. This would also involve the local community more in the functioning of the schools in the locality. All this can be expected to work towards the better functioning of the schooling system and also promote greater educational achievements. Given such developments in India, one can end here by sharing the book's optimistic tone that providing all children with primary education of high quality is certainly within India's grasp. All it now needs is a determined and sustained effort.

**Usha Jayachandran**

**EDUCATION, DEVELOPMENT AND UNDER-DEVELOPMENT** edited by Sureshchandra Shukla and Rekha Kaul. Sage Publications, New Delhi, 1998.

IT is always difficult to review a collection of essays on a broad theme as education, development and underdevelopment. The canvas is so vast that it can include almost anything. I started reading the collection wondering whether there was anything that bound the essays together. The collection moves from the oft repeated arguments on India's colonial legacy to essays on popular language, agricultural modernisation, structural adjustment, privatisation, higher education, a case study of a school in a working class settlement, the Dalit movement in Maharashtra, the Nellore anti-liquor movement and ends with stories of alternative models. The essay on China stands out as a sore thumb in a volume that is primarily focused on India. The editors have tried to look for a common thread to bind essays that seem to have been written as stand alone pieces. According to the editors, this volume was put together to understand persisting inequalities in education despite the deliberate measures for economic progress and take a closer look at the historical background and nature of development and extent to which education has addressed itself to the needs of the people.

The essays in the volume reflect uneven quality. Sumanta Banerjee's article on popular education in

colonial times is interesting and mirrors the debate on today's total literacy programme. Together with the late M. Shatrugna's piece on the literacy campaign and anti-liquor movement in Nellore, it explores the ideology and politics of adult education primers and popular newspapers/broad-sheets for neo-literates. The editors could have tried to develop this theme as it is of great relevance to India. The literacy campaign and its spin-offs in a few areas in the country tells us a lot about missed opportunities and deliberate derailing of movements with grandiose promises. Literacy material often reinforces prevailing attitudes and stereotypes. Nellore was more an exception than a norm. As Banerjee points out, an analysis of a pedagogic experiment like Sulabh Samachar in 19th century Bengal, becomes relevant for an understanding of similar pedagogic intervention today in adult education by the Indian state.

The attitudinal biases of the educated middle class pedagogues who designed the lessons for neo-literates in the NLM programmes ... can be traced back to the colonial era. The legacy continues – sometimes surreptitiously (even without the modern pedagogues being aware of the colonial education that shaped their biases), and sometimes consciously (carried out by those pedagogues who seriously adhere to the old colonial belief in looking down upon the unlettered masses as a commodity to be manipulated to serve the interests of the state). ... The Nellore anti-liquor movement demonstrated the potential of literacy materials that reflect real life situation of participants. Unfortunately, as is evident in Sadhna Saxena's essay on Education of the Poor – durability of promising innovations and replicability of effective strategies remain a major challenge.

Jandhyalaya Tilak's article on the effects of structural adjustment on education is not only informative, but it captures the complex dynamics at play in different countries. Extrapolating the experience of Africa and South America to Asia is hazardous. Experience in this region has shown that it is difficult to isolate the effects of adjustment on education. The effect has not been uniform in the region and some countries and some sectors have suffered severely. Tilak categorises the countries as 'intensely adjusting', 'adjusting' and 'non-adjusting'. It is interesting that, with the exception of Pakistan and Bangladesh, resources to primary education seem to have been protected in most countries in the region. The relative share of primary education has increased in India and Malaysia. Another noteworthy finding is that while gender discrimination

has increased as far as the stock of the educated people is concerned, gender discrimination in enrolments has come down in all the countries. The relative share of private sector seems to be increasing.

This observation is borne out in Rekha Kaul's chapter titled *Disorders in Education: Private Enterprise and the State*. She points out that commercialisation is taking place at all levels – starting from the pre-nursery stage to professional and technical education. Lowering of standards, inequality, and an obvious elite bias is evident across the country. Is increased 'state intervention' the answer in a country where government run institutions are in shambles? Privatisation may have increased the opportunities for the rich, but the fact remains that even where good quality public institutions exist, they are out of the reach of the poor. Intensive coaching, specialised inputs and a highly competitive academic environment has pushed the poor out of the education race. While education cannot be left to the mercy of free market forces, it should also be taken out of the clutches of a corrupt bureaucracy and corrupt polity.

Mohammad Talib and Padma Velaskar's chapters present useful case studies and reinforce the broad thrust of the collection. Krishna Kumar's piece, though misplaced in this volume, is insightful. On the whole this collection of essays makes for interesting reading but stops short of providing a book of significance.

**LEARNING AND FREEDOM: Policy, Pedagogy and Paradigms in Indian Education and Schooling** by John Robert Shotton. Sage Publications, New Delhi, 1998.

'THE country has reached a stage in its economic and technical development when a major effort must be made to derive the maximum benefit from the assets already created and to ensure that the fruits of change reach all sections – education is the highway to that goal.... Education develops manpower for different levels of the economy – it is also the substrate on which research and development flourish, being the ultimate guarantee of national self-reliance.... The deleterious consequences of non-investment or inadequate investment in education are indeed very serious' (National Policy on Education, 1986, modified in 1992).

The rhetoric of Indian education routinely includes statements like the above – 50 years of such

posturing has failed to deliver an educational system that serves the needs of the nation. John Robert Shotton's book addresses the vitally important issue of the crisis of Indian education through a consideration of its philosophy (posturing) and practice (reality). He looks at the present condition of education without delving too deeply into the historical reasons for its poor state of health. Shotton's endeavour is to look forward and explore a 'new departure' that has a fundamentally different philosophical and practical base. Exemplifying a wide range of interesting initiatives from India and abroad, Shotton tries to develop working models for a new-look educational policy for the next century.

There are virtually no equivalents of clinical trials (commonly used in medical research) in the field of education in India. Teaching methods and courses depend on teachers' subjective judgements and preferences, not evidence about effectiveness. There are almost no educational research centres in India that can provide an objective guidance on educational policy and practice. Therefore, Shotton's well-researched and carefully documented book comes as a breath of fresh air to the closed rooms of educational debate in India. An academic background in London and Cambridge, along with many years spent with the Sri Aurobindo Education Society in Delhi, seems to have given Shotton the perspective as well as the objectivity to deal with this contentious issue.

However, schools cannot depend on the arrival of supermen to become more effective. Shotton's 'new departure' is not without its problems – the problems of implementation that he does recognise. To wish them away by stating that schools need better teachers is at best an evasion. There are far too many schools and similar institutions in the country to man with the best people, especially in a profession that produces no economic surplus. There is no evidence that education is any more devoid of its great men than business is. But if schools cannot be made effective by being run by average teachers, normal people, then all is lost. It is the system that requires a change so that ordinary people who endeavour to work hard in the right directions can adequately fulfil the tasks of schooling. It is these right directions that Shotton addresses so effectively.

But the educational community itself most often hampers the search for effectiveness. It is extremely dangerous to raise the question as to what the purpose of the school is. The objectives may be measured against yardsticks of performance and staff may fail

this test. There will always be various definitions of a school and what it should do. The various constituents of a school argue and alienate support for themselves. Often the institution itself shuns the search for its mission. Each of the many definitions of a school is plausible and can be defended. The answer lies in striking a balance between the various objectives. Most schools in India pretend that there are no fundamental questions to be answered. If this thinking persists, schools cannot carry out any mission at all, let alone be effective. Shotton believes effective education develops 'potential, curiosity, interaction, application, the development of personal powers, and the generation of personal confidence.' He rightly emphasises the contribution of the local community in educational transactions and reiterates that schools need to be more democratic in their functioning. The shift from teaching to learning and from content to process have been debated for long enough. Shotton's unique contribution lies in his attempt to offer a realistic way forward.

For the last 40 years, India has followed a pattern of school education that has promised much but delivered little. Our school system is in a state of crisis and it must be realised that it has not performed. In a world of rising educational standards, where our school children should match the best for more than knowledge and hard work, the lack of performance of schools must lead to a drastic and radical reform of education. We can neither afford illiterate and semi literate young people, nor can we waste the talents of our finest students by grinding their enthusiasm to dust in the mill of our rigid and ill-structured system. Shotton has offered a way forward, a 'new departure'. His book is a must for all those who care about the state of Indian education, especially those who desire to do something about it. *Learning and Freedom* is aptly titled and tells one how to go about transforming Indian education in a scholarly but eminently readable fashion.

**BRIDGING THE GAP BETWEEN INTENTION AND ACTION: Girls and Women's Education in South Asia** edited by Vimala Ramachandran. Asian-South Pacific Bureau of Adult Education, New Delhi; UNESCO-PROAP, Bangkok, 1998.

THIS book contains country studies on Bangladesh (Roushan Jehan), India (Vimala Ramachandran), Nepal (L.N. Belbase, K.N. Shrestha, Saloni Singh) and Pakistan (Ruquia Jafri) with an overview drawing

together the main recommendations arising from these. Sponsored by UNESCO, it is an attempt to evaluate progress made in achieving universal primary education in South Asia, and in particular to understand the nature of the gender gap and the reasons behind its persistence. The objective of the exercise is to identify interventions: as the preface puts it, 'in the hope that gender gaps in basic education in South Asia will soon be a phenomenon of the past.'

The book will be a valuable reference for students and policy-makers concerned with education. Each of the four studies includes a historical review of education policy and of attitudes and initiatives regarding girls education; of available gender disaggregated data; and an examination of both governmental and non-governmental schemes that demonstrate successful approaches to female education.

However, the motivation of this book is clearly something beyond description or documentation. In all four countries, the initial approach towards girls education was to treat it as something to be accomplished as part of the objective of universal education. So in Nepal, for example, co-education at all levels was favoured (Belbase, Shrestha, Singh: 171). In the seventies and eighties, however, it was recognised that the issues surrounding girls education were different from that of boys education, leading to special programmes and incentives, and in some cases to special schools.

The functional benefits associated with educating girls – lower levels of fertility, better child health and nutrition, higher productivity – had a strong influence on policy formulation. Along with this was the more feminist view that education is a means of empowering women. These arguments drew heavily on international policy statements. In particular, the focus on women during the International Women's Decade of the seventies, the renewed commitment to basic education in the eighties, and the UNESCO/UNICEF/UNDP conference on Education For All in Jomtien in 1990, made an impact both on thinking and on aid allocations.

Although mainstream educational programmes were largely developed with national resources, in all four countries the programmes that had an explicit focus on 'gender equity' have been developed with support from external donors. This book argues that policies need to continue this special focus, on a larger scale, and with a higher level of decentralization.

In attempting to explain the gender gap in education, all four studies reconfirm that this has as much

to do with perceptions and attitudes as with financial resources and physical infrastructure. All over South Asia, social norms still largely favour 'separate but equal' worlds for men and women – an approach to equality that may be old fashioned but still has much support the world over (Bergmann, 1997). Equality, in the sense of seeking similar lives, with similar opportunities for growth and fulfilment for boys and girls, is not a widely held objective. Against this understanding, the lower value placed on girls education is not irrational.

Programmes attempting to increase girls enrolment and participation in school activities have to confront the deep-rooted beliefs of people regarding 'appropriate' roles and behaviour for girls. For example, it is reported that some parents were willing to let their daughters learn how to read, but were reluctant to have them learn how to write (Jafri: 240). The experience of South East Asian countries, which have been successful in achieving equality in education (and employment) between men and women, is testimony to the effectiveness of the functional uses of schooling (i.e. the education-employment link), though not necessarily to its 'empowering' role (Kuah Khun Eng, 1997). In South Asia too, it is considerably easier to convince parents that educating a girl will help her to earn more (and hence be a stronger partner in a marriage and within a household) than to persuade them that liberating the mind is desirable; and that education is a means of doing this.

Seen from this perspective, the suggestions made in this book for reducing the gender gap in education are both practical and feasible. Increasing the number of women teachers is strongly recommended. Women teachers provide role models for girls and their presence has been seen to overcome parental resistance to sending girls to school. However, increasing their numbers given the low levels of female literacy overall, requires a special commitment. It can be done, as the experience of pilot projects in India shows. A second recommendation is to examine and continue incentives for girls schooling. A third is for modifying the delivery systems so as to increase the access of the very poor, disadvantaged and physically remote, 'reaching the unreached'. Imposing a uniform system on countries without taking account of the need to make appropriate regional modifications will not meet the challenges of persisting gender bias.

A strong plea is also made for learning from the experiences both of special and pilot schemes run by the government, and those of NGOs that have been able

to successfully achieve gender-sensitivity in educational planning and implementation, although it is recognized that both government and NGOs are susceptible to similar pressures from donors and from social/political considerations. Greater community involvement, with decentralised systems, is seen as offering a way out and a basis for optimism.

Donor priorities have influenced the development of educational policy and in particular have had a tangible impact on programmes that have targeted girls education. Without such targeting, the natural consequence of limited resources, poverty and belief in 'separate but equal' gender roles, will lead to widening disparities. A recent assessment of the difference made by Jomtien suggests that while the conference and subsequent deliberations succeeded in giving basic education a higher priority among aid donors, the actual aid disbursements remain inadequate to meet the EFA objectives (Bennell and Furlong, 1998). This book, with its careful identification of approaches to education that have been seen to be workable, ought to help in keeping basic education on the agenda of concerned donors.

No attempt is made here to evaluate the financial implications of achieving universal education, perhaps because without a sensitive use of funds no real progress can be expected. In fact, the real reason behind the gap between policy statements and ground realities is that 'real decisions are taken at the time of preparation of action plans, projects, or during budget allocations' (Ramachandran: 88). Rigid financial and procedural systems can undo any attempt at innovation. Having understood the reasons for gender gaps, and the need to allow, at least in the short run, for multiple delivery systems, 'formal, non-formal, condensed, satellite and residential', countries will have to find the political will to keep basic education for all, particularly girls education, high on their priorities, and allow flexibility and innovation within educational systems.

# In memoriam

## John Bissell 1931-98

ON a rainy evening in early March, several hundred people who have helped write the story of modern India—politicians from different parties, leading figures from business and industry, artists, diplomats, even M.S. Gill, still busy tallying more than 340 million ballots cast in the 12th Lok Sabha election—gathered in a Friends Colony garden to remember a man whose life, like a rich cross-thread in one of the hand-woven fabrics that were his life's work, bound together much that is best in the spirit of India and the United States.

John Bissell was an American who began his education at Yale University at about the time in the late 1940s that Jawaharlal Nehru and his colleagues embarked on the task of building 'the noble mansion

of free India.' Already, John's love affair with India had begun, rooted in tales his father told of his experiences in India during the Second World War. But he could not then have guessed how deeply his own life would become interwoven with India's, nor how much it would express of the two countries' natural affinities.

That March evening, beneath the *shamiana* John's family had erected in their garden, became as much a celebration of those affinities as a memorial for John, which was just as he would have wished it. The evening provided only a single reference to the ironic counterpoint to those affinities that was provided throughout much of John's life by the strained political relations between India and the

United States, and then it was only to emphasize how estranged from that estrangement John felt.

Mani Shankar Aiyar, fresh from his election disappointment in Tamil Nadu, recalled meeting John in New Delhi in December 1971, at the moment when Richard Nixon was attempting to halt Pakistan's reversal in Bangladesh's independence war by sending the U.S.S. Enterprise and its accompanying battle group into the Bay of Bengal. 'Before I could say a word, John threw his hands in the air and said, with a broad smile, "Honestly, Mani, I had nothing to do with it",' Mani Aiyar recalled.

Like many such jokes, John may even have half-meant it. Long after he had made his own mark in India, with his marriage to Bimla Nanda, the peripatetic Bim who became the torch that lit his life, with William and Monsoon, the Bissells' two children, and with the success of Fabindia Ltd., the company that marketed the village fabrics that were John's other great passion, he was vexed by the association that others made between him and his uncle Richard M. Bissell Jr., one of the legendary figures of the Central Intelligence Agency during the Cold War era.

How vexed was apparent in an anecdote that appeared in John's obituary in the New York Times. 'I once asked him if it was ever a problem having his name and being associated with one of the great spy masters of the modern era,' Steven Weisman, a former correspondent for the newspaper in New Delhi, said. 'John said that he was acutely aware of it, and that early in his life in India his uncle asked him casually if he would consider doing anything. He said he was enraged at even being asked, that it would ruin his life if it were known his uncle had asked him.'

John, of course, served his country better by becoming a model for America's enduring virtues. From Yale, he went to work at Macy's department store in New York, and there developed his love for the look and feel of hand-woven fabrics. In 1958, he won a Ford Foundation grant to travel to India and help villagers produce traditional goods for export. After the grant expired, he stayed on, founded Fabindia, and married Bim, who had worked as social secretary for Chester A. Bowles and John Kenneth Galbraith when they were United States ambassadors to India.

For more than 30 years, from the mid-1960s until the night before John suffered the stroke that brought his life to a close at the age of 66, the Bissell's home became one of New Delhi's finest clubs, a place

where people of all walks of life, and political persuasions, could meet in good fellowship to talk of India, and America, and everything in between. Nobody can measure how important that fellowship was to sustaining the ties between the two countries, but everyone who joined the club knew there was nowhere in New Delhi or New York, in India or America, quite like the Bissell's home for the humour, the zest, and the good talk of those occasions, and for the common ground they celebrated.

At the memorial gathering for John, those who knew him best spoke with great passion for John, and for Bim, whose own career at the World Bank became another platform for sustaining friendships between the two countries. Richard Celeste, the new American ambassador, remembered John from the 1960s, when the ambassador was a young diplomat in New Delhi with only a glimmer of the future that awaited him as a three-term Governor of Ohio.

John, Celeste recalled, was a 'lanky, laughing person', New Delhi's best 'jitterbugger', but also an exacting businessman, who spent hours attending to the smallest details of the crafts he was trying to promote. 'John represented the best of what America is about, and respected the best of what India is about,' he said. 'In this week when we have been hearing a lot about *swadeshi*, let us remember that John made it real for thousands of villagers; this was not politics, this was life.'

But for many who were there, nothing better captured the essence of John Bissell than the words of Arun Shourie, who met John in another field where John excelled, as a 'shy giver' to the causes of those in India who needed help the most. Speaking as a father with a disabled child, Arun Shourie spoke in a halting voice of how John's generosity, who dedicated a third of Fabindia's profits to charity, had sustained the Spastics Association of North India. But more than even his financial generosity, Arun said, John had given of himself, treating the children at the spastics centre not as a visiting patron but as though 'it was his honour to meet them.'

'Each one of us in John's circle of friends should find a cause, or someone in need, and give as John gave. And let the first drop of this habit be spent in memory of John.'

## NEW FROM OXFORD

### The Theory of the Global Firm

**Vinay Bharat-Ram**

*The Theory of the Global Firm* brings together ideas on macroeconomics, the global economy, learning and technological progress, and the economic calculations that inform import substitution and export; together, they facilitate a better understanding of the firm in an open economy with divergent influences concerning its economics, freedom and institutional rationale.

This book insists that the global firm cannot ignore the delicate balance between import substitution and export; it presents the tools required to measure the optimal trade-off between the two. It also develops an interesting analytical framework that incorporates learning, technological development and product innovation. The analysis is enriched considerably by bringing theoretical analysis face-to-face with actual case studies from a wide range of industries from various parts of the world.

**'This is an imaginative book with a bearing on pure theory as well as the real world.'**

# Backpage

WITH election fever safely behind us, observers can now settle down to monitor the performance of second-time crowned Prime Minister Vajpayee and the BJP led front in government. The times clearly are not auspicious. The antics of BJPs pre- and post-poll 'allies' – not just the 'imperious' Jayalalitha and the 'maverick' Subramanian Swamy, or the newly incarnated Biju Janata Dal, but even the 'time-tested' Samata Party – do not indicate pleasant auguries for the alliance's major plank, stability. The hope is that this time around the experiment will not be a 13 day wonder. No one quite wants another election, just yet.

Evolving the compromise national agenda or cobbling together a ministerial team, expectedly after hard and somewhat murky bargaining, should be enough to drive home the point that running a coalition government, a minority one at that, is unlikely to be smooth. Given the composition of the House wherein the ruling coalition enjoys but slender majority (assuming all its allies remain present at full strength, and some other groupings in the opposition oblige by abstaining), floor management will be a nightmare. No wonder, after the acrimonious electioneering, the favoured phrase today is consensus. The BJP has reason to be pleased with the statement by Sonia Gandhi, now in the Congress hot seat, that her party will play the role of a responsible, constructive opposition.

The BJP has made the first peace offering by dropping the 'controversial' projects of the Ram mandir, Article 370, uniform civil code, the Minorities Commission, and so on from the national agenda. The prime minister has talked of 'ushering in a new age of reconciliation and accord,' of 'ending the adversarial relationship between the ruling group and the opposition' because, 'the nation cannot afford such adversity.' Fine words indeed. But restraining its enthusiastic supporters, exultant at the dawn of a Hindu raj, may prove tough. Diluting core commitments may well be seen as a compromise to 'retain power at all costs' by the faithful.

The alliance partners, all 17 (or is it 20?) of them, evidently do not believe in the language of restraint. While George Fernandes along with Murli Manohar Joshi and Govindacharya (from the outside) is keen to tilt at multinational windmills, others (BJD, Trinamul Congress, AIADMK) are looking for central help to van-

quish local opponents. For them, it is state fortunes that matter. Already, in whichever provinces the ruling coalition has done well, the demand for dismissing governments, or at least vigorously pursuing allegations of corruption, have gathered strength. And this, when the alliance has yet to settle down.

What is equally distressing is that such language is matched by the opposition. Clearly, they too have learnt little from the electoral verdict. Be it Andhra, or Rajasthan, or Maharashtra – the Congress, which feels on the ascendant, has already pronounced on the illegitimacy of the ruling regimes. Making life difficult for your opponents, preferably pulling them down, is still the favoured political past-time.

Reams of analysis about the recently concluded election has still to drive home the point that our political parties, and the political system, is extremely fragile. No party, ruling or otherwise, has a basis for feeling secure about its perceived support base. Not only has the BSP style politics with its vitriolic casteist rhetoric come a cropper (notwithstanding a 20% vote share in U.P.), even the corporatist Left Front with a 20 year reign in West Bengal under its belt has been served notice. The Samajwadi Party with its aggressive secularism (read, drive out the BJP) or the Shiv Sena with its equally aggressive Hindutva too should realise the limitations of their confrontationist politics.

Our political culture, notwithstanding its diminution to a quarter of the popular vote, is still dominated by the Congress. It too, despite faring worse than expected, seems to have learnt little. The unseemly haste with which it anointed Sonia Gandhi to both its top positions (party presidency and leadership of the parliamentary party) indicates its continuing fascination with Dynasty. The fact that the leader was relatively unsuccessful in converting the crowds into votes, or that nearly all of her 'personal' candidates lost, has failed to drive home the importance of issues and organization.

The one silver lining in the March drama was provided by the sharp rebuff to Subramanian Swamy who, Emergency heroics apart, enjoys pride of place in our degenerate political culture. In refusing to kow-tow to his sabre rattling, Prime Minister Vajpayee deserves our gratitude.

**Sri Madhava Ashish**

**NEW FROM BANYAN BOOKS**

A collection of essays, articles and letters in which the author, Sri Madhava Ashish, seeks to examine the values which underlie social ethics and environmental issues. Many of these themes engaged Madhava Ashish during his life at Mirtola, a small ashram near Almora in the Kumaon hills of northern India.

His teaching evolved beyond a purely religious form, in his search for the meaning of life. His work emphasised the need to integrate the inner reality with an active committed outer life.

*These writings are interspersed with incisive, poignant and stimulating letters exchanged between Raj and Romesh Thapar, founders of Seminar magazine, and Madhava Ashish.*

Mudra : OF : 111

This is 3 year old Shreya.  
Her parents abandoned her  
and vanished. If you turn the page,  
you'll do the same.

CAUSE

CÉLÈBRE Created by Contract for a cause.

Yes, I, \_\_\_\_\_ would like to adopt a 'Nanhi Kali' like Shreya. ☑ Enclosed is my cheque of Rs. 1200 (@ Rs. 100 p.m.) in favour of K.C. Mahindra Education Trust for one year's education. Please do send me progress reports and a photograph. ☑ Instead of one Nanhi Kali, I would like to adopt \_\_\_\_\_ Nanhi Kalis for \_\_\_\_\_ years. Thank you.  
• Anonymity of donor is assured. • All donations are exempted under section 80 G of the Income Tax Act.

With no one left in the world, little  
Shreya doesn't have the slightest  
hope of facing the future, unless she  
gets an education. And that's where  
you come in. To make a dream called

Nanhi Kali come true. Through  
Nanhi Kali, you can become the foster  
parent of a little girl like Shreya.

By giving Rs. 100 a month towards  
her education, your 'daughter' will be  
put into school and in fact, you will  
receive regular reports about her  
progress including a photograph.

Nanhi Kali is a special project of the  
K.C. Mahindra Education Trust - a

Trust set up by one of the most  
reputed industrial families in India.

A Trust that's been working since  
1953 to promote education and  
enlightenment across the country.

Since Nanhi Kali literally means  
'little flower', with people like you,

we hope to repair the broken  
petals of thousands of such  
underprivileged little girls.

So please don't turn the page yet.

## The problem

FORECASTING, at the best of times, is a hazardous business. And this is more so of political forecasting. Psephologists, highly visible at the announcement of elections, expectedly become somewhat scarce once the results are declared. This time around too, despite some of the experts getting some of the numbers right, the forecasts managed to be as off the mark as they always are, particularly in their details.

The one result that everyone, pollsters and political pundits, got right was that the elections to the 12th Lok Sabha would end in a hung Parliament. Notwithstanding inflated claims by both the BJP and the Congress (particularly after Sonia Gandhi jumped into the fray), the era of single party dominance is over. No matter how derisive both these parties were (and are) of coalitional experiments like the United Front, the fact remains that the only way any party can hope to rule Delhi is by structuring a pattern of pre- and post-poll alliances.

Nevertheless, the 1998 elections to the Lok Sabha, in some significant ways do mark a watershed. The most important is that the claim of our oldest political party, one that led the struggle for Independence, as the only genuine pan-Indian party now stands undermined. It is not just that the Congress has managed to lose two successive general elections, or that its representation in Parliament has remained stuck at 140. More telling is the statistic that its share of the popular vote has between 1952 and 1998 shrunk from around 45% to 25%. Similarly, from a situation where the Congress won seats from every single province in

the country, it has now been frozen out from various regions, most significantly U.P.

In the same time period, its key challenger in recent times, the BJP, has not only increased its vote share from 3.10% (1952) to 25.38% (1998), but has managed to win seats from 17 states and 4 Union Territories—a figure higher than that of the Congress with representation from 17 states and 3 Union Territories. It is also only 0.34 percentage points behind the Congress in popular vote share.

The impressive gains recorded by the BJP (a 14% increase in vote share from 1989) have to be read in conjunction with a few other indicators. For a long time the BJP (earlier Jan Sangh) was seen as a Hindi belt, urban, upper caste Hindu, trader's party, an imagery still invoked by many of its critics. Survey data reveals that the BJP today, despite electoral support from around 54% of upper caste Hindus (over 85% in U.P.) has made significant inroads among the OBCs, Dalits and tribals. Its vote share among women and minorities remains low, but a vast majority of the educated (graduates and above) and youth support the party. There is, thus, some justification as seeing it as the party of the future. More so since both the Congress and the left have, in chronological terms, a substantially older voter base.

These figures, as always, hide as much as they reveal. We have little indication of how stable and effective this voter base is. Even today, in U.P., the combined vote share of the Samajwadi Party and the Bahujan Samaj Party is 49.6%. They also led in 64 out

of 85 constituencies. Had they fought elections together, the complexion of the Parliament would have been very different. Arithmetically, at least, the party has no reason to feel upbeat. It also needs to be remembered that the BJP, as a party of governance, has so far not managed to improve on its electoral performance after a period in office.

As significant as the 'decline' of the Congress, or the 'rise' of the BJP, is the future of the third force, the UF. Its 'national' constituent, the Janata Dal, has all but disappeared. Many of its regional partners have suffered significant reverses and, like the TDP in Andhra, may well choose other 'national partners'. Its ally, the left, has held its own, but barely. It still remains confined to its regional bases, where too its dominance is under threat. The future, on current indications of a non-Congress, non-BJP coalition playing a crucial mediatory role, cannot be said to be bright.

Through the decade of the nineties, in electoral political terms, what we have witnessed is a steady gain made by regional, often single state formations. Even in the BJP led coalition, a little over a third of the numbers come from a motley crowd of 20 allies. While the significance of such a mix for cohesive governance is regularly remarked upon, what is often missed out is that the 'natural terrain' for electoral politics is now the states, not the nation.

Except in the unusual situation of a referendum-like, swing dominated election, the patterning in the Lok Sabha is more likely to be a reflection of regional aggregation than a national mandate. Possibly, this

might also explain the increasing importance of the anti-incumbency factor. Hopefully, local factors and performance is what will matter more. It is not a mere coincidence that over half the members in the new House are first-time entrants.

In important ways such a political tendency may also help re-define conventionally held ideas of the nation, as also federalism. One suspects that respective states and regional parties will not only demand greater compliance from the centre for their regions but will equally shape the whole. This is evident in the way the BJP, arguably our most unitary party, is being forced to accommodate the concerns (both genuine and fickle) of its various allies. Or in its now foregrounding a 'national' rather than its *Hindutva* agenda.

Given our somewhat undeveloped political culture, managing messy coalitional politics is unlikely to be easy. Even in the few weeks that the new dispensation has been in power, the strains are evident. And the conflicting pressures arise not just from the allies but from the different factions of the core grouping. Claims to cohesion or unity of purpose within both the BJP and the Sangh Parivar come across as hollow. While this may well have been expected given the rapid growth of these formations in the past few years, one is entitled to be sceptical about its slogan of both stability and being a party with a difference.

The secular decline of the Congress and its vacation of the centrist political space; the inability, despite spectacular gains of the BJP to successfully replace the Congress as a party where all social segments and all

regions, at least in part, enjoy space; the steady growth of regional, sub-regional, single issue political formations with low appeal outside their core support area – in our electoral political system implies that for the foreseeable future we are likely to witness fractured verdicts, hung Parliaments and unprincipled pre- and post-poll alliances to ensure narrow and fickle majorities. Not quite designed to inculcate confidence.

A focus on electoral politics and political parties, though central to the political process, hardly exhausts the political space. Unfortunately, our political analysts, while concentrating on numbers, vote shares, swings and so on have rarely bothered to probe deeper. We, for instance, know little about the long-term implications of an increasing enmeshing of our economy with the global market. The current debates over *swadeshi*, or the posturing about the IMF-WB or the WTO, while expressing the concerns of domestic big capital (read Bombay Club) provide few clues about how different social segments and different regions will be affected. And how they will behave politically.

Equally, it is a matter of concern why everyday, real-life issues – the state of our primary education, health, food security, drinking water, shelter, or access to and control over common property resources – seem to matter so little in affecting political fortunes. Nor, it appears, does corruption. After all, the number held guilty by public opinion – from Sukh Ram to Balram Jakhar, not to mention Laloo Prasad Yadav and Jayalalitha's partymen – who won is not small.

Even more disturbing is the political role of sections of our society who do not contest elections. About business we always knew, be it as funders of different political parties or as lobbyists with government. Still, the up-front role of different business houses and associations this time around came as a surprise. Once we add foreign corporate players to this tribe, our political culture is likely to get irretrievably altered. To business, we now need to add the bureaucracy, the judiciary and the media. No longer are important strata in these various estates content at playing their traditional, constitutional roles. They are increasingly aligned to different political parties and their actions are altering the 'rules of the game' – in the process squeezing out the little space we have as voters and as citizens at demanding accountability from our rulers.

To these one should add the hitherto unmentionable in Indian politics – our military and para-military. India has, so far, escaped the fate of our various South Asian neighbours. But with an increasing recourse to the army for settling internal disputes – from riots to

terrorism – and the growing concern about territorial security, who is to say what the future portends.

What about the ordinary citizen? Is our role merely to be confined to playing at iterant voter in contests with candidates and parties in whose selection and in whose programmes we have little say? Is our only power voting out unrepresentative, unaccountable, often corrupt groupings, only to have them replaced by their clones? There is no reason to feel too despondent. For one, despite assertions to the contrary, voter turnout was a little higher in the 1998 elections. Also, it is the relatively under-privileged strata that is participating in greater numbers. They, clearly, have greater faith in the country's democratic future than does our elite, and their participation does affect political agendas.

Second, it is sheer arrogance on our part to presume that politicians are knowledge proof. Political parties, as much as political analysts, carry out surveys, minutely scrutinize electoral results and try and re-invent themselves, though more for purposes of winning rather than service. Results of the kind we have recently seen do create the impetus for a serious re-think, not only about political strategies and programmes, but about the rules of the game. Be it weeding out the corrupt from electoral politics, introduction of reforms to control defections and horse-trading, evolving parliamentary procedures, or even the election of the Speaker (despite the unseemly deals this time around) – each of these concerns is being subject to greater scrutiny and debate.

Outside the elected House – Parliament and state assemblies – citizen's groups and social movements are attempting to push pro-people agendas, fight for a right to information and so on, to ensure that our fledgling democracy, fifty years down acquires content – of representativeness, of accountability, of performance.

There is no running away from the need to re-work many of the foundational presuppositions of both our electoral and political system. Be it the parliamentary form with its first-past-the-post rule, or the relationship between the different wings of the state – too much has happened, too much has changed for us to blindly assert that the political system is healthy. But surreptitiously bringing in the agenda of re-examining the Constitution, as the BJP threatens to do, is hardly designed to inspire confidence. A viable case for a second Republic has still to be made. As we move towards the next millenium our political future remains suffused with uncertainty. This issue of *Seminar* addresses some of these concerns.

# The welcome era of coalition politics

SURJIT S BHALLA

THE mid-term 1998 elections have just ended, but it is too early for Indian politicians to take it easy. There were several losers from the elections of '98 – and a few winners. Among the losers were two: First, politicians in general, and the political clout they carry in affecting the (mis)fortunes of the electorate. Second, the major parties – Bharatiya Janata Party (BJP) and the Congress – have been issued notice of their increasing irrelevance.

The winners – coalition politics, 'leadership' and economic liberalization. The future, while it will revolve around the two major parties, does not belong to them. The spin, therefore, on

the just concluded elections is – may there be several more, so that we can finally gravitate towards our eventual destiny of being ruled by technocrats, as most of the world, and almost all of the developing world, already is.

*Congress loses:* Sonia Gandhi kindled hopes of revival in the GOPI (Grand – or Geriatric? Old Party of India). Old in age, and in its tired ability to generate ennui, if not revulsion. In four major states – U.P., Bihar, Tamil Nadu and West Bengal – the GOPI could obtain only six seats (out of 220), with five accruing under Bihari circumstances. Add the 38 northern seats – Jammu and Kashmir,

Punjab, Haryana, Delhi and Chandigarh – and GOPI was barely able to cross a total beyond the fingers in its hands! Phrased differently, that is 12 seats for GOPI out of almost half the electorate, and a GOPI blackout in four states – U.P., Tamil Nadu, Punjab and West Bengal (1 seat).

**T**he Congress was able to retain the same number of seats it obtained in 1996 – 140 seats, and with its stated pre-poll allies, about 170 seats. There was much discussion throughout the campaign about the Sonia Gandhi effect. Her supporters argued that it was large since without her, Congress and her allies would have obtained seats in double digits. The various opinion polls conducted *before* Sonia Gandhi announced her interest in campaigning on 10 January 1998, suggested that the Congress and its allies (including only Kerala and Maharashtra and excluding RJD in Bihar) would obtain somewhere around 145-150 seats. The eventual tally, 147 seats. Thus, there seems little reason to argue that Sonia Gandhi's campaigning had a substantial effect, either way, in yielding the eventual result. (See Bhalla 1998b for detailed discussion.)

*BJP loses:* It might seem odd that the party, which has rapidly gained ascendancy and is now the party in power, should be classified as having 'lost'. The BJP gained power because of its opportunistic pre-poll alliances with several regional parties. The reason it may not be able to hold on to power is because of its opportunistic pre-poll alliances, and alliances made without any regard to ideological commonness.

But as each unfolding AIADMK moment makes clear, Jayalalitha's gain has been BJP's loss. The continuous humiliation that the BJP is undergoing at the hands of the AIADMK cannot but signal a pyrrhic victory, at

best. Initially, there were the demands for installation of ministers; now there is the demand for removal of ministers. Regardless of how the farce ends, the BJP is wounded, and will have to constantly run, not to stay ahead, but to prevent itself from falling further behind.

*The Hindu right loses:* There is some speculation that the BJP is in power today because of a fundamental shift in the preferences of the body politic towards the 'Hindu right'. The pre-poll electoral alliances, and statements by the BJP partners, suggests strongly that the fear was misplaced and the conclusion erroneous. Several leaders (e.g. Hegde of Lokshakti, Naveen Patnaik of the Biju Janata Dal in Orissa and J. Jayalalitha in Tamil Nadu) had made it clear that their ideology was substantially different than the 'Hindu right' allegiances of its senior partner. Further, the various opinion polls showed that the non-Hindu right leader of the BJP, A.B. Vajpayee, was the major (and only?) reason that the electorate preferred the BJP.

**T**he elections resulted in marginal gains for the BJP overall (161 to 177 seats) and humiliation in two states that they ruled – Maharashtra (home of the Hindu right) and Rajasthan. The BJP had to play a juggling act to keep its alliance intact in the formation of the government. It needed close to 100 seats to get to the magic mark of 272. Eventually, it had to rope in the 'secular' Chandrababu Naidu and his 12 seats, and yield the Speaker's post in exchange in order to gain power. Not such an auspicious beginning to the Hindu right, indeed. Elections '98 are a most likely witness to the beginning of the end of the influence of fundamentalists – a reality in keeping with other worldwide trends.

*Swadeshi economics loses:* The Hindu right is being kept company by

another loser from the elections – the proponents of *swadeshi* economics. The BJP government has pedaled furiously to distance itself from the economic policies it espoused before the elections. These policies were based on either the ideology of the extreme left (closed markets, xenophobia) or Congress rejects (commanding heights approach). The new definition of *swadeshi* in its most extreme form – India should be built by Indians!

**T**he rejection of *swadeshi* and the consequent acceptance of the economic liberalization policies of the Congress and the United Front suggests a convergence of views. The chance of a *swadeshi* reversal of economic reform policies is therefore close to zero. This is not due to a change in ideology on the part of the BJP – rather, it is to their acceptance of the new reality of powerful markets.

The increased power and influence of markets is felt not just in India but also worldwide. Governments have to proceed along broadly international market lines. Non-market friendly pronouncements from political leaders are met with immediate reaction from the stock market, and such reactions cause politicians to change their mind. Three recent examples from the Indian stock market serve to illustrate this 'new' phenomenon.

*15 and 16 January 1998:* A section of the party leaders associated with the formulation of the BJP manifesto say that if voted to power they will insist on a lock-in period of six months for FII investment to make it clear to FIIs that they cannot 'rush in and rush out' of the country. The stock market (sensex) fell by nearly 200 points to close at 3395.04. It fell further to 3366 the day after the lock-in announcement on a bout of heavy panic sales by FIIs. The next day, senior party leader and chairman of

the party's manifesto committee, Jaswant Singh, says that there is no question of any lock-in period for FII investments in India. The party's PM-in-waiting, Atal Behari Vajpayee, said the same in a written statement to the press.

Following the party's grand retraction, the market jumped by 100 points to close at 3481 on 19 January. A clear indication of the power of the market to discipline bad politics.

**T**he third example is from after the elections. The Economic Times, a financial daily, headlined a story indicating that a BJP ally, George Fernandes, had suggested that the tax rate on the 'rich' should be increased. The market fell a 100 points in the first couple of hours before soothing statements negating Fernandes's comments were issued. It is not just that the foreign money managers react to such statements. The Indian money managers do the same. Collectively, the stock market has become a major 'check and balance' on bad politics — in India, and elsewhere. The trend will only get intensified. This is the major reason for the about-turn on swadeshi, and for convergence in economic views of all parties.

*Political instability wins — but India gains:* The electorate gains from the impasse at the center. Paradoxical? Hardly. A lot has been written about the cost that a poor country like India pays for political instability. A large part of the electoral plank of the BJP was that it was its turn to provide political stability. The Congress wisely stayed out of this hyperbole, perhaps because it recognized that it had provided precious little, besides 'stability', to the Indian population over 50 years of its own turn at power.

There are reasonable grounds to argue that political instability is good for economic reform and, via compe-

tition, leads to improved politicians, and therefore better governance. The contention is that lack of political dominance means that politicians in power would make the extra reform in order to fight for marginal votes in a future election. In other words, that they could go to the electorate with a 'good' economic record. This hypothesis was supported by the reforms of 1991-1996 led by a minority (unstable) Congress government, and by the last two years of United Front rule. Among the reform achievements of the latter were: (i) tax reform with a reduction in the maximum rate to 30 per cent; (ii) rationalization of the pricing of the important oil sector; (iii) movement, albeit painfully slow, towards privatization of the bloated and inefficient state sector; (iv) deregulation of interest rates such that only rates of 30 day and below are now regulated by the Central Bank; and (v) movement towards capital account convertibility starting with the opening up of gold imports.

*BJP pragmatism wins:* The new (and welcome) mantra of the BJP is pragmatism. Actually, there were several hints in the run-up to the elections that this was to be the new *avatar* of the BJP. In its wide choice of partners, and in its projection of Vajpayee as the PM, the BJP had more than hinted that it was the most capable of all the parties in accurately reading the future. That future consists of: (i) a decreasing influence of politicians; a substantially altered, and more important, role for regional parties; (ii) the emergence of an entirely new coalition arithmetic; (iii) an increasing role for leadership and national leaders; (iv) an increasing role for international consensus and international markets in the formulation of economic policy.

*Politicians — need for change:* Several opinion polls over the last few years have suggested that of all the people in public life, those held in low-

est regard are the politicians and policemen. This breakdown in public authority is a subject for another occasion. At present, it is important for political parties and analysts to draw the right implications. This breakdown suggests that the politician will have to change her appeal in order to win future elections. Out go platitudes of helping the poor, and increasingly, of helping your caste. On the former, the poor have seen the naked reality continue, and on the latter, every party fields a caste-correct candidate in most constituencies. With the rapid development of information and communication technology, the voter is well aware of both his rights and his expectations. Delivery on promises assumes centre-stage as the voter shops around for the best deal.

*Regional parties — a competitive role:* As the voter goes shopping around, it is only natural that he would gravitate towards local politicians. The notion of a national party ruling the roost died with the commanding heights economy. This is a lesson that BJP learnt, but not (to date) the Congress. There is perhaps nothing more suicidal than a party that is both old and arrogant — attributes of GOPI as it clings to the notion that all it needs is charisma to get back to 220+ seat totals.

**A** little noticed development in the recent elections was the phenomenon of two-way fights everywhere. While at the national level, there seemed to be a *pot-pourri* of parties and alliances, the voter reduced them to straight two-party affairs at the constituency (and state) level. As forecast by almost all the opinion and exit polls (no Tamil Nadu surprise here), there was a virtual elimination of the low-brow national parties, i.e. Janata Dal (JD) and the Bahujan Samaj Party (BSP). The trend was complete with

the JD having broken up into state parties in Orissa (BJD) and Bihar (RJD).

This trend towards two-way battles suggests pointers to future coalitions and strategies. The two national parties – BJP and Congress – will have to rethink, with such soul searching being more mandatory for Congress. The emerging reality is not only of two-way fights at the constituency level, but also at the *national* level. This is because on both political and economic issues, there is a broad convergence of views. Today, the CPM is for economic liberalization, the Congress is against corruption, and the Hindutva obsession of the BJP is a relic of a bygone era.

**T**he alliances that will be formed in the next election are likely to involve considerably more homogeneity of views than in the last election. While it would be interesting to note whether Jayalalitha will find any national partners, it will be the case that alliances with other regional parties will have a ring of permanence and a common ideology to them. This, in the case of Congress, will mean a new approach. Alliance with its major ‘enemy’ in West Bengal, and perhaps with Naidu in Andhra, and TMC-DMK in Tamil Nadu will have to be worked out. But on what basis can two major contestants be on the same side?

*The new coalition math:* The following is a ‘suggested arithmetic’ for managing coalitions in the 21st century. The eventual math is not known, but it is unlikely to deviate much from the calculus outlined below. Assume for purposes of illustration that GOPI and Naidu decide to get together for the next election. If fairness and competition are guideposts, then the following seat adjustment formula suggests itself: seats are allocated to each party at some fraction (say three-fourths) of its previous election win-

nings. In these seats, selected on the basis of highest margin of victory first, the ‘other’ party would not set up a candidate. In the other (one-fourth) seats the rule would be ‘Let the best woman win’.

**T**his formula allows for cooperation and competition. The voter will know that there is a basic alliance, a common ideology, a common enemy, and a clear choice. He can either gravitate to the BJP+ camp or the Congress+ camp. Individual politicians will have a greater desire to perform, and to keep margins high. Such high margins will mean a relatively free-run at the time of the next election. Note that this formula works for future elections as well.

The above formula breaks down when an alliance is sought with a partner who gained very few (or zero) seats in the last election – e.g. Congress in U.P. and West Bengal, BJP in Andhra Pradesh, Assam, Kerala, Tamil Nadu and West Bengal. While somewhat different, the principle stays the same. The zero or weak party can suggest that its base level be what it has obtained in the last two, or three, elections. Also, considerations of the number of ministers at the Centre can form a basis of negotiation.

Besides such seat arrangements, the two national parties will also have to come to grips with the issue of ‘leadership’. The BJP needs no pointers in this direction, since it correctly assessed the need of the voter to ‘believe’ in a leader. It offered the likable and non-emotive persona of Vajpayee. What did the Congress do? In its arrogance and/or stupidity, it decided to contest the elections without a leader! Instead, it offered to the public the ‘gift’ of the Congress Working Committee’s divine choice of a leader *after* the election. That this is not ex-post chatter was indicated by

me in an article entitled ‘Has the Congress Lost its Head?’ Economic Times, 6 January 1998. In that article, I pointed out that a no-brainer policy of choosing a leader, any leader, was more desirable than Congress’s present choice of several pretenders. The voters wanted leadership, and collective leadership was an idea that most voters thought went away with the Berlin Wall, if not with Mao and Stalin.

**I**f one is thinking leadership, then one needs to consider the following ‘counter-factuals’. How many people would have voted for the BJP if Vajpayee was *not* its Prime Ministerial candidate? How many people would have voted for the Congress if it did not have a few unimpeachable leaders like Manmohan Singh? The Congress had its own home-grown alternative to Vajpayee. It chose not to market its brightest star, at a time when the electorate wanted little else than an honest and efficient politician. If GOPI has to win the next election, it needs to think and strategize now about how to play and market its major assets – Sonia Gandhi, Manmohan Singh and Pawar?

*The importance of being Tamil Nadu:* This election was marked by the fact that, excluding Tamil Nadu, the analysts, the pundits, opinion polls and exit polls got each part of the elephant right. Some had forecast that BJP+ would actually win in Maharashtra and Rajasthan (Door-darshan exit poll) – two states where they were actually routed. Others (TVI exit poll) were on the money in these two states, and others, but were off by a considerable margin in assessing the BJP+ seats at the national level (208 vs. the actual level of 250). How can this be possible, i.e. get a three-way classification right in almost all states and still be wrong in the aggregate? The

answer lies in Tamil Nadu. Consider the following: TVI exit poll forecast for BJP+ was 208 and that of Doordarshan 252. Excluding Tamil Nadu, TVI forecast was 205 and Doordarshan, 248. The result excluding T.N. — BJP+ got 220 seats. Suddenly, the TVI poll is the more accurate one!

**T**he AIADMK sweep was most unexpected, and this surprise is in large part responsible for the larger-than-life clout that it now has with the central government. If the 'sweep' was expected, it would have been part of the pre-poll calculation and would not have been able to bite, or sting.

How much of a surprise was the AIADMK victory? It is not an exaggeration to state that this victory was the most unexpected in all Indian elections conducted to date, and perhaps even in the world. There have been other surprises. The most recent 'major' surprise was that yielded by the elections in England in 1992 when Major embarrassed the pollsters and won. There was only an 8% unexpected swing, but a magnitude large enough for there to be a national commission of inquiry. In the case of Tamil Nadu 1998 (T.N. 98), the unexpected swing is at a state level, and of a magnitude two and a half times higher — about 20 per cent. What is also peculiar about T.N. 98 is that no one — not one out of a dozen opinion polls, three exit polls including one exclusively T.N. poll, analysts of all hues, politicians of all colors, and journalists of all stripes — count them, not one soul (including the AIADMK supremo, J. Jayalalitha) had forecast that the AIADMK-BJP alliance would get 10 seats, let alone the 30 out of 39 that they eventually obtained.

The most favoured hypothesis about why the whole class failed is that there was a late swing effect due to the Coimbatore bomb blast which occurred on 14 February, with elections

in Tamil Nadu on 16 and 21 February. While appealing, this explanation fails when confronted with the exit poll evidence. All the three exit polls — Doordarshan, TVI and The Hindu — forecast only 3 to 4 seats for AIADMK-BJP. Note that the Hindu poll was a state level exit poll only (hence expected to be fairly accurate), and conducted by one of the most reputable newspapers in India. What happened?

**T**here are two possibilities, and both are exceedingly weak explanations. The exit polls got it wrong because random sampling is a genuine problem for exit polls. (But they got it right everywhere else?) The exit polls, analysts, and pundits got it wrong because the Tamilians collectively lied to whoever asked them a question. Note that all the opinion polls got it right while getting it wrong because of the Coimbatore blast. (For the record, out of about ten constituencies sampled by the Doordarshan and TVI exit polls, in no more than two was the AIADMK-BJP alliance registering even a close victory).

There is one other state with a large surprise — Bihar. Most, if not all analysts, opinion polls, and exit polls were predicting a rout for the RJD-Congress alliance. Instead, the two parties garnered 23 out of the 54 seats. Not as large a surprise as T.N., but close. The explanation for this 'surprise' is that in Bihar, unfair commercial practices (ballot stuffing or the purchase of polling booth officials) is likely to have played a large part. Why this explanation cannot also partly apply to Tamil Nadu is not clear.

# Saffron king, regional knights

MAHESH RANGARAJAN

BY the time the contours of the results of the general elections of 1998 became clear, the United Front was out of the race. The Congress was having teething trouble in making a bid for power. But what sealed the deal for the saffron-led combine was the attitude of two key regional satraps. Even before the elections, J. Jayalalitha had roped together a clutch of smaller parties in Tamil Nadu and entered into a historic electoral pact with the Bharatiya Janata Party. The sweeping victory this alliance won in the southern state tipped the scales for the BJP, not only offsetting its significant setbacks in its erstwhile strongholds in western India but pushing its total tally in the South to 50 out of 132 seats. Since 1991, no party that has held power on a stable basis at the Centre has been

able to do so without a firm base in the South.

But the key change in the post-poll line-up was that of the former convener of the United Front, N. Chandrababu Naidu. Following the maxim that an enemy's enemy is a friend, he pulled away from the Front, adopted a neutral stance and then finally asked his MPs to vote for Vajpayee in the all-important vote of confidence in the Lok Sabha. India now has a BJP-led government but the real question of questions remains unanswered. Has there indeed been a major shift of power away from all-India parties towards regional players?

In one sense the verdict of 1998 was kinder to national level parties than the previous one. In 1996, the Congress and the BJP had polled just

around half the votes cast. That proportion did not change in any significant way this time. But the new alliances forged by these parties, especially those cobbled together by the BJP, made all the difference. The Congress and the Vajpayee-led fronts now polled a total of over two-thirds of the votes cast. The space occupied by the regional party dominated United Front shrank sharply. In particular, the Federal Front, which had as many as 59 seats in the previous House was cut down to just 21 members. This, as much as electoral compulsions of checkmating the Congress, weighed heavily on the leadership of the Telugu Desam party in casting its lot with the BJP. Better to pursue a regionalist agenda within a front led by an all-India party than stay out in the cold. This, in turn, points to another change brought about by the United Front experience: regional parties now want a share of power at the national level, indirectly if necessary and directly if possible. Rallying against the Centre is not enough. They now want to have a go at running the country.

**A**ny discussion of regional parties has to begin by distinguishing between different kinds of parties. First are the formations from smaller states such as those in the North East which would like to be on the right side of any regime in power at the Union government level. Simply put, they need the cash, and in cases of insurgency, the troops. In this sense, small hill states are a force for centralisation. This enabled the breakaway Congress parties in both Manipur and Arunachal Pradesh to link up with the BJP. Next are the rich peasant-led groups in Haryana and Punjab for whom the Congress is a major competitor for votes. Significantly, the Akali Dal in Punjab has a close work-

ing relationship with the BJP despite having a very different view of the Hindu-Sikh relationship that emphasises cultural distinctions as opposed to being part of a larger Hindu community. In Haryana, both the Bansi Lal and Chauthala-led groups are now with the saffron combine. But the really significant regional parties are those that exist in the larger states of the Union. It is at this level that there was a major change in 1998.

**R**egional parties were able to play a central role in the making of the Deve Gowda government in 1996 in a very specific situation, where the Congress had lost the mandate to rule and the BJP appeared to be a threat to state level autonomy. It was possible for them to rely on Congress support to gain control of the Centre but virtually suicidal to contemplate extending support to it. The BJP also gained due to the inability of the United Front to retain a distinct identity in the aftermath of the verdict. Once the question became one of either backing the Congress or joining hands with it, it was going to be very difficult if not impossible to retain the regional parties in the old battle formation. *Hindutva* stepped in to fill the breach in the wall.

Of course, not all regional formations have a stable history or a long-term basis. Even the stronger ones may have to pay a heavy price for the tactical choices they have now made. Lok Shakthi in Karnataka won only three out of 28 seats. It also cohabits with a strong local unit of the BJP which has now established a significant presence in all the three regions of the state. In Orissa, the saffron combine has made major headway in recruiting support among the tribals and the OBCs in the western districts, and may in the medium term overwhelm the Biju Janata Dal. But there are other, stronger players as well in

the saffron camp. Mamata Banerjee and her new found friends do need each other but the nature of her support base is such that it includes large numbers of the very minorities that the BJP may well target as 'infiltrators' in the future.

*The voice of Chennai:* If Bengal is a region with a strong sense of identity, Chennai is the only place in India other than Srinagar where the radio announcers do not say 'Akashvani'. For decades, they have said 'Chennai valu nilayam' or the 'Voice of Chennai'. It is here that the bonus seats for the BJP and its allies may turn out to be a mixed blessing. The lady is clearly not for turning. In the first round of the drama for choosing a new PM, she deftly reminded her ally how vital her party was by delaying the submission of a letter of support to the President. Next, she ensured that as many as eight ministers were from Tamil Nadu in the first round of ministry formation. Her own party managed to bag key posts in economic ministries including finance. Her priorities are clearly specific to her own party and to her own state: the dismissal of the DMK government is a must.

**T**his itself points to how Janus-faced regionalism can be. The AIADMK manifesto of 1998 is perhaps the most explicitly federalist it has ever been in tone or content. It calls for 'autonomy for each state and a federation of states at the Centre.' But in her attack on the DMK, Jayalalitha is willing to play a clearly pro-Centre role, asking for the use of powers under Article 356. The state government, in turn, is put on the defensive on the issue of the rise of terrorism and communal violence in the state. The Union government is playing a cat and mouse game. Not a week passes by without contradictory statements and demands on the matter of dismissal. Again, a regional force, for

its own reasons favours an interventionist federal regime.

**T**he pressures on her party's inner circle were no less than those playing on the minds of the BJP. The party has been out of power for nearly two years. It managed to wrest victory by forging alliances with smaller groups, some of which have been its opponents and adversaries in the recent past. The Patalli Makkal Kakshi with its social base among the Vanniyars of northern Tamil Nadu strikes at the very roots of the claims of the two larger Dravidian parties to speak for the Mandal classes in the state. The MDMK is led by an ambitious and young leader, V. Gopalsamy, with a mind and plans of his own which may well bring him into conflict with the reigning deity of the AIADMK in the future.

What keeps them together is a common dislike of Karunanidhi. If one adds up the votes, the DMK-led combine polled only four per cent less votes than the Jayalalitha led bandwagon. At the moment, all is well in the latter's camp but should an Assembly election come up before schedule, she will have a hard time working out seat-sharing arrangements with her allies. Put together the Lok-Sabha results in the state and the smaller allies won in over 45 Assembly segments. They are bound to demand their share of the cake from the AIADMK in the next Assembly polls, opening a Pandora's box.

It is now commonplace to point to problems that exist at the national level, of the inability of larger entities to impose their will and of the inevitability of smaller players exercising enormous clout. This fragmenting of the polity also exists at a regional level. In Tamil Nadu, the rise of a new Dalit party ensured the rout of the DMK-TMC candidates in at least two

constituencies, Sivakasi and Tenkasi. This points to a more complex situation on the ground than existed over the past three decades. The degree of self-assertion among classes, communities and castes is making various parties and leaders re-assess their strategies. In an increasingly fluid situation, it will become much more difficult to craft stable social alliances.

*The view from Banjara Hills:* But the man from Hyderabad took a different view of things. Chandrababu Naidu fought the elections on an anti-Congress and anti-BJP platform. His main refrain was simple: to work for Andhra Pradesh he needed more than the 17 MPs he had won the last time round. For a party in power since 1994, the Telugu Desam did creditably. Along with its allies, it managed to get about as many votes as the Congress party.

**B**ut there was a major shift in terms of where Naidu got his MPs. Since its founding in 1983, it has been a party with its strongest base in the coastal districts, but here it won only a single seat. Instead, it was in Telengana, which has a sizable Muslim presence and is traditionally a Congress bastion, that he struck gold. The real gains in the state were made by the BJP which not only won four seats but polled over 18 per cent of the votes. Interestingly, the Kapus and the Kammas, both among the support base of the TDP, showed clear inclinations of moving towards the saffron party.

What played on Naidu's mind was the possibility of having to contend with an unfriendly regime at the Centre. Much of the last three years has been spent rolling back on the very promises that swept N.T. Rama Rao back to power. The rice subsidy has been cut and prohibition lifted. By official admission over four out of five

cotton farmers lack access to institutional credit, making them highly vulnerable to economic adversity as was the case with the spate of suicides in Telengana. All this needs money, and the coffers in the state are almost empty. It is also possible that the very persistence of the Congress on the ground makes an accord with the BJP a distinct possibility.

**T**he problems with such a course of action are no less complicated than those faced by J. Jayalalitha. Until now the Telugu Desam has had a remarkably good equation with Muslims. This was partly due to its creditable record in handling instances of communal violence. It has also been backed up by signs of serious attention to educational and economic problems affecting Muslim communities in Andhra Pradesh. But a resurgent BJP is building on its old bases and creating new nuclei for future expansion. It is also not clear how the state's increasingly vocal Dalits will take to a close linkage between the regional forces and the saffron party. Though the new course has been defended in the name of 'political compulsions' there is no doubt the risks are as high as the potential rewards.

*Fragmentation or realignment?* Since the elections of 1989 no party has won a clear majority to rule the country. Since 1990 there have been at least two major platforms claiming to be the focus for a realignment of forces. One was the Mandal platform, centred on reservations but extending well beyond to changing the social composition of the political class itself. The other was the Mandir agenda which focuses on the need to unify all Hindus and to transform the idiom of Indian politics in line with 'cultural nationalism'. There has been a third platform of federalism. Added to the issues of affirmative action (that

include Dalit and Adivasi concerns) or of redefining nationhood (the saffron way or in other ways) was the question of centre-state relations. In turn, this is only part of a wider rubric of problems such as how the various regions of the country are to relate to the Union and to one another. Since 1990, whoever ruled India had to fashion a response to these mutually contradictory agendas. Even those out of power had to dovetail their strategies in the face of new realities.

**E**ach agenda can claim at least partial victory. The Mandal process has now set in so deeply in the polity and in society that it can only be slowed down but not reversed. In Bihar, both the Congress and the BJP had to ally with the children of the Mandal project to gain victory at the hustings. No doubt, the former is a pale shadow of its former self while the latter is a growing force, but the BJP too needs the support of a Nitish Kumar. Similarly, the absence of the priestly classes in the senior line-up of the Congress at the national level is surely a significant marker of social change.

The BJP has been much slower to change at its apex but at the state level, the ascendancy of a Kalyan Singh or an Uma Bharati points to a churning in its ranks. Here, the limitations of the Mandalisation process as it has worked out cannot be lost sight of. The change in the social composition of the political class was to have been only one part of a wider set of social changes. But at least in northern India, the splintering of these groups and their own rifts with the Dalits have made a hegemonic project a difficult enterprise. The old order has gone but the new is yet to fully replace it.

So too with Mandir. The BJP has indeed emerged as a formidable force polling one-fifth of the popular vote

in 1991 and 1996 and over one in four votes cast in India in 1998. It has also broken out of the post-Ayodhya isolation that had been its bane until 1996. Its new allies ensure that as an ideological formation it can proceed ahead with its cultural project in parts of the country and among social segments that had earlier been downright hostile to it. But to govern the country with the help of allies has required it to limit its sights for now. Its allies remain a problem, especially those whose vision of linguistic regions incorporates the minorities in a manner very different from that of political Hindutva. And in Uttar Pradesh the party, despite major gains, still remains apprehensive of a possible tie-up of the Dalit and Mandalite parties. Power itself is a problem for it threatens to wipe away the claim of being a party with a difference.

**R**egionalism in turn has won ground. No one seriously questions the nationalist credentials of regional parties anymore. Even a BJP chief minister like Bhairon Singh Shekhawat wants a larger share of the central tax revenues than any Union government is willing to contemplate. State parties have the power to make or even unmake Union governments. But the story does not go further than that. The financial and constitutional system is still geared towards a strong Centre. A shift of fortunes, and the BJP as well as the Congress would pin their hopes on such a shift, may put the Union on a stronger footing again. It is also clear that regional parties have yet to articulate a vision of a different kind of India the way the Congress did with a centralized polity as far back as 1928 in the Nehru Report.

In 1998, the three-way division of the polity showed signs of slipping into a two-way mould. But it is too early yet to speak of a two party sys-

tem. The fact is that Congress shows little signs of being able to incorporate, as it once did, the spectrum of interest groups, classes and communities of this vast country. Even a secular platform will require it to be far more accommodative of other political groups and of new social classes.

**T**he BJP hopes to use the unique combination of its alliance system and of its control of state power to replace the Congress as the fulcrum of the political system. But this will call for governance of a sort that is easy to contemplate but difficult to achieve. It will also have to smooth over conflicts with some of its own partners, which are likely to be accentuated by the exercise of power. The United Front, though now over in the sense of being a stable entity, will still play a role, if only a supportive one, in the continuing realignment of forces.

Equally important are assertive groups like the Dalits, one-fourth of whom nation-wide voted for a party other than the three major formations. Increasingly, as the right to vote and the power to exercise it devolve downward in society, these actors will come into play ever more prominently than in the past.

Regional forces are playing a larger role than ever before. But their powers are not limitless. A determined national party can and will try to divide and chip away at their bases. In turn, the political churning at the grassroots can undermine the satraps in their home bases. In the new context of post-1990 India, the genies are out of the bottle. Neither the saffron king nor the regional knights can rest easy. After all, in the past the threat to the former often came as much from the satraps as from the enemy outside the ramparts. The future, for all its promise, is an uncertain and unpredictable one.

# Through the looking glass, darkly...

PRAFUL BIDWAI

PERHAPS the most remarkable fact about the 1998 elections is that they produced a government led by a political current which had at best a distant relationship with the freedom movement – indeed, which in some ways questioned the fundamentals of the project which that movement had set itself. This constitutes not a generational shift, but a political fire-break, a change that is far more profound than the rise of the Janata Party to power in 1977 in place of the Indian National Congress which had been India's 'natural' party of government for the 30 years since Independence.

This political shift is not only a marker in the long process of historic decline of the Congress. It also reflects changes, both in the character of the Indian middle class elite and in the larger society, confirming and consolidating some of the major trends that have reshaped this polity, regionalisation being one of the most important. And yet, the shift does not represent a clear, decisive, victory for the Bharatiya Janata Party, even less for its sectarian, ultra-chauvinist, exclusivist ideology of *Hindutva*. Nor does it indicate its 'normalisation' as a mainstream political party evolving towards moderation and consensual politics. The Indian political system remains multipolar, coalitional, marked by immense complexity, divergence and heterogeneity. Under several contradictory processes and drives, and amidst continuing social

turmoil, it faces an uncertain future. A certain kind of instability, reflected in four hung Parliaments in a row, may remain endemic to it for some time.

To take a look at the broad national trends, the Congress has managed to retain its 1996 tally of seats, although its vote has fallen by more than three percentage points. It can claim that its decline may have been arrested, at least for the time being (although a disaggregated regional analysis reveals a more uneven, complicated picture). The BJP has gained five percentage points in votes, but its seat gain has been more modest. The United Front has taken a bad beating, although the left has not done (relatively speaking) too badly.

Beyond this, there was no wave, no overwhelming national trend in the elections. The voter made his/her decision on a range of considerations, many of them regional or state specific. It is impossible to analyze the results without going into state-specific factors. The reasons why the BJP lost badly in Maharashtra, more or less stagnated in Uttar Pradesh, and did well in Karnataka are entirely different, being rooted in caste, class and community configurations and developments unique to each situation. Nor do the outcomes in Tamil Nadu and Orissa derive from a national level trend.

Over two-thirds of the BJP-led front's gains have come from its regional allies. Indeed, a sizable pro-

portion of the BJP's own gains outside of its 'traditional' bases, e.g. in Orissa, Andhra, Tamil Nadu and Karnataka, came through alliances with regional parties. The real movers and shakers, and gainers, of the 1998 elections were the regional parties.

This strongly regional character of the vote is not new. Regionalisation has been in evidence for over a decade. Between 1984 and 1996, regional parties doubled their share of votes and seats in the Lok Sabha at the expense of national parties. The trend is reflected in the birth and expansion of the Telugu Desam and Asom Gana Parishad in the eighties, and the Samajwadi and Samata parties and Tamil Maanila Congress in the nineties. Even the latest versions, such as Trinamul Congress and Haryana Lok Dal (Chautala) are essentially regional in character.

**T**he 8% rise in the vote of the BJP plus allies derives from this phenomenon. It would therefore be wrong to oversimplify the present situation of flux and uncertainty and postulate trends towards certainty, e.g. a cyclical swing away from a regional party-dominated system to a 'national' system. It would be equally wrong to counterpoise regionalisation to the growth of influence of national parties; this is not a zero sum game.

This does not, of course, mean that the BJP has not made significant political gains in 1998 in relation to 1996. It has. For one, it has to an appreciable extent overcome the 'untouchability' or 'pariah' factor. In 1996, no one other than its pre-election allies, the Shiv Sena and the Akali Dal, was prepared to join hands with it. Today, it has the nominal, if opportunist, support of 20-odd parties, many of them non-communal, with little affinity for Hindu sectarian politics. This gain came at a very high cost: opportunist

compromises, erosion of coherence and credibility and, to an extent, the likely shrinking of the BJP's own social base. But its reality cannot be denied.

For another, the BJP has broken out of the confines of its 'heartland' – the North and the West – and acquired a presence in all the states of the South barring Kerala, spread to the East and into the Jammu region and, not least, even opened its account in the North East, e.g., surprisingly in Meghalaya. True, its presence in some states, e.g. Tamil Nadu and West Bengal, remains contingent upon its regional allies. But it is a significant gain nevertheless.

And for a third, the BJP has managed to project Atal Behari Vajpayee – a weak, communally compromised leader of modest accomplishments and no particular vision – as some kind of elder statesman and liberal, the most acceptable-to-the-middle-class face of the *Sangh Parivar*, with whom many petty bourgeois layers can identify and bond as 'one of us', a person who displays some of the superficial habits and forms of tolerance not usually associated with the more austere, humourless, hard-core, fanatical RSS types.

**B**ut it would be wrong to view the BJP's greater acceptance among the middle class and its vote gain as an endorsement of the Hindutva ideology. Although the BJP election manifesto – undoubtedly the longest, most considered, if also the most objectionable manifesto of all parties – was an elaboration of this ideology, the party's campaign had little to do with it except in a few highly charged communalised pockets. People appear to have voted as they did for the BJP and its allies on account of 'secular' considerations such as misgovernance and lack of accountability of incumbents, or chang-

ing caste equations and the collapse of centrist parties – not because of Hindutva.

The BJP's own allies, barring the Shiv Sena, refused to endorse its Ayodhya, Article 370 and Uniform Civil Code demands. They detached these issues from their campaigns, or they openly criticized the BJP's stand. The hastily put together post-election National Agenda for Governance too skips these issues, although it repeats the BJP manifesto's formulations on the nuclear weapons issue and on the question of a 'review' of the Constitution. Thus, it is ludicrous to talk of a new 'Hindu awakening' or 'self-assertion' underlying the BJP's 179 seat tally. The BJP is fantasizing if it thinks that a largely negative vote, in which divisions among its opponents played a huge role, is an endorsement of Hindutva.

**T**here is no evidence that the anti-incumbency factor, where it was present, operated differently for the BJP than for its opponents. For instance, the electorate was rather soft on the Left Front in Kerala and West Bengal and the TDP in Andhra, but delivered a blistering rebuke to the BJP-Shiv Sena in Maharashtra and Rajasthan in straight contests. Indeed, the BJP-Sena reversal in Maharashtra was in some ways more dramatic than the Tamil Nadu setback to the DMK-TMC.

Maharashtra and, to an lesser extent, Rajasthan, strongly confirm a major trend: the BJP in power tends to get quickly discredited; it cannot guarantee state-level stability. Gujarat, U.P., M.P., Delhi, Haryana and Punjab have repeatedly demonstrated this in the past. The BJP may win power in states primarily as a result of the Congress's decline. But it can rarely retain power for any length of time. Corruption, casteism and inability to carry plebeian layers of the population

with it often lead to the BJP's rapid isolation. Wherever the BJP—or its former *ayatar*, Jana Sangh — has wielded power, it has been no less venal and open to criminal influences than the Congress. And it has rarely proved stable or durable. Compare this with the left in West Bengal, which is the sole political force in India to have been returned to power in six consecutive elections in a major state—an unmatched example of stability.

**M**any commentators have been tempted to see in the post-election scenario signs of emergence of a two-party system, centred on the Congress and the BJP. This is largely an illusion. The two together have won only 320 seats; the rest (219, or two-fifths) have gone to other, mainly regional, parties. This latter is too large a proportion to permit easy generalization and oversimplification of India's highly, uniquely complex, political evolution. The BJP can weakly claim to have been a steadily growing force over the past decade or so, although its overall vote suffered a slight decline from 21 to 20 percent between 1991 and 1996. However, despite its electoral gains, its strength today is much less than the Congress's 193 seats in 1991, when that party was widely recognized as being on a downhill slope. The BJP is very, very far away from emerging as the pivot of Indian politics or, as it would crave to claim, an inheritor of the Congress tradition. It is a party on the extremity of our political spectrum, with a base whose narrowness bears no comparison with that of the Congress.

On the other hand, the regionalisation process has advanced. The political weight and bargaining power of regional groupings has improved. What we now have is *not* a two party system with a number of satellites, but a complex multipolar system, with

diverse tendencies and groupings contending within terms defined by non-communal concerns and issues. The UF has split twice in two years, and one of its main—originally its biggest—components, the Janata Dal, has collapsed. But there still exists the core of a third pole around the Left Front and regional parties, including the Samajwadi Party. There are also independent, if weak, forces such as the Bahujan Samaj and Republican parties which cannot be written off. With a shift in political equations, such a pole could rapidly grow. The fact that the Samata, Biju Janata Dal, AIADMK and the Lok Shakti have a purely tactical alliance with the BJP and could easily desert it, cannot be underrated.

**N**or has the BJP moved in the direction of 'normalizing' or 'Congressising' itself, except in the negative sense of becoming brazenly unscrupulous in the pursuit of power, and being highly corrupt and criminalised. The other sense of the term refers to the Congress's earlier role, as a national umbrella party based on a relatively broad social coalition comprising a scattering of the upper castes and the 'core minorities' (Muslims, Dalits and Adivasis), which attempted conciliation between competing interests and agendas within a co-optationist framework defined by the Nehruvian paradigm.

In this sense, the BJP has not even begun to 'Congressise' itself. It remains extremely narrowly based, both socially and geographically. Unlike the centrist Congress, the BJP is a right-wing, hierarchical, elitist party. The Congress has played around with identities—caste, religion, language—but this was not central to its strategy of political mobilization. The BJP is obsessed with identity politics and dependent on it. It can never move out of the narrow confines of retrograde

Hindu-supremacism. Its politics is deeply divisive, and rooted in exclusion and hatred. It can never be genuinely inclusive and consensual.

**O**f course, the BJP has acquired a great deal of resilience, and has learned to speak in many voices and many tongues. It has exploited its timely tactical regional alliances to great advantage. But its Hindutva core remains intact, which defines its long-term agenda. The BJP is not about to transform itself. It remains a grave threat to democracy, pluralism and secularism.

The BJP could well grow through successful alliance-making, and later finessing, of its allies. It could consolidate its upper caste votes in the South and the East, as it did in the North. But it could also equally plausibly decline through an erosion of its popular, especially OBC, vote, and through sectarian policies that repel its 'middle ground' supporters who are not hard-core communalists. The BJP is a party whose future no longer lies in its own hands: it lies with the opponents, and will be determined by the way they choose to exercise their options.

The BJP remains in thrall of the RSS. The RSS—its mentor, ideological master, organizational gatekeeper, and the final arbiter of its fate—is not about to mutate into a normal, democratic organization accountable to some public agency. It will remain a semi-secret society or cabal. The entire process of formation of the Vajpayee government clearly demonstrated the overwhelming power of the RSS over the BJP. The RSS, by its own admission, was involved in 'consultations' over the allotment of key portfolios to BJP ministers. It exercised its veto against Cabinet berths for Jaswant Singh—whose name was taken off the list hours before the March 19 swearing in—and Pramod

Mahajan, who deserted the Advani faction for the Vajpayee group a year ago. (Vajpayee was acutely embarrassed, but helpless.)

**T**he cornering of key portfolios such as human resource development, information and broadcasting, and home by BJP-RSS hardliners is an indication of the likely moves of the Sangh in the coming months. Through these pivotal positions, the RSS is certain to appoint its men and women to important posts in ministries and specialized institutions such as the Indian Councils of Social Science and Historical Research, the Sahitya and Sangeet Natak Akademis, various cultural bodies, the Archaeological Survey of India, committees on textbooks and syllabi, Doordarshan, All India Radio, and Prasar Bharati. It will also use its influence to secure favourable appointments for its nominees in the privately owned media.

The RSS is likely to mount pressure in favour of its long-term super-communal agenda on the BJP from outside the government through the VHP, Bajrang Dal, Rashtriya Sevika Sangh and other Sangh-controlled organizations. The VHP-Dal's stipulation of a two year deadline for the construction of a temple at Ayodhya, and the announcement of a martial arts-oriented training programme for cadres to physically expel 'foreigners' and 'infiltrators'—which will no doubt be facilitated by Advani's plan to issue identity cards to all *bonafide* citizens, and thus, polarize the religious divide—already herald the direction in which the Sangh Parivar will move.

If that is the picture at the right end of the spectrum, things are not very reassuring in the centre-left portion either. The elections' biggest loser was the United Front, which saw its Lok Sabha strength decrease from 179 to just 96. The UF's regional com-

position got further skewed: 55% of its MPs now come from just two states (West Bengal and Uttar Pradesh). The Janata Dal, at one time the Front's fulcrum, first split and now has all but collapsed. The Asom Gana Parishad scored a duck. Most important, the TDP whose leader was the Front's convenor, split away and supported the BJP in the confidence vote. It may well join hands with the BJP in some form or other.

What is less noticed, but is nevertheless important, is the shrinking of the left—the United Front's political midwife, and its ideologically most cogent component, which lends it much *gravitas* and weight. Of the Front's four left parties—the CPI(M), CPI, Revolutionary Socialist Party and Forward Block—the largest two suffered a significant loss of votes. The CPI(M)'s aggregate vote percentage decreased from 6.12 in 1996 to 5.18, and the CPI's from 1.97 to just 1.75, i.e. less than the Samata Party's 1.77, or the Trinamul Congress's 2.43. Today, the CPI(M)'s national vote is not much larger than the Bahujan Samaj Party's at 4.68%.

**T** rue, the communist parties (CPS) political weight cannot be measured by mere votes, and they are qualitatively different in character and impact from regional parties. But their decline is undeniable. With these elections, the voter has delivered a loud warning to the left: it had better shape up, or it could go into long-term decline, and become irrelevant.

The left no longer has any Lok Sabha representation from the Hindi-speaking states. This has only happened once before in 40 years. And that was in the 1977 'wave' election. The CPI(M), with 32 MPs, is now confined to West Bengal, Kerala and Tripura alone. And the CPI's strength in the Lok Sabha has been reduced to

a single-digit number, nine, in place of 12 in 1996. This is not just because the left did not make successful tactical alliances. It is because of an erosion of its social base.

For the first time since 1977, the CPI and the CPI(M) failed to win a single seat from Bihar, which used to return five to nine communist MPs. In terms of votes polled, the two CPS received their worst drubbing since 1957. From 10% in 1991, their vote is down to just four. The slack was not made up by the CPI(M)-Liberation group, Bihar's fastest growing left-wing force, which won only 2% of the vote.

**I**n West Bengal, the left retained its 33 seats, but suffered a two percentage point fall in votes. According to provisional figures, the aggregate vote for the left in West Bengal, at 47%, was only marginally higher than the Trinamul-BJP's 30% and the Congress's 16.2% added together. To put it more starkly, the *difference* in the left and opposition votes was *less than two lakhs* in the state as a whole. The left's vote has declined in 32 of 42 constituencies, in 14 of them by between 3 and 6%. The gap in urban and rural votes (the latter preferring the left) has narrowed too.

In Andhra, where there are between 70,000 and 120,000 left votes in each constituency, and where the CPS once had solid bases, the CPI won just two seats and the CPI(M) lost all three contests it fought. In Tamil Nadu too, the CPS performed poorly compared to 1996. In Kerala, a pro-Congress shift in votes reduced the left's victory margins. The left also failed to attract sizable votes in any industrial centres, where it commands some influence among the working class.

More generally, the left is less and less able to take advantage of the

opportunities offered by Indian social and economic realities, including persistent mass-scale poverty, deprivation and unemployment, growing politicization and awareness of rights among oppressed people, and rising popular disgust with corruption and administrative breakdown, to which it has often provided an alternative. Its appeal to youth, once strong thanks to the idealism, personal courage and sincerity of left leaders, has shrunk. It is not attracting new cadres from among workers and students. The left's traditional social base is narrowing, and new support – among landless agricultural workers in some areas – is not replenishing the loss.

**T**he left has been stagnating or slowly declining for the past decade. It could now soon go into a tailspin, as the CPs have done in many countries after the collapse of the Soviet Union. The Indian CPs are among the handful of such parties – with the CPs in South Africa, Brazil, Nepal, the Philippines, and to an extent in France and Italy – which have bucked the trend. The Indian CPs experienced very little of the demoralization and despondency that their counterparts have suffered elsewhere in the world as a result of the collapse of the 'actually existing socialisms' with which they tended to be identified.

This is no doubt a remarkable achievement in a period marked by the right's worldwide ascendancy. It is largely explained by the high stature enjoyed by the Indian left's leaders, the principled nature of its politics and its relatively superior record of governance. But this capital is fast depleting. In West Bengal, the left may have become a victim of the rising aspirations it has itself generated through its successful record of governance.

The CPs can try to rescue this situation by rethinking their strategies

and making a major thrust towards mass mobilization on real issues, especially in the Hindi-speaking states, as well as cadre-recruitment and education. This could be particularly effective if it is accompanied by moves towards merger and unification of the left. But the CPs will have to try hard to keep their heads above the water – in spite of the fact that their agenda or programmes retain a large measure of relevance for the plebeian layers of the Indian population.

**A**lthough the political-ideological space for a third force, viz. a true alternative to the BJP and the Congress, has by no means vanished or shrunk to minuscule proportions in spite of the setback to the UF, it is hard to see how it will acquire organized expression unless the left's weight – and its sheer numbers – grow and it is able to exercise greater leverage on ideologically weak but politically important allies such as the SP. Successful alliance building, as in Maharashtra, where the BJP-Sena could be electorally punished, is, of course, still possible in many states. This can help stop the BJP's forward march. But for a more durable and coherent Third Front to emerge, the left would have to become more powerful and active.

Where does the Congress stand after the 1998 elections? Its fate continues to be uncertain. Nationally, the party has won just about one-half of one per cent more votes than the BJP, but its success rate (proportion of winning to contesting candidates) is far lower (32%) than the BJP's 47. Its performance is highly uneven and erratic in many states, and abysmal in Uttar Pradesh (where it has been wiped out) and poor in Bihar (where its base continues to shrink). But the Congress has been able to escape utter marginalisation and collapse. Indeed, the

entry of Sonia Gandhi, and her assumption of its presidency, has given it new hope, and certainly put a lid on more extreme forms of internal factionalism.

However, this has been achieved at an enormous cost. To start with, it is far from clear that Sonia Gandhi's election campaign won the Congress very many votes or seats. A quick analysis suggests that it made little difference in constituencies, e.g. in U.P., where the party was already in poor shape. It may have, again, only contributed marginally in Maharashtra, where the Congress was anyway better placed to improve on its 1996 performance even before her decision to campaign – thanks to alliances with the Republican Party and the SP.

**T**here are few signs that Sonia Gandhi understands the intricacies of politics, or knows her party particularly well, well enough to be its strategist. Her entry – and the crude manner in which Sitaram Kesri was thrown out of the top Congress job almost overnight – has strengthened the worst forms of sycophancy and servility in an already effete party. This will act as a dampener and an obstacle just when the Congress is in dire need of organizational decentralization and political radicalization. The party will be tempted to put on hold any serious effort to evaluate why it has been going downhill for so long, how its right-wing economic policies, its corrupt ways, and its repeated compromises with communalism have caused the loss of much of its social base, and what could be done to stem and reverse this process.

The manner in which Sonia Gandhi was 'elected' chairperson of the Congress Parliamentary Party when she is not a member of either House of Parliament, nor intends to

be, speaks poorly of both its lack of respect for the principle of accountability of leaders, and of substitutionism: substitute a supposedly charismatic leader for real politics and programmes, and hope it will do the trick!

**T**he Congress continues to adhere to its post-1991 neo-liberal economic policy orientation. Indeed, with Manmohan Singh emerging more powerful and becoming the party's spokesman on economic affairs, this seems to have been strengthened. Unless changed, this orientation could prolong the Congress's alienation from the bulk of the population and isolate it further from the poor in a period of economic uncertainty and slowdown.

The Congress is yet to take a convincing stand on its involvement in, and responsibility for, the steady trend over 20-years favouring the growth of communal, especially Hindu-communal, forces; the increasingly partisan role of the police and bureaucracy in riot after communal riot; and its workers' own active participation, for instance, in the anti-Sikh carnage of 1984. It has a great deal to answer for as regards the Ayodhya movement and its horrible aftermath of January 1993, especially in Bombay – when its own governments were in power in the state and at the Centre.

The Congress's 'apology' for the Babri demolition sounds less than sincere because it comes too late and is unaccompanied by a policy shift or a real tangible change at the practical level. For instance, there has been no active anti-communal mobilization by the Congress anywhere. Even the principal ideological attack on the BJP in the first post-election session of Parliament was led less by the Congress than by the left, the SP and the

BSP. Sonia Gandhi's offer of 'constructive' cooperation to Vajpayee has been seen as a signal that Congress MPs should go soft on the BJP. Gandhi has shown no inclination to refurbish the Congress's image, let alone the reality, as a party that is incorrigibly corrupt, venal and manipulative, and which is too decadent to be able to practise a people-oriented politics. The stigma of the Bofors-scandal remains a liability for the Congress, making it vulnerable to manipulation, even blackmail.

**T**hat apart, the Congress seems rather poorly placed to relate to some of the most important processes that have been reshaping Indian society and politics over the past decade and more. These include the politicization of several plebeian layers who were for long excluded from politics and effectively disenfranchised; the 'forward march of the Backwards'; the transformation of caste identities from ritual hierarchical status to political communities, especially in the Gangetic plains; the self-assertion of the Dalits; movement towards secularization and modernization among the Muslims; and at the same time, the consolidation of an upwardly mobile consumerist middle class elite that is increasingly turning rightwards and large sections of which are becoming communalised, even as the economy is realigned and restructured to favour private enterprise and global capital.

Unless the Congress can relate to the positive components of these processes and radicalize itself ideologically, it will not be able to build a programmatic basis on which to survive and grow. It is far from clear that the Congress leadership is aware of the need for such a programmatic base. In some ways, unlike Narasimha Rao, Sitaram Kesri, for all his faults and weaknesses, could at least read

the writing on the wall on the Mandal issue, as well as on communalism.

Kesri's successor remains an unknown entity. Leaders close to her, and who matter in the party, do not seem inclined to undertake the kind of frank heart-searching and critical analysis that is urgently needed to understand why the party is in a mess, and how it might get out of it. The hold over the party of power-brokers and coteries remains strong. The appointment of such staid, unimaginative, or compromised figures such as Sharad Pawar, Manmohan Singh and P.A. Sangma to a 'task force' to 'rejuvenate' the Congress does not inspire confidence that the party's leaders are serious about learning lessons from the past and charting out a bold new path. It is far from clear that they will resist the temptation to substitute tired slogans for real, imaginative, pro-people policies. But it is clear that unless they do so, the Congress's decline could well become terminal.

**T**he BJP, despite its gains, seems as yet unable to fill the vacuum the Congress has left. Nor is the bruised Third Front poised to make a serious bid to do so. Thus, the current political impasse, in which the BJP has an edge – and holds half the reins of central power – seems likely to continue for some time – unless the parties of the left and the centre transform themselves and translate the aspirations and concerns of their social base into well thought out programmes and policies. Only then can the actual centre of gravity of Indian politics – which is determined by the balance of political forces at a given point of time – be realigned with or made to coincide with its 'natural' centre, which lies on the left. Until and unless that happens, instability will remain endemic to Indian politics.

# Reaching out

RADHIKA RAMASESHAN

FROM the stridency of anti-upper caste slogans like *Tilak, Tarazu, aur Talwar/Inko maaro jutha chaar* (expressing the collective wrath of the backward castes and Dalits against the Brahmins, symbolised by the 'tilak' caste mark, and the Banias and Thakurs with the weighing scales and sword emblematising their traditional occupations) to the importance of holding *bhai-chaara* (brotherhood) rallies, it has been a long, tumultuous and uneven journey across the country's politicalscape for the Bahujan Samaj Party (BSP). After a series of successes in the elections held after 1993 – when the BSP's partnership with the Samajwadi Party (SP) in Uttar Pradesh saw it in power for the first time – the BSP seems to have hit an all-time low in the 1998 Lok Sabha polls. Its group of Lok Sabha MPs has come down from 11 to just five.

The BSP lost all the seats it contested in Madhya Pradesh and Punjab. In U.P. it suffered a net loss of two seats, while in Haryana it managed to

gain one – thanks primarily to the alliance with the Om Prakash Chautala led Haryana Lok Dal.

But the BSP's vote share increased marginally even in states like Punjab where it contested alone. In Haryana its vote percentage was enhanced from 6.59 in 1996 to 7.68 and in Madhya Pradesh from 8.18 to 8.80. In Punjab it went up from 9.35 in 1996, when the BSP was tied up with the Akali Dal, to 12.87 despite the loss of an ally. In U.P. it increased negligibly from 20.61 to 20.76. In Jammu and Kashmir it decreased from 5.99 to 5.05. Overall its share remained more or less stagnant despite the loss of seats.

Some random inferences can be drawn from the bare-boned statistics. First, unlike in U.P., where the BSP's role has been critical in forming the coalition governments since 1993, it has not assumed that kind of leverage at the Centre, despite its leader Kanshi Ram's statements to the contrary. Kanshi Ram's refrain in the recent

elections was, 'I will be the king-maker, if not the king.' Both the roles have eluded him so far. The safest conclusion is that the BSP has been beaten to the game by more adept regional parties and formations.

Second, on its own it is unlikely to wield the degree of clout it has tried to bargain for. In U.P., for instance, the BSP's 20.76 combined with its erstwhile ally the SP's 28.67, makes for a spectacular 49.43 of the total vote percentage. It is almost 13% more than the 36.52% polled by the BJP which with its 58 seats continues to be the front-runner in the state.

**N**ot for nothing has this attractive combined vote percentage induced regretting with wistfulness among the second-rung leaders of the SP and BSP, who sounded as though they were putting up with the shenanigans of their egotistical leaders under duress. 'The SP-BSP has the potential to emerge as the country's first force,' remarked an aide of Kanshi Ram, while a SP general secretary's conclusion was, 'Had Kanshi Ram and Mulayam Singh Yadav (the SP supremo) come together, the former could have ruled over the country and the latter over U.P.' In Madhya Pradesh, its vote percentage added to the Congress' share of 39.27 produces a difference of 2.33 against the BJP's 45.75. It would have certainly taken the Congress' seat tally up by leaps and bounds.

Leaving aside prime ministerial aspirations, the electoral journey alone seems to have minimized Kanshi Ram's role in catalyzing a third front as an alternative to the BJP and Congress. The poor showing in the Lok Sabha polls has forced the BSP's leadership to lie low for the present. Unlike the SP—a comparison is inevitable since the two parties form the main opposition poles in U.P. —

which has already engaged its cadres in organizational revamping and tentative agitational programmes, the BSP is groping for a sense of direction. Why?

**T**he main reason is that the BSP has never made an impact as an opposition party — a role it was consigned to for years in the states where it has a base. Power is the key to the party's political and social impact. A clue to this phenomenon is to be sought in the presence of the Dalits in the bureaucracy, police and the provincial civil service.

There are as many Dalits (150 to be precise) in the U.P. bureaucracy as Brahmins. The Dalits have upstaged the Kayasthas who once controlled the bureaucracy. But as long as U.P. was ruled by a Brahmin chief minister, the Dalit officials were relegated to inconsequential postings. It was only when the Charan Singh headed Lok Dal government was installed did the Dalit officials assert their solidarity for the first time by grouping themselves into the Ambedkar Mahasabha, which has over the years become a forum for active lobbying for positions of power and patronage. This despite the fact that Charan Singh represented the Jats, a social grouping stereotyped for its display of 'muscle prowess' and collective 'high-handedness'.

Interestingly, mainstream intellectual opinion has sought to propagate the theory that Jats and Dalits were historical adversaries, whose antagonisms centred around land relations, while the Brahmins and Dalits have co-existed against an idyllic backdrop, approximating the Biblical utopia of the lion and the lamb. But senior Dalit officials in U.P. said that Charan Singh's coming to power was 'like a breath of fresh air' (to quote a senior police official and

an Ambedkar Mahasabha leader, S.R. Darapuri).

Perhaps the so-called antagonisms need to be put in perspective. Unlike the traditional Brahmin and Thakur or Rajput landowners, who could be classified as the old zamindars, the Jats are medium landowners who were among the principal beneficiaries of the land ceiling legislation which resulted in the abolition of zamindari. Quite apart from the feudal absentee landlords of yore, the Jats also took to tilling and cultivating the land themselves with modern methods of farming introduced with the advent of the Green Revolution. Though the otherwise enterprising and diligent new class of peasantry continued to exploit the Dalit labourers with the same impunity as the traditional landlords, the main source of antagonism was not so much this exploitation as the fact that a section of Dalits themselves began to compete with the Jats as the new landowners.

**T**hese were the Jatavs or Chamars of western U.P., who also benefited from the spin-offs of the Land Ceiling Act. The surplus earnings from their traditional calling of shoe manufacturing were invested in land. Once engaged as workers by Muslims in the leather business — concentrated in Agra and Kanpur — the Jatavs gained from the large-scale outflow of Muslims after Partition. The infrastructure left behind by Muslim traders, combined with their skills, saw the growth of an affluent class of Jatavs, who branched off into farming to keep their rural links intact.

With some wealth came the added bonus of reservations in education and jobs. In the pre-Mandal era, the first challenge to the upper caste hegemony in officialdom came from the Dalits. Land, money and power — the Dalits were the recipients of the

three ingredients of political success, albeit in varying measures. But it was enough for them to make their presence felt on the political scene, as clients or patrons, as manipulators or the subject of manipulation.

Charan Singh kindled the first instincts of where collective action could lead socially disadvantaged groups. One of U.P.'s few non-Brahmin chief ministers, Veer Bahadur Singh (Ram Naresh Yadav and C.B. Gupta were the others) fanned the urge still further. With the predominantly pro-Brahmin bureaucracy and police unreceptive to serving a non-Brahmin chief minister, Singh had no choice but to fall back on the Dalit officials, who were by then numerically quite a force.

**B**ureaucrats recall that it was Singh who took the first 'radical' (by U.P.'s social yardstick) step of posting Dalits as district magistrates and superintendents of police. These postings triggered off the first rumblings down the administrative chain. Dalits were posted as land revenue officials, clerks and *lekhpals*. In concrete terms it meant that the Land Ceiling Act would be implemented more vigorously and *pattas* given to the landless. Singh's sudden death and the return of a Brahmin chief minister, Narayan Dutt Tiwari, put a spanner in the works.

But the Veer Bahadur Singh interlude signaled a radical shift in heartland politics – it marked the end of the 'golden' era of the Brahmin-Muslim-Dalit social alliance, and unleashed ambitions of socio-political assertions in each of them, especially the Dalits. The BSP had arrived to fill the vacuum.

As noted earlier, it was on the fringes in 1989 when the heartland's politicalscape was dominated by two opposing political ideologies

symbolised by Mandal and Mandir. They first attempted to challenge the status quo and the established role of the upper castes as the norm-setters and pacesetters in society. To quote Hasan, 'OBC ideas of politics were clearly influenced by the need to politicize caste, using it as the basis for organizing political constituencies and waging political battles on behalf of the oppressed.'<sup>1</sup>

**F**or the RSS (Rashtriya Swayam-sevak Sangh) and the BJP, founded on the ideal of a 'strong, resurgent' India emblemized in the symbol of an expansionist map of *Akhand Bharat* – whose boundaries go beyond Afghanistan in the North West to Indonesia in the East – the very idea of a fractured post-Mandal social polity was anathema. L.K. Advani's *Ram rath* rolled across the plains of the West and the heartland selling the 'vision' of an *Akhand Bharat* contained in the depiction of a macho Ram.

Where was the BSP, with its pachyderm symbol in sky blue, in a landscape dominated by Mulayam Singh Yadav and his OBC politics and the BJP and its communal politics? As a fringe party with 11 MLAs in the U.P. legislature in 1991. But the first glimmerings of Kanshi Ram's unique school of politics were seen when he forged a tentative alliance with Mulayam Singh Yadav in the Lok Sabha by-election of November 1991 in Etawah.

Kanshi Ram thus far had given the impression of being a non-serious player in electoral politics. The BSP peddled the lack of an election manifesto as a virtue. Kanshi Ram's oft repeated line was: 'We have a one point programme – take power.' He had always contested in high-profile

fight – whether it was against V.P. Singh and Sunil Shastri in the Allahabad by-election of June 1988 or in Amethi in 1991. But he established the fact that the Dalits were moving away from the Congress.

The decision to contest the Etawah by-poll represented the first serious move on his part to enlarge his Dalit base and embrace other important social groupings, which in this case happened to be Mulayam Singh Yadav's base of Yadavs and Muslims. The Congress put up a Brahmin, Shiv Shanker Tiwari from Etawah with its huge population of Brahmins. The BJP settled for a backward caste candidate from among the Shakhys. Kanshi Ram won despite an imperfect alliance. It proved that a good section of the Yadavs and Muslims had voted for him along with the Dalits. Tiwari's defeat signaled the end of the Congress' winning social equation.

**I**solated as it was, the Etawah by-poll – which did not merit the attention of political analysts – heralded the arrival of a fractured social polity in U.P. This was within just five months of a 'saffron' sweep in the state. The Congress apart, the BJP had reason to feel shaky. Its worst fears came true when the SP-BSP alliance edged out the BJP in the 1993 assembly elections which took place exactly a year after what the Hindutva combine would describe as a 'watershed' in its political growth – the demolition of the Babri mosque on 6 December 1992. Instead of 'unifying' Hindu society, a year-and-a-half of saffron rule had caused the fissures to become more pronounced.

The SP-BSP partnership, which sought to coalesce the interests of the other backward classes (OBCs), Dalits, Muslims and other religious minorities, was hailed by secularists and liberals as holding out the first

1. Zoya Hasan, *Quest for Power: Oppositional Movements and Post-Congress Politics in Uttar Pradesh*, Oxford University Press, 1998.

real challenge to upper caste hegemony. Stray voices of sceptics, however, cautioned that the arrangement was born more out of the short-term expediency of finding a place for these sections under the political sun than posing an ideological challenge to the status quoist Brahminical order.

Kanshi Ram attempted to sugar-coat the experiment in a 'politically correct' idiom as a fight against the forces of the *Manuvadi* structure. Cracks developed in a matter of time. The Samajwadi Party-led new social coalition sent out a clear signal from day one that it was in government to empower and protect the interests of the OBCs, especially the more affluent groupings of Yadavs and Kurmis. Appropriately enough, the then chief minister Mulayam Singh Yadav and his deputy, Beni Prasad Verma, a Kurmi, held a joint public meeting a day after the government was installed to beam this message in the OBC stronghold of Barabanki.

**A**t the same meeting, Yadav announced policies and measures to strengthen the interests of the more backward classes (MBCs) like Kumhars and Mallahs. For the Kumhars, whose traditional occupation is pottery manufacture, and the Mallahs, who are fishermen, he announced direct leasehold rights over clayey soil and lakes and ponds which were traditionally leased out to intermediaries by the previous governments and thereby trapped these communities in an intricate web of exploitation.

The political message had an immediate repercussion at the grassroots. The OBCs, who lay low during the preceding BJP regime, began flexing their muscles not so much at the upper castes but the Dalits, who were also exhilarated by the prospect of participation in government for the first

time ever. Clashes broke out in places where the Dalits tried to take over possession of land which was given to them by the Congress governments. Their *modus operandi* was to put up Ambedkar statues. The land was almost always in the possession of the OBCs since in its overweening interest to safeguard the interests of the upper castes, the Congress governments had parceled out land in the possession of either the intermediate castes like the Jats or the OBCs to be redistributed among the Dalits. Land, the Congress had seen to it, would preempt the OBC-Dalit alliance from crystallizing.

Mulayam Singh Yadav also used the elections to the *panchayats* and cooperatives to the advantage of the OBCs. The shift in power from the upper castes to the OBCs at the grassroots made the Congress and the BJP shaky. But ill equipped to act on their own, they turned to Kanshi Ram who by then had become distrustful of Yadav's bonafides.

Using the BSP's slogan of *Vote hamara, raj tumhara, nahi chalega, nahi chalega* (We will no longer allow the upper castes to seize power with the Dalits' votes) to its advantage, the BJP offered to install Kanshi Ram's protegee Mayawati as chief minister if he agreed to sunder his ties with the SP. The BSP fell to the bait and thus an anti-BJP rainbow coalition vanished.

**W**hat the BJP had not bargained for from the Kanshi Ram-Mayawati duo was their acumen and skills to exploit the power structure to their advantage. If Yadav played around with the panchayats and cooperatives to empower his constituents, for the BSP's leaders the bureaucracy was putty in their able hands, to be manipulated at will. Dalit bureaucrats and police officials were given the choicest postings. The legislation on the

Prevention of Atrocities against the Scheduled Castes/Scheduled Tribes (popularly known as the Harijan Act) was enforced in letter and spirit for the first time. Not only Yadav's OBCs, even the BJP's upper caste supporters bore the brunt of this Act to such an extent that the normally voluble Brahmins and Thakurs, especially those living in villages and small towns, clamped up for the first time for fear that their usual utterances (which were of course pejorative) would provoke the provisions of the 'dreaded' Act. Quite simply, Mayawati put the fear of god into the hearts of the non-Dalits.

**N**aturally the BJP could not endlessly vindicate Mayawati's acts to its own constituents. Using the bogey of 'corruption' and 'misrule' it withdrew support to the government. But there was a section in the BJP, then as now, notably the Brahmin leaders like Atal Behari Vajpayee, Murli Manohar Joshi and Kalraj Mishra who reckoned that only through an alliance with the BSP could the BJP hope to rule on its own strength at the Centre. The calculation was obviously inspired by the Congress' Brahmin-Dalit-Muslim formula (minus the Muslims) which enabled the party to hold its own in the heartland for decades.

But the OBC leaders like Kalyan Singh and Thakurs like Rajnath Singh opposed the idea as they feared it would edge them out in the BJP's scheme of politics. Such apprehensions persisted the second time round when Vajpayee and Joshi—blessed by the RSS—firmed up an alliance with the BSP to form a government and head it by rotation, six months by a BSP chief minister and six months by one from the BJP.

If there was a heady exuberance among the Dalits during Mayawati's first tenure as the chief minister, which

gave the impression they hadn't quite come to terms with the reality of being in power, the second term saw them settling down to the nitty-gritty of governance and going about their agenda in a more hard-headed manner. Mayawati used the Harijan Act as fiercely as before and added more concrete programmes. She restructured the entire chain of command in the administration to ensure that landless Dalits, who were given *pattas* way back during the Emergency by Indira Gandhi, were actually given possession of their land – irrespective of whether it clashed with the interests of the BJP's upper caste voters or not.

**T**he Ambedkar village scheme was seriously implemented for the first time. A cluster of villages in each district was earmarked under the scheme and provided with *pucca* roads, tube-wells, canals, a primary health centre, a primary school (actually manned by teachers), and a community centre. Apart from providing the basic infrastructure to improve the quality of life for the rural Dalits, such schemes imparted a sense of dignity and a more forward looking vision to them for the first time.

In an Ambedkar village in the Tundla region, the Dalits – traditional land-owners, well-fed and scarcely fitting into the insular stereotype of impoverished people – I was told that the infrastructure facilities enabled them to challenge the upper castes' patronage for the first time ever. 'Now we do not have to go begging to them for water to irrigate our fields. The other day when I was invited by a Brahmin for a family wedding, I told him clearly, you go about it properly. We will attend the wedding only if you personally call on us and do not make separate sitting arrangements for us. He had no choice but to agree,' said a BSP activist.

In another village in Aligarh district, the arrogant Thakurs were hoist on their own petard when one day they refused to allow the Dalits the use of the only road connecting the village with the city. This had been an age-old practice, but the new generation of conscientised Dalits refused to follow it. They caught hold of some Thakurs, and in what was considered the 'ultimate insult', shaved off their moustaches.

To proponents of the line that caste-based assertions are antithetical to development activities, to those who hold 'casteist politics' responsible for a state's 'backwardness', Mayawati's answer was the opposite. In essence it meant development would also have to include among its beneficiaries the socially and economically disadvantaged groupings.

**T**he long-term implication are that given the obduracy of the heartland's upper castes to share power with other groups – interestingly, unlike the southern Brahmins they did not flee their regions when confronted with the inevitability of OBC-Dalit empowerment and have opted to fight it out – the BSP cannot persist with its agenda unless it strikes an alliance. But to translate its political base and voting power into political power, the BSP must strike durable alliances based on certain political principles and a commitment to a shared vision, rather than one which would yield short-term benefits. Otherwise, the party will be left high and dry, as in U.P., where a series of splits have all but left the BSP's shell intact – for the moment at least.

As of now, its only strategy – and a tentative one at that – aims to go beyond its limited Jatav base to reach out to other caste groupings, particularly the MBCs. Hence the emphasis on *bhai-chaara* in its latest rhetoric.

# From resistance to resignation

M ASLAM

THIS paper attempts to understand how sections of Muslims belonging to various socio-economic strata and different ideological and sectarian persuasions responded to the ideology of *Hindutva*, particularly in the context of elections held in U.P. since 1993. It is largely based on interviews conducted in Allahabad around the 1993 and 1996 U.P. Assembly elections, the recently held parliamentary elections (1998), and a survey of about 200 Muslim respondents each in

Allahabad and Banaras in January/February 1997.

The growth of *Hindutva* in the last decade has been a disturbing and complex phenomenon. It both created an environment for the demolition of the Babri Masjid on 6 December 1992 by Hindu militants and prepared the ground for the emergence of social and political forces like the Samajwadi Party (SP) and Bahujan Samaj Party (BSP) which offered the Muslims political choices other than the Congress to fight the Hindu right in U.P.

The attempts of the advocates of *Hindutva* to simultaneously target

\* This paper is extracted from a larger report prepared for the Thematic Studies project of The National Election Study 1996, sponsored by the CSDS and UGC.

Muslims and to woo them has compelled different sections of Muslims to constantly review their perception and response to this seemingly changing ideology, particularly when planning electoral strategy. Here I shall mainly focus on the response of the U.P. Muslims.

I had closely observed the 1993 U.P. Assembly election, particularly in Allahabad, and used the opportunity to interview a sizeable number of Muslims. In comparison to 1993, the atmosphere during the 1996 parliamentary as well as assembly elections was visibly cynical and lacking in enthusiasm as far as Muslims were concerned. By the time the 1998 parliamentary election was held, this cynicism became even more pronounced.

**D**uring the 1993 U.P. Assembly election the Muslims mood was surcharged. Their enthusiasm was overtly visible as was their apprehension. Coming within six months of the demolition of the Babri Masjid, the 1993 election was an important one. Muslims were understandably nervous about how the majority community would vote. They feared that a BJP victory would give formal legitimacy to the demolition of the Babri Masjid and were desperate to ensure that the BJP was contained. In this endeavour they were willing to join forces with any political formation, other than the Congress, which could defeat the BJP. Fortunately for the Muslims such a formation crystallized in the form of the SP-BSP alliance. Their support to this alliance succeeded in containing the BJP.

By the time the 1996 election was held, the SP-BSP alliance had fallen apart. For a short period the BSP did form a government with the support of the BJP and worse, the SP and BSP entered the 1996 elections as sworn enemies. A weak Congress,

which the Muslims were in no mood to forgive for its role in the demolition of the Babri Masjid, and an unbridgeable divide in the political formation which the Muslims had enthusiastically supported barely three years back, left them on the horns of a dilemma. Although the U.P. Muslims did eventually cast their lot with Mulayam Singh's Samajwadi Party, it was not with the enthusiasm which was visible earlier. In 1993 they had voted the SP-BSP alliance with enthusiasm and hope; in 1996 the Muslims voted for the SP mainly because there appeared to be no other choice.

By 1998 this waning enthusiasm had turned into utter cynicism. The Congress and other anti-BJP political formations claimed Muslim votes on the slogan of secularism and social justice, which increasingly sounded hollow and unconvincing; the mistrust and petty quarrels among them had created a sense of revulsion in the minds of voters in general and Muslim voters in particular.

**T**he inability of these forces to forge an alliance even after the 1996 election resulted in months of political uncertainty. The subsequent experiment by the BJP and BSP to share power by rotating chief ministers every six months, predictably broke down soon after Mayawati's first term in office. This resulted in blatant horse-trading and opportunistic splits within the U.P. Congress and the BSP. Every defector was promptly inducted into the Kalyan Singh ministry, the strength of which almost reached a hundred. Subsequently, shameful scenes were enacted by the U.P. legislators of all political denominations in the Assembly during the vote of confidence, making a complete mockery of the political system. It exposed in the crudest form the depths to which all political parties and their leaders

could descend in their lust for power. All talk of principles and ideology seemed to have lost meaning.

Coming in the wake of these developments, the 1998 election offered limited choices to the U.P. Muslims. The general feeling of cynicism and disenchantment with politics was widespread. Today, more Muslims can be heard saying that 'all political parties are the same', that 'they all use Muslims as vote banks', and that 'no political party has ever done anything concrete/substantial for the Muslims.' It is another matter that 'concrete/substantial' are never coherently defined. Ironically, this is close to what the BJP, the main political exponent of Hindutva, has claimed for quite some time.

**A**nother perceptible change apparent during the last election was a metamorphosis in the Muslim mood towards the BJP. Though during election, one normally sees resistance among Muslims to the BJP, this time around the mood was one of resignation. There were at least two reasons for this. First, the Muslims appeared to be disturbed by the petty quarrels and back stabbing in the anti-BJP camp. Second, and more significant, a major thrust of the BJP's campaign during the last election, particularly by its national leadership, was to seriously woo the Muslims and allay their fears. This worked wonders from the BJP point of view. It more than doubled its share of the Muslim vote in U.P. (from between 2-3% to about 6-7%). It was able to neutralize Muslim resistance to a considerable degree, which helped it win many more seats than it would otherwise have.

During the 1993 election I had witnessed the enthusiasm with which *burqa* clad women stood in queues at polling booths and how young Muslim boys carted their old grandparents

on bicycles, rickshaws and even in their arms, in order to enable them to cast their vote. In contrast, during the last election I found some of the same polling booths in the Muslim *mohallas* comparatively deserted. With the opposition against the BJP hopelessly divided, Muslims seemed to have realized that their effort alone could not do much to keep the BJP out, and they did not look too concerned about it. This metamorphosis in the Muslim attitude towards the BJP has in fact been crystallizing for some time; there was an indication of it even in the survey we conducted after the October 1996 U.P. Assembly election.

**A** brief analysis of some of the findings of the survey which was conducted in Allahabad and Banaras in January/February 1997 would perhaps be useful at this stage. I would like to imagine that the results of a similar survey would not be significantly different if it were conducted today, except perhaps that Muslims have become a little softer towards the Congress. For the purpose of the survey we identified a representative Muslim *mohalla* of about 200 households in each of the two cities, and interviewed one member from each household beginning from one end and stopped when we reached the figure of two hundred.

The *mohalla* selected in Allahabad was Bakshi Bazar situated between Atala and Nakhas Kona in the heart of the Muslim settlement in the old city. The Assembly constituency is Allahabad West (no. 282). This constituency though largely urban has a rural segment as well. We had initially planned to study both segments, but due to problems with investigators, could manage the urban segment only. The trades and economic activities in which Muslims in the urban segment are most visible are the

manufacture of tin *almirahs*, boxes, safes and related items; the wood furniture business; *beedi* making, and the meat and hide trade. The percentage of Muslims is also significant among tailors, barbers and motor mechanics. The *mohalla* selected for the survey came closest to adequately representing the Muslim sectarian, social and economic diversity in Allahabad.

**I**n Banaras the *mohalla* selected was Baqrabad in Jaitpura. The Assembly constituency is Varanasi North (no. 243). This is an entirely urban constituency with a large section of Muslim weavers belonging to the Ansari *biradari*. Though apparently indistinguishable to an outsider, the Ansaris here are not as homogenous as they appear to be. Besides reflecting the socio-economic and sectarian differences that are common among Muslims in U.P., the Ansaris in Banaras are divided into two major groups or sub-biradaris: 'Banarasiya' who claim to be the original inhabitants of Banaras and 'Mauwale' or those who have migrated from nearby Mau over the last 200 years or so. The two sub-biradaris are strictly endogamous and the identification of members with their respective groups is fairly strong. This has major social and political implications, especially during elections. The *mohalla* chosen has a near equal representation of both the major sub-biradaris.

While conducting the survey we asked some questions about the social and economic profile of the respondents. Others were designed to elicit their response to the phenomenon of Hindutva and their conduct in the recently concluded Assembly election held in October 1996. Here I shall briefly focus and analyze only those questions which give an indication of the changing Muslim response to Hindutva and elections.

To begin with, respondents were asked to identify what in their opinion was the most important issue during the October 1996 election. Three options were given: (a) to check/defeat the growth of communal forces, (b) to strengthen the unity of the minorities, backward classes and Dalits and (c) to remove impediments in the way of trade and occupation. As anticipated, a very large majority of respondents – 75% in Allahabad and 63% in Banaras – indicated that defeating communal forces was uppermost in their minds. However, while the remaining 25% in Allahabad were almost equally divided between the second and the third options, it was heartening to see that the remaining 37% of the respondents in Banaras clearly indicated that removing bottlenecks in the way of trade and occupation should be at the top of the agenda. This indicates that where Muslims are gainfully engaged in some reasonably successful trade or occupation, as weaving in the case of Muslims in Banaras, they tend to be less obsessed with communalism as an issue, unless of course the situation around them is communally explosive.

**A**nother question asked was whether the BJP was laying emphasis on the slogan of Hindutva merely to win elections or whether there was a deeper design/long term goal which they had in mind. Surprisingly, 56% felt that the BJP was using the slogan of Hindutva mainly for electoral gain and only 25% suspected any deeper design or that the BJP had any long-term agenda which by implication would harm the interests of Muslims. About 20% were undecided. This implies that there is much less schizophrenia in the Muslim mind about the BJP and much less fear about BJP being in government than is commonly imagined.

On being asked whether Muslim communalism has contributed or helped to accelerate the growth of Hindu communalism, 11% said yes, 41% said to some extent, while 48% disagreed with the proposition. This would indicate that over 50% of the Muslims have come around to thinking that the growth of communalism among Muslims has directly or indirectly helped the growth of Hindu communalism. Such views among educated/enlightened Muslims would not be considered surprising. But considering that the survey was conducted in 'typical' Muslim mohallas of the old city areas of towns where Muslims are economically and educationally backward, this is indeed a positive development. It indicates that there is an increasing realization among Muslims of the need to arrest the rise of Muslim communalism to check the growth of Hindu communalism.

**T**o the question—what would happen if the BJP came to power at the Centre—14% indicated that Muslims would be discriminated against, 35% anticipated that the religious rights and freedoms given to the minorities would be withdrawn, 17% feared that communal riots would increase, and 34% said that it would make no difference. Considering the anti-Muslim pronouncements of many of the advocates of Hindutva, it is not surprising for Muslims to fear that their religious freedoms would be curtailed or that they would be discriminated against if the BJP came to power. What is surprising is that 34% actually felt that a BJP government would be no different from any other government. I would imagine that this figure would not be much higher if the survey was conducted in a non-Muslim mohalla.

Considering the nature of mohallas where the survey was conducted, 34% is a very high figure. It

could mean one or more of the following: that a sufficiently large number of U.P. Muslims are so disgusted or disillusioned with the non-BJP parties that they feel that the BJP cannot be much worse; that they are not afraid of the BJP coming to power, in which case they have sufficient faith that the secular fabric in India is strong and cannot be subverted; that the BJP's bark is worse than its bite and that once in power it will mellow down and behave like any other political party. Whichever way we look at it, apparently the Muslim attitude to the BJP is gradually moving closer to the attitude of their non-Muslim counterparts.

Having ascertained in an earlier question that the Muslims in their mohallas by and large did not vote for the Congress in the 1996 election, we tried to seek an explanation. Not surprisingly 66% indicated that it was because the Congress had failed to save the Babri Masjid from demolition. However, as many as 32% did not vote for the Congress because it had failed to do anything for their social and economic uplift even after being in power for decades. This reinforces the view that a sizable section of the Muslims is less emotional about communal issues and the Babri Masjid, and more concerned about the social and economic problems confronting them.

**T**his is further borne out by the Muslim response to a question regarding the political strategy they should adopt in order to cope with the growing forces of Hindutva. Of the given options 54% favoured an alliance with the backward classes and Dalits, 24% felt that Muslims should retain their distinct identity, while 22% said that Muslims should form their own political party. A vast majority of them felt that they could not fight Hindu communalism by forming their own party;

they realized that would be counter-productive. It is not surprising that a majority of Muslims in U.P. have come around to the view that the best course for them is to forge a broad alliance with the backward classes and the Dalits. It is another matter that the leaders of the backwards and the Dalits do not appear to have realized this.

**A**s to which political formation has most steadfastly opposed Hindu communalism and is likely to do so in the foreseeable future, Congress got 5%, Janata-Dal 6%, SP 67%, Communists 19%, and the BSP a paltry 2%. That Mulayam Singh's SP is seen by the U.P. Muslims as the main bulwark against Hindutva is not surprising considering that he has been its most vocal opponent. As chief minister in 1990 he did not hesitate to use force to prevent the demolition of the Babri Masjid when it was first attacked. The death of about a dozen Hindu militants, magnified by the Sangh Parivar into hundreds and even thousands, greatly damaged Mulayam's image; he came to be sarcastically referred to as Maulana Mulayam. As a consequence he lost out to BJP's Kalyan Singh in the 1991 election.

Mulayam was, however, able to claim that he had sacrificed his office at the altar of secularism, which by implication meant the protection of Muslim interests. Ever since, Mulayam has been the chief claimant and beneficiary of Muslim votes in U.P., cornering between 70% to 65% in the '93, '96 and '98 elections. However, of late, a view has emerged among a section of Muslims that he has a stake in the preservation of communalism to play the crusader and bag the Muslim vote. Fortunately for Mulayam, this view has few adherents and even they are prudent enough not to be too vocal at this stage as the political

alternatives before the U.P. Muslims are limited.

Why the BSP figures so low in the Muslim mind needs some explanation. The Dalit-Muslim alliance is an old Republican Party dream and part of its agenda since the 1960s. Its political arithmetic in U.P. looks irresistible – about 22% Dalits and close to 17% Muslims add up to a winning electoral combination. Both have real and imagined grievances against the system and claim to be socially and economically underprivileged and discriminated against. Periodically both Kanshi Ram and Mayawati have made concerted efforts to woo the Muslims and have even flaunted data to show that the BSP has given more representation to Muslims in allotting tickets to the legislatures and ministerial positions when in government than Mulayam. There is some truth to these assertions. In 1993-94, a section of the Muslim intelligentsia had argued for a closer alliance with the BSP.

**H**owever, Mayawati's arrogant style of functioning and her thoughtless statements have often hurt the sentiments of various social and religious groups, including Muslims. The manner in which she dismissed and humiliated one of her ministers, Rashid Masood, having his baggage thrown out of his official residence within 24 hours of his dismissal, was perhaps part of her style. Since the minister happened to be a Muslim, its symbolic ramifications were considerable. It also gave Mulayam an opportunity which he fully capitalized upon, welcoming Masood with open arms.

The way Mayawati deserted the SP and formed a government with BJP support was projected by Mulayam as treachery and betrayal of the secular mandate. All this alienated the Muslims from the BSP. However, Mayawati's anti-BJP rhetoric, and her

bold and uncompromising attitude on Kashi and Mathura even when she was dependent on BJP support, has not failed to impress a section of Muslims. Nevertheless, even today, the BSP is only acceptable to the Muslims in combination with SP. They have pleaded with the leadership of the two parties to bury the hatchet and forge an electoral alliance.

**F**inally, I would like to analyze the Muslim response to one last question. On being asked why Muslims failed to contain the BJP in U.P. in the 1996 election, 41% attributed it to a division in the Muslim votes in their constituencies, 31% stated that there was no consensus on whom to vote for, 22% felt that Muslims did not vote in large numbers, and only 6% – a very tiny percentage of Muslims – attributed BJP's victory to a consolidation of Hindu votes. The fact that such a large percentage of Muslims admit to a division of their votes, or a lack of consensus on whom to vote for, should be an eye-opener to those who expound theories about block voting among Muslims or about consolidation of Muslim votes. That a reasonably large number felt that the Muslim turnout was low, reinforces the general feeling of apathy, cynicism and disenchantment with politics among Muslims mentioned earlier.

Before concluding it would be useful to reiterate that the Muslims like the Hindus are highly heterogeneous, deeply fragmented by sectarian, caste, class, regional and linguistic cleavages, and that the bond of religion is tenuous. Like all religious bonds, it acquires salience when threatened. A consolidation of Muslim votes is purely contextual – it generally takes place either when the communal environment is surcharged, or when there is a credible, viable and winnable secular alternative.

'What can Muslims expect from a BJP government at the Centre,' I asked a teacher of Arabic. He, along with his family, runs several *madrasas* (Muslim religious school) in different parts of the country. Having experienced various BJP governments, including in U.P., he saw no basic change. In fact, he pointed to certain benefits for Muslims.

He pointed out that since the BJP and Sangh Parivar are the main instigators of communal riots, they are more easily able to prevent them when in power. He also claimed that it was easier to get permission to build mosques and madrasas under a BJP government. He explained that in U.P. and Maharashtra, especially Mumbai, dozens of projects to build mosques and madrasas had been pending for nearly two decades. The Congress and other secular governments were afraid to grant permission for fear of being branded as communal. These, he claimed, were cleared by the BJP-Shiv Sena government in less than two years.

**H**owever, in the recently held election, the Muslims overwhelmingly voted against the BJP-Shiv Sena government in Maharashtra. How do we explain this? There had been no communal riots since the incumbent government took power, and the political environment during the election was far from being communally charged. So why did they vote against the government? Perhaps because they still mistrust the overtly Hindutva driven governments, despite the symbolic concessions offered. In this election they had a viable, credible and winning secular alternative and they voted for it with zest. In U.P., on the other hand, where there was no such alternative, their voting pattern continued to be marked by confusion, cynicism and apathy.

# Ever the outsider

PAMELA PHILIPPOSE

THERE were some notable absentees at last month's party celebrating the lifting of prohibition in Haryana. As the liquor industry punched at its calculators to tot up potential profits, and the tourist lobby settled down in right earnest to plying guests with large pegs of whisky with soda, women in a Rohtak village, speaking to a newspaper reporter, expressed fear that drunken brawls and wife-beating would once again be part of their lives.

Prohibition may not have been a conspicuous success in Haryana. But its withdrawal after the electoral reverses of Chief Minister Bansi Lal's Haryana Vikas Party in the recent Lok Sabha elections, signifies the defeat of what is undoubtedly a woman's issue. Indeed, it had for a brief period of time, beginning with the anti-arack agitations of the early '90s that erupted in nondescript villages of Andhra Pradesh's Nellore district, captured both the popular imagination and political attention. But the backlash was not long in coming. Within a span of five years in fact. With Andhra Pradesh Chief Minister Chandrababu

Naidu going back in April 1997 on his father-in-law's move to ban liquor sales in the state, and Bansi Lal following suit exactly a year later, that brief spring of resistance came to an end.

These developments highlight the nature of political discourse during the recent Lok Sabha election — it was largely barren of issues that touch people's lives. They also show how the decision-making processes in the country serve constantly to mute the voices and concerns of women. But the fact that prohibition, its imposition or its withdrawal, had enormous political ramifications in this country also shows that the distinction that is sometimes made between social and political issues is a false one. Almost as false, in fact, as the carefully constructed dichotomy between the private and public spheres.

For centuries, the women's universe was perceived as the 'private sphere', with the men, the true wielders of power, dominating the 'public sphere'. The Rashtriya Swayamsevak Sangh, which provides the ideological moorings of the BJP,

gives cultural and political legitimacy to such a construct when it states that 'the main function of a woman is to impart noble samskaras to the young generation—her prime responsibility is caring for the family...in our tradition women look after the house and men outside.'

But a democratic polity demands the collapsing of such arbitrary compartmentalization. The most important argument in support of bringing more women in the political mainstream hinges on the fact that women's viewpoints and experiences are crucial in a democracy. Something is supposed to change in the political culture of the country when hitherto invisible but significant social groups, like women, assume a critical mass in decision-making. It is not a charitable exercise, as some of the arguments over the Bill seeking to reserve 33 and one-third per cent of seats to women in state legislatures and Parliament seem to make out, but an engendering one.

**T**his distinction is important to keep in mind, especially as the Constitution (81st Amendment) Bill of 1986 guaranteeing 33.3% reservations for women in Parliament and state legislatures is perceived in some quarters as going against the interests of democracy. One only has to take the results of the 1998 general election to show how democracy, as it is practised in this country, militates against women's participation. Despite party manifestos stating that the Reservations Bill was worthy of implementation, no attempt was made by any political party to pay even token obeisance to the idea behind such a measure by fielding more women candidates. Finally, of the 268 women candidates in the fray, 43 won. They constitute 7.9% of the total parliamentary seats.

If 50 years of Indian democracy have not seen women's representation in Parliament and state legislatures cross even a pathetic 10% mark, radical measures are required to ensure that women constitute a critical mass in mainstream politics. Reservations is one such measure, and should remain in place until women are fielded and elected in their own right.

**T**oday, the Bill is once again on the anvil, with the ruling BJP-led coalition having promised in its National Agenda to push it through. But its stormy trajectory in the 11th Lok Sabha does not portend well for its fate in the 12th. History tends to repeat itself on this issue. Remember, there was a consensus on the Bill even in the 1996 general election. When the UF government came to power in June that year, it too had showcased its commitment to the Bill in the Common Minimum Programme. But from the moment it was presented in the September of that year by the then Prime Minister H.D. Deve Gowda, every attempt, from old-fashioned filibustering to explicit opposition, was made to stall its passage. In July, it was referred to a Joint Select Committee. Even after the Select Committee recommended its passage, it got tossed about like a volleyball, from one session to the next, until the United Front government collapsed in December 1997.

Two of the chief derailleurs of the Bill were from within the party that is now in power. BJP's Uma Bharati, a minister of state in the present cabinet, had introduced the first spoke in the wheel by objecting to the Bill's 'upper caste' nature. She demanded that reservations for OBCs be made within women's reservations. In December 1996, although the Joint Select Committee did not rule out provisions for OBC reservations at an appropriate

time but insisted that the Bill must be allowed to go through, BJP MP Gangacharan Rajput chose to organize a signature campaign once again attacking it over the OBC issue.

To add yet another dimension to the conundrum, the AIADMK, a senior member in the ruling coalition at the Centre, has recently stated that it will fight for OBC representation in the Bill. Such posturing could well encourage groups which had earlier objected to the Bill to once again stall its passage. But there are limits to what a Bill of this kind, even if it does become law, can achieve. Political power in itself is limited and limiting if it does not, in turn, allow ordinary women in this country to exercise the human rights granted to them by the Constitution.

**I**t follows, of course, that women's ability to exercise these rights will provide them with the opportunities and skills to participate in decision-making. Among these rights are the fundamental ones of a right to an education, the right to life and adequate nutrition, the right to work and, yes, the right—embodied in Article 21—to live with dignity.

Prime Minister Vajpayee has gone on record that he is committed to providing every girl in this country free education up to the college level. Here again it is useful to remember that many prime ministers have voiced similar intentions in the past—I.K. Gujral's Balika Samridhi Yojna announced last August was just one of them. Yet the 25% differential between male and female literacy has persisted in this country since 1961, with about 61% women aged seven and above found illiterate in the 1991 Census.

The reasons for this are well-known and Mahbub ul Haq and Khadija Haq have dwelt at some length upon them in their Human

Development in South Asia 1998 report. The point is that even when education is free, there are many costs to attending a school, including opportunity costs, since the girls could otherwise be doing household chores or earning a small income for the family. The HDSA quotes a World Bank study to show that as income falls, parents' willingness to educate their daughters decreases faster than their willingness to educate their sons.

**I**n other words, education for the girl child—albeit free education—has necessarily to be linked with policies that address the general well-being of the entire community. The approach paper to the Ninth Plan recognizes this. The two important tasks it sets for the country is the eradication of income poverty by the year 2005; and provision of basic services in health, education, safe drinking water, sanitation, shelter and food security for all. The babus, as Marx may have put it, have interpreted the world. The point, however, is to change it.

Defining food security is itself a complex task. Malnutrition has put its manacle on 53% of Indian children under four years of age and the redness of their hair, like the litmus test in a school lab, bears evidence of it. But even in conditions where the whole family lives in deprived circumstances, it is the girl child who is more likely to be underfed than her brother. The 1992 all-India figures of the National Sample Registration System show that infant mortality rates among boys is lower than that of girls, who are likely to be breast-fed for a shorter period, and more likely to be denied attention in a medical emergency.

This deprivation doesn't stop with her. It puts its footprint on future generations. The Indian Council of Medical Research has recommended an intake of 2,500 calories for expect-

ant mothers. Yet, on an average, a pregnant Indian mother gets 1,400 to 1,600 calories. An estimated 60 to 68% of pregnant Indians suffer from anaemia caused by lack of iron—a mineral that is vital for neuronal development responsible for the growth of the human brain.

State initiatives to address this founder on the rocks of corruption and ineptitude. The NCAER (National Council of Applied Economic Research) in its human development profile of rural India, based on 1994 data collected from 33,000 households, indicates that the poorest regions are precisely the ones that are deprived of a functioning Public Distribution System. Only 5% of households in a state like Bihar, for instance, have access to fair price shops.

**E**ven the utilization of the funds earmarked for improving nutrition at a mass level has been extremely unsatisfactory. According to one estimate, during '92-93, the average utilization rate of money earmarked for the social sector for all states was a little over 44% of the Eighth Plan outlay. Most states have tripped over schemes like mid-day meals, which were very useful in helping to retain children in schools, even while improving their nutritional profiles. Of the Rs 14,000 million allocated by the Centre for the scheme in the 1996-97 budget, only Rs 8,000 million was utilized.

There's many a slip between macro-level planning and micro-level implementation, just as policy changes made at the highest levels of government sometimes spell disaster at the ground level. Last September a group of economists, sociologists, and social activists met in Delhi to take stock of the effects that economic liberalization has had on the lives of working women. Feminist scholar and activist, Amrita Chhachhi,

summed it up thus: 'This is a period characterised by unevenness and uncertainty. We are witnessing processes of change and reversal. Those who once had access to jobs and health care, are now losing this access.'

**W**hether it was in the *beedi* rolling units of Mangalore or the construction industry of Chennai, the diamond processing industries of Mumbai or the electronics factories of Delhi, liberalization has deepened three processes: invisibility and insecurity of work, fear of unionization and job loss. The insecurity manifests itself in several ways. Contracts and sub-contracts mean that there is no formal employer-employee relationship, therefore no welfare provisions are ever made, and many get less than the minimum wage.

To add to this, jobs themselves are difficult to get. In the electronic units of Delhi, Chhachhi discovered that the demand for women is in the semi-skilled, low-wage end. But fear of losing even these dreary jobs prevents workers from joining a union or demanding their rights. It also prevents them from protesting when employers exploit them sexually.

In a far-reaching judgement delivered last August to a writ petition filed against the brutal gang rape of Bhanwari, a social worker in a Rajasthan village, the Supreme Court made many useful recommendations. Among them, it was made expedient on the employer to 'prevent or deter the commission of acts of sexual harassment and to provide the procedures for the resolution, settlement or prosecution of acts of sexual harassment.' What was interesting in the *Vishaka vs State of Rajasthan* case, was that the judges recognised that 'equality of employment can be seriously impaired when women are subjected to gender specific violence,

such as sexual harassment in the work place....'

The judgement only sought to make up for what the judges clearly recognised as a lacuna in the law. To date, there is no legal provision in the country to deal specifically with the sexual harassment of working women in the workplace, just as India has no law that addresses a crime as horrendous as child abuse. Legally, child sexual abuse is defined only as the sexual penetration of a child who is below 16 years of age.

It would require a rare political courage to address these issues. Each is linked intimately with the other, just as they are with a broader social reality. To give an example, an issue like inheritance rights for women is related to the social value of female children within communities, but it is also linked to general land reform. Twenty four years ago, the Committee on the Status of Women in India recognised this when it said: 'While it is true that the status of women constitutes a problem in almost all societies, and has emerged today as a fundamental crisis in human development, we found that sex inequality cannot in reality be differentiated from the variety of social, economic and cultural inequalities in Indian society. The inequalities inherent in our traditional social structure, based on caste, community and class have a very significant influence on the status of women in different spheres.'

Only one thing has changed in the years since these words were written. Today, the language of social justice is used not just by well-meaning development *wallahs*, but by politicians of all persuasions. Yet, even as they swear by women's empowerment, in actual terms they often end up unleashing processes of disempowerment through hidden and not-so-hidden cultural and economic agendas.

## Media tilts

P. SAINATH

THE election issue of the country's largest circulation English weekly, in a sense caught the flavour of it all. Close to 40 pages were devoted to 'star campaigners'. We got to know their 'campaign clothes', their campaign cars, the food they ate. And all the other trivia you never wanted to know and were sure no one else would be dumb enough to ask. Anything, but the issues. And that was 40 pages of colour.

In no other election year have the media functioned as poorly as they did in this one. Taking satisfaction in the failure of psephologists to read the polls right is only evading the point. The growing disconnect between mass media and mass reality continues. They were wrong in reading – or

not reading – the issues. They continue to be wrong in reading the results. And the process.

For all the yowling on ‘stability’, the polls showed us the relative unimportance of that notion – at least of stability as measured in the media. And in the run up, there wasn’t even the faintest attempt to evaluate the performance of various governments and their platforms – especially if those belonged to the BJP.

**B**ut let’s step back a little. The entry of Sonia Gandhi into the poll campaign caused problems for media managers. They had all but installed a BJP government in their newspapers and channels – with only the minor hurdle of the popular vote to be overcome. Here, suddenly, was uncertainty. What if she pulled it off for the Congress? Could they afford to alienate her by continuing on the BJP bandwagon? What if the Congress won and was vindictive?

Sonia Gandhi may not have transformed the election results for her party, but she certainly had the media hedging its bets. Some sections of the press went a step further: From a ham-handed backing of the BJP, to a ‘Sonia is drawing bigger crowds than Indira ever did’ line. A pattern of coverage that was already personality driven now became doubly so. The remote possibility that important issues would be discussed in the media shrank further. As many as 200 farmers committed suicide in Andhra Pradesh, driven to desperation not just by their tragic experience with pesticides, but very significantly by the collapse of rural credit. This happened even as magazines and channels were focusing on their campaign stars and their campaign cars.

If there was one thing approaching an issue the media – or its dominant groups – did harp on, it was

‘stability’. By which was understood a government that could last its full term. Interminable discussions and mind-numbing edit-page pieces produced a few gems. ‘There ought to be legislation to give the government stability.’ ‘Once a government is elected, it ought to be allowed to complete a full five years.’ Quite a few expressed this view.

The notion that stability can be legislated was itself indicative of the level of debate. But it persisted. A lot of credence was given to the promise of some BJP leaders (one of some six million they made) that they would ‘take steps’ to reduce the number of elections. Yet, if ‘stability’ was the issue, then the Bharatiya Janata Party certainly deserved scrutiny. The evidence suggests that the BJP is the least competent party of governance among the major political formations.

**N**o BJP government in the history of this country has ever completed a five-year term. Not as the BJP, not in any other of its several *avatars* – as the Jana Sangh, as part of the Janata Party. And most of those BJP outfits that did stick on for a few years have been massively rejected in the next election. This is peculiar to the BJP. A TDP (under NTR), a DMK or AIADMK, a CPI(M) could complete one term and even win the next. The BJP does not seem capable of this. It just doesn’t seem able to run a government. It makes little difference whether it is an alliance government, as in Maharashtra, or one with a two-thirds majority, like the former BJP regime in Gujarat. They seem unable to manage ‘stability’.

Generally, going by trends in the past, in most states where it is in power, people tend to vote massively against the BJP. It could be suggested that Vaghela saved the BJP in Gujarat from the kind of rout it faced elsewhere. Romesh Bhandari certainly

did that party a great favour in Uttar Pradesh – its gains in the round of voting after his action against the Kalyan Singh government were significant. In Maharashtra, there is always Thackeray and the Shiv Sena to be blamed – but who could they blame for, say, Rajasthan? Or for the fact that a ‘strong’ BJP government in Gujarat brought itself down?

‘Give them a chance’ was another oft-heard refrain in the run-up to the last polls. Yet, the BJP has been given several chances and it fared badly each time. What has been that party’s performance in government? Take Maharashtra, where it has been in power along with the Shiv Sena for three years. Perhaps the largest number of extra-judicial, ‘encounter deaths’ in the country have taken place in Maharashtra, the bulk of them in Mumbai alone. In February this year, a little before the polls, official data showed a 100% increase in custodial deaths across the country. In Maharashtra, that increase was 506%! This did appear as a report in a few paras in a couple of papers. But there was virtually no comment on what it said about such governments. Uttar Pradesh, incidentally, showed a rise of 347% in custodial deaths.

**I**magine if either of these figures had been reported from Bihar or West Bengal. You’d never have heard the end of it. To begin with, it would have been, deservedly, on the front page. There would have been reams of denunciation and scathing comment. I could not trace one editorial that discussed what the data told us about the governments concerned.

Maharashtra was the first state to drop close to 2,000 cases of atrocities against Dalits and Adivasis. This was almost immediately after the Sena-BJP came to power. Remember that Gopinath Munde of the BJP is in

charge of these matters. Again, virtually no discussion. One of the most important planks on which the BJP-Sena came to power in Maharashtra was their anti-Enron campaign. Soon after assuming power, they rewarded that company with a bonanza bigger than that given it by the Congress. This, for the media, was 'welcome pragmatism and common sense.' There was no examination of the possibility of corruption. The same government that dropped all those cases had its police shoot dead eleven Dalits in an incident in Ramabhai Ambedkar Nagar. Pramod Mahajan paid the price for this in the polls – only to be immediately rewarded with higher things by his party.

**T**he BJP-Sena had another powerful campaign plank in 1995. Housing for 40 lakh people in Mumbai. That would help close to eight lakh families. The real performance of the BJP-Sena government's 'slum redevelopment scheme?' In over two years it managed to put up a building consisting of 128 tenements. Let's be generous and take the number of people housed in those tenements to be above the national average of 5.52 per household. It would still mean close to ten thousand years to keep that promise. Meanwhile, the same government has destroyed the shelter of many thousands in brutal slum demolitions.

This is also a state where the chief minister promotes superstition. Remember the 'miracle' of 1995 when idols of Ganesh began to gulp down mugs of milk? Hours into the milkfest, even as hysteria gripped Mumbai, Manohar Joshi spoke to the press. He said that he had lab-tested the miracle in his own house and was happy to pronounce it genuine. The miracle was now official!

At the end of several years of BJP rule, Rajasthan still ranks among the

worst states in terms of human development. It has an infant mortality rate of over 85. Its sex ratio actually worsened between 1981 and 1991. Female literacy here just scrapes past 20%. That's less than Bihar's and the worst among all Indian states. The state is now infamous for atrocities against women. Also for a government that shields the culprits and punishes the few cops who try to book them.

**I**n Gujarat, the BJP provided the least stable government in the country. A minister was stripped in public by his own partymen, by the 'disciplined cadres' of the RSS. A faction broke away to form the RJP government. Then a faction broke away from that to join the Janata Dal.

In Uttar Pradesh, the BJP has built a government of defectors – not just of the common or garden variety, but includes those facing criminal charges and known for their links with gangsters and mafiosi. Every one of these was rewarded with a ministership. Still, even by building a cabinet of 93 ministers, the BJP could not provide stability. The break-up of the Loktantrik Congress showed how fragile the whole edifice was and is. The U.P. Speaker has set extraordinary precedents in legitimising fraudulent defections in that state. Imagine if it had happened in a non-BJP state. The press would never have let you hear the end of it.

There was – and still is – another issue that is a 'no-no'. In the 50th year of freedom we have a prime minister whose role in the independence struggle was least distinguished. The only journal that did a serious investigation of this had Vajpayee himself conceding the veracity of its main findings – and withdrawing a lawyer's notice sent in haste to that journal. In election coverage in most societies that would have been an issue. Not

here. The last time it came up, one leading newspaper said: 'After all, he was 15 at the time.'

Remember also that 'give them a chance' went in tandem with the 'inherent instability' of coalition arrangements. The UF, the BJP repeatedly argued – to the delight of much of the press – was worse than a 13-headed Ravan. At least in mythology those many heads were united in purpose. Now that the BJP has no-one-quite-knows-how-many allies, there is very little discussion of the issue. And even less of corruption, with Sukh Ram becoming No. 2 in government in Himachal Pradesh.

**T**he irony of Yashwant Sinha's first statement as finance minister wasn't even noticed. On behalf of the *swadeshi* crowd he immediately reassured the multinationals that they had nothing to fear from a BJP government. You might expect a finance minister to direct his first assurances towards the poor of this country.

Nor was there serious criticism after the dirty trick played on P.A. Sangma in the name of consensus. Less than two hours after congratulating Sangma on his unanimous election to the post of Speaker, the BJP announced its support to the TDP candidate and present Speaker.

Does this mean the press and media cover issues better when it's a Congress government? In terms of the wide canvas, no. Through the period of Rao, the impact of Manmohanomics on, for instance, agricultural labour was ignored or played down. In class terms, the difference is narrow. But in terms of 'stability', 'corruption', 'morality', and good governance – the BJP comes up trumps. It may not have a clear majority in Parliament, even with its allies. But as of now, it seems to have a four-fifths majority in the media.

# Limits to swadeshi

C. RAMMANOHAR REDDY

THE election manifesto of the Bharatiya Janata Party contains a paragraph which in many ways is suggestive of the dilemma the BJP-led coalition government faces in making economic policy. While criticising the governments of independent India, the manifesto states that all through the past 50 years the BJP and its predecessor, the Jana Sangh, had 'opposed the license permit raj... opposed the command economy... opposed senseless central planning... opposed the inefficient state capitalism... opposed nationalization...' The BJP and the Jana Sangh 'had been urging a liberal economic regime in which the full creative genius of the Indian people could flower.'

After having seen the Congress(I) hijack its agenda for liberalisation in 1991-96 and the United Front follow much the same set of policies in 1996-98, the BJP has been in search of its own unique economic philosophy. For seven years it has looked for something distinctive to offer in the place of its original programme, though its natural inclination would have been to follow in the same direction as the Congress(I) government of P.V. Narasimha Rao. The *swadeshi* idea may have given the

party a semblance of a distinctive identity. But now that it is in power, the BJP finds that its dilemma has only worsened.

The Atal Behari Vajpayee government has to cope with pressures from many directions. It heads a coalition that is more hydra-headed than the UF. The non-BJP members of the coalition have no views on the economy other than the advancement of their sectional interests. The AIADMK (All-India Anna Dravida Munnetra Kazhagam) has only Cauvery in mind, the Akali Dal higher procurement prices, the Biju Janata Dal another steel plant for Orissa. The BJP itself is pulled in two directions. There are the 'reformers' who would like to accelerate the process that was stalled in the mid-nineties, and there are the proponents of *swadeshi* who espouse a notion of economic nationalism that is yet to be defined. Whatever it does the BJP government will have to look over its shoulder at the RSS (Rashtriya Swayamsevak Sangh), which will monitor the implementation of the nebulous *swadeshi* programme.

The first real indication of where the BJP-led coalition is headed will be evident when Finance Minister

Yashwant Sinha presents the budget at the end of May or early June. But within a month of assuming office, there are some clues of the pulls and pressures operating on the government.

**F**irst, in early April the government announced a large bonus for wheat farmers in Punjab, Haryana and Uttar Pradesh. This followed a couple of weeks of sustained pressure from the chief ministers of the three states (where either the party or one of its allies is in power) for a major revision in the procurement price for wheat. This sharp increase in the effective procurement price was completely unwarranted and will lead to higher prices at the public distribution system and in the market.

Second, the government announced major revisions to the Export-Import Policy for 1997-2002. Coming at a time when there is widespread concern about the sharp deceleration in export growth, the Ex-Im policy offered many incentives to exporters. However, what was significant from the swadeshi perspective was that the government continued with the process set in motion by the two previous governments of gradually removing the restrictions on imports of consumer goods. This is in keeping with the commitments that India has made to some of its major trading partners – especially the European Union – at the World Trade Organisation in Geneva. There was no question of slowing the process, leave alone rejecting the very notion of opening India further to the import of consumer goods – as would have been consistent with the idea of swadeshi. Yet, failure to remove some controls on import of consumer goods would have provoked trouble at the WTO.

Are we then going to witness 'realism' combined with 'populism' – two very value-loaded terms that the

financial press loves to use – from the BJP government rather than anything substantially different from the past? That is unlikely, because the BJP thrives on its distinctiveness and the economic interests that have supported it do have specific demands. The real question is how far the BJP government can or will want to 'deviate' from the past.

Take for instance the swadeshi programme. The BJP – at least a particular section within the party – has constructed powerful imagery around a concept that it has borrowed from the independence movement. But we must recognise swadeshi for what it is worth in the BJP's plan of action. Swadeshi is an idea that is being harnessed to give greater protection to Indian industry. It is in essence a concept that is being used for assisting one section of one part of the Indian economy. Whatever the other messages and slogans that can be read into the swadeshi slogan, it is in the present instance only a programme for aiding domestic industry.

**O**perationally, it will at best provide some incentives for Indian manufacturers while removing some others from foreign investors. Thus, one can visualise the government raising import duties – within the limits permissible under the commitments India has made at the WTO – on products where Indian industry has been hurt too much and too quickly. One can visualise a greater equality of tax treatment of Indian and foreign companies. One can also visualise higher barriers to foreign takeover of Indian companies. That foreign companies will henceforth find it that much more difficult to enter the consumer goods industry is another possibility. This is all part of the process of calibration that has been much talked about in recent months.

Some of these changes can be substantive within the particular sector in which they are situated. But when viewed in the larger context of the reform programme, they are at best tinkering at the margins.

Some of the limits placed on swadeshi are very much the dictates of the international market. While foreign investment still plays a marginal role in the Indian economy, external funds are substantial in certain areas. If investors from abroad are unnerved by certain policy decisions of the government, then they do have the potential to harm the economy by heading for the door.

**I**t will be simply impossible for the BJP coalition to remove, for instance, the flexibility given to foreign institutional investors in the stock markets. The stock markets have come to depend on these buyers and any large-scale withdrawal of funds will pull share prices down even further. A move to liquidate foreign holdings of shares in Indian markets will also quickly deplete the external reserves. And the last thing that the government wants to deal with at this point is another debt crisis. This is one important area where the BJP government will give a very limited operational content to swadeshi. The many statements made by the Finance Minister, Yashwant Sinha, about India needing foreign investment and those expressed earlier, during the election campaign, by both A.B. Vajpayee and L.K. Advani, about foreign investors being welcome must be seen in this context.

If a section of the BJP has made too much of swadeshi, if the media has joined in this exaggeration and if on top of it all there are clearly defined limits beyond which the government will not be able to give swadeshi its true early 20th century meaning, what

can there be distinctive about the BJP's economic programme? There are a few aspects of both the party's manifesto and the National Agenda which carry the stamp of the BJP and its coalition. There are first of all the two 'B's' – the programme for the *bhagidari* sector and the *berozgari hatao* programme.

**T**he BJP, and its forerunner the Jana Sangh, was for decades seen as a party of the small trader, the partnership firm and the middle class entrepreneur who had set up a small-scale enterprise. This is no longer the case, but the BJP has still found it necessary to promise more support to the *bhagidari* or unincorporated sector. As much importance was given in the election manifesto to this sector of the economy as to *swadeshi*. More finance has been promised, more tax breaks and greater social security. The issue was downplayed in the National Agenda but it still finds mention. However, the BJP will find it difficult to redeem these promises.

There is first the problem of identifying the *bhagidari* sector. It served the BJP well during the election campaign to combine transporters, hoteliers, builders, traders, doctors, priests, carpenters and those self-employed as part of one homogenous group. The reality is otherwise. Each category faces its own challenges and problems, so no single set of policies can work for all these economic agents. It is a different matter if the government sets out to only help the trading class, the traditional base of the BJP. The second problem is in the nature of help offered. The BJP has plans to increase institutional credit to the unincorporated or informal sector. But this is precisely what three decades of bank nationalisation – the same kind of nationalisation that has been subjected to criticism by the BJP

– was supposed to do and did in some measure.

Unemployment as a problem did find mention in the BJP manifesto – as it did in the manifestos of all parties – but it was in the National Agenda that the problem of unemployment was identified for special attention. A slogan too has been coined for the purpose – *berozgari hatao*. However, while unemployment, especially among the educated and in the towns and cities, is assuming serious proportions, poverty remains the real problem. Unemployment is linked to the absence of income-earning opportunities and poverty to the presence of low-productivity work. Special programmes for the unemployed do have a role to play – there are in any case plenty of them already – but what is needed is a more rapid and larger creation of high-productivity work.

**S**uch jobs can be created if the BJP's target of seven to eight per cent growth a year is realised over a fairly long period. Can the BJP-led coalition deliver? Does it have a concrete set of programmes? Unfortunately not. It is all very well to state that the reforms should be reformed and even better to say that India should be built by Indians. New names and new slogans – the *bhagidari* sector and *berozgari hatao* – may also evoke enthusiasm. But there is no substitute for a nuts-and-bolts plan of action. This is where there are few clues to the BJP coalition's thinking.

If there is one programme that everyone is agreed on, it is on reviving public investment. The BJP wants to increase these outlays; its political opponents too made a similar promise during the election; Indian industry demands it and both the supporters and critics of reforms are in agreement about the need for greater investment by the state.

It is an irony that from a neglect of public investment that came so easily in the early nineties there is now a near consensus on the need for greater outlays. Of course, different groups espouse a revival for different reasons. The organised sector of Indian industry, for instance, sees higher state investment as the only way in which flagging consumer demand can be raised. Some others see the neglect of public expenditure and an ill-conceived wooing of private and foreign investment as the main reason for the deterioration in infrastructure services. Yet others see the relative shunning of public expenditure on aspects of the social sector during the nineties as a huge wage that will soon come up for payment in the form of an unhealthy and ill-educated population. In the latter two arguments the concern is more for the medium and long-term than for the immediate future, as contained in the demand of Indian industry.

**T**he BJP in its election manifesto placed a high priority on mobilising larger savings for higher investment and one of the main sectors identified for a quantum leap in public investment is agriculture. The same set of priorities is outlined in the National Agenda. But is it possible to come even remotely near the BJP's target of earmarking 60% of the Plan outlay for agriculture and rural development? At present, it constitutes a little under 20% of the investment in the central plan. Tripling this proportion would mean either of two things. A large-scale diversion of resources from the other sectors – infrastructure, education, health, communication – is one option. Nobody can even think of increasing public investment in agriculture in this manner. However, if the BJP's target of a 60% allocation implies that it wants to triple the absolute

amount of resources that the Centre now spends on agriculture, this can be achieved by increasing total Plan investment by over 40% while keeping the outlay in the other sectors constant. This is equally infeasible, considering that it would imply a dramatic jump in total Plan investment.

**T**he specific numerical targets may not be as important as the direction in which the BJP government wants to move – to revive the importance of public investment in the economy. It is in this respect, more than anything else, that the new dispensation will find itself constrained by the parameters laid down by the two previous governments.

To increase public investment, the government needs more resources. The funds for a larger Plan outlay can be had by either increasing revenue or by reducing expenditure in non-productive areas. The tax revenue of the Centre has been compromised by the ill-conceived 1997-98 budget of the UP government. Yashwant Sinha cannot even dream of correcting last year's mistake of lowering tax rates by now hiking them. Since so much of economic performance has to do with expectations and perceptions, the introduction of higher tax rates will send negative signals to the markets, snuffing out whatever hopes there are of a recovery. Revenue can also be expanded if the public sector enterprises yield a higher dividend. Though there has been some improvement in the performance of the public sector in recent years, it cannot easily throw off the neglect it has suffered during the nineties.

If a substantial increase in revenue is not a possibility, savings in expenditure are even less likely. The two biggest consumers of non-productive expenditure are the wage and salary bill of the government and

interest payments on market loans. The polity is a long way off from a consensus on reducing the size of government. And interest payments have ballooned as the government, since the early nineties, has shifted towards the market to bridge the fiscal deficit.

There appears then little likelihood of Yashwant Sinha producing a budget that will mark a turning point in public investment. It is possible over the medium-term to substantially increase tax revenue, enable the public sector to perform far more efficiently and perhaps even reduce the staff strength of the government establishment. But no dramatic changes can be expected in the first budget of the BJP-led coalition government.

**I**n the end, after all the sound and fury about swadeshi, one can expect the BJP government to continue with the broad thrust of the policies of the past seven years. There will be no dramatic changes. There will, of course, be certain special programmes designed to leave a BJP imprint on economic policy. But whether on swadeshi, bhagidari or berozgari – these unique features will, however, be more in the nature of frills to border the government's economic policy. The substantive changes will be few and far between.

That the BJP has to please all the members of its coalition is one reason why the government will find itself unable to do anything dramatic about the economy. However, that is only one reason. More importantly, too much time has been spent on sloganeering about swadeshi and too little on the nitty-gritty of an alternative economic framework. Now that it is in power the BJP finds that it cannot do much about translating swadeshi into action. Over the next year or so the swadeshi slogan will be shown up to be just that, a slogan.

# Alliances '98

CHANDRIKA PARMAR

COALITIONS and alliances have become dirty words in Indian politics. Not that alliances have been absent from our politics; but they have failed to acquire the aura of legitimacy in the national psyche and continue to be viewed as impious and promiscuous. There are several reasons why such an impression persists. One reason is that the term has always been conceived in a very narrow sense, suggesting a union between parties in government. But what this conception of the term

obscures is the fact that parties themselves reflect a coalition of diverse interests. In this sense, the one party dominant phase in Indian politics was also the period of 'consensual' coalition.

The Congress system, multi-group in character, was always a system of coalitions and informed by a continuous process of internal bargaining and mobility. In fact, it owed the sustenance of its position of dominance to its 'permeability'. Seen from

this telescope, all political parties are an aggregation of competing interests and in that sense a coalition. However, this paper does not intend to look at intra-party coalitions. Instead, it will focus on alliance related strategies adopted by the main political contenders, the Bharatiya Janata Party (BJP), the Congress and the United Front (UF) in the pre-election phase of the 1998 Lok Sabha elections and the success or failure of these strategies.

*The BJP:* In the 1998 elections, the BJP's share of the national vote was 25.5%, 5.2% more than its national share in 1996. It won 178 seats, up only by 17 from its national total in 1996. Yet it formed the government heading an alliance of 252 members in Parliament. How did it achieve this? What was its strategy? This question acquires salience especially since the BJP contested only 380 seats in 1998 as compared to 471 in 1996.

**A** combination of factors brought the BJP to power in the Lok Sabha. The first was the recognition by its leaders that the party's support base had hit a plateau and forging strategic alliances with regional parties could be instrumental in maximizing seats. As a conscious decision, alliances were forged with the AIADMK and its allies in Tamil Nadu, the Lok Shakti in Karnataka, the Biju Janata Dal (BJD) in Orissa and the Trinamul Congress (TC) in West Bengal. These alliances, besides its longer-term ties with the Samata Party in Bihar (extended to U.P. in 1998), the Haryana Vikas Party (HVP), the Shiromani Akali Dal (established after the 1996 election) and with its natural ally, the Shiv Sena in Maharashtra, were clearly forged with the goal of seat maximization.

The dilution of its ideology was a key to the BJP's success in the 1998 Lok Sabha. This was necessitated by a need to draw more allies into its fold.

While the Ayodhya agitation was primarily responsible for BJP's great leap forward, it had also conferred political untouchability upon it. Alliances were possible only if it abandoned its ideological purity. The BJP had to be given a 'softer look'.

**A**ccordingly, Atal Bihari Vajpayee, widely seen as the moderate face of BJP, was projected as the prime ministerial candidate. The manifesto talked of 'all the consensual, legal and constitutional means to facilitate the construction of the Shri Ram Mandir at Ayodhya.' As a step towards consensual politics, BJP for the first time indicated that if it found itself leading a coalition government, it would follow the common minimum programme in which Article 370, Uniform Civil Code and Ayodhya may not find a place in deference to the wishes of its allies.

The BJP in the South was given an acceptable local face and there was tacit admission that Hindu nationalism was only a secondary aspect of the more vital sub-nationalism. Doctrinal compromises were made: Hindi, Ayodhya and Aryavarta gave way to local languages, local nationalism and a dilution of extremist vocabulary. In forging key regional alliances, the BJP

did not balk at being a junior partner to local parties.

**S**imultaneously, as a strategy of vote maximization, the doors were thrown open to individuals of different parties. The induction of Aslam Sher Khan (Congress MP from Madhya Pradesh) and Ayub Khan (Congress MP from Rajasthan) was used to send a positive message to the Muslim community. It had to find a way to increase its vote/seat share so that it had the critical numbers to be invited to form the government.

*The Congress:* Congress won 141 seats of the 474 it contested in the 1998 elections, securing 25.9% of votes – a marginal increase of one seat and a fall of 4% in national vote share in comparison to its 1996 tally. In appearance it seems to be a party in decline. Unlike the BJP, which was clear about its strategy, the Congress found itself floundering after having forced the election over the Jain Commission report. The continuous drop in votes, the Congress itself acknowledged, was a consequence of a gradual desertion by its electoral base. For an umbrella party which derived its electoral victories by building coalitions out of disparate social groups, the Congress faced a basic threat to its

Electoral Performance 1952-1998

Note: Parties here represent pre-poll alliances;

1996: INC+(INC+AIADMK), BJP+(BJP+Samata+Shiv Sena+Haryana Vikas Party), NF(JD+Samajwadi Party) and LF(CPM+CPI+RSP+FBL)

1998: INC(alone), BJP+(BJP+Samata+Shiv Sena+Haryana Vikas Party+AIADMK+Akali Dal+Trinamul Congress+Lok Shakti+Biju Janata Dal), TDP(NTR), UF+(Janta Dal+SP(Mulayam)+TDP(N)+AGP+TMC+DMK+MGP+CPI+CPI(M)+RSP+FBL)

survival when confronted with desertions from diverse groups.

As a strategy for seat maximization the Congress, like the BJP, looked for pre-poll alliances. For Congress then, it was more a question of putting its own house in order, avoiding possible splits and defections while also negotiating alliances. Negotiations with the BSP in Madhya Pradesh, Lok Shakti in Karnataka, Samajwadi Party in Uttar Pradesh did not succeed. However, it did come to seat sharing arrangements with the BSP in Punjab, RJD in Bihar, and the Samajwadi Party and the Republican Party of India in Maharashtra, while continuing its older alliance with UDF in Kerala. Unlike BJP, the Congress was not content to be a junior partner in regional alliances; instead, it sought to dictate alliance terms rather unsuccessfully.

**T**he single most significant factor for Congress was Sonia Gandhi's decision to campaign for the party. While at one level her entry muffled dissent, her campaigns became the rallying point for party workers and for appealing to minorities by expressing regret for Operation Blue Star and the demolition of the Babri Masjid. But, her entry also resulted in the distancing of some potential allies, e.g., Ramakrishna Hegde who moved towards the rival BJP.

*The UF:* In 1998, the share of the UF was 21.9% of national votes, a fall of almost 7% from 28.5 in 1996. It is a front of 17 political parties, mainly formations thrown up by the mandalisation of politics. It has a lower caste base along with a strong Muslim support base. Most of its partners have a regional appeal. Although, some parties of the front fought the 1996 elections together, UF in its present form was a post-poll alliance to keep the BJP from forming the government. Its government lasted 19 months and

came to an end when the Congress withdrew support. In 1996, the UF was in power in as many as 10 states, a number which has now come down.

**I**n the 1998 Lok Sabha elections, the challenge before the UF was to maximize seats by keeping the alliance partners together. However, several problems surfaced in its camp. A major problem related to the arrangement regarding sharing of seats. The core committee decided that seats would be divided among partners on the basis of the party that was dominant in the state. But this led to a breakdown of understanding between the UF constituents.

In U.P., Mulayam Singh Yadav rejected the claims of the Janata Dal, the CPI and CPI(M), arguing that none of them could win any seats in the state. Thus, these parties put up their own candidates against the Samajwadi Party. In Tamil Nadu, Janata Dal withdrew all its candidates from the fray and boycotted the meeting of the prime minister with the TMC-DMK leaders. The CPI(M) withdrew four candidates, but put up two candidates against the TMC-DMK-CPI combine. Throughout the country, 45 UF candidates were pitted against their own partner parties.

*Success/Failure:* Going purely by the 1998 results, the BJP proved to be more successful as compared to its rivals in terms of maximizing seats. Its strategy helped the party secure the maximum number of pre-poll alliances, though this was insufficient to form a government. All-India figures reveal that it polled 25% vote and its allies added a significant 11.2%. Moreover, the main areas of expansion for the BJP-led front in this election were from a strata of the population where it had traditionally been weak: the OBCs, the poor, the less educated and from rural areas.

In the southern states (Karnataka, Tamil Nadu and Andhra Pradesh) out of the 50 seats won by the BJP alliance, 20 were won by BJP itself. The alliances' vote share in these states was 33.9%, the BJP's individual share was 16.6%, an indication of the success of the alliances. The alliance in Tamil Nadu was most fruitful, grabbing victory in 30 out of the 39 seats, gaining at the cost of the UF constituents. Kerala was the only major state that did not send a BJP candidate to the Lok Sabha. In the East (Orissa, West Bengal and Bihar), of the 53 seats won by the BJP alliance, only 27 were won by the BJP of which 19 were from Bihar. The vote share of the BJP and its allies in this region was 37.4%, BJP constituting 16.6%.

**T**hough the BJP won a smaller share of seats than its allies in all these states (except Karnataka), its gains were crucial compensation for its losses in Maharashtra and Rajasthan, at the same time enhancing its credibility as a party with an all-India presence. Through its alliances the BJP has also been able to establish political and organizational beachheads in these regions. The Congress has little to show by way of immediate gains in the 1998 elections. In the three key states of Uttar Pradesh, Bihar and Madhya Pradesh, which account for 179 Lok Sabha seats, the Congress tally is 15. Its alliances in Maharashtra paid rich dividends. The party's vote share in the state rose to 42.6% in 1998 from 34.8% in 1996, translating to 33 of the 48 seats, while its ally, the RPI, got four seats (4.1% votes). The Congress had worked early to bring the Republican Party of India and the Samajwadi Party into an alliance while simultaneously putting its own house in order and ensuring unity within the Maharashtra unit. In Kerala the long-standing partnership with the UDF

gave Congress a stable base to fight from; this also holds a lesson in alliance making.

The results from Maharashtra and Rajasthan indicate that it is too early to write off the party. The Congress continues to maintain a fairly high vote in many other large states: Andhra Pradesh (37.8%), Gujarat (34.8%), Karnataka (36.2%), and Orissa (41%). Future alliance strategies and internal management of the party organization could either rejuvenate it or lead to its demise.

The UF regional partners enjoyed mixed fortunes: humiliation in Tamil Nadu, big losses in Assam and a respectable outcome for its constituent, TDP, in Andhra (12 seats constituting 31.5% votes). The Samajwadi Party fought and retained 18 seats constituting nearly 27.7% of votes. The decline of the Janata Dal at an all-India level weakened the UF's position. It left the BJP as the chief gainer in Karnataka and Orissa. The data on the three states – Bihar, Orissa and Karnataka – in which the decline of the Janata Dal has been most significant, is interesting. The splits within Janata Dal tell the story of its decline.

**T**he vote share of the Janata Dal in Bihar was 8.3%, that of the RJD 25.2%, a combined total of 32%. This was the Janata Dal's vote share in the 1996 elections. In Orissa the Janata Dal's vote share in 1996 was 30.1%; in 1998 this fell to 7%, with the BJD winning 27.3% of the popular vote.

In Karnataka it is clear that the alliance with the Lok Shakti was crucial for the BJP. The Janata Dal's vote share in Karnataka was 34.9% in 1996; in 1998 it fell to 21.3%. Lok Shakti won 11.5%, while the BJP vote rose only marginally, from 24.8% in 1996 to 26.4% in 1998. However, the BJP-Lok Shakti combine won 37.7% ensuring it the single largest number

of seats in the state. If Hegde had chosen to align with the Congress or stay with the Janata Dal, the Karnataka scene may have been very different.

Alliances as a strategy of electoral competition have come to stay; seat maximization and alliances go hand in hand in the present political scenario. In broad terms this is leading to the emergence of a model at the Centre where smaller parties are aligning with one or the other national party. Neither the Congress nor the BJP are untouchable for regional parties as demonstrated by the leaders of regional parties like the Asom Gana Parishad, National Conference and the Telugu Desam.

**S**imultaneously, faced with stubborn limits that the mobilization of a multiplicity of social groups in the country places on the expansion of political parties, it can be argued that they will have to tone down their aggressive rhetoric and build more inclusive social coalitions than before. Faced with the compulsions of brokering alliances in a hung Parliament, where each party needs the support of other parties to form a government, political parties would need to moderate their rhetoric. A political system composed of multiple social groups and multiple parties, none of which are strong enough on their own to come to power, would seem to naturally exert a strong centripetal influence on party behaviour.

It should not be a surprise if the first few experiences of coalition government produce an atmosphere of instability. As the new rules of the game evolve, the growing pressure on the new governments to meet social needs and accommodate interests will lead to yet greater emphasis on performance. Hopefully this will lead to a more responsive and integrated polity, with politicians and political parties more sensitive to citizen concerns.

**STRUCTURAL ADJUSTMENT, GLOBAL  
TRADE AND THE NEW POLITICAL  
ECONOMY OF DEVELOPMENT** by Biplab  
Dasgupta. Vistaar Publications, New Delhi, 1998.

THERE is a mindset that believes in the following description of the global business environment. International trade is inherently unfair because developed countries of the North distort rules of the game. The South (developing countries) finds it difficult to push up exports. Although GATT (General Agreement on Tariffs and Trade) has brought down tariffs, the North resorts to non-tariff barriers. With constant or shrinking markets, because demand for primary commodities (major export earners for the South) goes down as production structures change, developing countries begin to undercut each other's export prices in an attempt to increase export volumes. This contributes to deterioration in the terms of trade facing the South, the Prebisch-Singer hypothesis. Imports can't be slashed because they are essential for growth. Faced with trade or current account deficits, developing countries have to borrow. But concessional lending is not available. Hence one borrows from the commercial

market and keeps borrowing to repay earlier debt. The net transfer of resources to the South becomes negative and one is stuck in a debt trap.

The rules of this unfair North-South game need to change. There should be a New International Economic Order (NIEO), with fairer rules for the South. Pity this has not come about, despite UNCTAD (United Nations Conference on Trade and Development). South-East (socialist countries) trade games were so much better, except that the East has collapsed. Nothing seems to be happening on South-South trade and economic cooperation either. Why can't the South bargain collectively? Why can't G-77 and the non-aligned movement (NAM) be resurrected? Not only is fair trade not being ensured, the North, led naturally by the United States is clamouring for free trade and thrusting liberalization down the throats of the South. This is being done through structural adjustment policies of the International Monetary Fund (IMF) and the World Bank, in spite of evidence that such structural adjustment policies don't succeed.

The so-called Washington consensus has now found an ally in the World Trade Organization (WTO). Consider how unfair the Uruguay Round agreement

was. GATT had no business to discuss services, or trade-related intellectual property rights (TRIPS), or trade-related investment measures (TRIMS). GATT's original mandate was negotiations on external sector policies, not domestic economic policies and it should have stuck to that. While the South suffers and is forced to open up, the North retains protectionism through anti-dumping, agricultural subsidies, quotas in textiles and garments, environmental measures, labour standards, restrictions on cross-border movements of labour (but not capital), and even flouts multilateral agreements through unilateral actions like Section 301 provisions. Nothing is done on restrictive business practices of multinationals. Where is the UN Code on Technology Transfer? The North even goes around pirating southern biodiversity through patents on *haldi*, *neem* and *basmati*.

This simplistic diagnosis may or may not be accurate. But in a country that has still not overcome the colonial legacy, there are people who empathize with this view. And there are also those who believe in it. After all, this diagnosis has the virtue of simplicity. Everything is clear in black and white. Like a formula Hindi film, you know the bad guys and the good guys from the first scene.

Biplab Dasgupta is such a believer, a fact which is known to all those familiar with his earlier work and background. A quote from the introduction will illustrate the thrust of this volume: 'For a majority of the less developed countries (LDCs) of the world today, structural adjustment is a fact of life. Sponsored by the World Bank in 1980, this package of policies is supplemented by the stabilization package sponsored by the International Monetary Fund (IMF).... These packages were originally introduced as short-term remedies to rectify severe imbalances in external and internal accounts in a large number of countries. However, once initiated, very few countries have succeeded in growing out of them, as one lending programme has followed another.'

The context is naturally India. As the Prologue states, 'The idea of a book on structural adjustment was originally promoted by the decision of the new Indian government, led by Narasimha Rao, to introduce structural adjustment in India in July 1991.... What has emerged, after several years of hard work, is an attempt at a comprehensive critical analysis of the Fund-Bank approach on development in less developed countries.... A negative consequence of this exercise is that the proposed book on India's experience with structural adjustment still remains to be written.'

There is much to disagree with, on facts as well as their interpretation. For example, the author does not seem to have read the Uruguay Round agreement, the references are exclusively to second-hand sources, which are not always accurate. But it is difficult to argue with those for whom the afore-mentioned simplistic diagnosis is an article of faith. Like religion, this diagnosis is an opiate for our left-wing academics (and politicians, since Biplab Dasgupta is a bit of both) and how does one argue about religion?

Subject to this bias and subject to the need to distort facts to fit a theory, this volume is well-researched and covers an enviable breadth of canvas. This is true of all six chapters on the new political economy of development, structural adjustment, the world trade system, environment, East Asia and a global overview. (There are two additional chapters that constitute the introduction and the conclusion.) Since the book was overtaken by the East Asia financial crisis, there is also an epilogue on that. The moral is simple and provides more grist to the mill. 'The helplessness of these countries, despite impressive growth rates, against the onslaught of obsessive speculators such as Soros, is a warning to other LDCs who are being goaded by the World Bank and IMF to take the express route to full convertibility of local currencies.'

If you are not a politician, read the book by all means. But if you are a politician, better stay away. You might seriously begin to believe that WTO agreements can and should be re-negotiated.

**Bibek Debroy**

**THE DISPOSSESSED: Victims of Development in Asia** edited by Vinod Raina, Aditi Chowdhury and Sumit Chowdhury. Arena Press, Hong Kong, 1998.

THERE are anniversaries and anniversaries. In the last year, while the country celebrated, even if in a desultory manner, the 50th anniversary of its independence from colonial rule, we were also forced to remember the trauma of Partition and the assassination of Gandhi. With him was also buried (only metaphorically) among the more trenchant critiques of development as we have come to experience it. Development, Gandhi warned us, was no unfolding of human capabilities and entitlements, but a conjuncturally specific path of material progress based on an exploitation of both man and nature. A necessary concomitant of modern civilization, the development process leaves behind in its wake victims, the left-overs and the dregs who are made

redundant – their skills, lifestyles, worldviews, even their labour power no longer of use.

For much of this century, this debate was couched in the somewhat sterile polarities of capitalism vs. socialism. Radical critics argued that if only property relations were appropriately altered, beneficial and equitable growth could be ensured. Having dismissed the likes of Gandhi as ‘backward’ and ante-diluvian, they rarely bothered to examine the real discontents of the modern growth process.

It is only now, with the socialist project in tatters and, the environmental and ecological crises assuming dangerous proportions, that development theorists have started seriously engaging with issues of sustainability and survival. Had they bothered to listen to ordinary people, we may all have been saved some misery.

Among the landmarks pushing us into reexamining our presuppositions about development is Bhopal. It will soon be 15 years since the tragedy and it does none of us any credit that a vast majority of the victims are still seeking justice. The Asian Regional Exchange for New Alternatives (ARENA), a Hong Kong based regional NGO, was among the first organizations to chronicle and analyze the carnage wreaked by the Union Carbide on thousands of innocent families. Subsequently it co-sponsored the Permanent People’s Tribunal on industrial disasters in Bhopal and Bangkok and worked for the formation of a coalition of the Asian Victims of a Hazard Free Environment. Over the years its perspective widened to look not only at mega disasters and projects, but also the silent and more endemic processes of degradation of the environment, the cornering of the natural resource base by state and corporation, leading to dislocation and displacement – in brief the crisis of survival.

*The Dispossessed* is a chilling chronicle of these processes. Through detailed case studies of 10 Asian nations – China, India, Japan, Malaysia, Nepal, Pakistan, Philippines, South Korea, Sri Lanka and Thailand – prepared by scholars and activists, it forces the reader to confront a balance sheet rarely presented by the UN or the World Bank.

Take the chapter on India. Not only are we provided case material on the Narmada Valley Project, the Tehri Hydroelectric Project, the Bhopal Gas Leak, the Balliapol Missile Test Range, the Chilka Shrimp Farm and the West Coast Power Projects but also discussion on a lack of basic amenities, child exploitation, corruption, debt and deficit, dumping, forest depletion, health hazards, pollution, industrial sickness – and the list

goes on. As comprehensive a documentation as any that this reader is familiar with.

The range of countries and cases covered provide telling evidence that the problem cannot be traced to specific projects, locations, political systems or levels of development. Let us not forget that the official Japanese response to the Minimata poisoning was no different from the way our political and corporate elites reacted to Bhopal. Try and bury the event. If that becomes impossible, then apologize and explain it away as a one-off case. Never is it accepted that the flaw is deeper, located in the development process itself.

This collection highlights another process, which is often missed. People are never passive victims. They struggle, often collectively, not only for redressal and justice but also for altering the ways in which our societies have organized their production processes. Even more, for changing the terms of discourse on what constitutes worthwhile development. It is this twin tendency that makes this book essential reading.

There is a minor downside. Expectedly, the different country contributions display an unevenness in both coverage and quality. All share a somewhat naive radical romanticism about people’s struggles and the potential of experimental alternatives to counter the currently hegemonic view. There is also an insufficient engaging with the tendency towards globalisation of capital and production. Above all, there is little effort at prioritizing the different issues. Surely, the argument is not that all ills that we confront can be traced to the same central processes. That would be a case of extreme reductionism.

Nevertheless, as a resource book for those keen to search out new ways of organizing life, *The Dispossessed* fills a vital gap. We now have Asian, not just western material to think about. For this, both the editors and the publisher deserve our thanks.

Seminarist

**GREENING AT THE GRASSROOTS: Alternative Forestry Strategies in India** by Eva Cheung Robinson. Sage Publications, New Delhi, 1998.

MOST historians, anthropologists and sociologists of contemporary India are united in their critique of centralized management of forest resources. They agree that the administration of these resources should be decentralized in a way that takes local knowledge and practices into account. However, the nature of institutional structures and decentralization have been

subject to much debate. While some scholars argue that forest management should be left to the village communities, others support joint forest management (JFM) efforts that have been put into action in the 1990s. In joint forest management, NGOs play a crucial mediating role between the local people and the forest department.

Eva Cheung Robinson's book has to be read in the context of this debate. In the main, the author is in favour of NGO initiatives in the forestry sector. Through her work with three NGOs in Andhra Pradesh she argues that these organizations provide a new 'organizational culture' for forest management. The success of these NGOs – RGHBMSS, GORD, and KIPDOW – is attributed to their awareness of traditional knowledge systems. This is in sharp contrast to the organizational culture set up by the Forest Department which is impersonal and informed by modern knowledge systems.

As Robinson sees it, the history of forestry as described by Tariq Banuri, Frederique Marglin and others is a story of the confrontation between modern and traditional knowledges. In this context she argues that social forestry in post-independence India is based on the false assumption that the fuelwood crisis in the country can be traced to the degradation of the forests caused by excessive local use. Instead, she links the degradation of forests to its commercial and industrial uses. According to the author it is erroneous to think that social forestry resulted in any benefit to the rural poor since more commercially viable species were planted instead of species for local use. She contrasts the social forestry programme with non-modern subsistence forestry programmes. These are initiated by NGOs in Andhra and are more conducive to the needs of the people. Overall she concludes that forestry initiatives which are initiated and monitored by NGOs are more successful in meeting the needs of the people than government forestry programmes.

Though the book records some valuable forestry experiments in Andhra Pradesh, its conceptual framework remains problematic. The dichotomy between 'traditional' and 'modern' knowledge does not measure up to any rigorous historical analysis. There have been numerous instances where scientific forestry had to take traditional knowledge into account. A good example of this is the propagation of lac in 19th century Central Provinces. The managing agencies had to rely on the Gonds' expertise to make their operations commercially viable. The basis of 'scientific forestry' was rooted in the knowledge of the local people. As

such, the generalizations developed by Ashis Nandy, Tariq Banuri, Frederique Marglin and others need to be modified.

The second important point that can be made vis-à-vis the relationship of traditional and modern knowledge relates to the way in which the question itself is framed. The case of lac propagation shows that the forest administration did not show more sensitivity to local needs by incorporating local knowledge into its ambit. In fact, this led to the further marginalisation of the household economy. Thus, the crucial issue is not whether traditional knowledge is incorporated into forest administration, but whether such an inclusion leads to an alteration in the prevailing power relations such that they are tilted in favour of the rural poor. Added to this, we must also ask if the measures adopted by NGOs and others lead to a change in these relations? The author fails to address these concerns.

Finally, this book raises the issue of biotic pressures on forests. Questions relating to local uses of forests are intimately linked with forest conservation. Today there is a great gap between supply and demand for fuel and fodder. This has increased the pressure on forests. In this context it is pertinent to examine the argument that the primary responsibility for the degradation of forests rests with industrial and commercial activity. While it is true that commercial activity has led to irreparable damage to the forests, the aim of forest conservation cannot be met solely by prohibiting commercial and industrial use of forests. It is well acknowledged that the natural forests of the country cannot be saved if the needs of the local people are not sufficiently met. The book fails to take this argument into account because the theme of conservation is by and large ignored. Hence, its discussion of alternative forestry strategies remains incomplete.

**Archana Prasad**

**THE CALL ME MEMBER SAAB: Women in Haryana Panchayati Raj** by Bharti Tekchandani, Kiran Jyoti and Priti Sharma. MARG, Delhi, 1997.

THE reservation of 33% of seats for women in local government (panchayats, zilla parishads, town areas and municipal corporations) has the potential to bring about more far-reaching social change than perhaps any other political measure adopted in recent years. The induction of large numbers of women into the public sphere through the process of nominations and elections, and then into positions of actual political and

social importance will affect the relations between the sexes in ways that are still taking shape but whose significance cannot be over-estimated. The widespread opposition to reservation for women in the Lok Sabha and Vidhan Sabhas implies recognition of the danger that this poses to patriarchal forces.

*They Call Me Member Saab* is a study of the elected women members in Karnal district of Haryana by a research organization, MARG. As the introduction clarifies, Haryana was chosen because of its backwardness and the low status of women. The state has the lowest female to male ratio in the country and women constitute only 30.17% of the literate population. Though women in Haryana are very visible and participate in different kinds of economic activity in large numbers and despite the fact that Haryana is economically better off than many parts of the country, the veiled women of the state exist in an unabashedly patriarchal, feudal and sexist world.

The district chosen for the study, Karnal, is a prosperous one. Economic prosperity, however, seems to have little linkage to social progress. The women interviewed in the study constitute 10% of the total women elected in the district. 112 panchs, 14 sarpanchs, 8 panchayat samiti members, 1 panchayat samiti chairperson and 2 zilla parishad members have been interviewed. The caste-wise break-up of those interviewed is as follows:

	FC	SC	OBC
Panchs	55	30	19
Sarpanchs	8	2	3
Panchayat Samiti Members	3	2	3
Panchayat Samiti Chairpersons	1		
Zilla Parishad Members	1		

The study begins with some interesting details as to how various elected women were actually located. The son of one panch pretended not to know anything about her status or whereabouts because he did not want to accept that his mother was a panch; he certainly did not want her to be interviewed.

Except for Krishna Sandhu, the chairperson of the Gharonda panchayat samiti, who was known in her own right, all the other elected women were known as wives or mothers of so-and-so. One sarpanch, Nirmala Devi of Kutel village, was known as sarpanchni while her husband was known as sarpanch. Several women refused to speak in the presence of men, especially their husbands. One of them had a bigamous husband. 67 of them were illiterate while 25 could only sign their names. 14 had studied up to the primary level, 10

between the VU and IX standards, 8 had passed the X standard, 1 was a graduate and 1 a post-graduate.

While the study found that, as in the rest of the state, more SC and OBC women were illiterate, their upper caste counterparts found their status un-enhanced by their education. One SC panch of Gondar village worked as an agricultural labourers on the field for Rs 25 a day while her husband, who earned Rs 50 for the same work, did so when he chose to and spent his earnings in the same manner. Another SC panch of Tikri village was regularly beaten up by her drunken husband.

On the other hand, there were women with unusual stories: one OBC panchayat samiti member told her husband and father-in-law that she would contest the election even if they threw her out of the house because she was determined to campaign for prohibition. Another SC panch filed her nomination papers without informing, let alone asking, anyone at home. Both these women are affiliated to national political parties but affirm that without reservation they would not have got the opportunity to contest the elections. Only 10 elected members had any experience of community work as anganwadi workers and members of mahila mandals before contesting elections.

As far as campaigning was concerned, most of the women candidates went door-to-door during the day. Their men folk were responsible for the campaigning at night, which included providing inducements like liquor to male voters. 18 women were unanimously elected and therefore did not need to campaign. There were 35 women who did not involve themselves with their campaign in any way.

After being elected, a surprisingly large number of women were associated with some form of developmental activity, though sometimes as minimal as signing forms. All of them complained of lack of funds and powers vested in the local bodies to which they had been elected. While some were unaware of the schemes that were to be implemented by them, a few were completely inactive. Significantly, only 8% of the women interviewed felt that they could work independently (of their family members) while 13% needed their husbands' help and 11% the help of others. In 35% of all cases, however, it was the husbands and sons who actually worked. Unfortunately, for 17%, no one did anything.

As for reservation of seats, 84% of the women felt that it was a very positive step. This is an important point to remember whenever the allegation is made that political reservation for women is a demand only raised by elitist urban women. Many of the women

interviewed felt that since men drink and 'steal' money, they were not as trustworthy as women. Several felt that literacy was essential for efficacy. They also felt that women could better implement family planning and prohibition programmes. As many as 101 felt that their families were happy with their being elected and were supportive. Many felt that their status had been enhanced.

Several had given up the *ghunghat* after being elected. Even women who were inactive in the panchayats had become more confident and vocal. One of them said, 'I can say and do what I want.' Another stated that her voice was now heard inside and outside the home. Still another stated that she could sit with the men, even in Karnal. Conversely, one woman complained that her husband had ceased to be supportive. Another's husband said, 'Earlier men could easily control their women, but now women threaten them.'

At the same time, several women complained that panchayat work, added to their domestic duties, was too strenuous a burden. Also too expensive because it entailed travel, eating or at least drinking tea outside the home, and loss of wages. All of them strongly felt the need for remuneration, not only for economic reasons but because it would decrease their dependence on men. One was emphatic that the remuneration should come to her and not to her husband.

They flagged off other problems they faced as elected representatives. While illiteracy topped the list, insecurity outside their homes came a close second. The study did not actually ask questions specifically related to insecurity and the threat of violence. Perhaps some important and disturbing facts about the threat of violence and intimidation that women face as rural women, as women in public life, and as women members of families, would have been revealed.

Official apathy, loss of wages and increased expenses left them feeling demoralized. Many felt that elected male representatives were impolite and ignored them. They felt the need for economic independence and proper allocations of funds. Many were in favour of 50% reservation for women and said that women must unite and make themselves heard. They expressed the need for a separate room where women could discuss among themselves. Some of them even advocated women panchayats. Construction of separate toilets was a strongly felt need. Most wanted *purdah* to be abolished.

At the end of the study a few detailed sketches of some individual elected representatives have been included. One is impressed by the grit and energy of

many of these women, plunging into an unknown world, equipped with nothing more than commonsense and a strong desire for survival.

In conclusion, the authors make some important suggestions that, if implemented, would help make women representatives more effective and the panchayati raj system itself more capable of fulfilling peoples' needs. The suggestions are with regard to the use of the electronic media, both radio and television, for bringing training programmes to the women in their homes. Designing of training programmes with the help of NGOs, and the necessity of making proper arrangements for the women members (like payment of TA/DA, lodging, boarding, transport and so on) so that they can avail of such programmes is emphasized. Literacy programmes and education of girl children are, naturally, strongly recommended. Finally, amendments to the panchayat legislation to ensure devolution of financial powers and elimination of bureaucratization and the functioning of gram sabhas is advocated.

*They Call Me Member Saab* is a timely and, perhaps, pioneering study that provides us an insight into the catapulting of rural women into the public domain. It describes the barriers that women face when they venture out of their limited domestic spheres and makes useful suggestions as to how they can be helped to be effective and autonomous. It is unfortunate and surprising, however, that certain issues, especially pertaining to Haryana, have been missed out by the study.

The first is that in Haryana the 1994 Act contains certain provisions regarding disqualification of a panch, sarpanch and up-sarpanch of a gram panchayat; member, chairman and vice-chairman of a panchayat samiti, and member, president and vice-president of a zilla parishad. Section 175 under chapter XX states that, 'By virtue of provision (q) of this section, none of the above-mentioned persons shall continue as such if they have more than two living children provided that a person having more than two children on or up to the expiry of one year of the commencement of this Act, shall not be deemed to be disqualified.' This legislation has been harshly criticized by the women's movement, and people and organizations interested in strengthening participatory democracy.

This is an anti-poor and anti-woman measure which will ensure that vast numbers of the poor are denied the right to contest elections. It penalizes women for something over which they have little or no control. The study does not concern itself with the impact of this legislation on future elections. No

questions about this legislation were asked to the women, all of whom have more than two children. Does this not indicate that it will be difficult to even find candidates in later elections?

How such laws militate against the rights of women in a male-dominated society was recently illustrated in Haryana when an elected male representative accused his wife of infidelity when she conceived her third child and proceeded to divorce her for this 'crime'.

The second point left untouched by the study concerns the implementation of prohibition in Haryana. While it was the women who created the pressure for promulgation of prohibition, the study tells us nothing about what elected women representatives did to implement it and with what measure of success. Prohibition is an issue of concern and debate in the women's movement and the experience of those responsible for grassroots governance would have been immensely educational.\*

Another weakness of the study is that it makes no attempt to assess how society at large, in a socially backward state with strong patriarchal traditions like Haryana, has reacted to the presence of women in the public domain. Women's reservation is already being subverted in various ways. There are reports from Haryana of no-confidence motions being successfully moved against women sarpanchs so that they can be replaced by male up-sarpanchs. Signature campaigns against women's reservation are being undertaken in villages where the sarpanch's seat has been reserved for a woman, so that this could be changed in the next round of elections.

These processes are, of course, at work in states other than Haryana. Accompanying these processes are shrill campaigns against elected women – of them being proxies, useless, neglecting their domestic duties, falling prey to moral turpitude, creating social chaos and so on. Physical violence against elected women is also on the increase. Lilavati, a corporator in Madurai, was knifed to death by goons running a water racket because she had successfully brought piped drinking water to her ward. Modibai, an adivasi sarpanch of Amba village in district Mandsaur of Madhya Pradesh, was beaten to death by her husband because he did not like her doing panchayat work. There must be similar cases in Haryana but the study does little to illuminate the social milieu that is responsible.

\* Prohibition in Haryana was scrapped on 1 April this year. This was subsequent to the ruling party's electoral debacle, in large part attributed to its prohibition policy.

Despite these shortcomings, the study is more than of academic interest. Women must be made aware of the transformation that legislations like the 73rd Amendment bring in their wake in order to effectively combat the attack on their democratic right to hold elective office. The study reveals that women elected to public office – even if they are illiterate, proxies or ineffective – experience a metamorphosis. The courage to throw off purdah, a ubiquitous part of the Haryana landscape, a woman belonging to a nomadic tribe sitting on a chair in the presence of upper caste men by virtue of her elective office is a courage born of holding elective office. Nuggets of information like these reinforce the significance of women's right to reservation as a right that they must fight to defend and extend.

Subhashini Ali

**CROSSING THE SACRED LINE: Women's Search For Political Power** by Abhilasha Kumari and Sabina Kidwai. Orient Longman, Delhi, 1998.

Prime Minister Vajpayee recently reiterated his personal and party commitment that the constitutional amendment to reserve one-third of the seats to Parliament and state assemblies would be steered through the House on a priority basis. One hopes he remembers that similar assurances were given by his predecessors, H.D. Deve Gowda and Inder Kumar Gujral. And that notwithstanding an ostensible all-party consensus on the issue, which incidentally featured in all political manifestos in 1996, the proposed Bill after a few days of acrimonious debate was shelved, to await more propitious times. Evidently this route to a share in political power is a thorny one.

The monograph under review, based on a research project sponsored by the Friedrich-Ebert-Stiftung (FES), a German donor agency active in promoting policy oriented work, provides interesting insights into this ongoing struggle for political equality, on the degree of space our political system gives to women to play an active role in the political process. The focus is on the space women have managed to create for themselves in our political parties, and whether there has been any significant change in either the nature of women's functioning or in the parties' approach to women and women's issues. The prognosis is expectedly depressing.

Though the participation of Indian women as voters in our elections has steadily increased over the

years, their representation in state legislatures and national Parliament has never exceeded 8.1 per cent. The number of women candidates put up by different parties or the seats they occupy in key decision-making bodies also remains uniformly low. Abhilasha Kumari and Sabina Kidwai examine the histories, ideologies, manifestos and organizational structures of both national and regional parties to gain insights into the position of women in the political system. More interestingly, they provide in-depth interviews with women politicians who have successfully climbed their way into positions of power.

Their basic contention is that none of the political parties have questioned traditional notions of women's role in society, that women continue to be perceived as belonging to the private or domestic realm whereas political participation is seen as a public domain, consequently for men. Thus, while the necessity of involving women in the political process is never denied, there is little attempt to look at both their capabilities and entitlements. No wonder there is an absence of serious effort to help women, particularly from the more marginalised socio-economic groupings, overcome given barriers.

To those seized with this question, this monograph traverses familiar ground. Ideologically, while the BJP is seen as hostile to this quest, the Congress is characterized as having an ambivalent attitude. The left, however, is viewed more positively. Nevertheless, even they scarcely have a better record. This is explained by the persistence of traditional attitudes. What is inadequately explored is why even women who are in the forefront of the demand for women's reservation, particularly belonging to the left parties, are so coy when discussing either their party positions or leaders. Of course, everyone feels that post the 73rd Amendment the situation is likely to change for the better, now that more women have entered the panchayats.

Overall the argument is that the current situation is created not only by historical and ideological bias but also by the nature of our electoral process and political environment, neither of which facilitate the entry of new groups. Is the route to political power then through the alternative modality of education and jobs, or through changes in property laws? Is the argument that since women do nominally enjoy constitutional equality, the fuss over their representation in political decision-making bodies is somewhat unwarranted? The debate continues.

## **ENSLAVED DAUGHTERS: Colonialism, Law and Women's Rights** by Sudhir Chandra. Oxford University Press, Delhi, 1998.

'Is it not inhuman that our Hindoo men should have every liberty while women are tied on every hand for ever? If I were to write you about this system of slavery, it would require months to complete it ... Oh! But who has the power to venture and interfere in the customs and notions of such a vast multitude except the government which rules over it? And as long as the government is indifferent to it, I feel sure that India's daughters must not expect to be relieved from their present sufferings.'

Rukhmabai, *The Tribune*, 9 April 1887

ANCIENT civilizations change but slowly. Rulers may come and go, the material facts of life may change, but presuppositions governing public discourse remain durable. So it appears does judicial discourse. We are, after all, an ancient culture.

Well over a 100 years back, a young Hindu woman initiated a legal crusade for freedom from the conjugal claims of a husband she disliked. Earlier, as a child of 11, Rukhmabai was married to Dadajee Bhikajee, a relative of her step-father. Not having reached puberty, she was not sent to her husband's house. The terms of the marriage were unusual. Rukhmabai was well-off, being legal heir to reasonable property from her late father. Her mother had re-married and her step-father had helped contract her marriage. Since the 'husband' was not well-off, nor particularly educated, the understanding was that Dadajee would 'improve' himself and live as a *ghar-jamai*. Over the next few years, while Rukhmabai, though not formally in school, taught herself (including English), the husband became wayward. He shifted to the house of an uncle, indulged in various vices, and made no effort to even acquire an independent source of living.

Since Rukhmabai's dislike of her husband was evident, and she enjoyed the support of her mother, step-father and grandfather—Dadajee approached the courts for the restitution of his conjugal rights. What he stood to gain was not just a wife, but her property.

The court of Justice Pinhey dismissed his appeal. The argument was not just that he found the husband unsuitable, that he was sympathetic to Rukhmabai, or even that he felt that a child-marriage was *per se* invalid, but that since Rukhmabai had never co-habited with Dadajee, the marriage was not quite a marriage. The case, according to him, was for the *institution* not *restitution* of conjugal rights. He further argued that had the appeal been made to the caste authority, given the English policy of not interfering with family law,

the court would have had no *locus standi*. However, since the matter had been brought before him, he would be governed by law and previous judgements. Overall, his verdict was that there was no case for forcing Rukhmabai against her will to live with Dadajee.

The matter went in for appeal. The High Court, in a reversal of the earlier judgement, held both that the marriage was legal and that Hindu law did admit to such cases. Rukhmabai was thus directed to move to her husband's house. She decided to fight back. However, instead of appealing to the Privy Council, she, in a manner of speaking, 'purchased' her freedom from Dadajee for a 'royal' sum of Rs 2,500. Subsequently, Dadajee died. Rukhmabai went to England, became a doctor, and came back to practice in Surat. She never remarried and lived the life of a widow.

The case and the controversy became a *cause celebre*, and many people – social reformers, conservatives, liberals – became embroiled in the debate through media and associated public forums. There were many issues at stake – the validity of child marriage, what constituted a valid marriage, the incompatibility of the 'couple', the fact that Dadajee was seen as a wastrel, issues of property, family and caste politics, and above all – the freedom and inviolability of the individual.

On the surface, even in the more constrained environment of colonial India, public sympathy should have been with Rukhmabai. After all, she was hardly consulted for the marriage, so how could she be expected to co-habit with Dadajee. But she was a Hindu woman. Would upholding her cause not damage the community? Who were the British to impose their cultural and legal standards on the community? Would this not bring into disrepute the very institutions of marriage and family? Over-riding all these was the apprehension, implicit in the later judgements, about the freedom of women.

These debates, too rich to be presented in a short response, are equally alive today. The 1900s saw two cases concerning the restitution of conjugal rights. Interestingly, while the Andhra High Court judgement upheld the rights of the wife, the Delhi High Court took a contrary view. And our Supreme Court, not particularly regarded for its emancipatory attitude towards women, upheld the Delhi High Court judgement. As earlier, at stake were the institutions of marriage and the family. Clearly, structures receive precedence over the individual.

There are at least two other side issues which mark this case. What if the Rukhmabai-Dadajee con-

flict had been reversed? Would Dadajee have received the same degree of support from the liberal reformers had he tried to wriggle out of a bad marriage on grounds that he was, at the time of contract, a minor and that he found his wife unsuitable on grounds of education, temperament or property? The fact that men, in those times, could contract more than one marriage, or engage publicly in extra-marital liaisons, while the women had no such choice (legal or social) and could not, in most cases, even marry on widowhood, does not obviate this question.

Some years back a friend who had been married off as a child faced such a predicament. While his 'wife' stayed behind in the village, he went on to higher studies. At some stage, he met a woman whom he wanted to live with. He was then informed that he was already married. The fact that he was then a child, had never co-habited with his 'wife', did not even know her – hardly mattered. He was, as per his family and community, married. The girl had shifted to his parents house. She considered herself 'married' to him. Was he not being selfish? Was he not ruining the other woman's life? What was she to do? Was she to blame? It was even suggested that he could 'keep' both women.

All of the above is familiar. The friend was made to feel guilty. He finally had to truncate his relations with his family/community. Also give up his property, never to go back to his native place. He did all that. Yet, the accusations continued.

A second issue has to do with Rukhmabai's subsequent career. How could a woman who had been instrumental in raising substantive issues of principle, taken up a public fight, solicited help, become a mascot for all those fighting for social reform and the cause of women – 'strike a deal', 'buy' her freedom, and 'play' at wife and widow. Many 'understood' the social compulsions, particularly in 19th century India. Or the fact that continuing rebellion would have come in the way of her practicing medicine. Did not the other great social reformer Pandita Ramabai, even after conversion to Christianity, retain her widow's garb?

Sudhir Chandra could have done well to explore this tension between an icon and his/her constituency. All too often, those of us, who engage in public causes, refuse due cognizance to our subjects. We expect them to 'perform' in consonance with the needs of our causes. The more recent debates over Shah Bano are a case in point. As is the case of Ameena, the child bride rescued from a 'marriage' with a Saudi national.

Finally, the issue of how we write about such 'cases'. Not imposing our personal value judgements

over history demands discipline. It goes to the credit of Sudhir Chandra that he has not just gifted us an extremely riveting and compelling monograph, but that he has made clear his 'feminist' biases. For once, the discourse and the interlocutor can be easily demarcated. And this requires some skill and sensitivity.

Harsh Sethi

**COLONIALISM AND ITS FORMS OF KNOWLEDGE: The British in India** by Bernard S. Cohn.  
Oxford University Press, New Delhi, 1997.

IN *Colonialism and Its Forms of Knowledge*, Cohn provides readers insights into the ways in which colonial power was deployed. The key to the control of the complex and stratified Indian society was knowledge that was laboriously collected by the colonial state. It came packaged in published reports, statistical returns (finance, education, health, mortality rates, prisons), official proceedings, legal codes, administrative histories, annual reports, district gazetteers, scientific journals, travelogues—the variety could be infinite, but this diverse production of knowledge was funnelled into the sole project of ruling India. The interpretation of this huge body of official and semi-official documentation, requiring exegetical and hermeneutical skills Cohn calls investigative modalities.

Of investigative modalities, the most important place was occupied by historiography, as it was the 'the most complex, pervasive and powerful, underlying a number of the other more specific modalities' (p. 5). Historiography formed the core of any reorganization of the traditional systems of knowledge—medicine, law codes (both Hindu and Muslim), property rights, traditional forms of land holding—according to the systemic ordering of the forms of knowing and thinking which the British brought with them to India. Accounts of travel, another modality for interpreting a strange world of customs and practices and people, used the observational powers of the eye and the pen, while spatial mapping, geographical as well as social features, of the huge administrative divisions yielded a mammoth body of data. These data, stashed away in the filing system that was the colonial administration, attempted to render the country they were ruling transparent.

What Cohn demonstrates successfully through these essays is that the filing systems are themselves codes. He contends that these texts, whether penetrating into the intricacies of Sanskrit grammar or law, or enumerating the physical features of the different

'races' and regions, all attempted to capture and represent the variety of 'others' that were present in the amorphous Indian society, and should therefore be read not just for the 'facts' or 'indications' they revealed, but also for the underlying meanings flowing from very different European rationalistic principals and assumptions. The essay entitled 'The Command of Language and the Language of Command' brings out the multiple layers of signification that underscored the delineation and reconstitution of systematic grammars for Sanskrit and vernacular languages, together with a whole range of teaching aids developed in institutions—Fort William in Calcutta, Fort St. George in Madras and Haileybury in England—for the future civil servants of the Company. In the process, Cohn argues, even Indian grammar could be converted from an Indian form of knowledge into a European object that was lexically knowable and quantifiable in the idiom of European rationality. The close link between knowledge and power was rendered more obvious, with some European missionaries bypassing classical linguistic training in Persian and Sanskrit altogether, and concentrating instead on the vernacular languages of Bengali and Hindustani, felt to be better harnessed to the simple structures of command on which colonial rule was to be based.

The same unequal power relations prevailed between the Indian scholars and their British counterparts. They were embedded in something more than just the dominant social and political positions occupied by the British. There was a major epistemological gulf between the two cultures and many British scholars complained bitterly about the manner in which the Indian scholars worked and thought. Given their dominant position, acquired because of their political status, the British could easily set the agenda on the way Indian languages, both classical and vernacular, were to be encoded and transmitted to the future ruling groups. Memorization without any proper understanding of the meanings of the texts was reflective of the attempts of Indian scholars, and was responsible for the rather ineffectual development of legal and critical subtleties, felt many prominent European Orientalists of the time.

Only Ellis among the early Orientalists appreciated the radically different mode of knowing and thinking of the Indian scholars and their systems of knowledge which the British assumed to be flawed because they had adjudged the Indian forms for the transmission of knowledge from the perspective of European norms (pp.52-53). But Ellis was only one

among many. By the late 19th century the European understanding and encoding of the Indian languages, from being fluid, complex, even unstructured, had become fixed, objective and tangible – it had made inroads into Indian legal texts, made assumptions about the medical treatises, and had worked its way into giving Indian civilization a history – in other words, it had succeeded in rendering India as a “case” of an earlier civilization, or a museum of ancient practices, from which earlier stages of universal world history could be recovered’ (p. 54). The Indian systems of knowledge – especially languages, were represented comparatively, a methodology that had the advantage of allowing the comparison of the formal features along lexical, syntactic, morphologic and phonetic groupings. Cohn stresses this particular achievement for the comparative method had the power to enable the ‘practitioner to classify, bound, and control variety and difference’ (p. 55). Moreover, the comparative method ‘also implied linear directionality: things, ideas, institutions could be seen as progressing through stages to some end or goal. It could also be used to establish regression, decay and decadence, the movement through time away from some pristine, authentic, original starting point, a golden age in the past’ (p. 55).

With the mastery over language, a project that in one move encompassed unique command over the ‘other’ for then the ‘other’ could be endowed with historiography, racial characteristics, and an European-controlled transformation of their own traditions and modes of thought, the road was clear for a more discursive intervention in the indigenous social structure and value system or the cultural site of law. The indigenous traditions of dominance and subordination, as reflected in the local institutions and procedures of dispute settlement, collided with the political culture of colonialism that was articulated at several levels: the state, the judicial apparatus and legal processes and the supra-local laws and regulations. The result was a conflict of values, where the hegemonic colonial rule of law inevitably had to be the victor. But it was an empty victory, for the substitution of English procedural law had the obverse effect of a paradox – the paradox that law, intended to serve as a basic defining principle of colonial rule, became itself an instrument of misunderstanding about the very nature of that dominance. This paradox ironically perpetuated a mutual miscognition that reproduced the distortions of the ruler’s knowledge of the ruled, and vice versa, in a discourse without end.

In the essay, ‘Law and the Colonial State’, Cohn recognizes and emphasizes that the colonizer’s know-

ledge of the colonized was not and never could be neutral to the relation of dominance and subordination which bound them together. This was more than apparent in the manner in which a Colebrooke or a Jones made certain assumptions about the ancient legal texts, the Dharmashastras and Mimamsa that formed the core of the constitution of ancient India, and set out the law of the land. From such assumptions, with the Orientalists, Warren Hastings and Sir William Jones convinced about the existence of the ‘ancient Indian constitution’, it was but a short step to end up ‘with what they had so much wanted to avoid – with English law as the law of India’ (p. 75).

The next two essays expand the meaning of the term ‘social’ to imply both social and cultural phenomena: Culture is transformed into the common frontier of anthropology and history, and the centrality of culture as an analytical tool for the examination of the attitudes of both the ruler and the ruled is acknowledged. In the ‘Transformation of Objects’, Cohn explores ‘how things are fabricated and how they are transformed into objects that have value and meaning.’ Yet the dominant political and social power established the norms of this cultural transaction. Therefore, it was the British who, in the 19th century, defined in an authoritative and effective fashion how the value and meaning of the objects produced or found in India was determined. Archaeological sites, artifacts, buildings, pottery, textiles – European science decided their worth after measuring it against the aesthetics and scientific expertise of the West.

‘Cloth, Clothes and Colonialism’, explores the semantics of clothing, the manner in which even clothing and drapery could represent power and authority for the rulers or the lack of it for the ruled. Even sartorial accessories like swords and turbans assumed an enormous significance, as they were invested with specific meanings by the giver and the receiver, and graded on the grid of power as the person giving or bestowing favours and the recipient. In fascinating analytical reconstructions of the cultural constructs of power, Cohn shows how clothes became invested with moral attitudes and a way of life – both British and Indian. Of special interest is the manner in which Cohn slips into the indigenous masculine mind-set of the 19th century and of the refashioning of masculine garments signaling to the well-versed that the wearer belonged to the progressive sections of Indian society. The way in which Victorian notions on feminine morality, with the required impetus being provided by the missionaries who professed to be horrified by the scanty feminine

attire prevalent in even good Indian families, was incorporated into the clothing of the women from well-to-do Indian families, with the encouragement of their westernized male members, provides an acute analysis of social and cultural transformations effected by the civilizational confrontations that released forces of change even within the domestic arena that long remained outside any direct onslaught of colonial values. Cohn has even touched on the surprising twists issues of apparel received when they were turned into symbols of protest – the most famous example being the Gandhi cap. Colonialism, nationalism, and even missionary zeal were thus deeply implicated in representational strategies and politics.

Cohn has succeeded in laying bare the unconscious foundations of the colonial rule in India through an innovative mixture of anthropology and history. He has caught the play between the old and the new in time and space in an exciting interpretation of history and anthropology. It would be constructive to apply his methodology to the endless permutations and combinations the stratified indigenous society underwent in order to neutralize some of the effects of this civilizational confrontation between the forces of colonization and the colonized.

**Anandita Mukhopadhyay**

**MAJOR GENERAL A.A. RUDRA: His Service in Three Armies and Two World Wars** by Major General D.K. Palit. Reliance Publishing House, New Delhi, 1997.

Major General Ajit Anil Rudra was verily a Zelig. Remember Woody Allen's enchanting little film by that name? The hero – a mousy, cipher of a man has the luck or the knack of finding himself in historic situations standing next to, or peering over the shoulders of, high personages. He is thus featured in innumerable press photographs and in newsreels alongside famous people who are doing famous things until, pretty soon, Zelig becomes famous himself, presumably, for being seen in the right company! Allen's film is a farce about celebrity-mongering by the mass-media.

'Jick' Rudra (who died at 97 years of age in 1995) was no mouse and was far from being a wallflower. Nevertheless, his long, pioneering but fairly undistinguished military career (mostly staff postings and, other than in the trenches on the Somme in the First World War as an ordinary trooper in a battalion of the Middlesex infantry regiment, with little operational

experience!) was, it seems, continuously punctuated by Zelig-like run-ins with the rich, the royalty and the renowned. For instance, during his years in England he recounts getting close to the family of T.E. Lawrence, yup, the very same Lawrence of Arabia. Elsewhere, he recalls accidentally dropping his swagger stick at the Lahore race course only to have the then Prince of Wales (later Edward VIII) in company of his cousin, Dickie Mountbatten as his ADC, on a state visit, pick it up and restore it with a smile to its owner. Some 15 years later, Rudra had a ringside seat at the coronation of George VI.

His memoirs (narrated with panache to, and written up elegantly by, Major General 'Monty' Palit) are an engaging chronicle of the military milieu and manners in 20th century 'cantonment India'. They also reveal the truth behind some singular political incidents involving the army, and are a delightful aid to flesh out characters who feature in our history books.

It turns out that Rudra's home in Delhi was a seed-bed of the freedom movement. His father, a progressive educationist and Principal of St Stephen's College, was instrumental in persuading the man later anointed the Mahatma to return from South Africa. As a young man, the General reports of his regularly bumping into the likes of C.F. Andrews, the Anglican missionary, Gokhale and, of course, M.K. Gandhi; of his keeping up a loose and easy relationship with the last-named long after he (Rudra) had joined the British Indian Army, and of his risking an abrupt end to his Service career by clandestinely facilitating the Mahatma's albeit more innocuous freedom movement-related escapades.

But, more importantly, he also elicits from Gandhi, with whom he is on bantering terms, the latter's prudent view that a free India will need an army. This is significant considering the sheer nonsense that was propagated about Gandhian non-violence animating state policy, chiefly by the country's first Prime Minister, Jawaharlal Nehru. Nehru, according to Rudra, told a bewildered C-in-C, India, General Robert Lockhart, soon after Independence that the country, because it believed in *ahimsa*, needed no defence policy and would do without an army! Rudra at the time on the General Staff was Lockhart's right hand man and close to Field Marshal Auckinleck, the Supreme Commander of the Indian and Pakistani Forces. The 'Auk' advised Defence Minister Baldev Singh to use Rudra, the senior-most Indian officer after Cariappa, who was away at the time attending a course at the Imperial Defence College in London, as his personal adviser.

'Jick' Rudra betook himself to Cambridge in 1914, with nothing more exalted in mind than to play cricket for the university; the access to Cambridge made possible, as he relates, because of his family's Anglican Church connections. With service in the First World War drawing most of the young on the campus by the River Cam, he too followed suit and joined the war effort a year later. His regiment was shipped off to France as part of the British Expeditionary Force under Field Marshal Sir Douglas Haig. Rudra was invalided out after a time in the trenches but, unlike his Cambridge mates, was denied an officer's commission in the British Army that he sought later in the War. But his ranker service won him official gratitude, including a meeting in Whitehall with the Secretary of State for India, and a King's Commission – via Daly College, Indore, because Sandhurst had stopped operating in the immediate post-War years for reasons of economy – in the British Indian Army.

Rudra was commissioned into the 4/15 Punjab and was one of only two officers (the other being Lt. Gen. Rajendrasinhji, the Jam Saheb of Nawanagar, of the 2nd Lancers, winner of a Military Cross in the Western Desert) permitted to remain in a British-officered regiment after the Indianization programme got underway in the mid to late twenties. The rest of the Sandhurst crowd, including Cariappa, Ayub Khan, et al., after their year's attachment as subalterns in British units, were either pushed off to the regiments earmarked for Indianization or transferred to State Forces. None were ever given any responsible positions either at the regimental level or on the General Staff. It was only late in the Burma campaign that K.S. Thimayya, S.P.P. Thorat and L.P. Sen – the only Indians to do so in the Second World War – enjoyed command in battle of their respective 'Indianized' units. Rudra, during the War, served in the Military Intelligence Directorate and as Director, Public Relations.

Obviously, Rudra socialized well with the English officers and, within limits, was accepted by them. In any case, it led, among other things, to his being called before the Alfred Skeen Committee. Motilal Nehru and Mohammad Ali Jinnah were members and they pushed for a faster-paced Indianization of the army. Particularly memorable is Rudra's recollection of how a waspish Jinnah took apart an English Colonel's testimony before the committee to the effect that Indians were incapable of command and could be trusted with neither handling monies nor with being fair and dispassionate in matters of recruitment and promotions.

Indeed, Rudra offers telling insights into the British Army officers' mentality and how determined and ingenious they were in their attempts to derail the Indianization programme. One of the preferred means to do that, as Rudra tells it, was to recommend proven incompetents from among the Viceroy's Commissioned Officers – the army's NCOs – for officer training with the express purpose of bringing this scheme into disrepute. Of course, there were honourable exceptions, persons like Auckinleck and Field Marshal, the Viscount Slim, stalwart British Indian Army-men, who meant well by the Indians and did not hesitate to reward merit.

Rudra's special relationship with the British also led to his being trusted with some sensitive jobs. Thus, it was he who inquired into that incident in the 1930s involving the 2/18 Royal Garhwal Regiment which refused to fire on the Khudai Khidmatgars protesting nonviolently in Peshawar. It earned this battalion undeserved praise from freedom fighters. The truth, as Rudra discovered, was that the Garhwalis were not fed that morning and the unit's British officers, after ordering these troops to take up position in the Kissakawhnee area of the city, cantered off to their mess to partake of breakfast and rest! Without their officers, these tired and hungry hillsmen, who just the night before had got back to the barracks from another call-up 'in aid to the civil power', refused to fire when they were ordered to do so. But for this lapse in officering, a second Jallianwala Bagh would have occurred, with what consequences who can say? (There is a cautionary tale here somewhere for the present day Indian Army stretched to the nines in performing 'internal security' duties.) Rudra's report prevented the entire regiment from being dishonoured and, as punishment, disbanded. And during the Second Great War, his fluency in Punjabi resulted in his debriefing Sikh and Punjabi Muslim soldiers who had gone over to Netaji Subhash Chandra Bose's Indian National Army.

General Rudra seems to have been adept at simultaneously playing both ends of the game, especially in the twilight years of the Raj. By his own account, he advised 'the Auk' in the matter of prosecuting the INA stalwarts – G.K. Sehgal, Shah Nawaz Khan and G.S. Dhillon – and, at the time of the showcase trials in the Red Fort, persuaded the Congress Party lawyer Bhulabhai Desai to defend the accused by supplying a piece of exonerating evidence – the Singapore garrison commander Lt. General Percival's signed statement to his surrendering Indian troops freeing them.

from their oath to the British and advising them to, in effect, cut their separate deals with the conquering Japanese! Again, at the time of deciding on the future of the Gurkha regiments in 1947, Rudra is appointed to the team visiting Kathmandu. He is ordered by his British superiors to keep mum during the proceedings. But prior to his trip, he makes an end-run around the British injunction by securing permission from Baldev Singh to canvas with the Nepalese government for continued service of Nepali Gurkhas in the Indian Army. To the consternation of his British colleagues, Rudra makes a powerful pitch at the meeting, which is accepted by the Ranas then running that country.

Ironically, it is Rudra's regimental sentiments which wrote *finis* to his career. He is asked by Lockhart to take over as GOC-in-C of the Army's Southern Command and to prepare a plan of action against the Nizam's forces in Hyderabad. The man he is to replace in Poona, Eric Goddard, Rudra's former CO from his old regiment, requests a delay of a few weeks to hand over command, pleading that this extra time in office would earn him a higher pension. Rudra accedes to this request. In the mean time, Lockhart resigns (when asked by Nehru whether he had prior information of the Pathan raiders gathering for an attack on Kashmir; he did), the 'intriguer' (according to the memoirist) Roy Bucher succeeds as C-in-C, and apprehending Rudra as Lockhart's man, promptly sidelines him by posting him as GOC, Madras Area. End of Rudra's career in the third army he served.

All this is great reading, but one cannot help but discern a moral hollow at the centre of 'Jick' Rudra's life, a hollow, which to be honest, must have been in the soul of every King's Commissioned Indian Officer, every Viceroy's Commissioned Officer and every Gentleman-Cadet who passed out of the Royal Indian Military Academy, Dehradun, in the early years. His account is replete with instances of routine discrimination against Indian officers motivated by the rank racism of their British counterparts and of the army establishment, generally. It is also full of admiring references to the few Indians who had the gumption to stand up to British taunts and insults. He makes special mention, for example, of one Ponnappa, a bold and no-nonsense Coorg classmate of his from Indore, who countered an insult by a senior British officer with public insult, and paid the price of virtually being drummed out of service. The issue here is the extent to which Rudra compromised his self-respect for the sake of a career. A Ponnappa reached the point

of resistance very early – at the officer training stage itself. Rudra (and the rest of that lot) never did.

**PEOPLE'S RIGHTS: Social Movements and the State in the Third World** edited by Manoranjan Mohanty, Partha Nath Mukherji and Olle Tornquist. Sage Publications, New Delhi, 1998.

THE idea of compiling this volume emerged when some scholars from Asia and Africa and a few Third World specialists from Europe met at an international workshop on Social Movements, State and Democracy in the Third World in October 1992 in New Delhi, as part of the P.C. Mahalanobis Birth Centenary Celebrations. The participants found the workshop so rewarding that they decided to continue their collaboration through future projects, and this collection of essays has been published as the first major outcome of that process. Hence, in an integral way, it is a purposeful and collective effort. As Manoranjan Mohanty writes in an introductory note, 'This volume has been planned as an intervention in the growing debate on the role of the state and civil society in the processes of transformation in the contemporary world. Challenging the dominant political theory of capitalist globalisation, the authors reaffirm some of the primary values of anti-colonial struggle and articulate the issues raised by contemporary social movements in the Third World as democratic assertions of people's rights.'

In a cumulative assertion, all the essays locate the issue of human rights within the popular struggles in the Third World against class exploitation and social oppression, thus moving away from the individualist notion of rights in the tradition of western liberalism. The social process that seeks to democratise the post-colonial state to make it more responsive and participatory in much of South and Southeast Asia and in Africa is highlighted. There is an attempt to emphasise the significance of the issues relating to caste, ethnic identity, gender and culture, as well as to integrate them with the class movements of workers and peasants. The three main currents of people's struggles for post-colonial transformation, revolt against class exploitation, and social movements (women's, anti-caste, environmental, and human rights) are concurrently explored to enlarge the meanings of freedom and rights. The thematic focus in most of the essays lies in recognising the state as a coercive apparatus which acts on the side of the ruling elites, while the oppressed

struggle in the ambit of civil society to pressurise the state to meet their aspirations. Both coercion and aspiration are born out of the nature of the development process that the state has followed in the post-colonial era.

This does not mean that all the authors agree on all aspects. There are differences between them which emerge in the text although, perhaps because of the manner in which the text itself has been planned, the discussion on these differences is not laid out. This is something of a disappointment, because in the 1992 workshop some of these issues must have been discussed and one misses the potential creativity of dissent and debate. Thus, in the first section on Civil Society, State and Nation, while Neera Chandhoke emphasises the integrating principle based on democracy, Mahmood Mamdani considers that the received theory of democracy itself is irrelevant to the African reality. In another incipient debate, Manoranjan Mohanty considers social movements to be a reflection of the 'creative society' denied by capitalism, while Sucha Singh Gill shows that some ethnic movements in India have been instruments for the reversal of democratisation. There is also the tension between perspectives on the state. Parth Nath Mukherjee and Ishtiaq Ahmed clearly delineate the role of the state in mediating between sections of the bourgeoisie and suppressing resistance in civil society, while Bjorn Beckman argues that the state plays a central role in the creation of civil society.

In the second section on people's movements, elements of the debate on the social movements come out fairly sharply. Gail Omvedt argues her position that the peasant movement (particularly in Maharashtra) has many radical features, specially of linking up with gender, caste, and environmental issues, with the possibility of unfolding a 'new agrarian revolution'. But Staffan Lindberg shows that there is a wide variation in the peasantry and different units of the same organisation may take contradictory positions on issues of culture and oppression. Abdul Rauf Mustapha, in his essay on Nigeria, demonstrates that the peasantry has been unable to develop a democratic response because peasant politics is a function of social structure and a reflection of cultural and historical values. Nripen Bandyopadhyaya, on the other hand, focuses on land reforms to argue that the mobilisation and participation of the peasantry is possible for shaping its own destiny (while acknowledging that the West Bengal reforms are showing signs of exhaustion). Olle Tornquist takes a different tack on the question of democratisation in the Philippines to show that even

when radical left groups entered the process to create conditions more favourable, they lost the initiative to non-archival organisations. But Sharit analysis of trade unions in India, existing organisations are not able to meet democratic aspirations, new forms do need – although the emergence of the new forms may weaken the overall movement.

The last section on human rights is edited by scholars and activists who have been in the struggle for rights in the context of a global dynamic. While they all eventually converge on the necessity for the human rights' movement to have a social base and respond to all manifestations of oppression, there are, nevertheless, no clear clues to what the debate could lead to. Upendra Baxi considers that the Indian state has retained its autonomy and is capable of responding to intransigent behaviour' to suppress the oppressed, but G. Haragopal and K. Srinivasan demonstrate that continuous amendments of the law itself has reduced the effectiveness of the law and paved the way to authoritarianism. Olukoshi shows that, in Nigeria, the rights movement among the middle class has had little effect, a response to the massively increased the structural adjustment programme of the International Monetary Fund-Worship. At the same time, there is little convergence among the civil liberties organisations. In the way of a larger all-inclusive way, Arief Budiman indicates the presence in Indonesia, where the legitimises military rule among the middle class through economic development and forms of dissent, and intense social movements in the democratic struggle. In a concluding section, Sethi analyses the manner in which NGOs, and social movements emerge in the social spaces created by the decline of developmental and political processes. Frequently, these were absorbed into the state apparatus, isolated as the social base dwindled. That one must not lose sight of the importance of this activity that provides the basis for analysis, it is this activity that provides the basis for analysis.

It is this 'hope' that animates the movement. As the Introduction spells out, 'A rights rooted in the post-colonial context, perceived as a set of conditions which affect all, groups, communities and nations'.

focus of the capitalist epoch on dual... presented an exclusivist rights. The social movements in it the perspective of defining text of manifest and latent deep-long-term denial of rights and of constantly grasping new nation and seeking new possibilities trouble is that hoping about the post-modernism is not adequate for an 'interventionally postulate that the rights' build alliances and expand its social and ignore the reality which is being the professionals are being coopted, and, the state is retreating, and heterological incompatibility stands in the . The essays, therefore, largely fail to find Estic solutions to the problem that illustrate.

ough, the essays succeed in an area to have been the original objective of the works. This is in an exposition of the modern state. Implicit in the various recognition that the post-colonial state falls very much into the classical the 'managing committee of the rule-revealing is the manner in which this committee has creatively devised new session, subversion, and cooption to that of global capitalist exploitation. arena of legislation or culture, of ethical-material development, of political rights, of labour organisations or of gender sensitivity or peasant on of essays tirelessly explains how the World continuously intervenes to the dissatisfaction within civil to step in with violent repression. attention is in anticipation of dissent to learn from the global experience of the state had been coupled to an function of the capitalist system – on and appropriation of surplus – could indeed have been a valuable ing lists of both analysts and practitioners can certainly 'hope' about the freedom' in future volumes – which is promised in this one.

### **Selected Works of Govind Ballabh Pant**

**Volume 10**

**B.R. Nanda (Chief Editor)**

This volume covers the period from August 1942 to March 1946. For nearly three years Pant was imprisoned in Ahmadnagar Fort along with Jawaharlal Nehru, Vallabhbhai Patel, Abul Kalam Azad and other members of the Congress Working Committee. In 1945 he took part in the abortive 'Simla Conference' convened by the Viceroy, Lord Wavell, to break the political deadlock and reconstitute his Executive Council. The volume ends with the campaign for the general elections in 1946 in which the Congress was back to office with Pant as Chief Minister of U.P.

*Seminar* (464) on the 'Right to Education' carried a number of contributions on the proposed Constitution (83rd Amendment) Bill. However, it would have been useful to reproduce the Bill itself. Had you done so, not just your readers but also those supporting the proposed constitutional amendment would have realized that it substantially departs from the thrust of the Supreme Court judgement of 1993. Some of the serious flaws in the Bill are:

A. Though paragraph 1 of the Statement of Objects and Reasons attached to the Bill refers to the National Policy on Education (1986) and the Supreme Court's judgement of 1993, para 2 drastically changes the scope and target of the responsibilities of the state – only on the basis of the recommendation of the Committee of Education Ministers. The lack of subtlety displayed by those who drafted the Bill is indicative of the opinion they have of the understanding of Indian citizens and Members of Parliament. No one is expected to notice the difference between a *fundamental right of all children up to the age of 14*, and that between 6-14. Nor are we expected to object to the shifting of responsibility from the state to the parents as a 'fundamental duty'; the state's responsibility 'to provide' is changed to one of 'enforcement'.

It is assumed that none of us is regarding compulsory, free elementary education enacted by most states remain unenforced because of the absence of adequate schools, support services, *without which poor families are incapable of sending their children, especially girls, to school.*

B. Studies on the last aspect enabled the women's movement to demand a national programme for child-care services (as recommended in the NPE, 1975). This was done through various campaigns during the '70s and '80s – culminating in the acknowledgment of the necessity of *child care and education*, especially for children below the poverty line, in the NPE 1993. A decade later, the only hope for a national policy for child-care is provided by the new Bill – an otherwise most objectionable policy – designed to erode India's democratic values.

The proposed constitutional amendment relieves the state of all responsibility for child-care from birth to the age of six. This is a departure from the Constitution and the Convention on the Rights of the Child adopted by the UN General Assembly in 1989 (resolution moved by India) and reaffirmed in 1991.

C. The Rights of the Girl Child to special support was first adopted at a SAARC summit, leading to National Plans of Action and the recognition of the present decade ('90s) as the International Decade of the Girl Child. Women's organisations and researchers who undertook to consult girls (from poverty groups) on their needs invariably came up with a demand for child-care centres, relief from excessive workload, on sibling care and other responsibilities for the family's survival—so that they could go to school and not to non-formal education (NFE) centres. There is no dearth of studies to demonstrate the positive impact of any form of child-care service on enrolment of girls in school.

The women's movement has been demanding child-care and development services, both as a 'birth-right of all children' and as an 'essential' support for (a) children's rights to development, and (b) working parents.

D. The Directive Principles of State Policy are defined by the Constitution as 'fundamental principles of governance'. Sometime in the '80s, the Supreme Court ruled that while government may take time to translate these principles into legislation, it would be *unconstitutional* to legislate against 'the spirit of the Directive Principles'.

I hope readers will interpret clause 4 of the proposed Amendment—that 'Article 45 of the Constitution shall be omitted'—in all its (lack of) subtlety. There have been laws in the past based on the Directive Principles (e.g. the Equal Remunerations Act 1976)—but no demand to delete any Directive Principle Bill.

E. This Bill is one of several measures on the anvil to reduce the Supreme Court's role as a guardian of the Constitution and people's rights. A shape of things to come? Or a symbolic celebration of the 50th anniversary of independence?

Lastly, the total withdrawal of all state responsibility (regulatory and otherwise) with regard to private schools, will certainly satisfy the theologians of the free market by providing constitutional guarantee to institutionalised inequality in education, and deprive students, teachers and parents of any protection against exploitation and abuse. Significantly, the guarantee is being offered during a year of parent's protests against unjustifiable fee-hikes and tragic negligence of student's security and care by private schools.

## **The Constitution (83rd Amendment) Bill, 1997**

*A Bill further to amend the Constitution of India*

Be it enacted by Parliament in the forty-eighth year of the of the Republic of India as follows:

1. (1) This Act may be called the Constitution (Eighty-third Amendment) Act, 1997.  
(2) It shall come into force on such date as the central government may, by notification in the official Gazette, appoint.
2. After article 21 of the Constitution, the following article shall be inserted, namely:  
'21 A. (1) The State shall provide free and compulsory education to all citizens of the age of six to fourteen years.  
(2) The right to free and compulsory education referred to in clause (1) shall be enforced in such manner as the State may, by law, determine.  
(3) The State shall not make any law, for free and compulsory education under clause (2), in relation to the educational institutions not maintained by the State or not receiving aid out of State funds.'
3. Article 35 of the Constitution shall be renumbered as clause (1) of that article and after clause (1) as so renumbered and before the *Explanation*, the following clause shall be inserted namely:  
'(2) The competent legislature shall make the law for the enforcement of right to free and compulsory education referred to in clause (1) of article 21 A within one year from the commencement of the Constitution (Eighty-third Amendment) Act, 1997: Provided that a provision of any law relating to free and compulsory education in force in a State immediately before the commencement of the Constitution (Eighty-third Amendment) Act, 1997 which is inconsistent with the provisions of article 21 A, shall continue to be in force until amended or repealed by a competent legislature or other competent authority or until the expiration of one year from such commencement, whichever is earlier.'
4. Article 45 of the Constitution shall be omitted.
5. In article 51 A of the Constitution, after clause (j); the following clause shall be added namely:  
'(k) to provide opportunities for education to a child between the age of six and fourteen years of whom such citizen is a parent or guardian.'

## *Statement of Objects and Reasons*

1. The founding fathers of our Constitution made a provision imposing an obligation, under article 45 in

Part IV relating to the Directive Principles of State Policy, upon the State to endeavour to provide within a period of ten years from the commencement of the Constitution, for free and compulsory education for children up to fourteen years of age. However, this goal has proved elusive so far. Our inability to achieve this goal 37 years after the target period has been a cause for serious concern. Reiterating the constitutional directive, the National Policy on Education (NPE), 1986, as modified in 1992, states that free and compulsory elementary education of satisfactory quality shall be provided to all children up to the age of fourteen years before we enter the 21st century. The Supreme Court in its judgement in *Unni Krishnan J.P. vs. State of Andhra Pradesh*, A.I.R. 1993 S.C. 2178, has held that children of this country have a fundamental right to free education until they complete the age of fourteen years. The Common Minimum Programme of the United Front Government, resolves to make right to free and compulsory elementary education a fundamental right and to enforce it through suitable statutory measures.

2. The Committee of Education Ministers which was set up to examine the implications of the aforesaid resolution have recommended that the Constitution be amended to make the Right to Free and Compulsory Education from six to fourteen years of age as a fundamental right and to make a fundamental duty of parents to provide opportunities for education to their children of this age group. Consequent thereupon, provision in the nature of compulsory and free education as a Directive Principles of State Policy under article 45 is no more required. States and Union territories would be required to enact laws for the enforcement of free and compulsory education within one year from the commencement of the Constitution (Eighty-third Amendment) Act, 1997.

3. The amendment of the Constitution to provide for compulsory education of children as a fundamental right would demonstrate the necessary political will and administrative resolve of the country to achieve Universalisation of elementary education and to eradicate illiteracy. This historical amendment of the Constitution in the 50th year of our independence should inspire the Nation to meet the daunting challenge of achieving the goal of education for all by 2000 AD.

4. The Bill seeks to achieve the above objects.

New Delhi, The 9th July 1997

Power Play

### *Financial Memorandum*

1. Clause 2 of the Bill seeks to insert a new article 21A in the Constitution of India to provide that the State shall provide free and compulsory education to all citizens of the age of six to fourteen years.

2. The estimated financial expenditure to implement the aforesaid obligation is forty thousand crore rupees during the next five years. The estimated annual expenditure will be eight thousand crore rupees. The said expenditure shall be shared by the Union and the State on the basis of sharing arrangements to be determined by a group of experts constituted for the purpose by the Ministry of Human Resource Development.

3. No other recurring or non-recurring expenditure is likely to be involved.

### *Annexure*

Extracts from the Constitution of India

45. The State shall endeavour to provide, within a period of ten years from the commencement of this Constitution, for free and compulsory education for all children until they complete the age of fourteen years.

### *Part IVA*

#### *Fundamental Duties*

51A. It shall be the duty to every citizen of India—

\*

LIMPERT'S 'People Without a Country' (*Seminar* 463) is no different from most studies carried out by human rights activists on similar problems in the sense that they invariably suffer from a partisan outlook. Limpert's concern for stateless peoples as vulnerable sections and their consequent subjection to human rights abuses is well-taken and beyond dispute. However, in the context of Arunachal Pradesh, Limpert chooses to be highly selective on the question of human rights by highlighting only one side of the story, i.e. the human rights concerns of the Chakmas and Hajongs. As a result, he fails to take up the indigenous question in his analyses of the refugee imbroglio in Arunachal Pradesh without which one cannot appreciate the nature of the current problem.

Indigenous peoples the world over have long been recognized as marginalized groups on account of their subjection to varied processes of exploitation, discrimination and alienation. 'The Study of the Problem of Discrimination against Indigenous Populations' under the aegis of the UN Economic and Social Council (1986)

observed that: 'Pluralism, self-management, self-government, autonomy and self-determination within a policy of ethnic development, as defined by San Jose Declaration, appear to be the formula called for by the times in which we are now living and to do justice to the aspirations and desires of indigenous populations, which have for long been subjected to interference and imposed conditions of all kinds.'

Any attempt at analyzing the Chakma question must, therefore, situate the problem in a framework larger than the one suggested by Limpert where he focuses exclusively on the background of Chakma's flight from erstwhile East Pakistan, their settlement in Arunachal Pradesh and their so-called integration with the social fabric of Arunachal Pradesh. Further, Limpert's assertion that 'Chakmas and Hajongs have voted in state elections and paid state taxes on their land' is not only facile but also unfounded in the absence of any empirical evidence. Such contentions are only reflective of his unawareness of an ongoing movement in the state against the settlement of the Chakmas and Hajongs since the early 1980s.

Arunachal Pradesh, formerly known as the North East Frontier Agency, is one of the youngest states of the Union of India. Before attaining statehood in 1987, it was a Union Territory directly under the control of the central government. Unlike other states of the Union, Arunachal Pradesh was granted statehood not on the basis of linguistic homogeneity, but due to considerations of its diverse ethnic make up. It is an ethnic *pot-pourri* and home to some 25 big and medium size tribal groups and some 110 small and very small sub-tribes with little or no linguistic and cultural similarities. Arunachal Pradesh also enjoys a unique position in terms of various legal and statutory safeguards provided to it under the Indian Constitution.

Arunachal Pradesh, for example, is a protected area under the provisions of the Government of India Act 1935, with internal control mechanisms such as the inner-line permit system where even *bonafide* Indian citizens of non-indigenous origins are denied entry into the state without prior permission from the state authorities. Yet another example of such statutory safeguards is the application of the sixth schedule of the Constitution which debar the non-indigenous Indians from buying land in the state. The underlying philosophy behind the introduction of these statutory safeguards was to protect the culture and identity of the indigenous peoples from the onslaught of external influences. Such protective mechanisms have long been in existence and date

back to 1873 when the Bengal Eastern Frontier Regulation Act was passed by the colonial regime. Hence, the uninterrupted continuation of these protectionist measures has only forced the Arunachalis to demand an explanation for the arrival and continuing presence of the refugees in the state.

Limpert's construction of the background neglects the changing nature of the demographic pattern in view of the settlement of the Chakmas and Hajongs in the state. According to the 1991 Census, the total indigenous population is merely 5,50,351 out of a total population of 8,64,558. A careful analysis reveals that the Chakmas have already become the second largest population, next only to the Nishing community. Further, the Chakmas already outnumber the indigenous peoples in Lohit and Changlang districts where they also dominate economically.

In addition, in the North East, relations between the state and the indigenous minorities have long been problematic, leading to frequent outbursts of violence or protracted insurgencies. The indigenous minorities in the North East are geographically concentrated and have traditionally viewed external authority as an imposition on their semi-autonomous status. In the face of greater administrative penetration of the post-colonial state, and threatened by growing in-migration of the low land people, the phenomenon of refugee flow from neighbouring Bangladesh and other countries has further worsened the situation.

Given the precariously delicate demographic configuration and ever-increasing ethno-cultural vulnerability, the indigenous peoples fear that they stand to lose land as well as employment; that political power will shift out of their hands, and that they might even be reduced to a minority in their own home, living under the hegemony of those who are clearly seen as 'foreigners'.

There are other problems in Limpert's account of the Chakma question. Although Limpert treats the Chakmas and Hajongs as stateless peoples, he fails to explicate clearly as to what marked the transition of the Chakmas and Hajongs from refugees to stateless peoples. He also makes a strong plea for grant of citizenship to the Chakmas and Hajongs. I agree with his contention that the Chakmas and Hajongs are eligible for grant of Indian citizenship as per the terms and conditions of the Indira-Mujib Agreement of 1972. But eligibility in itself does not guarantee the acquisition of any right. Moreover, the Indira-Mujib Agreement only states that '...the Chakma and Hajong refugees who came to India from the

erstwhile East Pakistan (now Bangladesh) before 25 March 1971 will be *considered* (my emphasis) for the grant of citizenship.'

In yet another reference, while drawing inference from the Supreme Court's ruling in the *State of Arunachal Pradesh vs. Khudiram Chakma*, Limpert contents that '...only citizens were permitted to purchase land in protected areas under the Foreigners' order of 1948. As Arunachal Pradesh was declared a protected area under the Government of India Act, 1935 the Chakma families' acquisition of lands outside the Chakma Allotment Areas would be valid only if they were found to be citizens of India' (p.44). This, however, is not true. The Foreigners Order of 1948 and the Government of India Act 1935, when read with the Sixth Schedule of the Indian Constitution makes it amply clear that *not all Indian citizens are entitled to lay claim over land in Arunachal Pradesh*. Contrary to his contention, even if the Chakmas were found to be Indian citizens, this would not entitle them to any legitimate claim over land, as land is exclusively under the control of the scheduled tribes of Arunachal Pradesh.

These issues are raised (not to weaken the claim of the Chakmas Hajongs to citizenship) to emphasize that Limpert attaches undue importance to a bilateral agreement and much less to the reasons which have prevented the Indian state from conferring citizenship on these people. Ironically the citizenship issue no longer occupies a significant place on the agenda of either the All Arunachal Pradesh Students Union (AAPSU) or the state government. What is agitating the indigenous peoples and their leaders is the issue of permanent settlement of the Chakmas and Hajongs and their demand to be considered as the scheduled tribes of Arunachal Pradesh.

Another problem with Limpert's account is his outright rejection of AAPSU – which he claims to be a 'private entity'. By focusing merely on AAPSU's role in the last three years during which it did harden its stance, Limpert conveniently overlooks the long history of AAPSU's peaceful involvement with the refugee issue since the early 1980s. Interestingly, in the formative years of the movement against the refugees, the state government came down heavily on AAPSU leaders and members as several of them were beaten up and arrested by the police while protesting against the continuing presence of the Chakmas and Hajongs. The state government, however, joined the movement against the refugees only at a much later stage when it was no longer possible for it to contain

the rising popular aspirations of the indigenous peoples against the refugees.

In a state with a strong tradition of single party dominance, AAPSU has clearly emerged as an important pressure group by being the most articulate spokesman of the people on several issues – the most important of which is the Chakma question. The AAPSU looks at the central government's plan of permanently settling the Chakmas and Hajongs in the state as part of a larger design to 'deindigenize' and 'disempower' the indigenous peoples. It is because of such fears, perceived or real, that the indigenous peoples under AAPSU's leadership have been reacting strongly. Limpert's allegations against the AAPSU as a 'private entity' and 'collaborator' of the state government in unleashing a systematic campaign against the Chakmas and Hajongs is not only unfounded, but also confirms his lack of awareness of a long-drawn popular movement by AAPSU.

The central problem in Limpert's account is that his approach is structured within a narrow framework of legal regime discourse analysis. Such an approach invariably gets entangled in unending legal debates over a problem which deserves serious socio-anthropological attention. This is not to suggest that legal dimensions of such a problem are insignificant or uncalled for; they do constitute the foundation on which the edifice of any humanitarian law is erected. However, what we often forget in such obsessive engagements with legalities is that, no matter how good these laws and policies may appear on paper, they are in reality only as good as they are effective in evoking compliance. Compliance comes easily and voluntarily only when the laws and policies are perceived by those whom they affect as fair and consistent with their own perceptions of the problem.

Perhaps, a better way to approach such a problem would be to look at it through the prism of perceptions. The views of all the parties concerned should be brought together in an effort to dispassionately and objectively analyze them against the background of legal provisions. This would facilitate a better understanding of the problem and help bring forth some of the contradictions inherent in the laws and policies applicable to stateless peoples and refugees. Such an approach would also help reconcile the conflicting interests of both the refugees and the local host society.

THE death of Pol Pot, surprisingly unnoticed barring the routine news-coverage and a few desultory obituaries, brings to an end what undoubtedly was one of the bloodiest careers in modern history. As the head of the Khmer Rouge, at one stage lauded by many as a progressive national liberation movement, Pol Pot and his associates subjected Cambodia and the Khmer people to a genocide that in relative, if not absolute, terms has few parallels. Estimates vary, but most experts would today agree that the killing fields of Cambodia claimed over 3 million lives.

Ideas are often seen as a motor force of history. What is less often realised is that mistaken ideas, when embedded in a totalising vision and backed by organisational power, have the ability to wreak destruction on an unprecedented scale. We invariably refer to the Holocaust under Hitler's Third Reich which claimed the lives of over six million European Jews. For Hitler and the Nazi Party, the Jews were a pestilence, an impurity that had to be eliminated for the Aryan (German) race to realise its true greatness.

Not so in the case of Pol Pot. Here was no racial zealot locating the greatness of his peoples in an imaginary past. Under him there were no pogroms against the ethnic 'other' – those of a Vietnamese or Chinese origin. If anything, Pol Pot's Khmer Rouge was imbued with a zeal to totally reconstruct society, to eliminate all traces of the past (feudal) society, to create a new man.

Central to this new vision was depopulation of the city – a site not just for a breeding of bourgeois, anti-people ideas, but parasitic since it fed itself (literally) on the labour of the farmers. Every adult was now expected to contribute to the production of food, either willingly or under coercion, if necessary. No opposition was to be brooked in the carrying out of this glorious vision. And if people had to be killed to help them see reason, so be it. Eggs, after all, have to be broken to make an omlette. A leaf out of Stalin's maxim: 'So what if the waters of the Volga ran red with the blood of the Russian people. At least it ushered in Socialism.'

As distressing as the genocide in Cambodia, and the support it received from the socialist brotherhood, was the ideological appreciation it elicited from leading intellectuals. Malcolm Caldwell was most vocal

in support of the new policy. So was Samir Amin, incidentally co-student along with Khieu Samphan in Paris in the early 1950s. Few remember that the early blueprinting of a new Cambodia was first outlined in Samphan's doctoral thesis. Fortunately, Joan Robinson was silent, having burnt her fingers earlier with her appreciation of The Great Proletarian Cultural Revolution. A rare exception was Kathleen Gough, incidentally 'attacked' for her revisionist views. Herein lies the second lesson of such tragedies. Intellectuals, particularly when keen to change the world, seem to lose all sense of proportion in their support to such causes. More so when they do not have to bear the brunt of the policies they advocate.

As a final aside it may be remembered that even after the genocidal regime of Pol Pot had been overthrown, and the true scale of the horrors perpetrated could no longer be hidden, the pages of *The Bulletin of Concerned Asian Scholars* for years carried 'learned' contributions debating the exact toll – whether it was 2.75 or 2.8 million. I suppose if one could prove that the death figures were lower by a few thousand, the tragedy itself could be wished away. Worse, earlier ideological adversaries, later global collaborators, the U.S. and China, continued to support Pol Pot to the bitter end.

Pol Pot and the Khmer Rouge that he helped construct should not be forgotten. More than tin-pot dictators like Idi Amin, Mbotu or Papa Duvalier, he, along with his illustrious predecessors like Stalin or even Mao, is a reminder of the horrors we can willingly perpetrate in the service of the true cause. He also forces us to be a little cautious when recommending radical social surgery, of trying to write history on a clean slate.

Closer home, we can hardly claim immunity from such tendencies – be they sectarian, communal or radical. Even as the trauma of the Partition has barely been contained, we are being subjected to a variety of exclusivist appeals. Arguments extolling our diversity and pluralism, or that we are fundamentally a tolerant society are inadequate as a basis for hope. For that we consciously need to work towards a new political culture. For a start, we must change our language of political description.

**Harsh Sethi**

**Sri Madhava Ashish**

**NEW FROM BANYAN BOOKS**

A collection of essays, articles and letters in which the author, Sri Madhava Ashish, seeks to examine the values which underlie social ethics and environmental issues. Many of these themes engaged Madhava Ashish during his life at Mirtola, a small ashram near Almora in the Kumaon hills of northern India.

His teaching evolved beyond a purely religious form, in his search for the meaning of life. His work emphasised the need to integrate the inner reality with an active committed outer life.

*These writings are interspersed with incisive, poignant and stimulating letters exchanged between Raj and Romesh Thapar, founders of Seminar magazine, and Madhava Ashish.*

A smile. A teardrop. A raised eyebrow. A flare of the nostrils. A frown. These are just a few manifestations of a language that transcends the spoken word.

Spontaneously communicating feelings like ardour, agony, ecstasy, excitement, fervour, fright, passion and pain. All housed in the human body and triggered by amazing chemical reactions.

Devotion and dedication have enabled a handful to master the art of self-expression. Fostering it to perfection. In the visual arts, the performing arts, music and dance

At Herdillia, we've also devoted over two decades perfecting chemical reactions, thereby elevating the quality of life. In homes, offices, industries and in agriculture.

It's our way of expressing underlying feelings. Like concern and care. Feelings that are an inherent part of Herdillia's chemistry.

Excitement, anxiety, agony and ecstasy - some amazing chemical reactions we all possess

# ENERGY

## LIFELINE OF THE NATION

For over three decades, Dasturco has been totally involved in energy conservation, its efficient use and management.

Dasturco has incorporated energy-efficient processes and equipment in all projects handled by it. To optimise energy use. To reduce energy consumption and to cut costs. To recover and re-use waste energy.

To cite only a few recent projects :

- ☐ Visakhapatnam Steel Plant.
- ☐ Tata Steel modernisation and expansion.
- ☐ Sunflag Iron and Steel Company.
- ☐ Misurata Iron and Steel Complex, Libya.

Also in alloy steel, mini-steel, direct reduction, ferro-alloys and other energy-intensive sectors.

And computerised energy management, as at Visakhapatnam Steel Plant.

Tel. : 6103146, 6103147, 6102867, 6101978, 6100448 Fax : 6194617

**Interest calculation to your advantage**

We apply your interest on a daily balance, and not on an annual reducing balance. A simple calculation that reduces your Equated Monthly Instalment (EMI) and saves you thousands!

**No prepayment penalty**

We won't make you pay for repaying us early! There is no penalty in case you decide to prepay your loan.

Our  
home loans  
let you save in  
so many ways,  
we don't know  
where to start.

**No annual charge**

No annual shocks! Unlike most others, we don't have any annual charge. Again, a considerable saving.

**No commitment charge**

Why pay for something you haven't received? With Home Loanz, you start repaying only after you get your loan – not before.

**Processing charge on a 'slab' basis**

We apply our one-time processing charge on a 'slab' basis, and not as a flat percentage of your loan amount. Which means a substantial saving for you!

All in all, you can't find a home loan that allows you to save in so many ways. So, for any amount from Rs 2.10 lakhs to Rs 1 crore, do call us today. Now that you know where to start.

*Loans at the sole discretion of ANZ Grindlays Bank.*

**HOME  
LOANZ**

Home finance with all-round savings.

NETWORK ● ANZ 260-97

This is 3 year old Shreya.  
Her parents abandoned her  
and vanished. If you turn the page,  
you'll do the same.

With no one left in the world, little  
Shreya doesn't have the slightest  
hope of facing the future, unless she  
gets an education. And that's where  
you come in. To make a dream called

*Nanhi Kali* come true. Through  
*Nanhi Kali*, you can become the foster  
parent of a little girl like Shreya.

By giving Rs. 100 a month towards  
her education, your 'daughter' will be  
put into school and in fact, you will  
receive regular reports about her  
progress including a photograph.

*Nanhi Kali* is a special project of the  
K.C. Mahindra Education Trust - a

Trust set up by one of the most  
reputed industrial families in India.

A Trust that's been working since  
1953 to promote education and  
enlightenment across the country.

Since *Nanhi Kali* literally means  
'little flower', with people like you,

we hope to repair the broken  
petals of thousands of such  
underprivileged little girls.

So please, don't turn the page yet.

Supported by M/s. Mahindra & Mahindra Ltd.

***Nanhi Kali***

A project of K. C. Mahindra Education Trust  
Cecil Court, Mahakavi Bhushan Marg, Mumbai - 1.  
Phone : 2021031. Fax : 2852441.

Created by Contract for a cause.

Yes, I, \_\_\_\_\_ would like to adopt a 'Nanhi Kali' like Shreya. ☛ Enclosed is my cheque of Rs: 1200 (@ Rs. 100 p.m.) in favour of K.C. Mahindra Education Trust for one year's education. Please do send me progress reports and a photograph. ☛ Instead of one Nanhi Kali, I would like to adopt \_\_\_\_\_ Nanhi Kalis for \_\_\_\_\_ years. Thank you.

THE MONTHLY SYMPOSIUM POST BOX 338 NEW DELHI 110001

Founder Editors RAJ & ROMESH THAPAR

Journal which seeks to reflect through free discussion, every shade of Indian thought and aspiration. Each month, a single problem is debated by writers belonging to different persuasions. Opinions expressed have ranged from Janata to Congress, from Sarvodaya to Communist to Independent. And

the non-political specialist too has voiced his views. In this way it has been possible to answer a real need of today, to gather the facts and ideas of this age and to help thinking people arrive at a certain degree of cohesion and clarity in facing the problems of economics, of politics, of culture

# The problem

WILDLIFE conservation in India, as in most parts of the world, is complex and often contentious. What on the surface appears to be a simple issue of protecting wild animals and plants from forces beyond their control, quickly dissolves, on closer inspection, into a complex tangle of conflictual issues: human rights versus the protection of animals and forests; the exclusion of all humans from protected areas versus the possibility of human coexistence with wildlife; exclusive state control over protected areas versus increased local participation in protected area management. Indeed, beyond the broad objective of preserving nature, there is often little in common among the various positions adopted by conservationists as to the specifics of what is to be protected, for, by and from whom.

Conservation practice necessarily entails the imposition of regulations over access to certain resources, with specific people or institutions attempting to define who has access to which resources, and on what terms. The outcomes of negotiated access to resources are largely a reflection of power relations at the local, regional or national level. There are critical questions revolving around our understanding of how ecosystems work, and the need to use accurate science in the management of protected areas. But here too, the links between power and knowledge influence our perception of the natural world, and the optimal means of managing it. Conservation practice is, therefore, a profoundly political process. I will make a simple point in this essay: what gets conserved and by whom will ultimately be determined by social and political processes as much, if not more, than by the scientific knowledge we bring to bear on resource management.

*State vs. local controls:* The central stand-off in Indian conservation is the question of whether protected areas should be inviolate and managed by the state, or whether local communities should have a bigger say in the management of protected areas, including, if need be, access to resources within these areas. In this discussion neither the demonization of the state nor the romanticization of local communities is of much value.

Can the state enforce unpopular policies that exclude local communities from conservation areas? The simple answer is no, not on a sustained basis. While the posting of guards may ensure the absence of villagers from the more high profile sections of national parks, there is little the state can do against anonymous 'crimes', such as the setting of a forest on fire or the poisoning of carnivore kills in the hope of killing lions, tigers, and other carnivores. Such actions are in part an expression of the alienation of villagers from conservation programmes that deny them access to basic necessities. In turn, such animosity may translate into heightened support for poaching, an activity that is most effective with local contacts, but also most effectively checked through the use of local contacts. Whether the state or the poacher captures the support of the local communities largely depends on the latter's degree of alienation from the resource and the state.

The divided nature of the state is another reason for its ineffectiveness in controlling local access to resources. The state is divided both vertically and horizontally. Rarely do the agendas of the lowest functionaries of the state align with those of policy makers – if only because of an inability of the state to provide adequate salaries to its lowest staff. In the absence of adequate compensation, but even if compensation were to be raised, there is little reason to assume an alignment of forest guard and policy-maker interests regarding what needs to be conserved and the means of conserving the same. Guards hired from local villages are far more likely to have sympathies with the people among whom they have kin and other long-standing ties. Guards may, of course, choose to enforce restrictions on some members of the community; this is, however, as likely to be an exercise of power as an attempt to conserve, say the wild flowers of the Himalaya, and is a shaky premise for long-term efforts at conserving nature.

There are also horizontal divisions within the state, deriving in part from conflicting mandates to different departments. But let us leave that for the moment, and concentrate on what to my mind is the more crucial issue of potential differences in the

agendas of politicians and bureaucrats. However imperfectly Indian democracy may appear to function, politicians will eventually respond to voter demands over the lifting of restrictions on access to forest resources. It is simply a question of the issue coming to gain sufficient importance in a given constituency.

Politicians elected on an anti-conservation plank will, eventually, denotify protected areas, as has happened in parts of Gujarat (Kothari et al. 1996), and for which there are demands in many parts of Madhya Pradesh. They will do this for two reasons: they benefit personally by allowing industrialists preferential access to the mineral and forest wealth within these areas, and they benefit politically from fulfilling electoral promises. Variations to this theme have been reported within the context of local access to reserve forests in Himachal Pradesh and Karnataka (Saberwal forthcoming, Someshwar 1995). In such instances, local community leaders and politicians are determining the use of forests and grasslands and not the Forest Department, the agency mandated to manage these resources.

There is, then, a *political* problem associated with exclusionist conservation policies of the Indian Forest Department. A long-term effective implementation of such policy borders on the impossible.

In response to what has been perceived to be a fundamentally unjust policy, numerous environmental and social activists have argued for the need to provide local communities with a greater role in protected area management. This is seen as being both inherently more equitable than an exclusionary policy, and a more effective means of conserving natural resources.

An extreme position among many social activists is for the handing over of all protected areas to the sole care of local communities. But there are other, less drastic, measures suggested by many, both within and outside the country. Following the successes of Joint Forest Management, there are now proposals for Joint Protected Area Management, in which local communities are seen as having greater managerial and decision-making responsibility than is currently the case. Giving up the ground currently occupied by the exclusionary conservation lobby, there is an interna-

tional interest in eco-development, which is seen as encouraging eco-friendly development within villages with the aim of improving the financial status of villagers, thereby reducing their dependence on resources within protected areas.

There are also examples from many parts of the country of local action enabling the Forest Department to achieve its own conservation goals. The Tarun Bharat Sangh, for example, has successfully agitated for a ban on mining activities on land adjoining Sariska National Park in Rajasthan. Similarly, inhabitants of villages that adjoin the Kailadevi Sanctuary, also in Rajasthan, have successfully come together to prevent migratory pastoralists from moving through the sanctuary, owing to the fear that the annual migrations of lakhs of sheep and goats are responsible for the absence of forest regeneration. In each instance, there is a convergence of local and state interests, with the latter's interests being served by the (political) mobilization of the villagers.

But this second example also points to a problem with the whole approach to increasing local participation, and that is one of defining what the local community is. We have here a situation of a coincidence of the interests of both the Forest Department and of the local villagers in the desire to reduce pastoralist presence in the area. Pastoralists, however, would argue that they too comprise the 'local', and that their rights to use the area are at least as 'traditional' as those of the villagers. Riven as Indian communities are by caste, class and other divisions, and given that in a specific context there are numerous stake-holders, how does one identify the limits of the 'local community' that will control access to resources? While the call to hand over control to local communities has a moral authority that is incontestable, even those who believe in it have to deconstruct the category of the community. This is vital if conservation is to be rooted at the local level (see also Rangarajan 1996).

Many commentators have romanticized local communities, particularly with regard to the ecological harmony of their lifestyles and the egalitarian and equitable functioning of their institutions. Research has

demonstrated, however, that local power structures are often equally or more responsible than the state in creating conditions of dependency and poverty (see Yáng 1989, Sivaramakrishnan 1996). A simple shifting of controls from the state to the local level may ultimately do little more than reinforce unequal relations of power at the local level. The means of empowering local communities need to be carefully thought out, including a conceptualization of the possible role the state can play in effecting and sustaining such change.

But the basic fact remains: we need to better involve village communities in conservation programmes, not because of lifestyles that 'are in harmony with nature', nor owing to the 'egalitarian local institutions' that will ensure equitable access to resources. Rather, if we continue to alienate local communities, we will, per force, be helping to politicize conservation issues, resulting in a sidelining of foresters and others with an interest in conservation. Instead, conservationists could use electoral power to apply political pressure to force the eviction of extractive industries, such as mining and forestry, from areas of conservation interest. Such political mobilization, in the interests of conservation, rather than against it, is likely to take place only where local communities are part of, and not excluded from, conservation policy and practice.

*Keeping people out, letting them in:* Involving villages in conservation programmes is of course rather vague. Let us assume that our purpose is to generate support for conservation initiatives, or at least minimize villager hostility to conservation measures. To focus on the latter, as I have pointed out above, a key source of animosity towards conservation programmes initiated by Forest Departments is the attempt to exclude people from national parks, tiger reserves and the like. The question is: is a blanket ban on human use of resources within national parks necessary? If the answer is a conditional no, then one has a potential means of enhancing local support for conservation. Let us examine the scientific debate over the exclusion of people from conservation areas in some detail.

Various justifications have been used over time to keep people out of areas of conservation interest. The notion that subsistence hunting pressures would lead to a decline in wildlife populations was used in much of the colonized world, even as sport hunting, often on a massive scale, was both permitted and extolled (Rangarajan 1996). Over the past two centuries, however, a second, more powerful idea has supported this exclusion of people from protected areas: the notion of a delicate balance in nature. Within this construc-

tion of nature, arguably linked to Christian mythology (see Worster 1985), nature is seen as being comprised of individual components linked through various chains in a vast food web. Each delicate and easily disturbed link helps to maintain an overall balance in nature. Human activities within such a framework such as fire, grazing, and shifting cultivation have been seen as 'un-natural' and necessarily a disturbance and threat to the delicate web of life.

Indeed, the notion of nature as a delicate web has constituted a key underpinning to theoretical ecology until as recently as the 1980s, and continues to inform popular perceptions of the natural world. For society at large this is often the most powerful rationale for a continuation with a policy to keep people out of protected areas.

More recent research, however, has suggested a more chaotic, and less deterministic, functioning of nature. Human disturbances in such situations are simply seen as being a part of the system. Fire regimes have been shown to play a significant role in shaping the structure and composition of savanna, prairie, and forest communities. East African pastoralists, for example, regularly burn dead vegetation in order to encourage the growth of fresh shoots, and to prevent the conversion of savanna to scrub bush (Homewood and Rodgers 1991). Serengeti National Park is a part of this savanna, and the periodic pastoralist burning it is subject to, needs to be seen as an integral part of the system that sustains the greatest assemblage of wild mammals in the world. There are other examples of fire playing critical roles in shaping forest and grassland communities (Cowling et al. 1985, Langston 1995, Belsky 1992, Howe 1994).

The response of systems to fire is primarily dependent on the evolutionary history of the species that comprise the system. Thus, given a long history of being subject to a particular burning regime, an ecosystem may be comprised of fire-tolerant or fire-dependent species. In such cases, the removal of fire may lead to an invasion of exotics that are competitively superior in a decreased fire environment. Conversely, the introduction of fire to a system unused to being burned may result in the invasion of exotics capable of withstanding the stress of fire. Therefore an alteration to a fire regime is likely to alter system characteristics. How one evaluates such change is a function of one's management objectives.

Similarly, intense grazing pressure may be responsible for maintaining high levels of species diversity within grasslands that have historically been

subject to such grazing pressure, as has been shown by research in the East African savanna, the North American prairie, and the species rich chalk grasslands of England and Northern Europe (Belsky 1992, McNaughton 1993, During and Willems 1986, Howe 1994). In the absence of grazing, taller species may outgrow shorter species, thereby 'shading' the latter out. In effect, grazing may reduce the height advantage a dominant species may hold, thereby reducing the dominance of a few species and increasing overall species diversity. Amidst considerable controversy over exclusion of livestock grazing from Keoladeo National Park and the Valley of Flowers National Park, reports indicate respective decreases in bird and plant species diversity in the two areas (Ali and Vijayan 1986, Naithani et al. 1992). The absence of research precludes a detailed evaluation of other Indian experiences of the consequences of altering long-standing grazing regimes.

Research suggests that grassland species that have evolved under an intense grazing regime have developed physiological adaptations that enable a high tolerance to grazing losses (Caldwell et al. 1981). On the other hand, in regions with a shorter history of grazing pressures, intense grazing can devastate a flora, leading to the invasion of unpalatable grasses and woody species as has been demonstrated in the Galapagos islands and the inter-mountain American West (Hobbs and Huenneke 1994). Whether grazing constitutes a disruption to a system, or, as a disturbance, is an integral part of the system, depends very much on the history of the region's grazing regime.

Theoretical treatments of fluctuations in biodiversity indicate low levels of biodiversity at both the high and the low extremes of the disturbance spectrum, and high levels of species diversity at moderate levels of disturbance (Connell 1978, Milchunas et al. 1988, Petraitis et al. 1989). Climatic disturbances such as fire, drought, flooding, hurricanes, and so on, have all been seen as increasing the general heterogeneity within an ecosystem, thereby leading to both a greater diversity of habitat types, and consequently, a greater faunal diversity. The same heterogeneity of habitat types can result from human use of a system, including heavy grazing, burning, indigenous farming systems and the like. It goes without saying that the disturbance hypothesis cannot be used to suggest that any and all human activity can be encouraged within a protected area. The idea, however, that *all* human resource utilization within protected areas is inimical to the conservation of biological diversity is hard to sustain in the face of such an argument. From a purely

ecological standpoint, there may be value in allowing a continuation of certain local land use practices.<sup>1</sup>

Such a position, of course, assumes that some level of regulation will take place to ensure that resource use remains in concert with the achievement of conservation objectives. In turn, this implies management based on monitoring, and the use of judgements regarding what constitutes acceptable levels of resource harvesting. Once again, we arrive at a political crossroads in conservation. Whose judgement is to be used with regard to what constitutes land degradation? In response to this question, one hears the claims to sole expertise, articulated by officials of the Forest Department and by research scientists. This expertise is premised on the 'scientific', and hence superior, training of scientists. The unsophisticated knowledge of herders, cultivators, and forest users, is seen as being too primitive to be of use in forest management. In counterpoint, one also hears claims, some rather shrill, of the superiority of 'indigenous knowledge' over 'western science', derived as the former is from a lived experience rather through the 'unreal' world of experimentation.

Mine may be a caricature of the polarized nature of positions adopted by different groups of people, but only marginally so. There is often an explicit dismissal of local knowledge as being unscientific, as also a romanticization of local knowledge as somehow having all the answers. It is the political issue par excellence, for the claim to knowledge is also the claim to power. As with most issues related to conservation, the reality is necessarily somewhere in between the two positions. Science has tremendous power through the use of statistics and the appropriate design of experiments to acquire knowledge of how systems function. The problem is that environmental variability from one year to the next coupled with the co-variation one is routinely confronted with in nature, generates difficulties in establishing causality with regard to ecological phenomenon. In contrast, years, and in some contexts,

1. A key response to this position is that most such examples are from areas with low population densities, and that the same logic would not hold within the context of India's population pressures. I would argue the need examine the issue on a site-specific basis (there is a need to deconstruct the Indian 'population problem'). Certainly many parts of the alpine meadows of the Himalaya are not necessarily subject to increasing population pressures (Saberwal forthcoming). The same may be true of other parts of India with difficult terrain—including the Thar desert and the north-east Himalaya. In any case, a blanket ban on human resource use may not be necessary, and we need to explore the conditions under which human resource use is compatible with achieving conservation goals.

generations of experience, may provide clues regarding 'normal' and 'deviant' ecosystem behaviour. The question is, can we develop the sophistication to mix deductive and inductive reasoning, or are we too fixed in our ways to be willing to look at complex problems using any and all sources of information?

There are no easy solutions. But this is to be expected, given that one is dealing with emotionally and politically charged issues. But as we, individually or collectively, claim the high moral ground in speaking on behalf of those unable to express themselves (plants, animals, or 'helpless' local communities), there is a need to recognize our tendency to work with dualities that are necessarily simplifications of inherently complex phenomenon. Should people be out or in? Should the state or should local people manage protected areas? Should 'western science' or 'indigenous knowledge' provide the basis for resource management?

For the most part, these are political questions. But then, to reiterate my point through this paper, conservation is about politics. And to effect better conservation we need to function as part of the wider political process – not solely as social scientists and scientists who have the 'best' answers. In a situation in which people's livelihoods and security are at stake, there are no solutions that will satisfy everyone. The question is: can we prevent a politicization of conservation whereby the backlash from exclusionary conservation results in politicians making decisions regarding the future of national parks, rather than the managers, scientists and local communities that currently stake claims to this management. Perhaps the unwillingness of conservationists of different hues to give ground to those from other camps hides the larger truth of the extreme difficulties involved in creating working coalitions. But as with the larger national political scene, and perhaps linked to the growing number of political fora for disadvantaged communities, I suspect that the era of a single constituency controlling all that happens within India's protected areas is drawing to an end. We can try to bring local communities on board, along with all the complexity that entails, or we can stand by and watch as industry, cultivation, herds of animals encroach upon protected areas, dams.... Much of this will happen with the support, or in response to the demands, of local communities alienated by an environmental movement rooted in what is ultimately an urban pre-occupation with a specific, culturally defined vision of nature.

# The authoritarian biologist

RAMACHANDRA GUHA

*Where will be taxonomists and evolutionists when cows and corns dominate the earth?*

Hugh Iltis, writing in 1967.

*If biologists want a tropics in which to biologize, they are going to have to buy it with care, energy, effort, strategy, tactics, time and cash.*

Daniel Janzen, writing in 1986.

*Conservation and biology are interdependent and inseparable because biology is at the heart of all phases of conservation and is the ultimate arbiter of its success and failure.*

David Ehrenfelds, in his editorial in *Conservation Biology*, 1987.

*Any grandiose plan for the conservation of wildlife without adequate provision for human interests is doomed to fail. Conservation in developing countries often has to be a compromise between scientific idealism and practical reality.*

Raman Sukumar, in his doctoral dissertation of 1985.

WHEN India became independent, in 1947, it had less than half-a-dozen wildlife reserves; it now has in excess of four hundred parks and sanctuaries, covering 4.3% of the country (there are proposals to double this area).

\* An earlier version of this essay was published in *The Ecologist*, 27(1), 1997.

Wildlife conservation controls big territory and is now big business too. Nor is this country exceptional in this regard. In response to a growing global market for nature tourism, and egged on by strong domestic pressures, other Asian and African nations have undertaken ambitious programmes to conserve and demarcate habitats and species that need to be 'protected for posterity'.

One might, at a pinch, identify five major groups that together fuel the movement for wildlife conservation in the Third World. The first are the city-dwellers and foreign tourists who merely season their lives, a week at a time, with the wild. Their motive is straightforward: pleasure and fun. The second group consists of ruling elites who view the protection of particular species (e.g. the tiger in India) as central to the retention or enhancement of national prestige. Willing on this process are international conservation organizations, such as the IUCN and the WWF, who work with a sense of mission at 'educating' people and politicians to the virtues of biological conservation.

A fourth group consists of functionaries of the state forest or wildlife service mandated by law to be in physical control of the parks. While some officials are genuinely inspired by a love of nature, the majority – at least in India – are motivated merely by the power and spin-off benefits (overseas trips, for example) that come with the job. The final group are biologists, who believe in wilderness and species preservation for the sake of 'science'.

These five groups are united in their hostility to the farmers, herders, swiddeners and hunters who have lived in the 'wild' from well before it became a 'park' or 'sanctuary'. They see these human communities as having a destructive effect on the environment; their forms of livelihood aiding the disappearance of species and contributing to soil erosion, habitat simplification, and worse. Their feelings are often expressed in strongly pejorative language.

**T**ouring Africa in 1957, one prominent member of the Sierra Club sharply attacked the Maasai for grazing cattle in African sanctuaries. He held the Maasai to be illustrative of a larger trend, wherein 'increasing population and increasing land use,' rather than industrial exploitation, constituted the main threat to the world's wilderness areas. The Maasai and 'their herds of economically worthless cattle,' he said, 'have already overgrazed and laid waste too much of the 23,000 square miles of Tanganyika they control, and as they move into the Serengeti, they bring the desert with them, and the wilderness and wildlife must bow before their herds.'<sup>1</sup>

Thirty years later, the World Wildlife Fund initiated a campaign to save the Madagascar rainforest, the home of the Ring Tailed Lemur, the

Madagascar Serpent Eagle, and other endangered species. Their fund raising posters had spectacular sketches of the lemur and the eagle and of the half-ton Elephant Bird which once lived on the island but is now extinct. Man 'is a relative newcomer to Madagascar,' noted the accompanying text, 'but even with the most basic of tools – axes and fire – he has brought devastation to the habitats and resources he depends on.' The posters also had a picture of a muddy river with the caption: 'Slash-and-burn agriculture has brought devastation to the forest, and in its wake, erosion of the topsoil.'<sup>2</sup>

**T**his poster succinctly summed up the conservationist position with regard to the tropical rainforest. This holds that the enemy of the environment is the hunter and farmer living in the forest, who is too short-sighted for his, and our, good. This belief (or prejudice) has informed the numerous projects, spread across the globe, to constitute nature parks by throwing out the original *human* inhabitants of these areas, with scant regard for their past or future. All this is done in the name of the global heritage of biological diversity. Cynics might conclude, however, that tribals in the Madagascar or Amazon forest are expected to move out only so that men in London or New York can have the comfort of knowing that the lemur or toucan has been saved for posterity – evidence of which is then provided for them by way of the wildlife documentary they can watch on their television screen.

## II

Let me now focus on the motives and motivations of one of the aforementioned groups: the conservation biologists. Biologists have, of course, been in the vanguard of the environmental movement in our time. The author of

the work that by common consent sparked modern environmentalism was a biologist, Rachel Carson. So were numerous other scholars and writers who contributed to shaping the environmental debate of the sixties and seventies. I think, for example, of Garret Hardin, Paul Ehrlich, Ray Dasmann in the United States; of C.J. Brejér in the Netherlands; of F. Fraser Darling and Julian Huxley in the United Kingdom; and of Bjorn Gillberg and Hans Palmstierna in Sweden (these examples could be multiplied).

Biology is a science that in three major respects differs from the disciplines of physics and chemistry. First, biologists are taught to look for interdependence in nature, viewing individual life forms not in isolation but in relation to one another. Ever since Darwin, biologists have also been oriented towards a longer time frame, thinking in aeons and generations rather than months and years. Finally, biologists have a direct professional interest in species other than humans; as ornithologists, botanists and zoologists, they are, willy-nilly, more alert to the interests of bird, plant or animal life. It must be said at once that this interest in other species sometimes blinds them to the legitimate interests of the less fortunate members of their own.

**T**he impatience with other humans is especially marked among conservation biologists, for whom farmers and forest-dwellers have come to represent a messy obstacle to the unimpeded progress of scientific research. A 'seeming goal of humanity,' writes Daniel Janzen in the *Annual Review of Ecology and Systematics*, 'is to convert the world to a pasture designed to produce and sustain humans as draught animals. The challenge, in which the tropical ecologist is a

general, knight, foot soldier, and technical specialist, is to prevent humanity from reaching this goal. *The true battle, is, however, to reprogramme humanity to a different goal.* The battle is being fought by many more kinds of professionals than just ecologists; however, it is a battle over the control of interactions, and by definition, the person competent at recognizing, understanding, and manipulating interactions is an ecologist.<sup>3</sup>

**W**hile the article's military metaphors and its appearance in a prestigious scientific journal are noteworthy, Janzen was only reiterating a well-worn theme. Over twenty years ago, a similar claim had been made by a botanist from the University of Wisconsin: 'If there is anybody who should provide leadership in the preservation movement it is the systematic or environmental biologist.... We are not only citizens and humans, each with individual desires. We are not only trained taxonomists and ecologists, each perhaps wishing to preserve the particular organisms with which we work. But we, the taxonomists and ecologists, are the *only ones in any position to know* the kinds, the abundance and the geography of life. This is a knowledge with vast implications for mankind, and therefore vast responsibilities. When nobody else knows, we do know where the wild and significant areas are, we know what needs to be saved and why; and only we know what is threatened with extinction.'<sup>4</sup>

Consider, finally, a recent assessment of global conservation by Michael Soulé, which complains that the language of policy documents has 'become more humanistic in values and more economic in substance, and correspondingly less naturalistic and ecocentric.' Soulé seems worried that in theory (though certainly not in prac-

tice!) some national governments and international conservation organizations (or ICOs) now pay more attention to the rights of human communities. Proof of this shift is the fact that 'the top and middle management of most ICOs are economists, lawyers, and development specialists, not biologists.' We have here a sectarian plaint, a trade union approach to the problem spurred by an alleged 'takeover of the international conservation movement by social scientists, particularly economists.'<sup>5</sup>

**S**oulé's essay, with its talk of conspiracies and takeover bids, manifests the paranoia of a community of scientists which has a *huge* influence on conservation policy but yet wants to be the sole dictator. A scholar acclaimed by his peers as the 'dean of tropical ecologists' has expressed this ambition more nakedly than most. I have already quoted from a paper published by Daniel Janzen in the *Annual Review of Ecology and Systematics*; let me now quote from a report he wrote on a new National Park in Costa Rica, whose tone and thrust perfectly complements the other, ostensibly 'scientific' essay. 'We have the seed and the biological expertise: we lack control of the terrain,' wrote Janzen in 1986. He was able to remedy this situation for himself by raising enough money to purchase the forest area needed to create the Guanacaste National Park.

One can only marvel at Janzen's conviction that he and his fellow biologists know all, and that the inhabitants of the forest know nothing. He justifies the taking over of the forest and the dispossession of the forest farmer by claiming that: 'Today virtually all of the present-day occupants of the western Mesoamerican pastures, fields and degraded forests are deaf, blind and mute to the fragments

of the rich biological and cultural heritage that still occupies the shelves of the unused and unappreciated library in which they reside.'<sup>6</sup>

**T**his is an ecologically updated version of the White Man's Burden, where the biologist (rather than the civil servant or military official) knows that it is in the native's true interest to abandon his home and hearth and leave the field and forest clear for the new rulers of his domain – not the animals he once co-existed with, but the biologists, park managers and wildlifers who shall now collectively determine how the territory is to be managed. In Costa Rica we only have Janzen's word for it, but elsewhere we are better placed to challenge the conservationist's point of view. A remarkable recent book on African conservation by Raymond Bonner, *At the Hand of Man*, has laid bare the imperialism, unconscious and explicit, of western wilderness lovers and biologists working on that luckless continent. Some of his conclusions are:

'Above all, Africans [have been] ignored, overwhelmed, manipulated and outmanoeuvred – by a conservation crusade led, orchestrated and dominated by white Westerners.'

'Livingstone, Stanley and other explorers and missionaries had come to Africa in the nineteenth century to promote the three C's – Christianity, commerce and civilization. Now a fourth was added: conservation. These modern secular missionaries were convinced that without the white man's guidance, the Africans would go astray.'

'[The criticisms] of egocentricity and neo-colonialism... could be leveled fairly at most conservation organizations working in the Third World.'

'As many Africans see it, white people are making rules to protect animals that white people want to see in parks that white people visit. Why should Africans support these programs?... The World Wildlife Fund professed to care about what the Africans wanted, but then tried to manipulate them into doing what the Westerners wanted: and those Africans who couldn't be brought into line were ignored.'

'Africans do not use the parks and they do not receive any significant benefits from them. Yet they are paying the costs. There are indirect economic costs – government revenues that go to parks instead of schools. And there are direct personal costs [i.e., of the ban on hunting and fuel-collecting, or of displacement].'<sup>7</sup>

**T**he remarks of a Zambian biologist, E.N. Chidumayo, reinforce Bonner's conclusions: 'Many conservation policies in Africa tended to serve foreign interests, such as tourism and safari hunting, and largely ignored African environmental values and cultures. In fact, the only thing that is African about most conventional conservation policies is that they are practiced on African land.'<sup>8</sup>

Bonner's book focuses on the elephant, one of the half-a-dozen or so animals that have come to acquire 'totemic' status among western wilderness lovers. Animal totems existed in most pre-modern societies, but as the Norwegian scholar Arne Kalland points out, in the past the injunction not to kill the totemic species applied only to members of the group. Hindus do not ask others to worship the cow; but those who love and cherish the elephant, seal, whale or tiger try and impose a worldwide prohibition on its killing. No one, they say, anywhere, anytime, shall be allowed to touch the animal they hold sacred even

if (as with the elephant and several species of whale) scientific evidence has established that small-scale hunting will not endanger its viable populations and will, in fact, save human lives put at risk by the expansion, after total protection, of the *lebensraum* of the totemic animal. The new totemists also insist that their species is the 'true, rightful inhabitant' of the ocean or forest, and ask that human beings who have lived in the same terrain (and with the animals) for millennia be taken out and sent elsewhere.<sup>9</sup>

### III

**T**o turn now to an ongoing controversy in my own bailiwick. The Nagarhole National Park in southern Karnataka has an estimated 40 tigers, the species toward whose protection has been directed enormous amounts of Indian and foreign money and attention. Nagarhole is also home to about 6,000 tribal people, who have been in the area longer than anyone can remember, perhaps as long as the tigers themselves. The Karnataka state Forest Department wants the tribals out, claiming they destroy the forest and kill wild game. In response, the tribals answer that their demands are modest, consisting in the main of fuelwood, fruit, honey and the odd quail or partridge. They do not own guns, although coffee planters living on the edge of the forest do. Maybe it is the planters who poach the big game, they ask. In any case, if the forest is for tigers only, they query, why have the officials invited India's biggest hotel chain, Taj, to build a resort inside the park.

Into this controversy jumped a green missionary passing through Karnataka. John G. Robinson works for the Wildlife Conservation Society in New York, for whom he oversees 160 projects in 44 countries. He conducted a whistle-stop tour of Nagarhole

and called a press conference in the state capital, Bangalore. Throwing the tribals out of the park, he said, was the only means to save the wilderness. In Robinson's opinion, 'Relocating tribal or traditional people who live in these protected areas is the single most important step towards conservation.' Tribals, he explained, 'compulsively hunt for food,' and compete with tigers for prey. Deprived of food, tigers cannot survive, and 'their extinction means that the balance of the ecosystem is upset and this has a snowballing effect.'<sup>10</sup>

All over India, the management of parks has sharply posited the interests of poor tribals who have traditionally lived in them against those of wilderness lovers and urban pleasure seekers who wish to keep parks 'free of human interference' – that is, free of other humans. These conflicts are being played out in the Rajaji sanctuary in Uttar Pradesh, Simlipal in Orissa, Kanha in Madhya Pradesh, Melghat in Maharashtra and in numerous other locations.<sup>11</sup> In all these instances, Indian wildlifers have ganged up behind the Forest Department to evict the tribals and rehabilitate them far outside the forests. In this endeavour they have drawn sustenance from western biologists and conservation organizations, who have thrown the prestige of science and the power of the dollar behind their crusade.

**A** partisan of the tribal might answer Robinson and his ilk in various ways. He might note that tribals and tigers have co-existed for centuries; it is the demands of cities and factories that have of late put unbearable pressures on the forest, with species after species being put on the endangered list. Tribals are being made the scapegoats, while the real agents of forest destruction – poachers, planters, politicians, profiteers – escape notice. As

Robinson flies off to the next project on his list of 160, he might reflect on his own high-intensity lifestyle, which doubtless puts a greater stress on the world's resources than dozens, perhaps hundreds of forest tribals.

The tribal partisan might further point out that even as plans are afoot to evict the tribals from Nagarhole, Taj is being welcomed in to build its hotel. Meanwhile, the Forest Department has applied for American money to build seven patrol stations and a network of roads connecting them. This, it is claimed, is necessary for greater vigilance against poachers, when what it will in fact do is open out the forest still further to outside penetration. Our tribal partisan might argue, finally, that a policy which treats forest dwellers as enemies rather than partners can only be counter productive. What this policy will encourage, in time, is poachers and smugglers of ivory and sandalwood who can count on tribal acquiescence in the battle against the common enemy, the Forest Department.<sup>12</sup>

**A**ll this was stated more eloquently by the anthropologist Verrier Elwin. Writing in 1963, having made his home among the tribals and forests of India for some 30 years, Elwin deplored the 'constant propaganda that the tribal people are destroying the forest.' He asked pointedly how the tribals 'could destroy the forest. They owned no trucks; they hardly had even a bullock-cart; the utmost that they could carry away was some wood to keep them warm in the winter months, to reconstruct or repair their huts and carry on their little cottage industries.'

Who then was (and is) the real culprit? Elwin tells us of the 'feeling amongst the tribals that all the arguments in favour of preservation of forests are intended to refuse them their

[rights]. They argue that when it is a question of industry, township, development work or projects of rehabilitation, all these plausible arguments are forgotten and vast tracts are placed at the disposal of outsiders who mercilessly destroy the forest wealth with or without necessity.'<sup>13</sup>

#### IV

The main difference between Verrier Elwin's time and ours is the growing influence of wildlife fanatics. In the past, the tribal was expected to give way to the juggernaut of Development, so that his forest abode could be claimed by iron mines, steel plants, and large dams. That gospel is now joined by the gospel of Total Conservation, in which the interest of the tiger is always elevated above the interest of the tribal.

**T**hat Elwin reversed this order of priority is not unrelated to the fact that his discipline of social anthropology tends to place the concerns of humans, especially vulnerable humans, above all else (and all others). But these conflicts must not be reduced to a matter of which discipline privileges which species. More sociologically sensitive biologists, for instance, have warned of the dangers of neglecting, in programmes of wilderness and wildlife conservation, the rightful concerns of the communities who live in and around protected areas.

Let me quote from three such scientists, writing in 1949, 1977 and 1994 respectively. First, a statement from the botanist M.S. Randhawa, notable for its alertness to farmers' interests and also for its then conventional categorization of 'useful' and 'harmful' species:

'With the liquidation of the feudal order... the problem of wildlife preservation has acquired a new significance. Whatever may be the faults

of princes and rajahs, it must be said to their credit that they preserved the wild animals and forests of their states rather well. With the growing demands of cultivators who want to save their crops from harmful animals, there is need of clear formulation of policy. There is immediate need of initial survey of all proposed National Parks areas. While there is necessity of maintenance of good vegetational balance and preservation of rich flora and fauna in the National Park areas, the general wildlife policy must be such as will not prejudice the use of developed agricultural land. The interests of the cultivator and the lover of nature must be harmonized.

'The apprehensions of farmers that the National Parks and Nature Reserves will develop into uncontrolled sanctuaries where pests and weeds will be allowed to flourish, and which will spread into surrounding agricultural lands must be allayed. The biologist must give lists of harmful and useful birds and animals. While the friends of the cultivator should be encouraged in the National Parks, the enemies must be exterminated. The biologist should also give a finding whether campaigns should be started for the destruction of wild boars, porcupines, monkeys, bats and parrots who cause enormous damage to crops and gardens. Before any such campaigns are started, it should be ascertained whether wholesale destruction of certain birds or animals may not have harmful repercussions, on account of the upsetting of [the] balance of power between various organisms.'<sup>14</sup>

**T**he great ornithologist, Salim Ali, came straight to the point, without any recourse to a dubious division between good and bad species:

'No conservation laws or measures can succeed fully unless they

have the backing of informed public opinion, which in our case means the usually illiterate village cultivator. In other words, unless we can make the villager understand, and convince him of the logic in expecting him to preserve the tiger or leopard that has deprived him of maybe his sole worldly possession – the cow which moreover provided the meagre sustenance for himself and his family – how can we induct his willing cooperation? Similarly, how can we expect him to see any sense in being asked not to destroy the deer or pig that have ravaged the crops which he has toiled for months to raise, and on which all his hopes are banked? Admittedly this is going to be a very difficult task, but I believe it is not impossible if we could but find the right approach. We have never really tried enough. Devising a realistic strategy is now a challenge to all conservationists.<sup>15</sup>

**F**inally, some remarks of the ecologist Raman Sukumar, whose work on the Indian elephant has highlighted the conflicts – as manifest in incidents of man-slaughter and the destruction of crops – between large animals protected in parks and farmers who live on the periphery:

'It is both unrealistic and unjust to expect only a certain section of society, the marginal farmers and tribals, to bear the entire cost of predatory animals. We have to work towards ameliorating the impact of wildlife on people if conservation of wildlife and their habitats is to gain acceptance among such people who interact with these in their daily lives.... Today the local people see sanctuaries or national parks as simply the pleasure resorts of the affluent. There is urgent need to reorient management of our wildlife reserves so as to pass on economic benefits to local communities.... If an adequate

proportion of the income derived from tourism is retained by the local economy there would be increased motivation for people to value wildlife and their habitats.... It is time we take bold new approaches towards reconciling economic development with conservation.'

**W**ith regard to the elephant-human conflict in southern India, Sukumar has been more than forthcoming with 'bold new approaches'. He urges proper and just compensation for the loss of life (which varies, depending on the province, from a niggardly Rs 2000 to Rs 15,000) and for damage to crops. He also thinks that in some cases, trenches and electric fences might dissuade elephants and other large mammals into trespassing into habitations and fields. Most radically, he states that 'wildlife populations that come into severe conflict with human interests may have to be directly managed to keep their levels below tolerable limits.'

He goes on to explain what the euphemism 'directly managed' actually means:

'It is clear that the adult male elephants are inherently more predisposed to raiding crops as a consequence of social organization. The removal of an adult male elephant from the population would have a far greater effect in reducing crop damage (by a factor of 20 in economic terms) and saving human lives than the removal of an elephant from a family herd. Our understanding of demographic processes in such polygynous species also show that the loss of a certain proportion of males is not likely to affect the intrinsic rate of growth of the population. The removal of females from the population would certainly reduce its growth rate. Hence, the selective culling of male elephants

identified as inveterate crop raiders or rogues would be the best form of population management.'<sup>16</sup>

These recommendations are the outcome of years of careful and patient scientific work, yet they have been unable to find acceptance. For Salim Ali's hopes notwithstanding, most conservationists remain uninterested in working towards a 'realistic' strategy. Forest Departments will not pay proper compensation, claiming that it would open the floodgates to all kinds of rustics with all manner of forged claims. Other biologists, and wildlife lovers in general, will not countenance any talk of 'culling', on moral grounds – all life is sacred – or on instrumental ones – which species will we have to manage next?<sup>17</sup>

**M**eanwhile, the tension around national parks continues – angered by conservationists, public and private, villagers in Karnataka have aided the notorious sandalwood and elephant smuggler Veerappan, who at least takes better care of their stomachs. So elephants raid crops and take the occasional life, while Veerappan cheerfully eludes the thousands of security personnel who have tried to catch or kill him for a decade.

It is conflicts such as these which have led the more thoughtful Indian biologists to reject the notion that species and habitat protection can succeed only through the punitive guns-and-guards approach favoured by a majority of wildlife conservationists, both domestic and foreign. Some ecologists, like Raman Sukumar, have sought to resolve conflicts between large mammals and humans; others, like Madhav Gadgil, have tried to move biodiversity conservation away from a privileging of large mammals towards a more inclusive and decentralized approach that would also honour and revive traditional systems

of nature conservation such as sacred groves. Sociologists with rich field experience, such as Ashish Kothari, have pleaded for a more democratic system of park management in which the voices of local communities would ring out loud and clear.

**T**hese conservationists by no means wish to see a world completely dominated by cows, corn and those who raise them. They have time for the tiger and the rainforest, and also want to protect those islands of nature not yet fully conquered by humans. Their plea, however, is to recognize wilderness protection as a distinctively North Atlantic brand of environmentalism, whose export and expansion must be done with caution, care, and above all, with humility. In the poor and heavily populated countries of the South, protected areas cannot be managed with guns and guards but must, rather, take full cognizance of the rights of the people who have lived in (and oftentimes cared for) the forest long before it became a national park or a World Heritage Site.<sup>18</sup> As Raman Sukumar might put it, we need to save agriculture from elephants as much as protect elephants from men.

In addition, the present philosophy and practice of conservation is flawed in a scientific as much as a social sense.<sup>19</sup> National park management in much of the Third World is heavily imprinted by the American experience. In particular, it takes over two axioms of wilderness thinking: the monumentalist belief that wilderness has to be 'big, continuous wilderness' and the claim that *all* human intervention is bad for the retention of diversity. These axioms have led to the constitution of huge sanctuaries, each covering thousands of square miles, and a total ban on human ingress in the 'core' areas of national parks. At the same time, little or no

thought has been given to the conservation of diversity outside these strictly protected areas.

These axioms of 'giganticism' and 'hands off nature', though sometimes cloaked in the jargon of science, are simply prejudices. When it is realized that the preservation of *plant* diversity is possibly more important than the preservation of large mammals, a decentralized network with many small parks makes far greater sense. The network of sacred groves in India traditionally fulfilled some of these functions. Yet modern wilderness lovers are in general averse to reviving that system: apart from rationalist objections, they are in principle opposed to local control, instead preferring instead centralized land management. The belief in a total ban on human intervention is equally misguided. Studies show that the highest levels of biological diversity are often found in areas with some (though not excessive) intervention. In opening up new niches to be occupied by insects, plants and birds, partially disturbed ecosystems can have a greater diversity than untouched areas.

**T**he dogma of total protection can also have tragic consequences. In 1982, scientists forbade villagers from exercising traditional grazing rights in the Keoladeo Ghana bird sanctuary in Bharatpur – when villagers protested, police opened fire, killing several of them. When the ban was enforced in following years, the population of key bird species (e.g. waterfowl and the Siberian crane) actually declined. Grazing, by keeping down the tall grass, had helped these species forage for insects. Grazing was thus beneficial to the park, but the pill was too bitter to swallow and in subsequent years scientists have refused to lift the ban.<sup>20</sup>

## V

The present essay is a companion piece to a polemic published some years ago in the U.S. journal *Environmental Ethics*. That essay took apart the then hegemonic ideology among American environmentalists of 'deep ecology'. I argued that deep ecology's master distinction, anthropocentric/biocentric, was of little use in understanding the dynamics of environmental degradation in the real world. I had also shown that deep ecology's claims to be a philosophy of universal significance were spurious, made possible only by twisting the thought of non-western thinkers (Lao Tsu and Gandhi, for example) completely out of context. I had suggested, finally, that the noble, apparently disinterested, motives of deep ecologists fuelled a territorial ambition – the physical control of wilderness in parts of the world other than their own – which led inevitably to the displacement and harsh treatment of the human communities who dwelt in these forests.<sup>21</sup>

**S**urprisingly, the article evoked a variety of responses, both pro and con. The veteran Vermont radical, Murray Bookchin, engaged in a polemic with American deep ecologists, offered a short (three-line) letter of congratulation. A longer (30 page) response came from the Norwegian philosopher Arne Naess, the originator of the term 'deep ecology'. Naess felt bound to assume responsibility for the ideas I had challenged, even though I had distinguished between his emphases (more sympathetic to the poor) and those of his American interpreters and followers. Other correspondents, lesser known but no less engaged, wrote in to praise and to condemn.<sup>22</sup> Over the years, the essay has appeared in some half-a-dozen anthologies, as a voice of the 'Third World', the

token and disloyal opposition to the reigning orthodoxies of environmental ethics.

In the North American context mine was a rare dissenting voice, yet the arguments of my 1989 essay made perfect sense to many of my Indian colleagues – indeed, it could not have been written in the absence of conversations over the years with scientists such as Sukumar and Gadgil. Perhaps it attracted attention because it constituted one of the first attacks on a form of ‘trans-nationalism’ generally considered benign. After all, we are not talking here of the Marines, with their awesome firepower, or even of the World Bank, with its money power and the ability to manipulate developing country governments. These are men (and more rarely, women) who come preaching the equality of all species, who worship all that is good and beautiful in nature. What could be wrong with them?

**S**even years later, I see no reason to revise my characterization of deep ecology as ‘conservation imperialism’. The specious nonsense about equal rights of all species cannot hide the plain fact that green missionaries are possibly more dangerous, and certainly more hypocritical, than their economic or religious counterparts. The globalizing advertiser and banker works for a world in which everyone, regardless of class or colour, is in an economic sense an American – driving a car, drinking Pepsi, owning a fridge and a washing machine. The missionary, having discovered Christ, wants all pagans to share in the discovery. The conservationist wants to ‘protect the tiger (or whale) for posterity’, yet expects other people to make the sacrifice.

Moreover, the processes unleashed by green imperialism are well nigh irreversible. For the consumer

tillated into eating Kentucky Fried Chicken can always say, ‘once is enough’. The Hindu converted into Baptism can decide later on to revert to his original faith. But the tribal people, thrown out of their homes by the propaganda of the conservationist, are condemned to the life of an ecological refugee, a fate for many forest people which is next only to death. For the Chenchu hunter-gatherers who have been ‘asked’ to make way for a tiger reserve in the Indian state of Andhra Pradesh, the problem is that ‘they have to pay for the protection of tigers while no one pays for the conservation of their communities.’ As one Chenchu told a visitor from the state capital, ‘If you love tigers so much, why don’t you shift all of them to Hyderabad and declare that city a tiger reserve?’<sup>23</sup>

17. ‘Culling’ is contrary to the ideology of ‘deep ecology’ that provides philosophical cover to authoritarian biologists and conservationists. Another unfortunate case concerns the crocodiles raised on the Madras snake farm by Romulus Whitaker and his colleagues. They have successfully raised thousands of crocodiles in captivity – and now await permission

from the Government of India to harvest a species that they have convincingly demonstrated is no longer 'endangered'. Permission has not been forthcoming, despite the fact that it will generate substantial amounts of foreign exchange to the state (from the sale of leather bags and the like) and provide employment and income to the Irula tribals with whom the Snake Park works.

18. For thoughtful suggestions as to how the interests of wild species and the interests of poor humans might be made more compatible, see M. Gadgil and P.R.S. Rao, 'A System of Positive Incentives to Conserve Biodiversity', *Economic and Political Weekly*, 6 August 1994.

Making the same point, albeit in more gentle language, are villagers in the Indonesian island of Timpaus. As reported by Harald Beyer Broch, 'Some islanders have heard that foreign organizations work for protection of crocodiles, and that they, succeed to the point that it is difficult to sell crocodiles in Indonesia today. Many of the present villagers said they would like these protectionists to live in villages where crocodiles are a threat, as they were in Timpaus some twenty years ago. That experience would probably have made them change their opinion. It might be easier to want to protect animals that you never encounter, than those that may eat you next day'. # Sacred groves for the 21st century

K. ULLAS KARANTH

INDIA has now seriously grappled with contentious problems of conserving its wildlife for over a half century, with a marked intensification of the effort in the second half of this period. This effort has been made against a backdrop of a massive population increase, rise in democratic aspirations and burgeoning consumer needs and greed, all of which fuelled a rapidly developing economy. Yet, against all odds, India has managed to hang on to, however precariously, several intact faunal assemblages of highly extinction-prone large vertebrates within the confines of its protected areas that cover only 4% of its landmass.

Compared to the virtual elimination or large scale range restrictions of large vertebrate faunas of North America, Europe and China, which accompanied comparable periods of demographic and economic growth, this is not a small achievement. This half-century of rich empirical experience in conserving wildlife in India is strewn with both successes and failures. India's success in holding on to species such as the rhino, elephant and tiger is quite spectacular when compared to the record of other Asian countries (with the possible exception of Nepal), which have undergone similar social transitions. However, major failures have also marred this conservation effort. The inability to manage wildlife scientifically, and limited by an official mind-set too rigid

to deal with issues affecting local people, are two glaring examples.

We have to analyze the problem of 'wildlife conservation' against the above background of empirical experience and ecological evidence. I would argue that, for this debate to progress beyond the usual sterile polemics of 'wildlife versus people', the terms 'wildlife' and 'conservation' have to be defined a little more rigorously. I approach this task by eliminating some of the definitions which muddy rather than clarify the essence of the problem.

**A** recent study (Madhusudan and Karanth, unpublished) in the Kudremukh National Park area showed widespread local hunting and collection of forest products, as causing severe depression of densities of large mammals and in the quality of their habitats. However, another study that focused on general biodiversity at the same site (but was thereby forced to use less rigorous methods, in our opinion) suggested that biodiversity levels were quite high and holding out well. Both studies concurred that logging in the past had made the forest structure less 'pristine'. However, because the second study did not attempt to collect any quantitative data on large mammal species more vulnerable to human disturbance, it failed to identify their serious population declines or their causal factors.

I believe the central debate here should not be about saving overall biodiversity, which includes all living creatures ranging from soil organisms to cultivated plants, and is measured by scientists through parameters such as species richness or diversity indices. Most forms of biodiversity (e.g. soil bacteria, fungi, crops, crows, rats, jackals) can survive on intensively human dominated landscapes such as cities, towns and farmlands. Several other forms of biodiversity may need

more natural landscapes to survive, but can still withstand intensive disturbances or even extractive practices (several forest trees, birds, reptiles, smaller mammals, wild pigs).

I exclude such organisms from the scope of this essay because, obviously, there are no major contentious issues about adversities imposed by human society when we deal with their conservation. In fact, most such biodiversity is likely to survive without any effort on our part or even because of our single-minded pursuit of better lifestyles and profits (gene banks, cloning, genetic engineering and so on). Therefore, I will focus here only on the conservation of a subset of this broader biodiversity, which can be termed 'wildlife'. Thus defined, 'wildlife conservation' becomes largely (but not exclusively) an issue of preserving viable populations, communities and landscapes of free ranging, extinction-prone, larger vertebrates (e.g., rhino, tiger, elephant, liontailed monkey, great hornbill, great Indian bustard).

**T**he term conservation as traditionally defined includes activities such as preservation (as in protected areas), sustainable harvesting (as in fisheries), and control or regulation of organisms harmful to human interests (as in the case of man-eating tigers or crop-raiding elephants). I broadly follow this definition, but with a thrust on discussing issues related to wildlife preservation. The term wildlife conservation here does not include concepts such as animal rights and *ahimsa*, which are moral and social issues beyond the scope of this essay.

Having defined wildlife conservation specifically in these terms, I will readily concede a point around which there is a surfeit of polemics in India. Many forms of biodiversity can and do coexist with human exploita-

tion of their habitats. Some forms may even be capable of surviving higher pressures of the future. These forms of biodiversity do not need inviolate sacred groves (of whatever size) to survive in. Further, I specifically discuss wildlife preservation in the Indian context of rising human and livestock population densities. I do so against a backdrop of increasing aspirations for material consumption levels among all social strata (including rural poor and tribals), and the burgeoning commercial markets for an increasing array of products from wildlife and wildlife habitats, in a growth-friendly economic climate.

**W**hat are the inherent characteristics of wildlife species or communities which render them vulnerable to extinctions? Several biological traits, which we simply cannot alter through progressive legislation or dedicated social activism, are clearly recognizable. Body size and diet are two such traits. Large body size is linked to greater dietary needs and hence to large home ranges and landscape level movements, even for herbivorous species such as elephants, whose food may be relatively abundant. As elephants move across large landscapes, they are attracted to raid agricultural crops, even when natural forage is abundant. Where natural forage is depleted by livestock grazing, bamboo extraction or annual man-induced forest fires, the problem of the elephant's conflict with agriculture becomes even more acute.

A carnivorous diet further accentuates this need for wide ranging behaviour among large vertebrates. To survive and reproduce, a single tiger may need a prey base of about 400 deer sized animals. A home range supporting such a prey base may extend over 15 to 500 square kilometers, depending on prey density. A

tigress raising cubs has to kill 60-70 prey animals in a year. Even if there is wild prey, she will kill cattle if she can. Where the wild prey base is depleted, she will prey exclusively on cattle, and occasionally humans.

**S**uch landscape creatures, therefore, live at relatively low densities. Social spacing behaviours such as territoriality, dispersal and seasonal migrations further accentuate their need for landscape level movements. For ensuring the survival of reproducing and viable populations (even using the more easily attained demographic criteria rather than the more demanding genetic criteria) of such species, relatively extensive landscapes are needed. Demographic models of tiger populations (Karanth and Stith, in press) show that a demographically viable, but small population of 24 breeding tigresses, would need a protected area of 400-4000 square kilometers, depending on prey density. Therefore, traditional conservation areas such as sacred groves are not big enough to hold tiger populations, nor can temple ponds sustain sea turtle populations. If these creatures are to survive the 21st century we need larger 'sacred groves'.

When such necessary large landscape matrices are embedded with attractive sources of food and water, such as agricultural crops or livestock populations, severe conflict between wildlife and humans becomes inevitable. In India, the extirpation of the cheetah and the near extirpation of the wolf, the restricted distribution of breeding populations of tiger and lions to less than 0.5% of their former distributional range, show clearly that their coexistence with humans has cost them dearly. Elimination of the elephant from extensive forested areas which are honey-combed with agricultural

enclaves, such as in Uttara Kannada district with 80% forest cover, shows that, ultimately, when human-wildlife conflict becomes inevitable, human interests will clearly prevail.

Not all such extinction-prone species are large, wide-ranging or carnivorous. Many occupy narrowly defined ecological niches. The lion tailed macaques and great hornbills of the Western Ghats have critical needs for food obtained from rainforest trees or lianas, and they shelter in old-growth tall timber. If their habitats are to be exploited intensively for timber or forest products such as fruits, nuts, roots, bark, resins, climbers or canes, they cannot survive in these habitats anymore. Such niche specialist wildlife species cannot shift their ranges elsewhere to make room for the needs of industries such as tanning, dyeing, *agarbatti*, food processing, timber or dairying which are dismantling components of their habitats, piecemeal, to cater to expanding local, regional, and global markets. While exploitation of timber is at least recognized by conservationists as a factor generally inimical to wildlife conservation, the equally severe pressures resulting from livestock grazing and from the extraction of other forest products for meeting the needs of an urban industrial market, are barely recognized as threats by most conservationists or social activists.

**T**he fact that India's rural poor or tribals are commonly hired as cheap labour to exploit forest products which end up in distant markets, is often mistaken for an ecologically sensible, traditionally wise, harmonious coexistence of wildlife and local communities. The argument that the collection of *tendu* leaves to feed the *beedi* industry of Mangalore or *sal* seeds for making hydrogenated fats in Mumbai, or cinnamon bark for the export-led growth of

*agarbatti* industry in Mysore, are all 'traditional' practices of wise use, simply ignores any critical ecological or historical analysis.

There is no doubt that the issue of cash income needs, which drive rural poor in India to such wage labour, must be addressed squarely on its own. This is best done without confounding the wildlife conservation issues with the livelihood rights issues. An overdose of market friendly humanism of this sort is not a substitute for site-specific ecological analysis of the real impact of such human induced, market-driven disturbances on wildlife communities.

**T**here is no evidence, *prima facie*, that the ecology of many endangered wildlife species, communities and habitats have evolved an evolutionarily adaptive relationship to such market-driven pressures. While it is true that some levels of disturbance regimes exist in nature, and sometimes human activities have formed a part of such disturbance regimes, there is no data to argue that all human induced disturbance, at all intensities, regardless of origins, is beneficial to wildlife.

Increasingly, many wildlife species themselves have become targets for direct exploitation for meat and body parts. The hunting of animals also occurs to eliminate crop raiding, cattle killing or man-killing. Hunting often results from a need for luxury consumption or supply to the local market. Very rarely is it for true subsistence in India, as it is, for example, in the case of rainforest pygmies of central Africa. There exists massive evidence that most of the hunting in tropical forests all over the world is unsustainable (Kramer et al. 1997; Robinson and Bennett, in press).

Even under potentially favourable factors such as low human population densities and extensive wilderness areas in Central Africa,

hunting by pygmies seems to be turning unsustainable. The combination of traditional fieldcraft with modern hunting accessories (guns, explosives, torch lights) or even simple technological advances in metallurgy (such as use of wire cables for snares or use of steel and springs for traps), impose pressures on many species which evolution has not equipped them to cope with. When external markets are linked to such situations, wildlife declines become precipitous.

**I**n India there is not a single site where it can be shown that unregulated hunting does not lead to virtual extirpation of wildlife. This point is particularly well illustrated by the state of wildlife in the Northeast Indian hill states and elsewhere in Southeast Asia. In both these places wildlife has been extirpated over extensive areas of community owned forests, despite there being in place strong traditional structures of authority and resource management. In Northeastern India, a short list of widely distributed species driven to extinction by hunting entirely or over most of their ranges during the last two centuries includes: Javan, Sumatran and Indian rhinos, barasingha and brow-antlered deer, takin, wild-water buffalo, Malay sun-bear and the Gangetic dolphin. Not surprisingly, all these are large bodied vertebrates.

Apparently, the altered human demographics, improved technologies and increasing market penetration have made traditional hunting of these species unsustainable. Therefore, at this point in time 'sustainable' hunting in itself, whether regulated by a local or distant authority, does not seem to offer much scope for wildlife conservation in India. When biologists argue in favour of such incentive driven hunting practices to encourage local communities to conserve wild-

life, based on the African or American experiences, they seem to ignore Indian realities – just as social scientists tend to, when they advocate unhindered forest product collection by locals.

Therefore, in the face of substantial evidence to the contrary, one must be cautious while extrapolating the relevance of examples of coexistence of humans and wildlife from other ecologically and socially dissimilar contexts to India. We simply cannot extrapolate from examples of the low-density populations in the Amazon rainforest living off wild meat to rainforests of the Western Ghats. We know that hunting in rainforests of Asia has virtually extirpated large mammals because of higher human population densities, better technologies and greater market connectivity.

**W**e cannot assume, because the Masai herders in Africa coexist with large carnivores in landscapes over several thousand square kilometers, such coexistence is a feasible option inside wildlife reserves of a few hundred square kilometer area. We cannot ignore the fact that Maasai reduce livestock losses to predators to tolerable levels by hunting to depress densities of lions and hyenas. While the poor quality land on which Maasai graze their cattle has few other uses in their context, the forests of India can have many profitable uses than preserving either wildlife or rural grazers. We also need to note that in the African context such multiple use areas *exist outside of, and in addition to* large and strictly protected preserves with which they often have source-sink relationships.

The Maldhari herders of Gir are sometimes presumed to coexist harmoniously with lions, because they traditionally tolerated some livestock

losses to lions. Yet, with the relocation of Maldhari herders from parts of Gir, the abundance of wild ungulates and their contribution to lion diet, both increased. The simple predator-prey system comprising of lions and domestic buffaloes turned into, arguably, a more 'natural' multiple prey-predator system. I would argue that the latter should be the goal of wildlife conservation, in a social and biological context where intact lion-ungulate communities occupy probably less than 0.1% of their former distributional range. If the conservation goal were to merely have lions living off domestic water buffalo (a species as exotic to Gir as Eucalyptus trees), one could conceivably argue in favour of raising captive lions on buffalo meat at a fraction of the social cost of trying to preserve remnant pieces of the Girecosystem.

There is no doubt that conservation decisions result from a partly political process driven by social pressures. My point here is that this process should also incorporate substantial knowledge about biological needs of wildlife, and not merely about the human needs and aspirations. With the early biocentric preservationism having yielded ground to the user-friendly and market friendly conservation paradigm of 'sustainable use' over the last two decades, starting with the platitudinous World Conservation Strategy, we need to re-survey the ground we have covered.

**T**o flip the other side of an argument tossed up a few years ago, we now need conservation not only as if people mattered but also as if large animals mattered. To describe such arguments in favour of incorporating of specific biological knowledge into the formulation of wildlife conservation policies, merely as manifestations of whimsical 'authoritarianism' on the part of socially insensitive wildlife

scientists seems rather naïve. A social scientist would be horrified if a biologist were to state that because Bishnois of Rajasthan do not eat antelopes, the Inuit of the Arctic or the Dayaks of Sarawak could also live as vegetarians. Unfortunately, it is precisely such dataless, free-wheeling extrapolation which appears to underlie most articulations about the feasibility of peaceful, perpetual – and allegedly traditional – coexistence between human societies and extinction-prone wildlife species.

Given that biological knowledge is necessary for practicing wildlife conservation, a related issue is the distinction often made between the local community's wildlife knowledge versus external, 'authoritarian' scientific knowledge. While the former is supposed to envision multiple, holistic pathways to wise use and coexistence with wildlife, the latter type of knowledge is presumed to be linear and inflexibly driven by scientific arrogance. I believe this presumed dichotomy is often in the minds of the inexperienced or untrained observers who pronounce such judgments, rather than based on any reality.

It is common experience to many of us biologists who have put some time in the field that interpretation of a field observation made by a good wildlife scientist and a native expert usually converge. The problem of dichotomous perception on what causes a phenomenon observed in the field usually emerges when the knowledge of the arrogant 'outsider' is solely derived from books and/or when assertion of the wise 'native' is driven by an externally tutored response to justify a current resource use practice. How many people know that the famous speech of the Red Indian Chief, which extols the traditional harmony between Amerindians and

mother earth, was actually drafted by a Seattle lawyer? Time and again, over the last two decades, when I tested my perception of the causes underlying negative factors affecting wildlife in field situations against those of an experienced but uninvolved local villager or tribesman, we usually agreed.

During a recently concluded study around Nagarahole (Madhusudan and Karanth in Robinson and Bennet, in press) our line transect survey data showed substantial differences in densities of large ungulates between two sites. One site was rigidly protected from local hunters while the other was less well protected. Our perception that this difference was largely due to greater access and less rigid enforcement of anti-hunting measures in the second site, was soon confirmed by a questionnaire survey of several local informants including neutral villagers and even illegal hunters themselves. When questioned in a non-ideological context, unrelated to their immediate needs, both neutral observers and the poachers themselves agreed that local hunting was the most important cause of depressed animal densities. Yet most of the literature pertaining to the issue of wildlife conservation generated by social activists in India, fails to point out this widely prevalent ground reality.

While rigorous scientific studies may be needed to 'prove' such hypotheses in a peer-reviewed ecological journal, the driving forces behind wildlife declines over most parts of India are usually apparent to any knowledgeable, experienced observer. To perceive basic reasons for such declines, all that the observer has to do is, at least for a moment, deconstruct intellectual predilections such as 'local communities do not damage their environments' or 'Indian foresters scientifically harvest timber.'

Let us agree for a moment that it is socially desirable to save a small subset of biodiversity, which I have defined as wildlife earlier. Let us be aware that this goal is achievable for a few wildlife species through establishment of gene-banks or zoos, with practically no attendant costs in terms of social conflicts which we are facing now. In fact, wildlife authorities in many Southeast Asian countries, in practice, basically focus their entire energies on such *ex-situ* measures, helping species like the Sumatran rhino to head towards extinction. The power of the international captive-breeding lobby among Third World wildlife managers stems from its magical ability to project glitzy technowizardry of *ex-situ* solutions as a substitute for the messy and hated job of on-ground protective tasks.

However, let us say we really want to save wildlife species *in situ*, with all ecological relationships and processes which sustain their populations, biological communities and landscapes which harbour them. If we so decide, there is no escape from having protected areas which are relatively free from commercial market pressures, and excessive human induced disturbance. The future challenge lies in setting up regulatory mechanisms, which can realistically work to reduce pressures and disturbances.

I am not talking here of fine-tuned wildlife management measures, such as deliberate setting-back of forest succession, use of fire to promote grazing by ungulates or establishing connectivity through new corridors. I am talking of the more basic need to regulate removal of plant biomass and hunting which often leads to conflicts between managing authorities and local communities. If we are to have relatively inviolate wildlife protected areas in the future, with acceptable

levels of social conflict around them (assuming, for the moment, that conflict-free society is still a distant dream), the following components may become necessary ingredients of any wildlife conservation policy.

**A**t present the designated protected areas which are relatively intact and have *de facto* protection probably comprise less than 1% of India's area. (I would exclude major national parks such as Namdapha, Nagarjuna Sagar and Manas from my category of *de facto* protected areas). Clearly, this minute fraction has to be maintained and, if possible, increased. Where and how this should be done – and can be done – are issues open to debate. But the process has to be based on site-specific data. It is clear that wherever such protected areas survive, they will be accessible to an equally small fraction of the local communities of India. Most local communities (urban, semi-urban and rural) in India, who even now manage to survive without such proximity to protected areas, will continue to do so in the future.

Although ideally the state and its regulatory arms should ultimately wither away and all their social policing functions replaced by incentive-driven or voluntary changes in human behaviour, at this point in our history, the use of force to protect wildlife has to be acknowledged as a fundamental need. How best to minimize this need and how best we can combine it with the practice of participatory democracy and upholding of human rights, are still evolving issues.

Even in the few successful examples of extractive joint forest management such as those of West Bengal, there exists a local authority which punishes those who break the law. In extreme situations such as that of Kaziranga, which is a 500 square kilometer natural enclave

under immense threat from hardcore rhino poachers, a protective force of 200 men patrolling round the clock is needed. Whether such protective forces work better under a localized authority or under the government's control is an issue which needs to be explored in a site-specific context.

We also need to recognize the fact that if only local needs of biomass not driven by market forces are considered, management of outside landscapes to cater to just these needs can occur under state sponsorship (social forestry) or NGO sponsored technocratic interventions (Ranthambhore Foundation in India, WWF-USA in Nepal). On a larger scale, such landscape management which is complementary to wildlife conservation goals, can occur only under the force of economics. On the eastern boundaries of Nagarhole National Park, annual crops are grown. There is heavy pressure on the forests to graze livestock which produce draft power and dung, as well as for collecting firewood, small timber and bamboo for local use and sale in markets. Regulatory measures here come into conflict with a relatively large fraction of the local population engaged in wood cutting and grazing. Regulation turns into a 'law and order' problem, a common scene around many protected areas of India.

**O**n the western boundaries of Nagarhole, where the land is under coffee cultivation, the reduced dependence on livestock, production of woody biomass in the plantations and almost guaranteed conditions of full employment at relatively high wages have combined to virtually eliminate such biomass pressures on forests. The regulatory application of force in this case becomes easier, and locally acceptable, because it is specifically targeted only at a small fraction of the

local population involved in illegal hunting or smuggling of valuable timber or non-timber forest products. This is somewhat similar to the situation which prevails around Kaziranga where most genuine local needs of substance biomass and employment are met from productive agriculture and tea plantations. The protective force therefore concentrates almost exclusively on dealing with illegal hunters.

**C**onservation options are, in the final analysis, political options. Scientific, moral, aesthetic and pragmatic arguments have been advanced to show that sacrificing the remaining 3% or so area under wildlife reserves is unlikely to make any dent on human problems, which we have been unable to solve by using and abusing the remaining 97% of the land area. Do we just assume that political representatives of local communities do not understand this? Conservationists need to use all their persuasive powers and arguments to convince them. These are powerful arguments ranging all the way from traditional tolerance of rights of other creatures to the 21st century needs of biotechnology for human welfare. Coupled with proper economic incentives and deployment of an adequate deterrent force, sometimes we may even succeed.

Endangered wildlife species and their habitats are coming under increasing pressure from a variety of social forces: consumer, urban and industrial interests who benefit from 'mining' the wildlife habitats for minerals, water, power, forest products, and even recreational use; Local communities whose hunger for the land, employment and forest products keeps increasing; An articulate, humanitarian, urban middle-class constantly fuelling its own numerical growth in both the government and

NGO sectors. The path of least resistance against all these pressures has converged on wildlife protected areas in the form of a conservation model which advocates market-driven resource exploitation linked to increased local people's access into wildlife protected areas. This model is envisaged to work under the oversight of a massive developmental bureaucracy which administers the protected areas and surrounding landscapes, without any use of force.

Somehow we seem to hope that natural animal communities and their intricate interactions have the evolutionary adaptations and resilience to survive this onslaught of market-driven humanism. I believe there is neither empirical evidence nor ecological data justifying the acceptance of this user-friendly model of wildlife conservation. Clearly the paradigm of sustainable use everywhere has outlived its practical utility, as did the earlier one of state controlled authoritarian preservationism. I believe that the alternative concept of 'sustainable landscapes' advocated by Robinson (1993), in combination with the ideas of the emerging discipline of ecological economics, may provide useful tools for protecting the sacred groves in which our wildlife has to survive into the 21st century.

## One size does not fit all

RENEE M. BORGES

ULTIMATELY it all distills down to size – size of population, body size, size of breeding territory, size of herd, size of forest, size of water body, size of data. ... And of course, size is inextricably linked with shapes – shapes of population distributions, shapes of breeding territories – are they regularly and densely packed or are they amoeboid because of the shape of the food resource distribution or of areas for sexual display, shapes of data – are there lots of good data sets and a few poor or are there equal numbers of good and poor data sets – are the data only available for one size class, let's say, the large forests and none for the other? All sizes have shapes – actual physical shapes, or shapes formed by the pattern of distribution of the data.

In this article, I make a plea for a greater emphasis on the actual physical sizes and shapes of protected areas because this holds the key to sound management practices. A management practice for one size does not fit all. I develop this argument and its relevance to the people versus protected area debate against the backdrop of the Bhimashankar Wildlife Sanctuary in Maharashtra.

Let us meander into this sanctuary by way of the Bhima which originates at Bhimashankar. The Bhima joins the Krishna, so in a sense the Krishna originates at Bhimashankar. The Ghod also originates here within a tiny sacred grove of the village Ahupe at the northern end of the sanctuary and subsequently also joins the Bhima. The *Jyotirlingam* temple near the Bhima's origin is a major site of Shiva worship. Abutting the temple is what used to be a sacred grove, a remnant patch of evergreen seasonal cloud forest at the crest of the Western Ghats, less than 100 ha in size and connected to some forest remnants, each only 1-10 sq km in extent. Within the sanctuary, which is only 130 sq km, less than half of this is 'forest' which in these small fragments is interspersed with slash-and-burn agriculture, hill paddy fields, steep bare rock surfaces and grassy expanses strewn with boulders.

**P**art of the sanctuary drops down over the crest into west-facing teak forests. I will not deal with this part except to say that these forests serve as a refuge for crest birds and other species during the fog-bound monsoon at the crest. A small protected area with still smaller forest patches in a highly fragmented landscape. Think small. Do not think of expanses of grassy meadows or forests in Kanha National Park or the conglomerate of Bandipur, Mudumalai, Nagarhole and Wynaad. Think small; very, very small. Think of nine villages within this landscape, a total population of about 3000 people and 5000 free grazing livestock when counted in 1992.<sup>1,2</sup> Now think of shape—shape of the sanctuary which has a longer north-south axis than an east-west axis, in an area where the rivers run from west to east.

Home in onto any of the forest patches—often there is an abrupt tran-

sition as if a tree surgeon or tree barber had shaped this landscape—grass/rock/paddy fields/slash and burn on one side and forest on the other. Home in onto the rivers—there is riverine forest for only a short distance (5-10 km) from their origin, then the river banks are devoid of vegetation.

**L**et's now go to the Bhimashankar temple which receives more than 3,00,000 pilgrims annually,<sup>1</sup> many of these in the Hindu month of *Shravan*, and one huge pulse during *Mahashivratri* after which the water sources near the temple are ruined until the rains come. Bhimashankar is also a tourist attraction and about 2500 resident tourists (those staying for at least one night) were recorded in 1991.<sup>1</sup> These numbers may have increased considerably since then, especially as the other so-called hill resorts like Lonavala and Khandala nearby have virtually become over-developed weekend suburbs of Mumbai.

The so-called sacred grove adjacent to the temple harbours the first courses of the Bhima and is the finest and most diverse forest patch at Bhimashankar. It is primarily here that we have studied the giant squirrel and the plants it is specifically associated with, besides other species. The squirrel population in this grove has declined by 30% between 1985 and 1995.<sup>3</sup> This would put the local population into IUCN's vulnerable category—a population with a high risk of extinction in the medium-term. Since giant squirrels are canopy specialists, herbivorous, and as they are not hunted in this forest patch (evidenced by their lack of shyness), it is reasonably certain that this decline is a consequence of diminishing resources. This view is further supported by the fact that the home range size of individual squirrels has doubled in the 10 year period.<sup>3</sup>

I mentioned that the once sacred grove is sacred no more. Firewood is regularly collected from this grove—especially by people of a village called Bhorgiri, about 8 km away. It is then sold to commercial eating and lodging houses that have mushroomed near the temple because of the pilgrim and tourist trade. Admittedly this pressure is less in recent years because of a kerosene depot in the village and official insistence on the commercial use of this fuel. Firewood from here and surrounding forests is also stocked up for the monsoon by people of the Bhimashankar village attached to the temple.

**B**esides firewood, timber is also extracted for varied consumption. Another extracted commodity consists of the treelets of *Diospyros sylvatica* and *Garcinia talbotii*. This is for the construction of temporary stalls selling temple offerings and small trinkets to visitors and is mostly done by the younger generation of tribals, 15-25 year-olds who have finished school (usually not more than the 9th grade) and for whom this is a way of obtaining cash. These trees are especially targeted because they have straight poles even at the sapling stage. Their extraction is a concern because these are dioecious species in which males and females are separate, the recorded sex ratios in this population are heavily skewed towards the males and these species are also important in the giant squirrel diet.<sup>3</sup>

There is another problem with this grove. Since the Bhimashankar grove is the prime forest patch, giant squirrels from other areas where the fragments are getting smaller, attempt to enter it. This has caused serious crowding of squirrels at the edge of the patch and has led to an increase in aggression and to a breakdown of territoriality in the edge areas.

The Bhimashankar sacred grove also contains many endangered species of trees endemic to the Western Ghats like the *Diospyros* and *Garcinia* mentioned earlier. Some of these are represented by only a few adult individuals within the patch and are likely to remain as relics till their life span is over. When we looked at a few plant-pollinator mutualisms we found one tree *Heterophragma quadriloculare* (locally called *varas*) to be obligately pollinated at night by a species of carpenter bee.<sup>3</sup> Carpenter bees nest in dry wood; therefore dry wood, especially that containing carpenter bee nests, needs protection – particularly in a low productivity cloud forest site.<sup>4</sup>

**A**nother shrub *Lasiophan eriocephalus* (locally called *rameta*) was found to be obligately pollinated by a small species of beetle. Although this plant is self-compatible, the beetles are needed for pollen transfer within flowers. Moreover, we found that plants in clumps produced more fruit than isolated plants. The beetles are attracted in larger numbers to clumped resources. The pattern strikes again! In another dioecious *Diospyros* species, we found that males in one population did not flower at all one year, while males in other populations several fragments away were in bloom. Consequently, females did not set fruit in our study population that year. Had there been an intervening male population, the pollinators which are generalist insects, could have transferred pollen to our females. Here again, isolation and the small population size made a significant difference to plant fecundity.<sup>3</sup>

Forest resource management practices usually take the total tree resource stock into account. Our studies have shown that even in the most common tree species, wild mango and *Memecylon umbellatum* (locally

called *karap*), there is variation between individuals in resource quality, that is in the chemical composition of the bark, leaves or fruit. Only a few individual trees of these dominant species are used by giant squirrels for feeding; squirrels even cross territorial boundaries to feed on these preferred trees.<sup>3</sup> In management terms it means that the small resource base is actually even smaller.

**T**he traditional local inhabitants are mainly Hindu Madhao Kolis. They have a subsistence economy which until recently was still solely based on barter. Most families are below the poverty level.<sup>1</sup> They grow rice, finger millet and oil seeds. The major non-timber forest products are the fruit of *Terminalia chebula* (locally called *hirda*) which is sold to the tanning industry, the pods of *Aca-cia concinna* (locally called *shikakai*), and honey.

Currently, there is a crisis of traditional values at Bhimashankar – just as there is all over the world. A restless younger generation, brought up on the dubious fare available on pirated videocassettes and Doordarshan (there is at least one television set in each village, and the videocassette player is shared between villages), and which is exposed to urban prototypes in the form of pilgrims and tourists, shows little inclination for the older traditions. Most families have at least one member working outside the area, usually in a factory or doing manual labour in Pune or Mumbai. A part of the earnings trickle back to Bhimashankar. Still others work as road labour for the PWD or as casual labour with the Forest Department. The villagers in and around the Bhimashankar temple derive most of their income from temple-related activities. It is therefore not a completely insular economy.

The temple has attracted migrants who have settled in Bhimashankar. They could be classified as opportunistic resource consumers who have not evolved with the system. Similarly there is a powerful tomato and grape lobby which functions in the eastern plains, 60 km from Bhimashankar, but still draws upon the resources from Bhimashankar, often illegally. These resources, in the form of stakes which are needed for growing tomato and grape plants, and the stems of *Carvia callosa* (locally called *karvi*), a semelparous plant which flowers once in seven years and then dies like the bamboo, are its target. Some villagers augment their cash flow by teaming up with this lobby. The role of *Carvia* in this ecosystem has not been specifically studied, but it acts as a soil binder and grows even on the most rocky and steep slopes. After several years of runaway resource extraction leading to resource depletion, a species related to *karvi* is now the new target. The attractiveness of short term gains is undeniable. That is how timber contractors persuaded the villagers of Ahupe to sell their sacred grove. Fortunately a local NGO intervened, and the grove still exists.

**C**urrently, there is furious debate on the participation of people in forest management, especially about their role in protected areas. Can the lessons from Bhimashankar contribute to this debate and how? I think that this issue is particularly germane to Bhimashankar, especially given its small size. Models of resource utilisation have demonstrated that if a certain portion of the resource is kept inviolate and unextracted within a refugium, it would ensure continued viability of resource extraction from nearby extracted areas as restocking from the refugium could occur.<sup>5</sup> As a matter of fact, spatial refugia in which

resources within certain spatial boundaries are protected were found to be more effective than temporal refugia in which resources are only protected during certain times, e.g. closed hunting seasons.<sup>5</sup> The refugium concept is even more valid for a small resource catchment area like Bhimashankar.

**T**raditional extraction practices that have continued in a sustained manner over several generations have been witnessed in several societies, especially those existing in small, territorial groups in stable, productive environments. In such cases, it is widely believed that the extraction levels were arrived at via trial and error over long time periods.<sup>6</sup> At the same time, many examples of failed, not so judicious extractions and environmentally destructive practices have been recorded even within such closed societies.<sup>6</sup> It is believed that an optimal harvesting strategy could be derived only if the consumers held the harvesting effort steady for several years and then compared it to harvest with effort at the end of one or more earlier periods of constant harvesting effort.<sup>5</sup>

However, this is virtually impossible to do in the real world, and people often do not have complete information about the relationship between harvest and effort. They use simple thumb rules which may or may not succeed in providing a sustainable harvest and may even result in the decimation of the resource.<sup>5</sup>

Analysing prudence versus profligacy, Berkes<sup>7</sup> and Gadgil<sup>8</sup> have concluded that prudent use of resources is possible only by so-called ecosystem people who are closely dependent on the resources immediately being produced within their surroundings within a definable catchment from which they can obtain feedback about resource status by trial and

error harvesting regimes. On the other hand, biosphere people, who can draw resources from areas distant from their habitation, tend to be profligate about resource use as resources exhausted from one area can be replenished from other quite distant areas. This also usually involves cash exchanges. Ecosystem people can derive management regimes for utilising common property or communally-controlled resources and can avert the tragedy of the commons. This, however, applies only to those resources that the ecosystem people have 'evolved' with and whose resource regeneration patterns, relative to certain normal levels of exploitation, they understand.

**A** classic example of the tragedy of the commons from Bhimashankar is the exploitation of moss from the tree trunks of the seasonal cloud forest. Moss was a resource that the ecosystem people had earlier never exploited commercially. They would use moss, along with a fern species, only to thatch their dwellings once a year prior to the monsoon: a low level of exploitation that did not need controls. In the 1980s, even prior to the declaration of the sanctuary, when horticultural concerns in Rahuri, about 200 km away, offered handsome prices for moss from Bhimashankar, many tribals competed with each other to exploit this open-access resource and in a couple of years the moss was exhausted.<sup>1</sup>

A Forest Department ban was effected as soon as this was reported but it was already too late. Along with the moss went the orchids, the fern and other members of the epiphyte community of the seasonal cloud forests of Bhimashankar. Even after a decade, the moss has not returned. Besides the accompanying species loss, the moss community of cloud forests contributes to drawing moisture from the low

clouds, thus playing an important role in hydrological cycles.<sup>4</sup> The significance of this in the Bhima-Krishna catchment is obvious.

Migrant traders, tourists, pilgrims, and commercial lobbies pose a significant threat to the longevity of the resource base of this ecosystem and its ecosystem people. These are opportunists and will move either to new livelihoods or to other areas once this area has been despoiled (traders, lobbies, tourists), or will bring in the resources with them (traders, organised bus tours for pilgrims). Who cares then if the resources at Bhimashankar are depleted?

The people mosaic at Bhimashankar therefore consists of ecosystem people, biosphere people and people in between these extremes. Its resources are in a leaky system and consequently so much more vulnerable, more challenging, more difficult to manage. A resource management system assuming only ecosystem people would certainly fail.

**W**hat has all of this to do with size, and where do we go from here? Let us take the ecosystem first, exclusive of humans. There are many things we do not know about the system. We do not know the impact of livestock grazing on plant regeneration and fragment growth. We do not know if the species within these fragmented forests are metapopulations – a metapopulation is one in which local populations are connected by individuals that migrate between them, e.g. seeds from one population being dispersed into another. The fragments might constitute a metapopulation for giant squirrels because we have recorded 'floaters' – squirrel strangers that wander into our resident population in the Bhimashankar sacred grove; however we do not know specifically from which patches these

floaters come and whether they contribute genes to our resident squirrels. The fragments may not constitute an interbreeding metapopulation for plants and insects, and this could have serious consequences.

**R**ecent studies have shown effects of inbreeding and extinctions in localised butterfly populations.<sup>9</sup> Another study using butterflies as indices of biodiversity has shown that 20-30 ha forest fragments have very depauperate butterfly faunas relative to that in a 227 ha patch separated by a distance of only 0.5-1 km from the small fragments.<sup>10</sup>

A long term study carried out in Amazonia reports that annual tree mortality and tree damage were nearly eight times higher at the edges of fragments rather than in the interior due to microclimatic changes and wind-turbulence at the edges.<sup>11</sup> Moreover, by using realistic fragment shapes in a model, it was found that a fragment of 1000 ha has 22-42% of its total area influenced by edge effects whereas a fragment of 500 ha would have 30-58% of its area influenced by edge, and that the edge effect for trees penetrated to a distance of 100 m from the fragment boundary.<sup>11</sup> The penetrance of the edge effect for grasshoppers was found to be 30 m in another study in South Africa.<sup>12</sup>

The behaviour of frugivorous birds would also need to be considered, as their movement between fragments would determine the extent of seed dispersal and thereby plant genetic exchange between fragments. The movement of fruit-eating birds between forest and pasture was found to be restricted to a distance of 1-80 m from the border of the forest.<sup>13</sup>

Based on data from the Biological Dynamics of Forest Fragments Project in Amazonia, Laurance and Gascon<sup>14</sup> provide many management

recommendations that could ensure maximum ecological connectivity of forest fragments. Obviously all of their recommendations cannot be directly applied to any landscape but the data do speak for themselves. Small fragments are much more vulnerable than larger patches. The Bhimashankar fragments are all in the small size range – one sacred grove is of the order of 0.5 ha! Management strategies for large areas are, therefore, obviously different from the small areas; especially if their shapes are such that they have more relative edge. Lack of ecological connectivity between patches would mean that even in a small sanctuary of 130 sq km like Bhimashankar, the actual internal ecological units are orders of magnitude smaller. Research on the effects of fragment size, shape and connectivity is desperately needed for areas like Bhimashankar.

**C**onservation biologists have now started to talk in terms of pollinator therapy for isolated populations of plants which would involve hand pollinations as well as reintroductions and re-establishment of suitable pollinator populations.<sup>15</sup> At Bhimashankar, we know that if carpenter bee populations were lost, we would lose *Heterophragma*. It is difficult to imagine hand pollinating 30-foot tall trees and that too by bringing in pollen from diverse individuals, as the carpenter bees normally do! It is obvious that plant species that are self incompatible, that do not reproduce by clonal propagation, that do not coppice when cut or damaged, that are dioecious, that are dependent on a single or few pollinators and seed dispersers, are much more vulnerable to local extinctions than others.<sup>16</sup>

Behavioural aberrations or changes also occur in larger animals in fragmented areas when they are

either crowded (recall the aggression in giant squirrels) or when their populations become too small. The idea that a few protected pairs or breeding individuals can restock depleted populations has often been found to be untrue because minimum group sizes are sometimes required for effective breeding or foraging behaviour.<sup>17</sup>

**F**inally, a fundamental issue that has to be addressed is the one of resource substitutability. Many individual species within ecosystems cannot use resources other than those that they have adapted to over generations of evolutionary time. A habitat specialist is a habitat specialist; an obligate seed-disperser or pollinator relationship is just what it is – obligate. There is nothing really to argue with here. However, humans can use resource substitutes if they have to; cultural evolution in humans can occur within single generations. Humans can adopt substitutes for food, clothing, shelter and many other resources even within the same generation.

Am I advocating, therefore, universal and forcible acculturation of all tribal societies? No. But surely there can no longer be any dispute about the fact that the sort of management for survival needed for members of natural ecosystems, other than humans, is more difficult than that required for humans, especially if the humans involved are already changing from being true ecosystem people? High priority conservation areas, sacred groves, safety forests – these are just different names for areas set aside for ecosystem survival and resource renewal. I will concede that in large resource catchment areas, some types of traditional resource harvesting regimes by local people are acceptable if the harvesting patterns are tried and tested relative to the rates of resource renewal. But I am advocating a

refugium position for fragmented forests like those of Bhimashankar because they are small; very, very, small.

Just as the onus on one side, the refugium position, is to show that this is necessary by more specific research of the type outlined in this article, surely the onus on the other side is to show that it is not. And surely if there is a genuine doubt, the precautionary principle should prevail. It is time for conservationists of all inclinations to talk to each other without rancour and to work together pragmatically to find solutions. Moreover, solutions need to be sought on a case-by-case basis, and cannot be applied across the board. For it is clear that management for one size does not indeed fit all.

I conclude with a selection from Pablo Neruda's *Critical Sonata*:

Before, we had to battle  
with weapons of doubtful caliber  
and, wounding ourselves, we forgot  
what we were fighting about.

.....

And so I think that maybe  
at last we could be just  
or at last we could simply be.  
We have this final moment,  
and then forever  
for not being, for not coming back.

(From *Memorial de Isla Negra*,  
1964)

# Massacre of the innocents

ASAD R. RAHMANI

A NEW idiom of wildlife conservation is participatory or joint forest management, which ostensibly means involving local communities in the conservation and sustainable utilization of biodiversity. While the merits and demerits of this approach are dealt with elsewhere, I will briefly describe the participatory approach which we should adopt to save the great Indian bustard and other wildlife of the grasslands.

The great Indian bustard, *Ardeotis nigriceps*, is a large handsome bird of the short grass plains of the Indian subcontinent. Formerly it was widely distributed from Punjab and West Bengal in the North to Tamil Nadu in the South and Sind (in Pakistan) in the West to Orissa in the East.

It always favoured the grassy plains, often highly overgrazed by livestock or wild herbivores, and strictly avoided hilly and forest regions. Consequently, it was absent in the thick forests of Central India as also the Western and Eastern ghats. It was mainly found in the drier Deccan plains with sparse vegetation, Saurashtra peninsula and the Thar desert. A hundred years ago it was fairly common in Sholapur, Ahmednagar, Aurangabad and Beed districts of Maharashtra, Kurnool, Mehboobnagar and Anantapur districts of Andhra Pradesh, almost the whole of Saurashtra (except the Gir forests), parts of Kutch, the Thar desert and some parts of eastern Rajasthan.

In its open, flat or slightly undulating habitat, standing almost a meter

tall and weighing 7 to 10 kilogram, the great Indian bustard is a conspicuous bird. Its main defense against natural predators is its keen eye-sight, strong flight and a tendency to freeze to camouflage itself. Despite its large size, it is not easily noticed when squatting on the ground or standing behind a bush or a clump of grass. Anyway, it does not have to adopt these tactics frequently because there are few natural enemies for an adult bustard. It shares its grassland habitat with the blackbuck, chinkara, nilgai, wolf, fox, jackal and wild-cat. While a wolf could easily kill an adult bustard, the later three are no match. Earlier, the cheetah was a potential predator but it is now extinct in India and even the wolf has become scarce due to persecution by man. The greatest predator now comes on two legs, more often on a four-wheel drive vehicle.

**T**he great Indian bustard was always a quarry or a game bird for hunters but it was not easy to shoot. Three developments which occurred almost simultaneously tilted the balance against the bustard: the advent of the jeep in the mid-1940s after the Second World War, a breakdown of tough wildlife protection laws after India's Independence, and an increase in the number of livestock. Despite its wariness, the great Indian bustard is foolishly unafraid of a vehicle. With criminal hunters realizing the innocence of the great Indian bustard, the massacre started. The bustard disappeared wherever the jeep could reach. At the same time there was a general breakdown in the enforcement of wildlife laws. During the British period, and specially in the numerous princely states dotted all over the country, wildlife laws were strictly observed. Perhaps as a defiance to the colonial and the autocrat's powers,

breaking of wildlife laws by the general public became a norm, resulting in unrestricted killing of helpless wildlife.

**T**he 1950s and 1960s were the worst decades for Indian wildlife. The main sufferers were the denizens of open areas such as the blackbuck, wolf, lesser florican and the great Indian bustard. At the same time, huge areas were colonized for cultivation to feed an increasing human population. The third factor which severely impacted the bustard numbers was overgrazing by livestock. Earlier, almost every village in Saurashtra and Rajasthan had its own grazing areas where some rules were followed to control grazing. These grasslands, called *bheeds* in Saurashtra, *rakhals* in Kutch and *urans* in the Thar, provided grass as well as protected biodiversity. With a breakdown of village control over its lands, there was no one to protect the grasslands, resulting in a free-for-all situation. These *bheeds* and *urans*, so vital to the rural economy, were either overgrazed, given over for cultivation, or planted on by the Forest Department.

The great Indian bustard, belonging to an ancient family of birds, had survived for millions of years but it appears that there is no place for this majestic bird in independent India. Although officially protected since the early 1950s, not a single poacher has ever been persecuted for killing the bustard. On many occasions the Government of India looked the other way when higher-ups were involved. In the early 1960s, enforcement of wildlife laws reached its nadir when the Maharajah of Jaipur offered a dish of bustard meat to the visiting Queen of England. India's distinguished ornithologist, Salim Ali found bustard feathers outside an army mess in Kutch and wrote an angry letter to the

government but no action was taken against the offenders.

The enactment of the Wildlife (Protection) Act of 1972, at the intervention of Indira Gandhi, gave some hope to the beleaguered animals. But the turning point came in 1979 when there was an uproar in the media against hunting of bustards by Arab sheikhs. The Arabs had come to India at the invitation of the External Affairs Ministry (then headed by the present Prime Minister Atal Behari Vajpayee) to hunt the houbara bustard, a migratory species which arrives in large numbers in the Thar desert during the winter. For the Indian press, a bustard meant the great Indian bustard. Regardless, this avoidable hunting episode came as a blessing in disguise for the great Indian bustard because for the first time the government realized that the popular mood was against the destruction of wildlife in the name of 'sport'. The Forest Department, which till now had not looked beyond forests and tigers, was forced to take some steps for protecting the bustard and its co-inhabitants of the grasslands.

**I**n 1980, the Tourism and Wildlife Society of India, which spearheaded the fight against the Arab sheikhs, successfully organized a conference in Jaipur. Its deliberations revealed that the great Indian bustard survived in six states — Rajasthan, Gujarat, Madhya Pradesh, Maharashtra, Andhra Pradesh and Karnataka. It had totally disappeared from Punjab, Haryana, Uttar Pradesh, Bihar, Orissa and Tamil. All the six states where the great Indian bustard survived took conservation measures to protect the remaining populations.

The Government of Rajasthan declared Sonkhaliya near Ajmer a Closed Area to protect the 50-60 bustards and also declared a 3,162 sq. km

Desert National Park in Jaisalmer-Barmer districts. Moreover, a Closed Areas for Shooting was declared near Diyatra in Bikaner district. The bustard was proclaimed as the 'state bird' of Rajasthan. The Madhya Pradesh government created two sanctuaries—Karera in Shivpuri and Ghatigaon in Gwalior—to save the remaining birds, and Maharashtra established a huge area of more than 8,000 sq. km in Sholapur and Ahmednagar districts as a bustard reserve. In 1985, on the recommendations of the Bombay Natural History Society, the Andhra Pradesh Forest Department saved the remaining six square kilometre of dry grassland near Rollapadu village where I had seen the largest known flock of 35 bustards in July 1983.

**D**uring the 1980s, my colleagues and I conducted intensive studies on the great Indian bustard at the Bombay Natural History Society through the funds provided by the U.S. Fish and Wildlife Service. It was found that more than 50% of the great Indian bustard of India were found in the vast waterless grasslands of the Thar desert. These bustards survived because of comparatively lower human disturbance, due mainly to the inaccessibility of the areas, especially for motorized vehicles. Detailed scientific studies were conducted over six years to ascertain its breeding biology and habitat requirement.

As the bustard lives in grasslands and marginal agriculture areas, with a mosaic of grassy patches, cultivated fields and fallow fields, all heavily occupied by humans and their livestock, it is not possible to declare large protected areas, which would exclude human beings. Habitat preference studies revealed that the bustard lives in sparse grassland where the height of vegetation is below its eye level. As soon as a grassland becomes

dense and tall (above one meter), the bustard leaves that patch. This observation had an important bearing on management of bustard grasslands and their sustainable use by humans. The bustard breeds mainly during the monsoon, when grasses should be protected from livestock grazing. After the monsoon (when bustard breeding is over), the grass can be harvested in a scientific manner.

Beside working at a general strategy for bustard and grassland protection, we also made specific recommendations for each bustard habitat. The edaphic and climatic conditions vary from area to area and the same rule of grass harvesting cannot be followed everywhere. But for all the areas we showed that bustard conservation and proper utilization of grassland were not mutually exclusive. Any area developed for fodder production helps the bustard and other wildlife and conversely, grassland plots developed for bustard breeding increase fodder and other biomass, which benefit local communities.

**W**e also recommended that about 10 per cent of a bustard sanctuary could be made into a core area, with strict protection to habitat for most parts of the year. These core areas would serve as seed banks for other grazed grasslands. From these core areas, grass and other biomass were to be harvested only every two or three years to ensure that the habitat remains suitable for bustards. To provide maximum benefit to villagers and bustards, these core areas of not less than 100 hectares should be scattered in different parts of a bustard sanctuary. In Sholapur district it was conclusively proved that the development of core grassland areas greatly helped in recharging the aquifers and village tanks. We suggested that most of these core areas should be on the dry plateau

which are the catchment areas for village tanks.

In the late 1970s, a large number of plantation and grassland plots were developed in Maharashtra under the DPAP (Drought Prone Areas Programme). The main aim of DPAP was to undertake conservation measures for the protection of land that suffered from severe overgrazing and soil erosion. The DPAP not only helped in achieving this aim in certain areas but it also resulted in the restoration of wildlife, especially the great Indian bustard, blackbuck and wolf. In other words, bustard conservation is nothing but sustainable utilization of our grasslands for the benefit of livestock, villagers and wildlife.

**H**owever, the Forest Department, true to its generic orientation, did not appreciate the role of local people in saving the great Indian bustard. As soon as an area was declared a sanctuary, it imposed all sorts of restrictions on the villagers. Instead of working with the villagers for eco-restoration of degraded land, curbs were put on their traditional land use.

The Karera Bustard Sanctuary is a classical example of such mismanagement. This 202 sq km sanctuary was specially created in 1981 for the protection of the great Indian bustard in a highly degraded and marginally agricultural area. About 5 to 8 bustards and 50 to 60 blackbuck precariously survived in this area dominated by *Thakurs*. Some poaching was thus not uncommon. Once the bustard was discovered and the sanctuary came into existence, poaching virtually stopped. The poor and simple inhabitants of the 22 villages falling under the sanctuary were elated by the publicity and visits of high officials. There was tremendous empathy with their *son-chirya* (golden bird) as the bustard was named. Many local people were emp-

loyed as bustard watchmen, which gave them additional pride.

The Bombay Natural History Society conducted studies in Karera from 1982 to 1986 (and later some monitoring till 1994). In the beginning, bustard numbers increased satisfactorily and around 20-25 birds were noted in 1985-86 (this was due to successful breeding and immigration of birds from surrounding areas). However, this soon led to another problem which antagonized the farmers. The blackbuck, which till now was kept under control by poaching, increased by leaps and bounds. By the end of the 1980s, they numbered more than a thousand. Crop damage by blackbuck became a major issue and the ire of farmers turned on the great Indian bustard which they saw as the main cause of their troubles.

**B**ased on our studies conducted over six years, we recommended the development of six core areas in the uninhabited parts of Karera Sanctuary. Livestock grazing was to be banned only during the bustard breeding season (March to July), but instead of developing such areas, the Forest Department gave more emphasis to protecting individual nests. Even this protection was not properly carried out and this futile exercise resulted in the identification of nest sites by villagers. When the time came, the villagers knew where to strike to 'solve' the problem. The consequences were disastrous. By the late 1980s, bustard numbers started declining and the last bird was seen in 1994. We now have an anomalous situation in the Karera Bustard Sanctuary, with the presence of an Assistant Conservator of Forests, a Range Forest Officer, two Foresters, four Forest Guards and 15 bustard watchmen, but no bustard!

The unfortunate story of Karera is being repeated in Sorsan bustard

area in Kota and Rollapadu Wildlife Sanctuary in Kurnool in Andhra Pradesh. Fed up with the crop damage, three bustards were poisoned by irate villagers in Sorsan in January 1998. The Forest Department claims that the bustards died of some mysterious disease. The six sq. km Rollapadu grasslands where 50-60 bustards come for breeding is perhaps the most important bustard habitat left in peninsular India. In this area also, effective protection has resulted in an increase of blackbuck numbers from 17-20 in 1983 to 300-350 in 1994-95. Farmers surrounding these grasslands are up in arms, protesting against crop damage. The situation is just ripe for Naxalites to step in and destroy the sanctuary.

We have conducted studies in Rollapadu since 1985 and have made extensive recommendations to the Forest Department, but little action has been taken. Our recommendations emphasized the importance of involving local communities and proper publicity to benefits accruing from conservation. Once it is demonstrated that grass production increases through protection and that aquifers and wells are restored, the villagers will come forward to protect more grassland areas.

**T**he great Indian bustard is a symbol of a healthy grassland. With more than 420 lakh heads of livestock in India, we need nearly 100 lakh hectares of grasslands. Instead, we have only 12 lakh hectares which may be considered as grassland. With such a large gap between demand and supply, there is a need to look into our land use policies. Eco-restoration of our degraded grasslands, with the help of local people, would not only improve the fodder and other biomass but also make the habitat suitable for species like the great Indian bustard, which has no other place to live.

# A princely bequest

DIVYABHANUSINH

IN tracing the history of hunting through the ages, one would come across a natural order when it was necessary for the survival of man. This continues to be the case for certain tribal peoples of India. In course of time, hunting became a part of court life as an essential requirement for a king and his courtiers to shoot stationary and moving objects to remain fit and agile, and to remain efficient in warfare. Kautilya talks of setting aside special forests for the king's pleasure of hunting, Gupta coins show kings as lion-slayers and so on. *Manasollasa*, the encyclopedic work on court life compiled in the 12th century by Someshwara III, the southern Chalukaya king, records 35 different modes

of hunting deer alone, apart from hunting with dogs, falconry and fishing.

Feroz Shah Tuglaq was a keen hunter and his hunting stables contained so many cheetahs, caracal, falcons, among others that, according to a *shikarnama* of his times, their numbers defied inventory. At the height of their imperial glory, the Mughals turned hunting into a great court activity. These pageants became larger than life and were the favourite pastime of Akbar and Jahangir. The disintegration of the Mughal empire in the North and the rise of large principalities in the South – such as Hyderabad, Mysore, Travancore, Cochin and other smaller states – saw one-third of the Indian sub-continent

divided into some 500 and odd principalities, which survived till the independence of India and Pakistan in 1947.

For Indian princes, hunting was an important pastime and an integral part of court life as had been the case for centuries. But in the last 100 years of their existence, there was a major departure in the sphere of state activity from previous traditions. As the East India Company, and after 1858 the British Indian Empire, established paramountcy over the sub-continent, they took unto themselves an essential part of the sovereignty of princely states, i.e., the function of external aggression. As such, Indian rulers were left to contend with only internal law and order and such developmental activities as they chose to engage in. The regulation of external affairs by the British also left Indian princes with considerably more time to pursue leisurely activities, such as hunting, as never before in history. By that time hunting had become a 'manly' activity which could be used to great advantage to please the British, brother princes and friends, though it did take the prince into areas of his principality he may not otherwise have visited. But it had lost relevance as an essential training ground for warfare.

It is unfortunately forgotten that hunting activities *ipso facto* required preservation of flora and fauna from destruction by human interference, other than that which was sanctioned by the prince. Hunting and conservation were, in fact, two sides of the same princely coin. It is argued that Indian principalities were autocratic, which was more often than not, true and that princely subjects had few rights as individuals. However, these conditions must be viewed in their historical perspective. Elected legislative assemblies of any importance in British India were only created in 1937,

mainly as a consequence of the Government of India Act of 1935. The concepts of equality, fraternity, liberty and justice, as we know them today, were enshrined in our Constitution as late as 1950.

**B**ut a curious, and perhaps the most important, outcome of the princely legacy was that the royal hunting grounds in different states logically translated into several of India's premier national parks and sanctuaries. For example, the Jaipur state gave us the jungles of Ranthambore; Alwar gave Sariska; Bharatpur gave Keola Deo Ghana; Gwalior gave Shivpuri; Kashmir gave Dachigam; Rewa gave Bandhavgarh; Kolhapur gave Radhanagari; Mysore gave Bandipur; Mayurbhanj in Orissa gave Simlipal; Manipur gave Keibul Lanjao—the home of sangai, the brow antlered deer—to name but a few, after the formation of the Indian Union.

In the Saurashtra peninsula, Bhavnagar gave Velavadar National Park famed for its blackbuck, the states of Junagadh, Baroda and Bhavnagar gave the incomparable Gir forest, and Kutch, Dhrungdhra and smaller Muslim states left behind the Great and Little Rann of Kutch which gave protection to the Asiatic wild ass among other desert fauna such as caracal, desert cat, desert fox, and chinkara.

Apart from being hunters, many of the princes were authorities on animals and birds. For example, Maharao Khengarji of Kutch discovered the flemingo city in the Great Rann in 1893. Dharamkumarsinhji of Bhavnagar wrote his *magnum opus*, *The Birds of Saurashtra*, almost half a century ago, still the standard work on the ornithology of the region. Along with the principal of Saurashtra's princes' college, he also pioneered systematic census operations of large carnivores

in the country. Lavkumar of Jasdan is today a pioneer of nature educationists in the country. The late Darbar Saheb Shivrajsinh of Jasdan was an ornithologist of repute and Maharaj Himmatsinhji of Kutch continues the family tradition of ornithological study. Their work and that of many other princes, forms an important part of the literature of the flora and fauna of India.

Indian princes such as those of Kutch, Baroda, Travancore, and Cochin encouraged others to study the fauna and flora of their states. Salim Ali's studies of Avi fauna were greatly assisted by such princely states. The century old Bombay Natural History Society continues to publish pieces by many princely contributors in its famed Journal; its list of patrons reads like a who's who of the Indian princely order. The Maharaja of Nabha was the moving spirit behind The Wildlife Preservation Society of India. He was in the forefront of the princes who gave up shooting to espouse the cause of protection.

**T**he Maharaja of Korea and Maharaja of Sandur, better known as M.Y. Ghorpade, excelled in nature photography. The Maharaja of Kashmir, Karan Singh, headed the famous Project Tiger at its inception in 1973 and steered it for years thereafter. And M.K. Ranjitsinh of Wankaner was a key official of the Government of India in drafting the first comprehensive legislation to protect wildlife a year earlier in 1972. It was not surprising that Indira Gandhi appointed Y. Digvijaysinh of Wankaner as the first independent minister for environment in the country in 1982. The enlightened among the princely order continue to serve the cause of conservation under the new regime, even though they have lost their traditional power base.

The methods of conservation adopted by the various states were specific to that state and to the requirements of the area to be preserved. However, if one were to make a broad and sweeping statement, it can be said that villages and towns in princely states had the use of their common lands for grazing livestock. Farmers tilled their farmlands, but they were not allowed inside the protected *vidis* (grasslands) or jungles of a state, other than forest villages and settlements. In the post-independence era and with the exploding growth of human, cattle, goat and sheep populations, the first to go were the open grasslands which the princes could not protect since the powers of state were no longer vested in them. This was followed by the destruction of the forests.

It would be instructive to go somewhat deeper into the experience of one particular state, Junagadh, which included most of the Gir forest, home to the Asiatic lion. The state of Junagadh rose from the ashes of the Mughal Empire in the mid-18th century. Ruled by Babi Muslims, it had a notable record of peaceful administration and communal harmony. It covered an area of approximately 3,300 sq miles. The total area of the Gir forest was about 1,000 sq miles, most of it in Junagadh state, i.e., one third of the state was jungle.

In the age old Indian royal tradition, the biggest carnivore was royal game – only the ruler could hunt it and others only by royal permission or sufferance. In Kutch, it was the leopard, and when it became extinct, the Maharao reintroduced it. In Mysore or Mayurbhanj it was the tiger, and so on. Expectedly, therefore, the lion was royal game of the Nawabs of Junagadh. Indeed, it was their state emblem, apart from being portrayed on a postage stamp in 1929, thereby becoming

the first wild animal to be depicted on a postage stamp in the Indian sub-continent. No one could shoot the lion without the Nawab's permission. Its protection was of paramount importance and a succession of Nawabs jealously guarded their small numbers.

By 1880, few lions survived; the figure doing the rounds at the time was that only a dozen were left. In 1890 the figure was believed to be 31. It is said that the number dwindled to a mere 19 by 1899-1900, the year of *chappanyo kal*, the great famine. Lord Curzon, the Viceroy, who visited Junagadh state in 1900, declined to shoot a lion on hearing from the Nawab about the few that remained. This incident was behind Lord Curzon's statement, the first from the highest in the empire, for the conservation of fauna and flora in his celebrated letter to the Burma Game Preservation Association in 1902. Nawab Rasul Khanji was gravely concerned about the lions and he was instrumental in bringing their plight to Lord Curzon's attention, thereby freeing him from the pressure of British officers and brother princes for shooting permits for lions in his state.

The figures quoted are from the Junagadh state records. They were estimates rather than a result of credible enumeration. The fact remains that lions were in extreme danger of being wiped out. The state was alive to the danger, and the Nawab went out of his way to protect them.

Nawab Rasul Khanji died in 1911 and the state came under British administration for a decade until the 20 year old Nawab Mahbat Khanji came of age and was invested with full powers in 1920. In that year, according to R. Ratnagar's estimate of the state Forest Department, the number of lions had increased to 100. Was this figure accurate? If so, was it a result

of strict control over lion shooting by the British administration? Or was it because of an increase in natural prey species and lesser interference in the jungle by man and cattle after the famine of 1899-1900? Were the earlier estimates far lower than what they should have been? Had the lions become prolific breeders due to an undisturbed habitat? We do not know for sure; perhaps the increase was a result of some, or all, of these factors. It is certain though that the lion population was on the increase.

During the British administration, the Gir forest was studied at great length and working plans, which were initiated by Nawab Rasul Khanji's administration, were followed by more elaborate ones. Tighter controls for timber extraction, as also grazing rights of forest villages and herdsmen (Maldharis) were introduced. Timber being an important source of income, the Gir forest was never a sanctum sanctorum for wildlife, though large tracts of it remain undisturbed to this day. Even a system of payment was evolved to compensate owners of cattle whose livestock was taken away by lions.

Nawab Mahbat Khanji was a man of quiet disposition and was not particularly fond of hunting. Tradition has it that he would go to the Gir for a shoot. A good male lion would be tracked down for him while he waited for the lion to appear before the *machan*. But he would not shoot, remarking that the animal was not big enough and return to Junagadh! While he did on occasion shoot lions, as it was customary, it would be safe to say that the Junagadh royal family probably shot less than 10 lions between 1920 and 1947.

Permission to shoot lions was given sparingly to a few British officers or brother princes of Kathiawar

or from elsewhere. While the records are not complete, it is doubtful if permits for more than two animals per year was given by Junagadh state during this 27 year period. However, according to a recent estimate by M.K. Ranjitsinh, roughly 10 to 20 lions were killed in and around Junagadh state, with or without permission, between 1920 and 1947.

**T**he Gir forest also extended into the Amreli district of Baroda state and the Mityala area of Bhavnagar state. While the Maharajas of Baroda and Bhavnagar hunted in their own areas, the Nawab had another problem on his hands — that of the Junagadh lions straying into adjoining territories of the smaller Kathi and other states. In fact, the Forest Department of Junagadh employed beaters and drummers to drive back itinerant lions into Junagadh state territory to save them from being shot. To the rulers of adjoining states, the lions were not 'theirs' and therefore fair game!

In August 1947, Nawab Mahbat Khanji acceded to Pakistan. This caused turmoil in the state, though he continued to live in Junagadh until his departure for Karachi in October 1947. A government in exile, *Arzi Hakumat*, had been formed earlier and on his departure, Junagadh state came under the direct control of the Dominion government. A year later, the state of Junagadh was merged into the United State of Saurashtra and in this messy way the Gir forest, with its treasured lions, became a reluctant bequest to the Indian Union. It is creditable that the government of Saurashtra continued to protect the Gir and the hunting of lions became the sole prerogative of the *Rajpramukh*, the Head of State. Though lions continued to be officially hunted, the number of permits were reduced until the practice was stopped around 1955.

Despite these turbulences and troubled times, a census of the lion population was carried out in 1950 by M.A. Wynter Blyth, Principal of Raj Kumar College, Rajkot and Maharaj Dharamkumarsinhji of Bhavnagar based on identification of foot prints. Their census showed 219 to 227 lions in Gir and its surrounding areas. Incidentally, their methodology for large carnivore census became a precursor to similar efforts decades later for the tiger, after the inauguration of Project Tiger in 1972. The increase in lion population between 1920 and 1947 from 100 to 219/227 shows over 100% growth. Though the Nawab and Maharajas of Baroda and Bhavnagar hunted lions during this period, it was the protection they gave to the animals and their habitat that enabled the lions to survive and increase during their regimes.

**T**he merger of Indian states implied that the powers of the state were vested in democratic institutions. A firearms licence could be obtained without much of a problem by anybody who wanted it. Princely states, wherein no one but the prince and his entourage could hunt, now became open country to anyone who wanted to shoot, legally or otherwise. A fear of retaliation from the princes lingered on in former state areas, certainly till the first general election of 1952 and to a lesser extent till 1957. Apart from shooting permits being issued liberally, poachers found their way into grasslands and forests. The author remembers venison being openly sold in Ahmedabad in the early 1950s.

If one were to summarise the legacy of the Indian princes, it may be said that autocratic rule ensured that fewer human beings were after wild animals than in our democratic times. Ever so often, the case of the Maharaja of Surguja who shot more than

1,000 tigers in his lifetime is mentioned as an example of wanton destruction. This was certainly so. But, it was the vanity of one man; the state always had tigers despite his hunting aberrations. The situation becomes very different when 1,000 hunters, legally or otherwise, want to shoot a tiger, maybe even one every year. Equality, liberty and the more or less unfettered right to bear arms for man have a different connotation for fauna, which make for impressive trophies or add exotic taste to the table!

**I**n princely India, most princes were keen hunters. To them it was a matter of personal concern and pride that their favourite hunting grounds were protected. This certainly is not the case when an impersonal bureaucracy is headquartered in a distant state capital and whose masters, the central government, sits in an even more distant Delhi.

Each prince maintained a careful estimate of his favourite game, usually the tiger or lion, as in the Gir. The state administrations honestly reported their conclusions, even if they were unfavourable or alarming, for example of the declining lion population in Gir. Today such census figures have become a 'game' of increasing numbers. According to census reports, lions have increased from 205 in 1979 to 239 in 1985 to 284 in 1990 to 304 in 1995. During this period, the Gir has shrunk to almost half its turn of the century size, and it has come under increasing pressure from humans and cattle! The more famous tiger census figures speak volumes. One tiger reserve enumerated, apart from ever increasing tigers and other large fauna, porcupine, giving a breakdown of the number of males and females—a remarkable feat indeed.
